**R. C. Spencer, of Milwaukee, endorsed work which had been inaugurated by the universities, and offered the following resolution, which was adopted: "I move that Mr. Springer be authorized as the representative of the National Commercial Teachers' Federation to convey to the authorities of the University of Michigan the cordial approval of this Association in its contemplated work, through a summer school, or otherwise, affording persons ambitions of becoming teachers of commercial branches, the opportunity to better prepare themselves for this work."**
seen her successful struggle to enter the professions, the trades, and business. Her ability, steadiness, and intelligence are recognized. Her further advancement will depend much on the opportunity afforded to her by commercial education. "No women appreciates a home more than those who work with brain and hands for a living, who have a capacity for more than the mere enjoyment of the hour. There are no women who are in no more truly wondrous, more jealous of their refinement and their rights, than those who have found in the arena of business, that it is the woman who is always true to the noblest attributes of her sex, who is the woman that commands respect and love,"

Mrs. A. J. Barnes, who was to have discussed this paper was absent.

W. H. Wigham, of Chicago, presented a paper outlining the relation which the commercial educator should sustain to the business office. He drew a comparison showing the relative standing of the professors in law schools, medical schools and commercial schools to their several interests in their respective localities, and expressed the fear that the commercial teacher was not called in consultation by the business man in need of assistance concerning faulty methods of accounting, as often as were the legal and medical professors, by those in need of professional services which they might offer. He illustrated his remarks by the introduction of a series of letters in actual use by large business houses, and urged the commercial teachers to get in closer touch with the business men where they live. G. E. King, who was to have discussed this paper, was absent.

J. W. Warr discussed some slighted essentials of a business education. Among others he named Voice Culture, more simplified English and Penmanship exercises. The physical culture of our pupils should not be neglected, neither should their moral trainings be overlooked. We shall publish Mr. Warr's paper in a subsequent number.

Prof. E. L. Payne, of the Kansas State Normal School, gave a very interesting discussion of the normal method of teaching arithmetic.

"Arithmetic is a peculiar science, in that there is only one side to it. A computation is either absolutely right or absolutely wrong. No methods of teaching the same should be introduced merely for their disciplinm value. That which is learned merely for the sake of being unlearned at some future time, is a waste of effort, and should not be encouraged. Methods should be ends in themselves, and not merely means to an end. Much difficulty arises in the teaching of arithmetic, because of the lack of the proper appreciation of the value of mathematical training. The literary college takes one extreme of the situation and makes the theory of utmost importance. The business college goes to the other extreme and places the entire value upon the practical method. Neither is normal or natural, although of the two, the business college is the more nearly right."

Following his paper, he illustrated on the black board several short methods of presenting various subjects, all of which he urged the teachers to adopt from the beginning. He especially criticised those texts which introduced various long methods of solving problems at the beginning of the book, reserving the short cuts till toward the close, where they are reached by the student after he has been completely confused and discouraged by the various processes he has studied. Speed and accuracy, represent the key note to Professor Payne's address, which was received with marked approval from the teachers present.

The Banquet

With the inimitable J. W. Warr as toastmaster, nearly two hundred commercial teachers and friends gathered at the banquet table Saturday evening. After satisfying gastronomic requirements, the following toasts were responded to:

Everybody had a good time. The speakers who had been most careful were determined to go away full of mental as well as physical good things. Mr. Ferris fairly cut himself, and many of the older members regarded his speech as the finest specimen of oratory that the Convention had ever been favored with. The introduction of the banquet feature at our annual meetings has proved entirely successful.

MONDAY, DECEMBER 30.

The last session of the Federation began half an hour late owing to the delay caused by taking the picture of the convention. Secretary Brown read the minutes of the Detroit meeting, from which it appeared that the amendment to the constitution as adopted at Detroit had not found its way into the minutes. Robert C. Spence of Milwaukee had prepared a resolution which he presented, the substance of which was to the effect that, much as the secretary's books did not show the fact, the constitution had been changed and inasmuch as the change had been made in a hurrly and without proper debate, therefore he declared that the change was not made. Time was short, half of the members were at lunch and, without debate the resolution was adopted.

Dr. A. E. Winship, Editor "Journal of Education," Boston, Mass., delivered an address on "The Cause of the Great Awakening in Commercial Arithmetic," which was very inspirational and was received with much favor by the body. He first discussed the fact that at one time illiteracy statistics were given by states, then by cities. The first notable increase in school attendance was in the grammar grades, during the last ten years it had been in the high school classes, and he believed that the next decade would see the large increase in the higher or professional schools of which he considered Business Colleges an example.
This is largely necessitated by the changed conditions in the industrial world. No longer are trades and professions learned by means of an apprenticeship. The days of the street railways are behind us. At first the drivers used mules as motive power, and the degree of skill required was not great. At length the trolley car was introduced, and at night schools the old drivers were permitted to acquire the extra education which was required of them. With the introduction of the third rail system, another night school was instituted in order that the trolley motormen might receive the still further instruction needed.

The public schools have failed in their instruction in arithmetic because they have introduced the percentage system in their marking. Business Colleges have succeeded because they have considered a result as entirely right or as entirely wrong.

A shorthand will be studied in the future for its use by the business man and not entirely as of value to the clerk. The future business man will take care of his correspondence by means of shorthand notes which will save him the labor of writing the letters, allowing the clerk to transcribe the same and typewrite them at his leisure.

As illustrating the changed methods of the business schools the speaker brought out the fact that at his last visit to a similar meeting the speakers were trying to tell the business men how they should keep their accounts, whereas at this meeting he noticed that the account clerk himself was on hand. The large business houses were actually keeping their accounts. Doctor Winship’s address is published in the New England Journal of Education, under the title “Why This Commercial School Exist?” This may account for his apparent wandering from his subject as announced in the Federation program. He really hardly touched the subject of Arithmetic.

D. W. Springer, of Ann Arbor, Mich., discussed the extent to which Commercial Education should enter into the public school course. As an introduction he outlined the history of the School system in the United States with special reference to the secondary schools. He argued for a four-year commercial course which should provide a broad education for the pupil who intended entering the business world, contending that the public school courses should not in any way act as competitors of the Business Colleges. Each can do a work which the other is doing. In an early number will be published W. N. Ferris’ splendid paper, by some thought to be the best given at the convention.

National Business Teachers’ Association

Reported by R. H. Seymour, Director of the Commercial Department of the Springfield, Ill. High School

The Business Teachers’ Association met in session at the Business College, Friday morning, December 27, with President J. A. Hiner, of Louisville, in the chair. About seventy-five persons were in attendance. After T. W. Bookmyer had made a report for the Executive Committee, President Hiner delivered his address, which was summarized in our January number, N. L. Richmond, of Kankakee, III., followed with a paper on “The Man Behind the Books.” Mr. Richmond divided this man, so to speak, into two classes: school managers and school teachers. He complimented commercial school teachers on their earnestness and enthusiasm and their ability to train students to right habits of thinking and acting. He insisted on thoroughness in mastering principles, and exactness in the daily routine of school work. He believes that the teacher should be consulted by a student who has not done his work and takes an advanced position, as do many other thoughtful commercial school managers, regarding the essential qualifications of commercial teachers. He believes that there should be a central school in each state where persons who desire to become commercial teachers may be trained according to pedagogical principles. He is in favor of courses at least one year in length.

This paper was discussed by Mr. Marsh, of Cedar Rapids; Mr. Dudley of Marshalltown, Iowa; R. C. Spencer, H. M. Rowe, D. W. Springer, and E. W. Seymour. Mr. Marshall said that some teachers are literally behind the book, because they can do nothing unless the book is in front of them. Mr. Spencer said that the business man is usually the one who is behind the books, for without business transactions there would be no need of the books. He would have teachers visit business offices and come into touch with actual business methods, with which sentiment Mr. Rowe and Mr. Springer heartily agreed. Mr. Seymour very properly took exceptions to Mr. Richmond’s statement that high schools are taking men who are incapable and without either experience or special training. He argued that since the high schools pay better salaries than most of the private business schools, they obtain the best men.

The Round Table discussions, owing to insufficient time, were limited to one topic: “Are entrance examinations advisable?” These discussions were carried on by Mr.
Barbeck, of New London, Conn.; Mr. Book- 
myer, of Sandusky, Ohio; Mr. T. C. Smith, 
of Kansas City; Mr. Enos Spencer, of Louis-
ville; Mr. Parish, of Grand Rapids, Mich.; 
and Engineer C. F. Stiehl, whose paper, sub-
terred before special application can be made, 
if the subject were presented correctly, 
all of the public school arithmetic work 
done in eight years could be done in three 
years.
He emphasized the fact that in the 
public schools, How? seems to be the 
principal question, but that in business, 
What? is the great question. Mr. Ferris 
believes that the all-important work is the 
fundamental work, rapid addition and frcations. 
He has dropped the teaching of 
short cuts. He suggested that business 
teachers consult practical workmen 
among those who do shingling, laying, siding, 
masonry, carpeting, paper-hanging, etc., 
in order to get practical application of the use 
of denominate numbers. He very wisely 
said that the student who is master of 
the fundamental processes of arithmetic, 
together with common fractions and the 
basics are of denominate numbers, has very 
little to learn in percentage aside from business 
uses. The custom of dividing percent 
ages into cases is useless and confusing. The 
all-important applications are Profit and Loss, Commission, Bank Discount and 
Stocks and Bonds. The basic fact of each 
of which is, respectively, Cost Price, Work 
Done, Value of Paper when Due, and Par 
Value. Mr. Ferris is a firm believer in the 
value of mental arithmetic. He considers 
that even the best books are but helps. He 
thinks that many problems should be origin-
ated by the teacher. He pins his faith to 
the method thoroughly learned. The key-
not to to his paper is the need of accuracy 
and rapidity.
The discussion of this paper was led by 
R. L. Meredith, Zanesville, Ohio. He 
said that to practice problem solving skill in calculation; development in logical 
processes of reasoning; and an acquaint-
ance with the terms and processes peculiar to 
the various applications of business 
problems was the main feature, and this 
must be trained to grasp results. Mr. Mer-
edith insisted upon simplicity. He con-
demned the 100%, method of tabulating 
problems. He approved the use of all-important parts and multiples.
Enos Spencer, of Louisville, Ky., read his paper on "Methods of Opening 
and Closing Corporation Books." He made 
comparisons and contrasts regarding the 
three kinds of investment accounts: single 
proprietor, partnership, and corporation. 
He cited ten cases covering the general 
conditions under which corporation books 
might be opened, and then in describing 
the closing of corporation books, cited nine 
cases covering the usual conditions govern-
ing the disposal of the undivided profits. 
Mr. Spencer's paper is so practical that we 
shall say that letters should be sent out 
next month. Mr. Meredith, however, 
writes, and we commend it to the attention 
of all our readers.
In the absence of G. E. King, of Cedar 
Rapids, Iowa, who was to have led the discus-
sion, the paper was discussed from the 
door in a general way, after which the 
meeting adjourned.

**MONDAY, DEC. 30.**

"Business Practice" was the first subject 
for consideration. It was to be handled as 
a symposium, L. W. P. Stiehl, of Uhrich-
ville, Ohio, being the first on the program, 
with a paper on "Intercommunication." Mr. 
Stiehl told that the best way to lay a 
foundation for Inter-Communication Busi-
ness Practice is to have business transac-
tions carried on within the school room in 
a representative business community made 
up of students. He read the names of 
apparently all the authors, both ancient 
and modern, that have ever written on the 
subject of accounting, and he commented 
favorably upon the excellence of American 
textbooks. He rightly explained the term 
Inter-Communication Business Practice by 
saying that it is a system by means of which 
transactions are carried on among the 
students of different schools situated in 
various parts of the country. He suggested 
that the various publishers be requested to 
formulate a unified system of Inter-Commu-
nication Business Practice as a course 
 auxiliary to what is now generally being 
done with some of the textbooks or 
modules.

Discussion was general. Mr. Lord de-
scribed how inter-communication work is 
carried on between his school and eleven 
other eastern schools, under the name of 
the "Eastern Business Practice Association." 
J. F. Henderson, of Oberlin, Ohio, read a 
paper on "Business Practice combined with 
Barter among the students." He described 
effectively the formation of a set of business 
offices, including a bank, wholesale office, 
and commission office. The business men 
of any community are to be represented by 
the pupils in the school room, who carry on 
transactions with the offices. Students buy 
of the Wholesale Office and sell through the 
Commission Office, to the teacher, who, in 
turn, sells to the Wholesale Office again.
The teacher should pay the maturing liabil-
ities of students who have to leave school 
before their notes and accounts have been 
settled. Mr. Henderson made some very 
strong comments on the necessity of close 
 supervision of this part of the business 
course, warning his hearers that loose and 
inaccurate work would not only beget bad 
habits, but would result in a loss of interest.

"Business Practice in the Commercial 
High School" was the subject of the next 
paper, which was read by N. B. Van Matre, 
of Omaha. A summary of Mr. Van Matre's 
paper was published in the January number 
of this paper, and it is already called 
forth epistolary protests, notwithstanding 
the fact that the paper in full was much less 
temperate in language than the extracts 
that were published. The discussion by 
H. M. Rowe, J. A. White, and others, 
developed opposition to Mr. Van Matre's 
swearing charges against high school prin-
cipals.

Mr. Twigg, who was to have led the dis-
cussion, was absent. Mr. Stiehl, who was 
to follow Mr. Twigg, said that the com-
mercial schools and the business public 
should be the chief allies of the commercial 
departments of the public and private 
schools; that they are kindred workers, and 
the relationship should bind them in an 
unbroken chain. He thought that specialists 
should not break the law of professional 

R. L. MEREDITH, ZANESVILLE, O.

H. M. ROWE, BALTIMORE, MD.

L. P. W. STIEHL, UHRICHVILLE, O.
It was Mr. S. Frye who then read an interesting paper on "Advantages and Adaptation of the Voucher System of Accounting." He spoke of the history of the voucher system and gave credit to Col. Geo. Soule, of New Orleans, for establishing it. He asserted that this system is rapidly taking the place of all others, especially in manufacturing and wholesale offices. It can be used in connection with the system of books already in use. It requires cash vouchers for all purchases and expenditures. But one account is opened in the general ledger known as Vouchers Payable or Audited Voucher's Account. Only one debit and one credit entry is necessary each month, the debit entry from the cash book, and the credit entry from the Voucher Record. Mr. Frye gave a detailed description of the Voucher Record book and explained with care how to handle incoming invoices, and cash checks.

R. B. Jones, who was to have discussed this paper, was absent, but W. L. Meredith, of Zanesville, Ohio, was present, and he, with H. M. Rowe, H. M. Lockyear, and others, was quite extensively. Mr. Rowe does not believe in considering the "Voucher System" advanced bookkeeping. He thinks that everyone who is supposed to know anything about bookkeeping should be familiar with this system.

The election of officers was then held, with the following result:

President, U. S. Frye, Chicago, Ill.
Vice-President, A. R. Bruebek, New London, Conn.
Secretary, J. J. Crafton, Quincy, Ill.

EXECUTIVE COMMITTEE

J. C. Walker, Danville, Ill.; J. R. Van Mater, Omaha, Neb., and K. L. Meredith, Zanesville, O.

TUESDAY, DECEMBER 21

Excepting H. C. Walker, of Louisville, everyone on the program was absent. Mr. J. J. McFarlane has sent his paper on "Commercial and Industrial Geography," and H. M. Rowe read it. It is a masterful treatment of this interesting subject, and we shall publish it in full.

Mr. H. C. Walker then read a paper on "Commercial Geography; Its Neglect; Its Value."

Mr. Walker, referring to the fact that in our advanced civilization we must utilize the products of the whole world, that all nations are interdependent, said that it is imperative that business educators give attention to Commercial Geography. Mr. Walker's rather broad definition of Commercial Geography is, "It is the science which describes the world in relation to man as a producer and trader. It expedites the human control of the forces of nature and tells the story of their adaptation to the economic needs of the race. It treats of the many influences operating all over the world, which encourage or hinder the production, transportation, or exchange of the commodities which supply man's wants and needs."

Mr. Walker truly said that men must now learn how to obtain wealth as well as how to dispose of it after it has been secured; that the faculty of active accumulation as well as that of acquisition must be trained and cultivated in order to produce the model business man. He touched upon physical geography, industrial conditions, and the magnitude of the world's commerce. He made interesting comparisons between the various branches of this country's trade and that of other countries, setting forth in a most attractive manner some very interesting facts of Commercial Geography, in order to illustrate its value. This paper and the paper by Mr. McFarlane strike a new note of hopefulness for the practical character of the work done in private business schools. If those who heard Mr. Walker's and Mr. McFarlane's papers and those who read them could attend the meetings of the Association, the public in Philadelphia, they would be able to reach the climax of interest in Commercial Geography by a detailed tour of inspection through the Philadelphia Commercial Museum, where Mr. McFarlane's paper was general and interesting. Mr. W. H. Whigan urged the teachers to send to the Department of Agriculture for printed matter and a careful study of the excellent monthly list of references that appear in the PENNART-ARTIST AND BUSINESS EDUCATOR.

An informal discussion was then held on the subject, "What Constitutes Legitimate Advertising?" Mr. Bookbinder pressed his well known and highly commendable views, and the glove was picked up by C. W. Robbins, of Sedalia, Mo., one of the old-timers, who was an unknown position. There was but one person present to uphold Mr. Robbins' practice, and he was not a member of the Association. Indeed Mr. Robbins was not himself a member of the Association; therefore, when Eno Spencer presented the following resolution, it was unanimously passed:

"Resolved, That we regret the practice of guaranteeing positions, as a means of inducing attendance. We believe it to be detrimental to the best interests of the profession."

Harmony marked the proceedings of every session of the Association. About 100 persons enroled. Let the Milwaukee meeting be the largest in the history of the Association, as a special tribute to the "Grand Old Man," whose hospitality we are to enjoy.
Meeting of the National Short-hand Teachers’ Association, Held at St. Louis, Mo., December 27-29, 1901

Reported by D. D. Mueller, the Bartlett Commercial College, Cincinnati, O.

FRIDAY, DECEMBER 27

After calling the meeting to order, President Kennedy read his address, which was well received. Among other things it contained the following: subsequent resolutions:

First, that the system of appointing State Secretaries to look after the interests of the Association in their respective states be continued.

Second, that nominations for the various offices of the Association be made by and before the whole Association in meeting assembled, instead of by committee as heretofore.

Third, that the editor of the Association Department in the official organ, “The Typewriter and Phonographic World,” be selected by the publisher of that journal, subject to the approval of the Association.

All of these recommendations were adopted by the Association. The secretary of the Association, Mr. L. A. Arnold, now read his report, a striking feature of which was a severe criticism of State Secretaries who did nothing for the Association. He presented a plan for a summer school for teachers of shorthand and typewriting. The report was received by the Association, excepting the question of the consideration of which was deferred until later in the session, so as to allow all members time to think it over.

The first number on the program was a paper by Charles T. Platt, of Hoboken, N. J., entitled “Where Are We At?” This was in Mr. Platt’s usual droll and interesting style. The speaker asked the question whether it would not be better to require less speed in shorthand and a more thorough knowledge of English and related subjects. Also what should shorthand and business schools attempt to teach in the limited time at their command, keeping in mind the extended courses laid down by commercial high schools, covering a period of three or four years. Those taking part in the discussion were Brown, Hill, Healey, and others. It cannot be truly said that they discussed the paper, which seemed to form a text to be departed from. Whatever reasons led Mr. Platt to ask the question which constituted his subject, it was evident to those present that he had no less cause, and probably more, after the discussion was closed, to repeat the inquiry, “Where Are We At?”

Miss L. L. Ely, of Sterling, Ill., read a very interesting paper upon “The Duties and Opportunities of the Shorthand Teacher.” She brought out the thought that each student was a delicate organism of the teacher’s time and attention, and wanted to know if it was right to devote so much more time to the dull student than to the bright one. She placed before the Association very clearly a number of the important duties of a teacher, as well as a glowing account of some of his opportunities. The paper showed that Miss Ely not only realized the duties of a teacher of shorthand, but also recognized the largest opportunities presented to such teachers as faithfully performed their duties.

“Twenty-five Years of Shorthand Schools,” was the subject of a very comprehensive and interesting paper presented by B. Howard, of Cincinnati. Shorthand schools of twenty-five years ago were contrasted with those of today, both as to number and condition. He pointed out the fact that the largest business establishments made use of stenographic help, and consequently at that time such services were well paid for. In recent years, however, the situation has changed, having only a few letters each day to write, also find that an amanuensis is a valuable adjunct to a business office. These men, as a rule, are not capable of discriminating between first-class and second-class work, therefore, a demand has sprung up which fosters the incompetent stenographer as well as the schools which turn him out. Mr. Howard expressed his contempt for the proprietor of a large business establishment, and his desire for the teacher down to the very lowest point in the way of remuneration, so as to enable him to place before the gaze of his prospective patrons a symptoms and dazzling equipment. If paper presented the value of all these things in their places, he yet maintained that the first important element in a first class shorthand school was brains, brains, brains, on the part of the teacher. He further cited the fact that the ideal teacher was one who was a competent reporter and possessed all the qualifications necessary to make a first-class teacher, but of the two he preferred the teacher who had the necessary pedagogic skill, and was lacking in reporting experience, rather than the person who was skilled as a reporter, but lacked teaching power.

The last paper of this day’s session was by Mr. Fred Irland, Washington, D. C., entitled “The Art of Shorthand Reporting.” Mr. Irland placed before the Association a very inspiring picture of the accomplish ments necessary to reach the very highest pinnacle in the art of shorthand reporting. He referred frequently to the magnificent feats accomplished by our congressional reporters, although he modestly disclaimed any special skill for himself. He showed that the ideal report was one which gave to its readers the same idea that the speaker intended to convey to his audience. To do this it was necessary quite frequently to modify the phraseology used by the speaker, as the reader has not the gestures, intonation, etc., of the speaker to assist him to arrive at the meaning intended. On the other hand, the reporter should be able to make a verbatim report, as otherwise by placing the whole or greater portion of a speech or address in his own language, he was in direct violation of the duty of the editor. Also, the quantity of the jargon and abbreviation employed by the speaker. The Association recognized that Mr. Irland exemplified in his own personality the highest achievement in the art of shorthand reporting in an unassuming manner, enabled him to captivate all who heard him or had the pleasure of making his acquaintance. Mr. Irland and his paper were one of the delights of the Association.

SATURDAY, DECEMBER 28

Miss Mary A. Healey, of Pittsburg, Pa., presented a paper, entitled “The School Side of the Incompetent Amanuensis Question.” As an important aid in overcoming incompetency, she advised making imperative a study of kindred subjects, such as grammar, punctuation, capitalization, etc. Incompetency might be minimized if rigid entrance examinations were required, but as to whether such entrance examinations were practiced was generally upon local conditions, as hardly two schools have the same environment. She considered that probably the best method of disposing of the entrance examination question was to refer it to the business managers and proprietors. She gave an optimistic view of the future, basing this view upon what shorthand schools generally were now accomplishing. She thought it well to consider ideals, but more practical and beneficial to take into account actual conditions. She pointed out that a good equipment educationally was not all that was required to make a student a success in shorthand. He must be enthusiastic and nurture his whole soul to the work. The paper was discussed by Brown, of Sioux City, Platt, Weber, Byrnes, Hill, Mueller, Moran, Patton, Moore, Fueller, and Asscheuer. The consensus of opinion was expressed as against entrance examinations, excepting as a means of determining in what respect the student needed special attention.

The next paper, “Tricks of the Trade in Shorthand Teaching,” was presented by Mr. John K. Gregg, of Chicago. The author explained that he used the word tricks
to mean that tact and adaptability which a teacher acquires by experience and a thorough mastery of the system in all of its details and essentials is a most forti-\nifying sense. Placing this view upon the matter, he declared that there are tricks in the business of teaching shorthand, for who would say that there are tricks in all trades but to one who can do nothing more clearly or every\nmany the best and most practical paper of the convention, from the teacher's stand-\npoint. It comprised innumerable sug-\ngestions on details which make up the major part of the shorthand by adven-\ndues. As one of the tricks of the trade, he\ncited a thorough knowledge of human nature as well as a thorough mastery of the\ntype of the art, and the technique of the\nsystem taught, should be a by example, as well as precept, although the\nteacher should not allow his own expert-\nness to discourage the student, but should\nshow the student how he is not so very far\nbehind after all, and that by practicing en-\nthusiasmatically in a certain way he will soon\nbe able to do almost as well. The teacher\nshould be resourceful and should be able to\nadapt himself to conditions as they arise.\nNothing would conduite more to a teacher's success than for him to take a personal in-\nterest in the progress of each student. The\nhabit of addressing each student by name is a trick of the trade, which, though small, has a very beneficial effect. Quite frequently a\nlesson or principle can be made clearer to some students by presenting it in differ-\nent language than that used in the text\nbook. In fact, the teacher was admonished\nnever to make his own instructions subordi-\nant to that of the textbook, that while the\ntextbook laid down certain principles, those principles were not presented in the only possible way. The student should be the easiest for all students to understand.\nMr. Gregg strongly advised the intelligent use of the blackboard. The outlines written upon the board should be written sufficiently large to make them legible to every student of the class, and should not be written too rapidly, as this might discour-\nage the student. The teacher should be of an amiable and genial disposition, possess-\ned of much vim and enthusiasm. By adver-\ncating a long course of study, the teacher\nrenders the student the greatest possible ser-\ncice. In concluding his remarks, he stated that well-directed energy comes next to brains, as an essential qualification of a good teacher. The paper was discussed by Platt, Mosher, Miller, Hill, Moran, and others.

In answer to a question, Mr. Gregg went\nto the blackboard and illustrated some of the points brought out in his paper. One of these points had reference to night school work. He stated that the course for students of the night school should be different from that for day students. They needed to have more space and less routine work. On account of the nature of their at-\ntendance, which is quite frequently under trying conditions, it is necessary to keep them thoroughly interested and to show them they are making progress. Mr. Greggs' suggestions and illustrations were of the greatest benefit to teachers of all systems, and the teacher was well entertained with his paper. If more papers of this kind were presented at the convention, greater benefit would be derived by attending meetings of our Association.

Next came a paper by Patrick J. Sweeney. Mr. Sweeney, in his paper, "Shortland Schools in the Large Cities". It is difficult to give a true conception of the excellence of this paper in a paragraph. An idea, however, can be gained of the estimate placed on the paper by the Association when it is known that by a unanimous vote the secre-\ntary wested to have the paper printed and a copy delivered to each member of the Association. This is an honor, which has never been accorded to any paper ever delivered before the Asso-\nciation. The paper, taken as a whole, plainly pointed out the road to success in the business of shorthand writing in partic-\nular, and the commercial world in general. He related a number of the qualifications demanded by business men, among which were common sense, originality, self-\nreliance, agreement, promptness and secrecy. He said that brains and ability were essential, but to be of value they must re-\nmain upon the firm foundation of stern-\nhonesty. The stenographer should not be\nallowed to do more than he is paid for, other-\nwise he would never be paid for more than\nbe does. Men who can think and who can be\nrelied upon at all times are always in de-\nmand. If the stenographer can do his own\nwork, he should be allowed to have the re-\nward of his labor. His reward should be in exact ratio. A stenog-\nrapher should be ready for emergencies and should always be guided by the principle, "Is it right?" He emphasized the absolute necessity for keeping one's mouth shut with re-\nterence to the affairs of the business office. One who has ever lost the confidence of his employer in this respect will find great difficulty in winning it back again. He asked, "What becomes of a man's word if he won't keep it and none else will take it?" He gave as a good guide for steno-\ngraphers the motto of our President, "Better faithful than famous." This paper will be published in full by the Association.

"No Room for Shorthand Blatitutes," is the subject of a paper by David Wolfe Brown, Washington, D. C. and read by Mr. Fred Irland. Mr. Brown was absent, pro-\fessing to have no time to read the paper. Mr. Irland read the paper as best he could, but without fingerprints the paper was not ready for the Association. Before reading the paper, Mr. Irland gave an instructive talk on his experience in reporting the Hon. Chas. G. Dawes, ex-\n
The controller of the Currency, who delivered an address the previous night before the Federation on the Banking Systems of the United States, Mr. Irland stated that, although he had been informed that Mr. Dawes was difficult to report, the speaker himself having expressed his belief that Mr. Dawes would have some difficulty along that line, it really turned out as in many cases to his advantage. It is a great thing to be able to report an expert in shorthand. Mr. Brown, in his paper, drew a contrast between the dull and bright pupil, and stated that the bright pupil was too often given too much attention and delight on account of his belief that his natural brilliancy would carry his to the goal. He preferred the hard working pupil who was industrious without being a genius, rather than the genius with no industry. The ambition of a pupil however, was the best of all. Sometimes, however, there was misdirected ambition, which created a desire on the part of the student to fly before he could walk. Then there was the student who knew it all. There are periodic tautanums. He believed that many of the bad shorthand habits found\namong students were the result of long\nhands. Among these he mentioned pen-\nant, which has periodical attacks. Each\nstudent was taught in the use of the slate and lead pencils in our schools, the longhand twist, aerial pen\ntwirling, and scattering of notes over the page when compactness is desired. He staled that habits of good or evil, according as the habits were good or bad. Everything that the student does should be done in the right way from the start. The teacher should not simply correct errors, but should, so far as possible, keep the students as to keep them from making errors. Mr. Brown in the main was highly appreciated by the teachers present, but the sentiment was quite freely expressed that the general excellence of the paper was seriously marred by a wholesale onslaught on what he termed systems having no re-\nporting record. The query uppermost in the minds of many who listened patiently or in part, was: "Is there a\nmethod that cannot in some manner can progress be expected in the matter of methods of swift writing, unless the profession is sufficiently fair minded to give every sincere effort toward the better-\nment of shorthand systems an impartial investigation and trial?" What system was ever invented that had a reporting following from the start?

**Monday, December 19 - Typewriter Day**

The program of this day was opened by Miss Bronte Gillispie of Ottawa, Neb, who held an interesting discussion of the hand and finger training for typewriter operators. She believed in training the hands and fingers preparatory and in connection with the daily practice on the typewriter. The plan suggested many excellent advan-\ntages features, and her paper was well re-\ceived by those present.
After the reading of this paper, a discussion arose as to the advisability of allowing advertising matter to be distributed in the room in which the shorthand section was holding its meetings. After some discussion, the whole matter was declared out of order, and it was directed to proceed with the program.

Mr. Chas. H. McGurrin, Kalamazoo, Mich., then read his paper on "How I Would Teach Typewriting." He stated that the best method was that which succeeds the best. He placed special emphasis on spelling, and advised a special course for those who were deficient in this respect. He declared that the touch, while under this method was not only more important but the touch was preferred on the face of a fore-arm. While he did not condemn the blank keyboard, he believed that it could be used only in conjunction with a long keyboard. He stated that there was no absolutely invariable method that was best. He advocated dictation for the best method of gaining speed on the machine. The paper was discussed by Prof. Walker, Lyons, Butler, and Hill. Among other things brought out in the discussion was the fact that many teachers had difficulty in getting their students to apply touch typewriting to the dictionary in the shorthand note. The tendency noted by the teachers was that in their desire for accuracy, students would look at the keyboard. Mr. McGurrin was asked how to overcome this, but gave no satisfactory solution. The first essential of success in shorthand work was in a thorough education in the branches of this calling. A fair knowledge of the English tenses, especially spelling, was necessary. So far as typewriting was concerned, he believed it to be greatly a matter of habit. Therefore, the first lesson was an essential one in that it formed a foundation for the establishment of many habits, and that the teacher should select those that are good. A good taste should be cultivated on the part of the student. All his work should be gotten up in a systematic and orderly manner. The student should be taught to keep his machine in good condition. Errors in the students' early practice work are frequently caused by a lack of ability to write too fast. In the beginning the use of the eraser should be prohibited, while in the advanced work, the student should be instructed how to make neat corrections, take out and re-insert the paper, etc. To make the work more interesting, he would offer prizes for the greatest quantity of accurate work turned out in a given time. A certain portion of the dictation work should be corrected and written. He believed in frequent tests of speed, as it forced the student to attend to the matter of attending such tests and relieved him of the nervousness resulting from the presence of strangers. After the reading of his paper, he was asked many questions by teachers present, to which he replied in his characteristic way. He suggested several times that possibly an exhibition by a student who had learned in accordance with his method would be more interesting and instructive, but the Association refused to do so.

The following was reported by W. O. Davis, Erie, Pa.

Mr. F. W. Mosher, of Omaha, Nebr., read a paper on "Teaching Shorthand Students to Spell." Discussed by Miss Petraglio, Mr. Hodge, Davis and Piatt.

The subject "Value of Completing the Shorthand Course," was ably handled by Mr. P. B. Peters, Kansas City, Mo. Mr. Peters said that the commercial world demands accuracy; that the pupils are the scales in which the teacher is weighed, and that short-term schools have no standing in the world of education.

The completion of a shorthand education has a value to the student economically, because he can earn higher wages, mentally, because the more he learns, the more his brain is capable of learning; morally, because the consciousness of knowledge brings self-respect. It is valuable to the employer financially, because he can better afford to pay a good salary to a clerk than to throw away even a small sum on an incompetent one. Morally, because the knowledge that he has under his direction of an employer who can be dependent upon him, to do his work accurately, is the best relief to the already overcrowded life of the busy man. And morally, because a jewel of a stenographer would absolutely forestall the necessity of hif temper and propriety provoked by ill-done duties.

Officers were elected as follows for 1902: President, L. A. Arnold, Chicago, III. Vice-Pres., A. C. Van Sant, Omaha, Nebr. Secretary, W. O. Davis, Erie, Pa.

EXECUTIVE COMMITTEE.

TUESDAY, DEC. 31, 91.

C. T. Platt, Holoken, N. J., John K. Gregg, Chicago, III., and Jerome B. Howard, Cincinnati, Ohio.

Appreciation was expressed of the work of the State Secretaries. It was recommended that the Association bear the expenses of the State Secretaries incurred in the interest of the Association, not exceeding the sum of five dollars. Also that the president be authorized to appoint a press agent whose duty should be to prepare a brief and concise synopsis of the proceedings at the end of each day and secure its publication by the daily papers.

The report of the resolution's committee was adopted in its entirety.

Upon motion duly seconded, the Association decided that hereafter no papers would be published in the official organ unless the author was present to read same, or sent the Association an apology for his absence.

The Association also passed a resolution prohibiting the distribution of any advertising or extraneous matter in its meeting rooms.
many more, while a number of bad ones will utterly ruin him; mentally, because the best spur for the tagged mind of the instructor is a eager student morally, because he needs to be kept up to a belief in the grandeur of his calling.

Mr. C. E. Hutchings, one of the leading reporters of St. Louis, read an interesting paper on "What a School Can Do Towards Teaching Reporting." This was discussed at length by Mr. Platt, Mr. Stechi and Mr. Earling.

A paper on "What and How I Should Study Were I to Enter a Shorthand School with a View to Making Myself an Expert Amansusmian," by Mr. J. A. Lyons of Chicago, was well received. Mr. Lyons read a very comprehensive paper in which he dwelt on the following:

"QUALIFICATIONS OF A GOOD STENOGRAPHER." 

Personal Appearance: Cleanliness, neatness, dress.

Natural Ability: Perception—quick, tact, industry, memory, common sense.

Education: English, grammar, composition, punctuation, spelling, reading, handwriting.

Typewriting: Machine, tabulator, card attachment, speed, accuracy, neatness, uniformity of touch, copying, arrangement; envelope, letter, document, mimeographing, carbon copying.

General: Local geography, streets, cities, buildings, postal laws, filing correspondence, copying, indexing, depositing in bank.

Discussed by Messrs. Platt and Miller.

Mr. Arnold, the new president, then appointed the state secretaries for the ensuing year.

Mr. E. N. Miner of New York, recommended Mr. L. A. Arnold, as Editor of the Association Department in the phonographic world and upon the association confirmed the recommendation.

The meeting then adjourned to meet in Milwaukee, one year hence.

Members National Shorthand Teachers Association, Enrolled 1901.

Program of the National Penmanship Teachers' Association at St. Louis.

The meeting from start to finish was a success. There have been larger meetings and smaller ones as well, but never a more congenial one. All did not agree, but the disagreements were not disagreeable. The interest was marked and well sustained. Many well known penman and educators in attendance.

The meeting was held Friday morning by Mr. Zaner, who presided throughout the session.

Mr. J. E. Fish, the secretary, being absent and having serious trouble with his eyes, the president appointed Mr. Healy of New York to fill that position, which he did most graciously and worthily.

After registration of members Mr. Zaner delivered the usual president's address, entitled "The Penman of Yesterday, Today and Tomorrow." He claimed that the penman of today was better educated than heretofore and that the ones to follow must be still better educated. He believed that there are more really fine penmen and more fine penmanship being executed today than ever before. He further said that the penman of tomorrow would be a teacher of commercial subjects and penmanship; a teacher of teachers in normal; a supervisor; or an engrosser, there being a constant and increasing demand for each.

Mr. Robert C. Spencer of Milwaukee, "the grand old man of our profession," discussed the president's message in his usual courteous manner. He disclaimed that the Spencerian was a fifty-two degree system - that it could be written forward, backward, or vertically.

"The Supervisor," by F. F. Musrsh, Lakewood, Cleveland, Ohio, was next presented. The paper was a good one. Among the many sensible things said were the following:

D. L. Musserman, Quincy, Ill.

C. A. Faust, Chicago.

C. H. Allard, Quincy, Ill.

The supervisor in our public schools is a modern innovation. He is among us as a force of circumstances and his office is a medium between the superintendent and the grade teacher. His advent into the public school system marked another step toward the ideal system of public education. He is a product of necessity. First was the need, then the demand, and lastly the individual himself.

Here permit me to add some advice to the young men and women, who are thinking of entering upon the profession of a supervisor.

You must not think that the position is easy to fill. It is not. All persons have not the qualifications for directors or leaders. They must be fitted by nature as well as by training for this especial calling. In fact, few persons make good leaders. I feel that all can testify to this fact.

Young man or young woman, if you find that you have the ability to teach comprehensively, possess a temperate, patient, disinterested, you may develop the qualities of a good supervisor. You will need a gentle bearing, temper, suave manners, a fair degree of tact, and a goodly portion of hard common sense. Some of these qualities you must have by right of nature, others you can cultivate.

To be able to put yourself in the teacher's place is a strong point in your favor. The more the truth, that you are full of the subject you are to present.

If you lack enthusiasm and understanding, your work will be a failure.

A supervisor must know something of all subjects outside of his specialty. He must be liberal minded, progressive, and progressive as well as a man of industry and progress.

Mr. Musrsh favored verticality for children, but thought children under ten years of age should be taught to write. Conditions in public schools are not as favorable as in business colleges for successful writing and therefore business college teachers are, as a rule, too severe in their criticisms of the writing and the teaching of it in the public schools.

He concluded by saying: "Make good writers of your teachers and your pupils will write well.

Discussion followed by Messrs. Spencer, McConkie, Fish, Faust, Hill, Gusbert, Musserman, Plummer, Tamblyn, Allard, and Healey.

Mr. and Mrs. F. F. Musrsh, Cleveland, Ohio, The Bride and Groom of the Convention, though no one knew it but themselves.

Compendium took many a young man from the wood-pile, and it was the ornamental style that did it.

"Why Vertical Writing is a Failure," by A. X. Palmer, Cedar Rapids, Iowa, was next read and received with interest. Mr. Palmer had presented his paper after considerable preliminary rapping, but when he got to it he made things quite lively, as he usually does. He believes vertical writing is a failure, not alone because it is upright, but because it is usually taught by the copy-book method. He thought it was the product of publishers rather than of popular demand or need, and that it was wrong to sell copy-books, which he said cost but two cents each and sell for eight to nine. Naturally, he reaffirmed his faith in the manuscript movement and in slant writing, though he disclaimed ever having taught fifty-two degree writing, or any other particular slant.

Discussion followed by Messrs. Mission, Stiel, and C. S. Chapman. The latter is now engaged in other pursuits, but happened in St. Louis and gave the convention a call. Mr. Chapman is the father of the Western Penman's Association, and therefore of the National Penmanship Teachers' Association, the latter being the outgrowth of the Penman's Association. He delivered a most excellent address on the subject of the laws of developing genuine rapid business writing.

"Vertical vs. Slant, From Business Man's Standpoint," by Cyrus W. Field, Jackson, Mich., in his presentation, Mr. Field believes in slant writing and is not afraid to say so. We hope to present part of his paper at a later date.

"Style of Writing to Teach, and How to Teach It," by C. A. Faust of Chicago, Ill., was the longest and most exhaustive paper presented with numerous blackboard demonstrations as to styles of letters; made descriptive parallels between letters, both capital and small; exercises, etc., etc. Mr. Faust drew from his varied experiences as telegraph operator, printer, etc., to illustrate certain points and to prove that writing is merely habit.

"Speed in Vertical Writing," was then taken up by R. K. Row of Chicago, Mr. Row having been unable to attend, his name having been placed upon the program without his consent. Mr. Row secured seventeen pupils from the New building of St. Louis to give a demonstration as to whether vertical could be written rapidly or not. The pupils came from the grammar grades and had never received instruction except from regular grade teachers. They wrote legibly the sentence: "Our acts our little angels are," within a small fraction of thirty words a minute, comparing the letters to the Wilder. A number repeated the sentence six times in a minute.

The association extended a vote of thanks to Mr. Row, the principal, the teacher, and the pupils for their hearty cooperation.

Mr. Row then answered many of the arguments commonly put forth against vertical writing and copy-books, and all in all met the fierce opposition of "the slants," in a most convincing and gentlemanly manner.
He proved two things: vertical can be written rapidly and rapid writing can be secured from the copy-book and grade teacher.

The following officers were elected for 1902:
President, H. G. Healy, New York City.
Vice-Pres., F. F. Murdock, Cleveland.
Secretary, W. C. Schoppel, Springfield, Ill.

EXECUTIVE COMMITTEE.
C. Z. Zane, Columbus, O.; A. N. Palmer, Cedar Rapids, Iowa; and L. F. Fish, Chicago, III.

TUESDAY.
"Pencilmanship in the Ideal School," by A. E. Parsons, Creston, Iowa, was presented. Mr. Parsons, like Mr. Palmer, is an uncompromising foe of copy-books as well as of vertical. Unlike Mr. Palmer, however, he has nothing to substitute for copy-books but live teachers, and therefore his motives were not questioned. Messrs. Spencer, Row, and others discussed the paper in a cordial manner.

"Spencerian Pencilmanship," its Origin, History, Influence, Characteristics, and Claims, by Robert C. Spencer, Milwaukee. Mr. Spencer's paper was the last paper on the program, but not by any means the least. We print it in part elsewhere; the remainder will follow next month.

Private Commercial School Managers' Association

Reported by J. R. Anderson, Principal, Barnes' Business College, St. Louis.

The second annual meeting of the Private School Managers' Association was called Thursday, December 28, but there being no quorum, no business was transacted. Friday, December 27, the Association was called to order by Vice President, Chas. Miller, President, L. L. Williams, being absent. The minutes of the previous meeting were read and approved.

F. B. Virden, of Chicago, Chairman of the Legislative Committee of the Association, presented his report. It showed that the committee had secured the reversal of the ruling of the court in favor of the trustees of the leading commercial school in New York City, which decided that the trustees had no legal right to maintain an action for the recovery of the rent of one room occupied by the commercial school. The court in its decision gave the following reasons: first, that the trustees had power to make and enforce rules with respect to the use of the school rooms; second, that the trustees had a right to exclude the students of the commercial school from the use of the room; third, that the trustees had the right to maintain an action for the recovery of the rent of one room occupied by the commercial school.

The committee had also been successful in having the law prohibiting the use of the commercial school rooms for purposes of instruction in the commercial schools of New York City, declared unconstitutional and void, and the committee recommended the adoption of the same by the commercial schools of New York City. The committee had also been successful in having the law prohibiting the use of the commercial school rooms for purposes of instruction in the commercial schools of New York City, declared unconstitutional and void, and the committee recommended the adoption of the same by the commercial schools of New York City.

The committee had also been successful in having the law prohibiting the use of the commercial school rooms for purposes of instruction in the commercial schools of New York City, declared unconstitutional and void, and the committee recommended the adoption of the same by the commercial schools of New York City.

RESOLVED, That the Private Commercial School Managers' Association endorse the Underwood typewriter for instruction purposes in schools forming this Association.

While the resolution is official, it is written in such a way as to be acceptable to all schools, and, in the opinion of the writer, the whole proceeding was entirely satisfactory and in accordance with the resolutions of the Association.

No no resolution was held on Saturday, and Monday's session was poorly attended, the only business of importance that was transacted being the report of the committee on membership dues.

Geo. F. Low, the Chairman of this committee, recommended that all proprietors of commercial schools be eligible to membership, and that the annual dues be $10, of which $5 should be paid to the treasurer of the Federation, and $5 to the treasurer of this Association.

After discussion by Enos Spencer and G. W. Brown, the report was adopted.

M. G. Koehnberg, Chairman of the Committee on Reports, reported that his committee had done nothing.

A very interesting paper was then read by T. W. Bookmyer, of Sandusky, Ohio, on the subject, "Proprietary Induce to the Field of High School for the Higher Education of Young Women." Mr. Bookmyer pleaded for a high standard of business methods, and suggested the promotion of the commercial school for the higher education of young women. His methods of getting business must be above reproach, if progressive, and appeal to righteous ambition, not to selfish motives; if essential, appeal unflinchingly, truthfully, to the poor, who holds out dishonorable inducements is unworthy to instruct the young. Honor is disregarded when money-making and money-getting are the chief inducements to the pursuit of commercial training as an inducement to take the work, and he denounces the guarantee of positions, the house-to-house solicitation of students, rate-cutting, and life scholarships. These inducements must eventually have a tremendous uplifting effect on the general standards of commercial training.

President, Enos Spencer, Louisville, Ky.
Vice-Pres., Chas. J. Smith, Pittsburg, Pa.
Secretary, M. J. Kohrbough, Omaha, Neb.

EXECUTIVE COMMITTEE.

Officers were elected as set forth above, and the Association adjourned to meet in Milwaukee. But a very small part of the printed program of this Association was carried out. The few meetings were held at odd times, and it was difficult to keep track of them. Possibly to this cause may be ascribed the fact that no session were there any than fifteen school proprietors in attendance.
Members of the Private Commercial School Managers Association

Convention Squibs.

D. W. Springer.

St. Louis compares favorably with Chicago — for dirt.

The arrangement of the program this year was the best in the history of the Federation. It continued, mornings for sessions, afternoons for general, evenings for fun.

Some definite time should be arranged for the private managers' section. Under the arrangement this year, nobody knew when a meeting was likely to occur and the result was a smaller attendance of the same than at Detroit.

Best meeting in the history of the Federation. Make it still better next year.

Those who came late on the opening night and had not reserved rooms in advance, were obliged to look elsewhere for accommodations. First time it ever happened.

The open meeting, addressed by ex-comptroller of the currency, Charles G. Dawes, was a success. Good theme, good man, good address. St. Louis people did not appreciate it, however, judging by the number present.

More persons got their names on the program and then failed to put in an appearance than ever before. This disease is growing and before long it will be necessary for a rule to be passed as in the National Educational Association, requiring that the author of every paper read shall be present.

Sup't Pearce of the Omaha schools, who gave an address before the body two years ago at Chicago, was an interested listener at the session on Monday.

Ferris, Payne and Winship—an interesting trio of inspirational speakers.

Fewer public school commercial teachers were present than at Detroit. Inquiry developed the fact that many feel that they are not wanted by the business college proprietors, who constitute the majority of the membership. If this is true, it is a near-sighted policy on the part of the aforesaid proprietors.

The banquet was a great success as to numbers, an average as to speakers, a failure as to service. A large number of teachers were present for the first time. Trust you like the sample and will come again.

The banquet hall of the St. Nicholas proved the best place for the general meetings which had been held previously.

The idea of a summer school which should provide courses suitable for commercial teachers was favorably commented on by many of the teachers present. If the proprietors will lend encouragement in the way of providing suitable vacation periods, it is probable that the standard of commercial teachers will be much raised during the next few years.

The hotel lobby was mainly interested Monday evening in discussing the action of the private managers in approving the Underwood as a standard machine, in return for which the Wagner Typewriter Co., agrees to furnish members of the body with the machines at $50 each. Some thought that this action would break the back of the trust and compel them to lower their price. Others were afraid that the trust would become defiant and raise the price to schools. All agreed that it would have some effect upon the situation.

The intervening Sunday was spent by the delegates in a variety of ways. Nearly all attended some church, the mass at the Catholic Cathedral attracting the largest number.

The United Typewriter and Supply Co. organized a pleasant trolley party Sunday afternoon and showed their guests a very pleasant part of St. Louis and the site of the prospective World's Fair.

E. H. Fritch, through whose invitation the meeting was held at St. Louis, made a charming host, ably assisted by his good wife. All were pleased with the genuine hospitality shown.

It is coming to tax the capacity of any business college to entertain the annual meeting.

You would have laughed, and perhaps looked, like this, had you heard Warr at the Federation Banquet.

The suggestion was made at St. Louis that we should make a larger use of the Boards of Trade in the cities where we meet.

The newspapers, especially the Globe Demo- crat, gave the meetings a goodly notice, and it is said that the Chicago papers had more about the meeting than when we met there.

The invitation to hold next year's meeting in Detroit came from the City Board of Education and the only live Mayor the Federation ever saw. This invitation was supplemented from the School and University authorities at Ann Arbor, asking that one day's session be held there. Gov. A. T. Bliss added his personal invitation to the others that Michigan should be privileged to again entertain the body.

The public school commercial teachers held a little informal meeting Saturday at the time the private managers were in session, for the purpose of discussing their peculiar troubles. Sunday the information was given out in the hotel lobby that a camera had been held for the purpose of booming one of their number for the presidency of the Federation.

A. L. Lyons is one of the most popular members of the body and is in every way worthy the condescension which was placed in him by an election to the presidency. The association honored itself more than it honored him in the choice. He has been one of its hardest working members.

Lord was a success as a president, say in one particular—not a meeting was begun on time. Those who felt bad at his election were most ready to give him praise for the mannerly way in which he conducted affairs.

Our Portraits

The pencil and pen portraits in this number were sketched from life at the St. Louis Federation by Mr. Zane.

Regular Features

Many of our regular, artistic, and practical features were omitted in this number in order to make room for the preceding report.

The Dennis Eagle

The Dennis Spread Eagle and Declaration of Independence Design, of which there is an advertisement elsewhere in our columns, is certainly the finest thing of the kind we have ever seen. It comprises a combination of flourishing, lettering, script and neo-gothic, and is worth every cent he asks for it, $20.

Considering the fact that you can get a faithful reproduction of it for one-two hundredth part of the price of the original, we think all of our readers who are not through-bound, and who appreciate excellence in this line, would never regret having given their order for the same. It is a gem of pen art—a masterpiece from one of America's rare geniuses— with the pen.
Commercial Education.

Great has been the progress of commercial education during the past quarter of a century; greater still will be its progress in the immediate future. From a mere, brief course, in bookkeeping of but a few years ago, the high school and the average school has expanded until today instruction is given in commercial arithmetic, law, correspondence, geography, transportation, ethics, history, accounting, etc., etc. The presence of this commercial school, whether public or private, as now comprehended and recognized, is not merely to prepare persons as office clerks and automatic stenographers, but to prepare young men and women to become successful business men and women. True, the first steps are in office routine work, but our boys and girls, or, if you will, young men and women, must be trained broadly and deeply so that they may become something more than automatons. They must lay foundations for correct and independent thinking and acting; they must be taught to grasp problems of commerce and industry; to appreciate opportunity, competition, trade, market quotations and their significance, questions of incorporation, etc.

These new conditions bring new responsibilities. High school in modern times must become an education of ability, both natural and acquired, to grasp and serve the forces of commerce and commercial education.

Believing that the future of commercial education is the financial school, on such a foundation, we shall endeavor to grasp the situation and meet the enlarged condition in the way of publishing a journal worthy the great and growing cause.

To this end we solicit your cooperation in building up the greatest journal of the kind ever dedicated to practical education. By greatest, we mean largest and best. Our ambition is not merely to be better and bigger than our co-workers or competitors, but the best possible.

The Penman's Jubilee.

Next year it is proposed to hold a Penman's Jubilee at Milwaukee, celebrating the semi-centennial of the evolution of Spencerian penmanship. It will be held under the auspices of Mr. Robert C. Spencer, the original of Spencerian penmanship, with the presence and encouragement of many of the best and most splendid men of the typewriting and penmanship world.

Hurray for Milwaukee! Hurray, not for Milwaukee beer, but for Milwaukee the home of Robert C. Spencer, the most beloved man in our profession! Hurray! Hurray!!!

Pleasant Anticipation

In our March number that prince of penmen, F. B. Courtney, will present something concerning the art of typewriting. We know that it will be work well worth some preparation on the part of each in order to fully appreciate it.

Mr. Courtney seems not only able to do what every other penman, living or dead, has done, but he has invented and executed some kinds of work never before attempted by any other originality. His labors seem limitless. Let us advise all penmanship lovers to carefully study his work and learn to fully appreciate his versatility and dexterity.

Don't give up.

FRIENDS:

Your editorials on the education of children have my earnest approval. It is coming home to me now since I have one of my own in school. She comes home with a slave full of good Jackson轮廓 lines, which her teacher is pleased to cut fine.

What is to be done? The average teacher is not better equipped to teach penmanship than when you and I were boys. I am teaching an anti-reform, but often meet with opposition.

Brothers, let us not give up the cause. There is victory before us.

Fraternally,

J. F. CASEY.

The Typewriter

Messrs. ZAXER & BLOSER.

GENTLEMEN: We are duly in receipt of your favor of the 16th inst., and are very much interested in what you tell us regarding the use of the typewriter in connection with primary and elementary education. You certainly occupy a very much more advanced and enlightened position in this matter than many in your line of business. Some people seem to think that the use of the typewriter is of necessity opposed to the interests of good penmanship. We have always regarded the matter in a different light, and we think that any one who will study the matter at all intelligently will soon find the effect of the clear, legible work of the typewriter is almost invariably beneficial upon the handwriting of those using the machine. Even a spitting, illegible signature seems out of place attached to a nicely typewritten letter.

Yours truly,

WICKOFF, SEAMANS & BENEDICT.

Obituary

Mr. C. E. Toles, the widely known newspaper comic and cartoon artist, died the latter part of December, 1901, being but twenty-five years of age. Mr. Toles' work was in constant and increasing demand because it was original, unique, graceful, and always pleasing. This world loses one of its most promising smile provoking artists; the next world gains one. Among we prefer to believe that our talents live as well as we.

Good Words from Mr. Mills

DEAR FRIENDS:

The December number received. You are certainly doing a good work in publishing such a high grade journal as the P. A. and E.

I do not write very many "gushing" things, but I want to say that every number of your paper inspires me to become better in my profession. Our ideals are high, and you are carrying them out in your publication.

These are but few lines, but they are from the heart, and to me they mean much.

With best wishes, I remain,

Yours sincerely,

Rochester, N. Y., Nov. 29, 1901.

E. C. MILLS.
From the Williamsport Sun, Williamsport, Pa., we note that in December the Williamsport Commercial College held its annual reception in the opera house building, with a large attendance. A musical programme was given, followed by dancing. It is, no doubt, an excellent plan to give attention to the social side of life in our business schools, as well as in the academies and colleges of the land.

Mr. C. C. Petrie, recently a student in the Gregg School of Chicago, has been engaged as a teacher in the Rhode Island Commercial School, of Providence, Rhode Island. Mr. Petrie is a very bright young man, who has had several years of teaching experience in the public schools, and we predict for him an unusual success in his new field of work. By the way, Principal A. S. Henney, of this enterprising school, is rapidly building up a very important institution, and wisely surrounding himself with a faculty of conscientious, capable teachers. His many friends throughout the profession will be glad to know of his unqualified success.

The Capital City Commercial College, of Des Moines, Iowa, held its seventeenth annual graduating exercises Thursday evening, December 12. There were sixty graduates from the commercial course, thirty-two from the penmanship course. The principal address was given by the Honorable Richard L. Barrett, state superintendent of public instruction. On the faculty list, we note the names of our friends, W. H. McCaskey, W. F. Gieseman, R. F. Williams, and J. H. Carothers.

"The Southern Student," Abbeville, Ga., Normal College and Business Institute, is sending out the best papers received from the Southern states.

The Mussillon, Ohio, Business College is sending out some very good advertising literature, among which is a college paper.

The Butte, Mont., Business Educator, which represents us very regularly, is one of the best school journals received at this office. It is one of the highest grade school journals published. Newspapers are few, and yet most of them cannot equal the Butte, Mont., Business Educator.

The Minster, Ohio, Business College journal greets us in quite a pleasant holiday form. This school seems to be doing very effective work, and as a consequence is prospering.

The Springfield Business School, Springfield, Mass., issues a beautifully printed catalog yearly. The work done by the business school is shown in the offices and the school rooms, are excellently done. The illustrations are attractive, and the general effect ought to be productive of business.

We have just received, with the compliments of the Lincoln Business College, Lincoln, Neb., a copy of the Lincoln Business College, which you can give your friends. We are a little embarrassed in giving this to you, and they are to be congratulated upon the appropriateness and excellence of the product.

J. C. BRYANT.

Mr. E. P. Kuhl, a former Zanian boy, is now connected with East Allegheny Col-lege, Wheeling, W. Va. We are greatly mistaken, Mr. Kuhl has the material in him of which a great man and a great man he has made, and we predict that he will some day see what he has been working for.

MESSRS. WYCKOFF, SEAMANS & BENCID, manufacturers of the Remington Standard Type-Writer, have issued a new and beautiful souvenir booklet of scenes in St. Louis, re-produced by the photogravure process. It took The Academy of Music, in Philadelphia, one year to do this, and they are to be congratulated upon the appropriateness and excellence of the product.

A. H. EATINGER has charge of the penman-ship department of the Lexington, Ky., Business College.

"Nothingness that we just opened here in September, we have a large school, and a fine class of students," writes C. S. Master, principal Bartlett Commercial College, Huntington, Ohio.

E. P. MILLER, formerly of North Anson, Me., Academy is now teaching penman-ship and bookkeeping, at the Oberlin Business College, Ypsilanti, Michigan. Mr. MILLER is a Zanian boy, and one from whom we believe very much can be expected.

King's Business College, Raleigh, N. C., is sending out a very modern four-page circular.

McPherson, Kans., College, greets us with a fifty page catalog bound in white, with an embossed cover, and quite an attractive design. The catalog is well gotten up, but no better than the school. In fact, not as substantial.

We are happy to report the receipt of a beautifully engraved invitation to the graduating exer-cises of the thirty-sixth class of the Pierce School, Business College, Buffalo, N. Y.

We acknowledge the receipt of an invitation to attend a reception at the rooms of the Williamsport Business College, in its handsome new home, New Year's night.
The above is a specimen of compact lettering by Mr. Carlton V. Howe, of Philadelphia. It is something somewhat original, and certainly very effective. To do it, rule head and base lines for the letters, and suggest them carefully with pencil. Then outline them neatly with the pen, and fill in around with a round or smooth pointed pen, or with a brush.

Mr. Howe does this work very rapidly and very neatly. His name lettered herewith indicates how such work can be done successfully.

### Lessons in Engrossing Script

**Number Two**

Before beginning practice on this lesson, it would be well to review the previous one, writing it carefully and well, as it contains the foundation of nearly all the small letters. Make these letters half an inch in height. After learning to make them well, gradually reduce them until they are the size desired.

The incised part of the shade in should be one-third of the distance from the top, while in e, c, o, and the oval part of a, it should be one-third from the bottom. Raise the pen at the base line and learn to replace it skillfully.

Make the loop stroke of e downward, with a slight shade at the turn. Great care should be taken in spacing. When e follows or precedes, they can be made separately close together.

Study form, contrast, and grace in these letters, and try to make every one contain the essence of beauty. If you fail to secure smooth lines and true forms at first, do not be discouraged, but, with an energy that does not relax, persevere to victory.

J. K. N. - Down strokes too close - turns too angular - lower turns more angular than upper turns. You have made a good start. This will win you more time for practice. Review often. Come regularly and you will win.

"STUDENTS who intend following Mr. Stein's lessons in Engrossing will do well to send a dime to ARTIST, Box 75, MENOMINEE, MICH, for a generous sample of A. No. 3 quality of weed paper especially ruled for these lessons."

---

**FOR SALE**

A Commercial College in a town of about five thousand, good country around it. Just started last fall, fair attendance. Will sell cheap. Reasons, climate and water does not agree with owner. Good chance, care Zaner & Glover.

---

**Mr. and Mrs. C. E. Williams**

Will sail from New York, on the Celtic, February 8th. Have three months' tour in Egypt, Palestine, Greece, Italy, and other continental countries. Here's wishing them the happiest period of recreation that they ever enjoyed.

---

**Another Benedict**

Mr. Geo. P. Thacker, of South Norwalk, Conn., recently entered into a life co-partnership with Miss Kathryn Hurley, of Worcester, Mass. Pupils, teachers, and principal of Brown's Business College, of South Norwalk, Conn., presented him with a pair of handsome moquet velvet rugs. We extend our heartiest congratulations.

---

**H. E. WYGAL, Engrossing Artist**

Copy-Book Script a Specialty. Diplomas, Letter Heads and Resolutions Neatly Engrossed. Card Writing done to order. Write for estimates. Address all orders to 1232 Curtis Avenue, CLEVELAND, OHIO.

---

**E. C. MILLS, 195 Grand Ave., Rochester, N.Y., will send you a short letter, in his business style, fresh from the pen, for 25c. It will be an inspiration to you in your practice.**
BY C. C. CANAN, DUKE CENTER, PA.

plain, clear and open writing is the model handwriting for business and general use. The ornamental writing now used was not evolved from plain writing, but the plain writing is the outcome of changes from the old artistic style of writing. The trend of advancement has been from the ornate to the plain, from slowness to the quickly executed style of modern writing.

We now have many styles of ornamental writing. The engrossing style being very much like the writing of our forefathers who used "a gray goose quill."

No two penmen write exactly alike, although some penmen are skilled in writing the different styles of ornamental writing. It is my opinion that drawing helps the writer of this style of writing, much as much as it teaches him to be observing, while on the other hand, from experience in business schools, I consider the practice of shorthand a detriment to good writing.

We have only to look at the penmanship journals now issued to see the great extent that shaded writing is used by penmen. The writing seems valuable to the penman because it is often the means of giving him added interest in his work, and to judge from the many beautiful specimens that are constantly appearing, he is taking advantage of this to a great extent.

We find that the penmen who have given the most to the profession and who have been of the most use to the world in general, have been followers of this style of writing, and from this alone we conclude that shaded penmanship has been of much use in the past, and we hope for greater things for it from the future.

**Far Superior**

"I am a subscriber to several magazines on penmanship. They are all good, but the PENMAN-ARTIST AND BUSINESS EDUCATOR is far superior in every respect."

**OFF-HAND FLOURISHING**

In white ink on black card-board is the latest thing out. It is clear, attractive, beautiful and up-to-date. It will advertise your school, college or writing in a manner that nothing else will do. Send for a trial order and be convinced. 23x23 inch designs, 3c to 60c, 3c to 90c, 5c to $1, $1 to $1.50, 50c, 25c, 5c, and 10c. They are bold, dashing, artistic, and catch the eye of the passerby. Write today. Circulars free.

M. B. Moore, Box 7, Morgan, Ky.

I am not extended.

To Home.

after January the fifteenth.

3 East Kinney Street.

Newark, New Jersey.

Saturday, December 31, 1901, at Lakewood, Ohio, Mrs. Letitia Sock and Mr. E. E. Musings, Supervisor of Penmanship and Drawing in the Lakewood High School, and Miss Sarah A. Firkins, announce the marriage of her daughter, Miss Sarah A. Firkins, to Mr. William Johnson Trainer, Thursday, December the twentyninth, nineteen hundred and one. Our most cordial well wishes are hereby publicly extended.

To Mr. David Irvin Rowe, Miss Dorothy Neta Herzberger, Married.

Thursday, November the fourteenth, Nineteen hundred and one.

Johnstown, Pennsylvania.

On Tuesday, December 23, 1901, at Ivanhoe, Miss Dorothy Neta Herzberger, of Brazil, Ind., Business University, and Miss Emma Ames, of Ivanhoe, were married. Our best wishes are hereby extended.

E. C. Mills,

195 Grand Ave., Rochester, N. Y., will send you a set of business capitals, arranged in systematic order for practice. For 25c. They are fresh from the pen and will encourage you to do better writing.
Lessons in
Object Drawing

Number Two

BY ALICE A. GORST

The study for this lesson is made up of different materials. The tin is of tin, the hemisphere of wood, and the jar of light-colored, unglazed pottery, and the drawing should be so shaded as to represent these different materials.

The pottery will have the softest lights and shades and the tin the most pronounced ones. In a surface like tin, the lights and shades border upon each other and shade sharply, like the earthy tones of the hemisphere, but the colors remain distinct and not confused. The drawings given show two different styles of technique. In a study composed of curved surfaces it is perhaps a little easier to allow the shading to follow the curve, though it is immaterial, providing results are good. It should be remembered that these drawings have been greatly reduced from the originals, which were from four to eight times as large as the engravings here given.

Wise Counsel.

120 BEDFORD AVE.,
BROOKLYN, N. Y., Dec. 2, 1901.
MESSRS. ZANEK & BLOSER, COLUMBUS, O.
GENTLEMEN:

Just a word to commend your broad, catholic spirit in dealing with penmanship problems. It should mean much to those of your readers who look for wise counsel.

We have too much of the cut and dash work in teaching in these latter days, and too little of the thoughtful training of the "old-timers."

Keep up your good work, and depend upon the friendship of
Yours very truly,
M. J. GOLDSMITH.

J. C. FOWLER, Arlington, Ore.
Will send one dozen black cards, white ink, any name, for $1.25; one dozen white cards in plain or ornamental style, 25 cents; 42 lessons in Business Writing, $1.00. Letter showing style of business writing, free. Work will please you. Order and be convinced.

"Marshall's Corporation and Voucher Accounting," by Carl C. Marshall, published by the Goodyear-Marshall Publishing Co., Cedar Rapids, Iowa, is one of the latest contributions to commercial education literature. It trains the student in the every day details of corporation management and accounting, giving him a fine line of actual practice in just those things that he needs to learn how to do. The course combines commercial accounting with a thorough and practical presentation of voucher and columnar bookkeeping as used by modern business houses. We think that this examination of this new work will at once convince you of its merits and lead you to exclaim, "It is just what I have been looking for." They are also offering a very complete equipment for the work at a very modern price. For further information address the publishers.

Shorthand examinations by Edward A. Cope, published by Isaac Pitman & Sons, number 35 Union Square, N. Y. City, is a twenty-four page booklet of Pitmanic shorthand. The price is twenty-five cents.

BY S. M. BLUE, COLUMBUS, O.
This dashing, white ink eagle-bird escaped from the fertile brain and skillful pen of Mr. F. B. Courtney, Des Moines, Iowa. Certainly Mr. Courtney is one of the trinity of modern flourishers-R. C. D. Brown, Courtney, Dennis. It is difficult to say which is best, as all are masters, and their flourishing has striking resemblances.

The above is certainly very graceful, artistic, and skillful; quite unconventional indeed.

---

Modern Penmanship Publications for Penmen and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

- *Zanerian Theory of Penmanship*—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 196 pages, cloth binding $1.00

- Lessons in Ornamental Penmanship—A work in slip form embodying the $10 mall course formerly given by us, with some extra plates. A thorough and complete work for home learners

- Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical writing yet published $5.00

- Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled $5.00

- Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published $5.00

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address,

ZANER & BLOSER, Columbus, Ohio.
Lettering and Designing—No. II—by E. L. Brown, Rockland, Maine

The original of the accompanying cut was made 16 x 9 inches in size, and it was prepared for a catalogue cover. It is rather neat for the purpose and is worthy of close study. First note the space allowed for each of the parts of the design, and carefully study the form and proportions of lettering and decorative ornamen. Every part of the design should be drawn in pencil first, then traced in ink as previously explained. The light and shade must receive proper attention, otherwise your work will lack strength and character. Observe the lines used and the manner of cross-hatching the same to produce the desired effects. The line shade on the words “Business College” was executed with the aid of a spacing square.

Cultivate originality. It is the originator, not the copyist, who reaps the greatest success. Beginners must do a certain amount of copying, after which they must begin to cultivate their own ingenuity, if they would become successful in this line of work.

W. L. THOMAS,  Pen  Specialist.
TRY MY WORK ONCE.
Memorials and resolutions engrossed Diplomas made with the pen and filled. Invitations neatly executed. Cards one doz. 25c, two doz. 50c. Send 1c for a specimen of my different styles of writing. Address W. L. THOMAS, Box 512, Wichita, Kansas.

E. C. MILLS, 2 bedrand Ave., Rochester, N.Y., will send you 10 lines of fresh from the pen for 50c; lines for 50c; 10 lines for $1.00. The $1.00 package is quite a complete compendium of business writing.

100 fine white

1000 either kind by express $ 1.50

Address, ZAHE & BLOSER, Columbus, O.

The term illustration in an artistic sense means a graphic representation of an artist's conception of an idea, object or incident, and an illustrator is one who executes these ideas whether for himself or another. From the beginning of the human race we read its history from the illustrations by which it has been represented in every age; rude gauzes on the walls of the habitations of the cliff and cave dwellers; carvings on the war implements of the savage; the hieroglyphics of the Egyptians; the Assyrian and Persian bas-reliefs of battles and conquests, on the walls of their palaces, and on the public paths of the Romans, and also their triumphal arches still standing grim and salutary reminders of the faded glory of their builders. And so on through the Dark and Medieval Ages, developing through the invention of movable printing blocks, by the Chinese until it apparently reached a fixed stage in its final perfection by the Germans. Since then the main principles have never changed, although the comparatively recent invention and perfection of photo engraving processes has simplified and lessened the amount of work in the mechanical line and opened greater possibilities and facilities in the way of the artist.

The first and greatest requirements for success as an artist or illustrator is education. It may seem peculiar in the writer to mention this in a paper of the scope and character of the P. A. AND B. E., but it is insisted on more particularly here in order to impress on those who are already availing themselves of its educational advantages to greater industry, and also to stimulate those who perhaps may not have been using their time to the best advantage to greater efforts if they hope to attain any degree of success in this profession. History, works of art, languages and mythology should be assimilated until the student is thoroughly acquainted with the habits, manners, and customs of the human race since the dawn of history.

Now for the equipment: One-half dozen Gillett pens, number 66, two or three quill pens, and a bottle of Higgins American drawing ink (General) or a bottle of Zanerian India Ink, a hard lead pencil, a good rubber, and a tube of Chinese white. For paper use a good Bristol board with a hard surface. Before commencing your sketch remember a good drawing must have the following qualifications; these should be borne in mind throughout the artist's career.

1. Good line quality.
2. Perfect form, (good drawing).
3. Technique.
4. Natural shades and shadows.
5. Good composition.

For the first lesson we will practice on the line. I append below samples of line work which illustrate themselves. No special instructions are necessary until the second lesson when we will take up the second point, perfect form.

The only device by which TOUCH TYPEWRITING can be properly and satisfactorily taught.

PRICE $ 9 PER DOZEN (Prepaid.)

E. C. Mills, 195 Grand Ave., Rochester, N.Y., will send you one dozen cards, your name in either plain or ornamental writing, for 25c. Address lines 10c. per dozen extra.

Address "CANDID" care Penman-Artist and Business Educator.
Lessons in Engrossing—Number Sixteen—By H. W. Ribbe, 181 Tremont Street, Boston, Mass.

Old English makes good headings either plain or with elaborate finish. To practice this lesson draw two compound curves a little less than one-half inch apart, calculate and mark the space for each letter and execute with a No. 1 Sonnecken pen, broad point. Sketch the panels for initial letters very carefully in pencil and finish with a Gillott's 3G pen. In the ornamentation outside of the panels strive to secure a strong, rough and artistic touch. The delicate touch necessary for executing good writing is of no account for such work.

Mammoth Spread Eagle Design! (3 ft. x 5 ft.)
Including the Declaration of Independence
artistically engraved. One of the finest pieces of Ornamental Penmanship executed, embracing Off-hand Flourishing, Round Lettering, Script, Pen Drawing, etc. If you want the original it will cost just $20, but a Bromide reproduction, 12 x 18 in., showing in every detail exactly what the work is, can be had for $1. If you are an admirer of the art you should see it. If you wish to get up artistic designs you need it. If you are not satisfied with the piece and will return it in good condition, your $1 will be refunded.

What MADARAZ says, who knows a good thing when he sees it.

***** The photo of your masterpiece "THE DECLARATION OF INDEPENDENCE" is worth many dollars to young penmen. There is nothing like it to be had at any price, and the student in pen work, who cannot profit by studying it, had better quit penmanship. The round, and free-hand writing, flourishing, simple and intricate lettering are of the highest order of merit. The eagle at the top is a standard, while the portrait of Washington alone is worth the dollar, *****

PENMANSHIP, business and ornamental, including Engrossing; and DR. W. ING, including Designing and Illustrating, are our specialties. We aim to teach these well. As a consequence our pupils are recognized from the Atlantic to the Pacific, from (and including) Canada to the Gulf, and beyond, as among the world's best in their lines. Without doubt the Zanerian has more successful pupils and graduates in the field, earning their livelihood by what they secured there, than any other similar institution. Other schools have started and ceased, but the Zanerian lives and flourishes, year in and year out, simply because it gives practical, timely, valuable, bread-winning information, and because it is looked to by school proprietors all over this big country of ours for successful, skillful penmen, teachers, and artists. Need we say more? For information address us above.

“MAKING BETTER WRITERS” is the Mission of “GEMS”

An up-to-date book on Business Writing, for the use of teachers and schools, or students who desire to improve their penmanship by home practice. Practical, Scientific, Entertaining, it presents an OLD SUBJECT IN A NEW WAY. “GEMS” contains sixty-eight pages. Nine hand plates show every position used in writing. There are twenty-seven drawings on the nine plates.

Full description of each. Twenty Lessons in Business Writing are presented from a view point never before taken by an author. A study of Principles, not Lessons only; it makes writing a fascinating pastime rather than uninteresting drudgery. It has the strongest commendation of teachers and pupils alike. Its aim is to teach—to school the learner in the essentials of penmanship. Anyone desiring to be a better writer cannot afford to be without it.

Price, 50 cents per copy, postpaid. $5.25 per dozen (one order) by express. Postage stamps not taken. Send Postal Money Order or Silver.

Address the author and publisher,
Cyrus W. Field,
President of Jackson Business University.
Jackson, Mich.

CARD PLATE FROM "GEMS"—ONE OF ITS THIRTY-FIVE PLATES.
Spencerian Writing

(Continued from Page 3.)

by business colleges, and presented as illustrations by the Penmanship periodicals; by schools, short and vertical, copy-books and publications, and in most of the copy-books, in use prior to the attempt recently made to change the handwriting of America by introducing a clumsy-English version of the Spencerian Penmanship, and the American imitations and modifications.

Spencerian writing is marked by symmetrical forms, easy and graceful combinations, regularity of letter forms, and by short and graceful turns. Its merits of variations in size, spacing, height of letters and position on the line, adapted to different conditions, uses and tastes. Spencerian capital letters and curved letters, which small letters are taken from the oval or ellipse in nature and from the graceful undulations of vines. The capital forms in Spencerian afford a beautiful variety, pleasing to the eye, belonging to the art of seeking mastery over the pen by training the hand and mind to the expression of ideal impressions by graceful and rapid movements.

Spencerian is a compromise between coarse, round and copy-hand writing and the Spencerian, and represented its principles of both. Its author therefore named it semi-angular writing, until his pupils and the public called it Spencerian, which he adopted, under which title he disseminated his system.

He believed that less curve in the connecting lines and shorter top and base turns gave sufficient legibility and easier and more rapid execution. He dispensed with unnecessary strokes, thus shortening the Spencerian, and through which the pen travels and giving clearness and distinctness to the writing. He dispensed with the heavy down strokes seen in coarse and copy-hand writing, because they were not necessary; the more rapid formation of the letters, impelled movement, wasted nerve force, caused fatigue and gave to the writing a dark and sombre appearance.

The introduction and distribution of shade in writing, he treated according to principles of art governing light and shade, requiring intelligence, taste and skill.

The combining of letters into words in Spencerian is by flowing, continuous movement, avoiding unnecessary breaks and saving time lost by lifting and putting down the point of the pen on the paper.

The Spencerian system is based on the line as the feature of the art in which there is a tendency to vary according to differing conditions, tastes and temperaments respecting which individual liberty should be allowed. The Spencerian system is based on the line as the feature of the art in which there is a tendency to vary according to differing conditions, tastes and temperaments respecting which individual liberty should be allowed. This opposition to Spencerian's philosophic liberty and self-expressive handwriting.

It opposes excessive inclination to the right or left, which tends to illegibility.

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

Portraiture-The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instruction. ...$1.50

Sketching from Nature - A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with fascinating text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth .... $1.00

Light and Shade - A manual on drawing by Mr. Zaner. It contains 40 pages, 9 x 7 inches, of illustrations, and plain, simple, instructive text. It is just what home students need, and what all others who are not at home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. The illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings.$0.90

Pen Studies - A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning, showing the pupil how to make the simplest strokes and to gradually evolve the finished design .......$0.60

The New Zanerian Alphabets - A guide to engraving, containing a great variety of alphabets, designs, such as diplomas, resolutions, etc., with complete instruction. A substantial book bound in cloth. Sample pages of this book will be mailed for 2 cent stamp .......$1.50

Progress-C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches. It is on the finest of plate paper, 22 x 28 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great. "It's certainly a bird" are some of the expressions many have made on seeing it. It's true .......$0.60

The Business Practice Department

Is the Crowning Feature of the Commercial School if it is Well Conducted.

But, unfortunately, there are a great many departments of this kind that fall far short of being what their names imply. The trouble is, that they are not properly organized, or conducted through lack of the necessary facilities.

FIRST, there must be a definite system well worked out to meet the varied conditions of the school room; SECOND, there must be a practical course of transactions for the student to follow; THIRD, there must be a well equipped office department, and FOURTH, there must be good teachers in charge of this work.

WE SUPPLY EVERYTHING BUT THE TEACHER.

International Business Practice, price list No. 5, supplies the system and the organization with a series of suggestive transactions for the students. It also gives thorough information in regard to the organization of the offices.

Business Practice Blanks, Nos. 498 or 499 supplies each student with a complete set of books for work in this department.

We can supply Complete Outfits for any Office or College Bank in Books, any size or style of binding on short notice at reasonable prices. SEND FOR SPECIAL PRICE LIST. We have outfitted a great many offices and business practice departments during the last six months, and our supplies have given the greatest satisfaction everywhere. Correspondence solicited.

EARNEST'S ENGLISH CORRESPONDENCE

Is helping hundreds of Commercial and Shorthand Teachers to train their pupils in the use of good English in speaking and writing. It was prepared for this special purpose. It is not a grammar, but it trains in those things in which grammar school pupils are usually found deficient. Sample copies for examination will be sent prepaid on receipt of the wholesale price, 35 cts.
Mr. E.E. Gaylord,
High School, Beverly, Mass.

Dear Sir:

In reply to your inquiry, I attended Comer's Commercial College in Boston, and was very much benefited thereby. I believe that attendance at a school of this character is a very great advantage to a young man, and if unable to attend during the day, his evenings would be well spent in taking instruction at such an institution of learning.

Very truly yours,

Wilson D. Miles.
Isaac Pitman's "Shorthand Instructor"

"THE TEXT-BOOK OF THE AGE."

"The new Twentieth Century edition of Isaac Pitman's 'Shorthand Instructor' will make
every teacher of shorthand talk. I adopted the Isaac Pitman system several years ago after a
considerable acquaintance with a number of the Pitmanic presentations. I have never regretted
the step—was contented from the first—now I am happy. This new Instructor not only saves
time for the pupil, but it does away with all drudgery and brings happiness into the school.
The introduction of the word signs and sentences at the beginning; the elimination of unneces-
sary rules and exceptions; and the logical and masterly style in which the subject is
presented, places it far in the lead of any text-book on the subject I have ever seen.
I am confident that anyone can now acquire a knowledge of the art in one-third less time than
hitherto. It is bound to be the popular shorthand text-book of the age."—E. E. MILL, (Late

The Eastern Commercial Teachers

Will see in Philadelphia, at the forthcoming meeting,
the incarnations of the commercial spirit, the spirit that
makes business schools successful. But while commercial
training in tangible form may be seen in the great
factories, mills, offices, ship-yards, etc., all will return to
discuss in convention the best
methods of presenting that
part of commercial training that has been reduced to

"Correspondence"

Is one of the subjects for
discussion, and it will be ably
handled by a successful teacher,
but every teacher knows that
this, as well as other subjects,
to be taught with results even
approximately satisfactory,
must be presented from a good text-book. Probably
every important school represented at the convention
will have had some of our publications, and the majority
of the teachers will have had practical schoolroom
papercuts of the helpfulness of our books on Corre-
spondence. No other book on this subject has been
bought so largely as ours have been purchased, and they
receive enthusiastic praise from all who use them. If
teachers who are not familiar
with those books (the text-
books, Letter Writing, and the
exercise book, 25 Graded Les-
sions in Letter Writing) will
send us thirty cents in stamps,
mentioning this advertise-
ment and the school in which
they teach, we shall be pleased
to send them copies of these
books, charges prepaid. The
retail price is $1.65.

Other Publications

Our other publications on
English, Spelling, Law, Arithmetic, Bookkeeping, Shorthand,
Typewriting, and Business Practice, have a very
large and growing sale. Let us send you our free cata-
logue and circulars.

CLEVELAND, OHIO.
Finger Movement

Under the above title, Mr. J. F. Barnhart, of Akron, O., contributed an article to the Penman-Artist and Business Educator. We would advise all who have not done so to read it. It is worthy of your serious consideration because it comes from one who is able and sincere, and because it advances some new thoughts on an old and unpopular subject.

We think Mr. Barnhart is right in his belief that since children must learn to write, and of necessity thereby use the fingers, that some intelligent instruction should accompany such writing whereby the pupils might learn to use the fingers in the most advantageous manner. But we are not sure that this is the time to begin such instruction. We are inclined to think it is too late. Not on the theory that it is "never too late to learn," but because we think the day is near at hand when writing will not be required of pupils during the first years of school.

Therefore, instead of advocating the correct teaching of something which he admits is premature, we think it better to advocate no writing and larger writing during the first years of school life. If larger writing is allowed, pupils will, of their own accord, use the arm instead of the fingers. We think, therefore, it is a case of "let well enough alone" (not a progressive plan in general) and devote our energies to something more in accord to nature and therefore scientific, and which now seems sure to follow—no writing and larger writing. (No writing where it is possible to practice the reform, and larger writing where no writing is as yet out of the question.)

Again, we think Mr. Barnhart is wrong in that he believes that correct instruction as to the right use of the fingers would eventually lead to correct use also of the arm. This would be true were it not for the immaturity of the child's fingers. Immaturity and prematurity are two conditions difficult to correct and overcome by instruction. The reason is that nature's laws have been violated and the result is permanent injury—a condition which can never be wholly corrected or overcome.

The matter of teaching children to write at five and six years of age is like training colts and putting them on the track to make "yearling records." This experiment was enthusiastically tried some years ago, chiefly in California, with the belief that correct training was better than no training. But alas, time proved that the record breakers at one year of age were not the winners at three years of age. Colts allowed to mature before training surpassed in the end those which had been trained from colt-hood. It was a clear case of premature training.

We think we have a parallel case in requiring children to write before they are old enough. And Mr. Barnhart's plan of correct instruction will but result like correct training of colts which were too young to be trained. As a rule, those children who learn to write so well during the first years of school life rarely ever write well later on. Others come to the front and stay there. To our minds, it is clear that there is but one true way to improve the writing of the many, and that is to defer instruction until pupils are old enough to receive and practice it rightly. Finger movement instruction in the beginning and then muscular (arm) movement instruction are but temporary expedients which do not reach the root of the evil, and therefore do not permanently improve the writing of the many, nor do they produce the highest proficiency on the part of the few who become professionals.

Mr. Barnhart in his advocacy of correct teaching of exclusive finger movement to children, and Mr. Palmer in his advocacy of correct teaching of exclusive muscular (arm) movement to adults, represent the two extremes. They are both sincere, but Mr. Barnhart is dealing with immaturity and prematurity, and Mr. Palmer with the consequent evils thereof. There is but one permanent solution: Cease requiring and teaching writing until pupils are old enough to write rightly, which would be from eight to ten years of age, and then so much excessive movement training in the grammar grade and business college will be unnecessary.
Lessons in Rapid Business Writing

BY

16 GRAND AVENUE, ROCHESTER, N. Y.

Number Six

Instructions, Plate Thirty

Always drill first on movement exercises before starting the regular copy work. Make the reversed oval retracing exercise as it will aid you in getting the correct movement for the capitals in this plate.

Make the R, and the B quite full through the first part of letter. The top part of this first oval should not be made too narrow. Close the space up pretty well through last part of letter. The upward stroke seems to be a help to most students in getting a good start for the P, K and B. Think good forms and then write rapidly with the muscular movement.

Plate 30

140 A A A A A A A A A A A A A A A A
141 Reunion Reunion Reunion Reun
142 Remember world makes the penman,
144 Be Be Be Be Be Be Be Be Be Be Be Be
145 Banner Bannister Banner Ba
147 Be sure you are right, then write.
Instructions, Plate Thirty-one

During our practice on capital letters we should go back occasionally to the small letter exercises and give them a thorough review. Tone the movement down and see that the pure muscular movement is used in making these. Arrange your work exactly in the same manner as shown in the copy. Finish the work by turning the paper lengthwise and write across the lines and writing without using any ruled lines whatever. Keep lines of exercises same distance apart.

Instructions Plate Thirty-two

Those who have been following this series of lessons carefully have perhaps noticed that but few different styles of a capital have been given. In fact, we have adhered very closely to but one form of capital. Where a number of different styles of letters are given the student will usually try them all and will gain but very little. We believe in making our copies as well as our instructions definite and to the point. It is better to learn one good form of letter in a thorough way than to practice on a great many and then not be able to make any one well. Make the figures and commercial abbreviations small and use a light movement.
Instructions, Plate Thirty-three

These copies will be found very practical as they embrace cities, places, etc., of well-known reputation. Practice these names with care and make a study of each one. Keep work uniform.

Instructions, Plate Thirty-four

Here we have the practical forms used in business letters. Too much time cannot be spent on such practical work, but stop whenever the movement becomes cramped or sluggish and review the exercises often.

Try to make your work look well. Study the little things that go to make up a well-written page. Do not make your loop letters too long, or they will conflict with the writing on the next line.

I can guarantee anyone a good handwriting who will carefully follow the instructions and who will practice in a faithful manner.
On this plate we cover both the loop letters and the semi-extended letters, and on the first line we have words beginning with each of the semi-extended letters, t, d, p and q. These letters should be only two spaces high from the base line, in other words, twice the height of the small letters. In practising on the words containing loop letters, see that you make the loops all the same height and width, and do not allow yourself to diminish the size of the letters as you get nearer the end of the word. In writing words containing loop letters below the base line, always make the loops long enough to bring the letter out distinctly, and by that I mean not less than one and a half spaces in length, but by no means should they be made so long as to interfere in any way whatever with the small writing on the line below.

terminus dominant premier quantum
linoleum balmoral hamlet kerosene
jasmine yeomanly grandeur zinnia
fathom fragrant fourteen frequent

The figure 7 is merely a straight line not more than one space in height and proper slant. You should learn first to make a straight line before going to the next figure. The figure 4 is made very nearly square; follow the copy as closely as you can. The 6 is the only figure that is made more than one space in height from the base line. The 0 is simply a small oval and is made exactly the same as the small o in writing. Stems of 7 and 9 should extend about one half space below the base line. The oval part of the 9 must always be closed at the top. Having practiced quite a good bit on the capital Q it will not be necessary for us to say anything about the construction of the figure 2, for it is made exactly the same, only very much smaller, one space in height. The upper part of the figure 3 should be about one third of the size of the lower part. The finishing stroke of the 3 should be connected with the first downward stroke, and both should be perfectly straight. The figure 8 may be made by making the long left curve first, or by making the horizontal left curve first, it makes little or no difference where you begin. However, great care must be taken to see that you cross the lines one-half the height of the figure.

66666666 00000000 77777777 1234567890
222222 33333333 55555555 33333333 235235
88888888 1234567890 1234567890

The "dollar" sign should always be made small. Make the s first, then cross it by means of two parallel lines which should begin a little above and extend a little below the s. Some years ago this sign was always written in plain letters a, but instead of using the small a, a single line or parallel lines are used now. The small character used to represent "cents" is made about one-fourth the size of one of the small letters. It consists of the small c and a short, straight line cut through it. This character should always be placed above the base line. Our next character means "at" or "ton," and consists of a small a one fourth regular size, and enclosed. Our next abbreviation is "of account," both letters a and c may be placed on the base line, or it may be written in the shape of the character of "per cent." The character used to represent "per cent." should never be used any other way than this copy. The first "naught" or small o, one-fourth regular size, should be placed one space above the base line, while the one on the right side of the stem should be placed on the base line. A very serious mistake is frequently made by making both naughts too large. The next abbreviation means "care of," the small c being used instead of the small naught, otherwise it is the same as the "per cent." mark. In practising make the figures only one-fourth regular size.
We have given for practice, words containing the thirteen minimum letters.  Be careful to maintain turns where there should be turns, and angles where there should be angles.

Watch the spacing closely between letters.  The spacing between letters should be a trifle wider than in letters.  Then, too, the spacing between words should be a trifle wider than between letters.  Just how wide is immaterial.  Just so two words do not appear as one, or that there is so much space between words that a letter or word seems to have been omitted.

Be careful in finishing the letter w in the word win so that it does not look like va.  Be careful also in finishing the letter v in the word trim so that it does not resemble ve.  The word iver is not an easy one because the tendency is to loop the last part of r or to fail to loop the last e.  Write and rewrite these words until you can make the r without an open loop, and the v with a white space in the center.

Be careful to close the a at all times, and to keep the finish of it high so that it does not resemble a.  To make the letter o, you must use a real, rolling motion.  A rolling motion will not only make it nice and rounding, but will also close it.

Be careful to drop to the base line at all times with the second part of a so that it will not resemble a.

In all of this work use an easy, graceful, rolling movement.  The fingers may be used a little, but they should not be used to excess.  The power should come from the arm.  If you wish to learn to write an easy, graceful hand, you must practice with a free and flowing movement.  Therefore do but little work slowly.

The angle of the paper may differ widely with different individuals.  Some persons find that they can do the best work with the paper held parallel with the table, while others find that they can do their best work with the paper held parallel with the forearm.  We usually find it best for all to hold the paper somewhere between the two extreme positions.  In other words, we think most persons can do best with the paper turned at a slight angle, not unlike the position used by a great many people for slant writing.  Each one of you should determine for yourself the position that enables you to write the best hand in the easiest manner.

**Criticism**

G. T. R.—You are on the right road.  Don't ride the pen on the down strokes.  Keep turns rounding and angles sharp.  Greater ease will aid you later on, therefore strive for it now.
General Miles.

In an interview, several weeks ago, General Miles told a newspaper reporter that at one time it was a toss-up as to whether he should be a journalist or follow some other occupation. He decided that he was attending a Boston Commercial school, and was sent by the proprietor to take a position in the office of The Boston Herald, but, after considering the matter, he decided not to take the position.

The Editor of The Business Educator wrote to the General, requesting the name of the school that he attended and asking him to express his opinion of the value of commercial training. The letter on our cover page is the sequel.

Inquiry developed the fact that, General Miles, while at Comer's Commercial College, paid most of his expenses by assisting in the janitor work and by making himself generally useful. Some time after declining the Herald position, he entered a store, and, while there, enlisted for the Civil war. Certainly it is not a little to the credit of American Commercial school methods, as well as to inherent pluck and ability, that the commanding general of our armies and probably the greatest Secretary of the Treasury within fifty years received their school training (General Miles is not a West Pointer) under commercial teachers in business colleges. All honor to George N. Comer and Nelson A. Miles; to Robert C. Spencer and Lyman J. Gage.

Mr. Williams Replies.

Mr. Editor:

I am not sure that I am expected to make reply to the criticisms of Dr. Herrick, Dr. Scott, and Mr. Crissy on my paper which was read at the Detroit meeting of the N. E. A., and which appeared in the November issue of your journal. If I may be permitted, however, I will say a few words.

There should be no doubt in the mind of my friend, Dr. Herrick, that every graduate of a university school of commerce must begin in business exactly where the commercial school graduate begins—as a clerk; and I do not see how he can expect him to climb the ladder of promotion faster than the commercial school graduate can who had a thorough high school course on entering the commercial school. The situation seems to resolve itself into a question as to which would be more valuable to a young man, a head full of trigonometry, medieval, modern and American history, and economics, which Dr. Scott says are needed as a foundation or preparation for his more technical courses, or the experience and knowledge of business which he would acquire during the period which would be required to pursue Dr. Scott’s preparatory studies.

Two Young Men—An Illustration.

Suppose, for the sake of argument, that two equally bright young men left a high school at the same time and at the same age. One entered Dr. Scott’s school of commerce and spent three or four years with his course of study, and the other entered a good commercial school where he, within eight or ten months, acquired practical knowledge of bookkeeping and business office methods, became expert in figures, secured a graceful and rapid handwriting, cultivated the ability to write a good business letter, became familiar with the law of commercial paper, agency, partnership, etc., and at once secured a place in a good business house, which he could do without question, because such men are always in demand. Is it supposable, that when the young man from Dr. Scott’s school of commerce came along at the end of three or four years, and secured a place in the same house, which I believe he would find difficulty in doing, because his attainments would not be so readily available to the house, is it supposable, I say, that the young man from Dr. Scott’s would be promoted faster than the other? Would it not seem that the experience that the business college boy had acquired during the two or three years in which he had devoted to the business would be more valuable to the house than the knowledge of trigonometry, medieval, modern and American history, etc., etc., which Dr. Scott’s young man would bring to the business? It will be urged, perhaps, that the man from Dr. Scott’s has secured better discipline than the other; but has he? Has not the experience of the commercial school graduate disciplined him in the most effective manner? Which discipline would be more valuable to the house, and hence to the possessor? What is education, anyway? Is it knowledge obtained from books alone? Is mental discipline obtainable from books only? I would a thousand times prefer the experience, the grasp of conditions, the ability to bring things to pass that the leaders in the commercial world have who are not college graduates, than to possess all the knowledge that all the universities in this country, and the world besides, afford. Many of our leading business men who began at the lowest rung in the ladder, with next to no education, have not only achieved commercial success, but have become familiar with the world of literature, are attractive public speakers and connoisseurs in art, and while they are ignorant of the most of Dr. Scott’s course of study, they are better and more liberally educated than they would be if they had it all.

The United States Has Commercial Intelligence.

I still insist that it is absurd to blindly imitate the business methods of France and Germany. Taking into account the long commercial supremacy of England, France and Germany, and the fact that America is a new country, and until very recently has been too busy developing and satisfying her own markets that she has had no time, inclination or capital to cultivate foreign markets, together with the present condition of our foreign trade, it seems to me we are getting along very well indeed without German and French instruction in business customs and methods. The anxiety which is felt in all European countries regarding their hold on the market and the future of their industries, is a further proof that there is no apparent reason for the adoption here of French and German ways.

I cannot agree with Dr. Herrick that “the success the United States has had is due to her productive power rather than to commercial intelligence or organization.” England should be able to construct a bridge or make railroad iron cheaper than we, as she has had much longer experience, but she can not, because of the superiority of American business intelligence, business energy, and business organization. American contractors can underbid all England in the matter of a bridge to be constructed in Egypt and complete it in one-half the time. English contractors require for the same work. Isn’t that a compliment on the superiority of American intelligence and organization? Dr. Herrick wants to “add to an equipment for being a productive nation a preparation for being an exchange nation.” A little patience will enable Dr. Herrick to see all this. The exigencies of the case demand such governmental encouragement of our merchant marine as foreign governments have afforded. Business men
are clamoring for ship subsidies, not for university schools of commerce.

TRUE EDUCATION IS FUNDAMENTAL, DISCIPLINARY AND TECHNICAL.

Dr. Herrick says he had hoped that we were beyond the time when one institution should be limited to matters disciplinary and another to matters technical. He could not do either carefully, I said, "A part of the education for all special activities must be fundamental, a part must be disciplinary, and a part must be technical. Even schools that supply the first, the secondary school and the college the second, and the professional school the third. It must be admitted, however, that all courses of study, whether elementary or professional, are disciplinary." Practicing professionally is also disciplinary; work is disciplinary. It will be seen that I place no such limit on the work in any school of any sort, as Dr. Herrick thought.

Dr. Herrick says also that I have got to show that there is no disciplinary value in the study of the economic history of England before I have a right to inveigh against it as an unnecessary course of commercial studies. I shall not attempt to show anything of the sort, because I believe such study has disciplinary value, but I do not believe it has sufficient value to justify yourself in the time which it would involve, because just as good discipline may be secured from branches which have more intimate relation to the living present, and much better discipline may be obtained from businesses which have no relation to itself.

Dr. Herrick must admit, I think, on more mature reflection, that his statement, that he "has known graduates of engineering schools who have been so frightened that they shortened their term of apprenticeship and became in the end superior workmen," is not a well made point, as higher commercial courses manifestly do not furnish a skilled and proficient apprenticeship in business affairs; the commercial school much more nearly does that.

DR. SCOTT'S STRANGE LOGIC.

Dr. Scott finds but "two classes of critics of the university commercial courses." so far as he has investigated, he means, I assume, the two classes of commercial opposite- tor whose educational advantages have been so limited as to make it impossible for him to appreciate the meaning of a university course of any sort, and whose conceptions of modern commerce are so little, if anything, more than bookkeeping, stenography, type-writing, and office routine. The other is a certain type of business man who, either through good fortune or self-education, has achieved a certain consistency in the course of a business life, and has come to believe that no training except that obtained in business itself is necessary for the prospective business man, or whose business experience has been so small and limited a scale as to render impossible his appreciation of the real problems that confront the people who are engaged in the great industrial enterprises which constitute the characteristic features of modern times. It is most proper, of course, to discuss the question of university commercial courses with either of these classes. In other words, the commercial school properly properly constitute the composite of which are fairly educated, although they have not all enjoyed the blessings accruing from university training, many of whom have given the best thought of their nature lives to the training of those men who will conduct business pursuits, and have been close students of the requirements of business, and some of whom have had quite extended and varied business experience; and those men who, handicapped though they have been by limited education, have achieved conspicuous success in business and are today leaders of commerce, are utterly incapable of appreciating the real problems which confront the people who are engaged in the great commercial enterprises. The men who are the most experienced in those great commercial problems are the graduates of obscure colleges, who have had no business experience, but who have read books. It seems to me that this is the logic of Dr. Scott's remarkable statement.

Indeed, Dr. Scott says in terms that "Naturally the only persons really competent to solve these problems are the people connected with the universities, who, at the same time, in the commercial world, are the men who, according to the modern business world and its needs." Isn't that refreshing? Comment would seem to discredit the intelligence of your readers. The case may be covered up by a quotation from the song of the theoretical sailor in Pinafore:

"Stick to your desk and never go sea, And you may become a ruler in the Queen's navee."

IS "GOING TO COLLEGE" A FAD?

By esteemed friend, Mr. Crissy, and I cannot differ very widely as to the kind and extent of the idea that he or I should have who contemplate business careers.

Mr. Crissy must have had sufficient experience with college graduates to know that the knowledge they have acquired is not only good business, but that the mental discipline they have had is not so much better than would have been secured during the same period in a good business house. We have had many college graduates who have been more bright and most diligent students they have uniformly been, but nearly all of them have become commercial teachers instead of having gone into business. A number of the exceptions have been those who have not been engaged for them in advance. If they have not positions in business ready for them on completing their course of study, and must seek employment, many hesitate about beginning at the foot of the ladder, as the boy who has a high school and a commercial school education expects to do. Hence their opportunity to secure a start, which must precede a foothold which in turn must precede success, is lost. Mr. Crissy and I will agree that college training is very valuable to professional men, although several of the brightest and most successful lawyers and seventeenth of the septuagenarians never saw the inside of a college. Is it not true that three-fourths of the young men who go to college, expecting to become business men, would better spend the four years in the schoolroom and get started in business? Again, isn't "going to college" in large sense a fad? And hasn't "college education" become something of a fetish?

It is true that Mr. Crissy has but one serious criticism to make on my paper, which is that it is entirely unsatisfactory and perhaps discouraging attitude toward the pioneers in this country of higher business education. After reading Dr. Scott's paper in your November issue, I was looking over the paper and your column, when I discovered the following paragraph at the top of page 6 of That is, in fact, a statement which will not find favor with the public. Therefore, it is quite evident that in the case of a company, even more than in that of a private firm, the entire profits should not be taken out of the company. In such a case, there is, of course, a limit to the practical advantage of leaving
funds in any one business, and that limit is reached only when it is found that it cannot be profitably employed therein; yet in most instances an increase of working capital means an increase of profits, and it would therefore seem wise to set apart certain of the profits each year for the purpose of creating more working capital. Various terms are applied to a reserve, such as Reserve Fund, Reserve Account, Surplus, Margin and Rest. The writer has a preference for the term Surplus Fund. 

**"PAPER RESERVES"**

The numerous failures that occur show conclusively that a large Reserve Fund will not in itself serve to ward off disaster, hence the unfortunate shareholders hasten to express their views as to the ungeniuness of the "paper reserves." In many cases the argument is plausible, and in many cases the very opposite. (See below, Investment of Reserves.) With regard to such items as goodwill, patents, etc., it can be seen that a Reserve Fund represented by such as these may be shattered at any time by a lowering of the company's standing, non-utility of patents, etc. The Reserve in but few cases can be depended on to represent the amount indicated; it may be more or less subject to the ordinary risks of fluctuation from day to day. It will be readily seen that their existence depends upon the "realization" of the assets. The misapprehension of the public as to the disposition of undivided profits might lead one to suggest that they be entirely divided among the shareholders and so shift the risk to the shoulders of each individual shareholder. "The fact that the division of profits up to the hilt is universally regarded as a weakening of a company's position ought to be sufficient to show that undivided profits—no matter how employed—are an undeniable source of financial strength." The following Journal entry would be required to dispose of the matter properly:

PROFIT AND LOSS ACCOUNT, DEC. 31, 1901  

Expenses, etc., of the year's business ........................................... $2,000 00  

Reserve for Depreciation ...................................................... 240 00  

Reserve for replacement of Fixtures, etc., ................................ 50 00  

Reserve for bad debts ................................................................... 340 00  

Net Profit carried down for appropriation ................................. 8,010 00  

$8,750 00  

Interim Dividend No. 25, 6% ........................................ $3,000 00  

Present Dividend No. 26, 6% .................................................. 3,000 00  

Reserve Fund 3% of Capital ...................................................... 150 00  

Balance (unappropriated) carried down ................................. 610 00  

Gross Profit for year from Trading Account .............................. $8,750 00  

Balance from last year ............................................................ $12,000 00  

Net Profit for year brought down ............................................... 6,910 00  

The balance, $8,750, represents the portion of undivided profits to be carried to next year's account and will be treated at the end of the year the same as the $2,100 shown above. This amount may, if desired, be carried to an Undivided Profits account. The "interim dividend," is a dividend paid in the middle of the year on the strength of the anticipated gains; the books must not be closed or reports made at the time. It is the custom with many companies to pay dividends in this way.

**RESERVE FOR DEPRECIATION**

The balance, $8,750, represents the portion of undivided profits to be carried to next year's account and will be treated at the end of the year the same as the $2,100 shown above. This amount may, if desired, be carried to an Undivided Profits account. The "interim dividend," is a dividend paid in the middle of the year on the strength of the anticipated gains; the books must not be closed or reports made at the time. It is the custom with many companies to pay dividends in this way.

**SPECIAL RESERVES**

As stated, a Reserve Fund is an amount set aside to meet unforeseen contingencies; a special Reserve is a sum set aside and "ear-marked" to meet a known or special contingency. Certain companies have a "special reserve" for the purpose of meeting losses which will eventually be found to have arisen in respect to bad and doubtful debts, depreciation of property, replacement of machinery, etc. From the general misapprehension of the meaning of Reserves it seems necessary to state emphatically that these special Reserves are not Reserve Funds at all, and should not be appropriated for any other use than that for which they were created. They are created by an equivalent charge against Profit and Loss Account, while a Reserve Fund is set aside from profits and charged to Profit and Loss Appropriation Account. The following brief statement may exemplify more clearly the points under discussion:

**MACHINERY AND PLANT**

Dr.  

Cost .................................................. $15,000 00

**RESERVE FOR DEPRECIATION**

Cr.  

Ten percent, written off Machinery and Plant ........................... $1,500 00

The preferable method:

**MACHINERY AND PLANT**

Dr.  

Cost .................................................. $15,000 00

Balance ............................................ $13,500 00

Less 10%, for depreciation .................................................... $1,500 00

Balance ............................................ $12,000 00

$1,500 00

**RESERVE FOR BAD AND DOUBTFUL DEBTS**

This is an account of great importance. It represents an amount set aside to meet any losses that may occur in respect to bad debts. In nearly every business there is more or less credit given, and this necessarily implies certain losses from time to time. Losses may not occur, yet it is a wise plan to make due provision for them in case of necessity. It is undeniably a hard matter to tell just how many of the customers are likely to cause a loss; nevertheless, the best plan is to provide a certain per cent. of the aggregate book debts as a reserve to meet the loss should it occur. If any losses occur they should be debited to this account; or if many are likely to prove worthless during the year it might be advisable to charge them all to Lost Accounts, and at the end of the year close the total into the Reserve for Bad Debts Account. On the Balance Sheet the amount set aside should be deducted from the total book debts, but in the Ledger it appears on the opposite side. See appended Balance Sheet, following will illustrate the accounts in the Ledger:

**ACCOUNTS RECEIVABLE**

Dr.  

Taken from Individual Ledger .................................................. $9,800 00

**RESERVE FOR BAD DEBTS**

Cr.  

Two per cent, for possible loss .............................................. $196 00

A similar account may also be opened to provide for discounts on book debts.

**SECRET RESERVES**

These are sometimes created by large financial concerns, such as banks and insurance companies. The reader has possibly noticed that some institutions of this sort declare the same rate of dividend year after year whether the business for the year be good or bad; also that the gains are likely to show an increase when in reality there is a decrease as compared with the previous year. The reason for this is quite obvious; but in case the gains are exceptionally large,
what is done with the excess? It is true the extra gains in prosperous years are sometimes distributed among the employees and stockholders in the form of bonuses, but this is not always the case.

The object of all secret reserves is to equalize dividends, apparent profits, as above stated. If banks and similar institutions publish their accounts showing considerable fluctuation in the amount of profit earned, the result might really cause a feeling of discontent which actual facts did not warrant. To obviate this possibility the Secret Reserve is counted upon Reserve are formed, by understating the value of property in prosperous years, or by maintaining at cost investments which have permanently increased in value, or by the entire omission, from the Balance Sheet, of assets which should be included. The fact of assets being written down in prosperous years will contemplate the possibility of their being written up in less prosperous years. This practice is more harmful than understating assets, for it causes a secret deficit, while the former causes a secret reserve. The practice is not commendable, though opinions differ greatly as to the extent to which it is permissible.

Investment of Reserve Funds

Assuming that it is desirable to create a Reserve Fund, the question arises as to what should be done with the surplus assets thus represented. Shall this fund be retained in the business to provide more working capital, and help to swell the profits, or shall it be specially invested in gilt-edged securities to fall back upon Reserve are formed, by need when — as was pointed out — it is difficult to raise working capital by other means. If all the resources of a company are confined to the particular business engaged in, the share holder have all their money embalmed upon a single venture, and they will be in a bad position if anything goes wrong. When the surplus assets are invested the Reserve Fund remains as a credit in the ledger, and the amount of cash so invested is debited to an account called "Investment Fund" or "Reserve Fund Investments." The amount so invested may remain intact while the Reserve may disappear entirely by direct losses or depreciation of assets.

As to whether or not a Reserve Fund should be specially invested depends largely on the nature of the business. In a Financial Institution it would undoubtedly be advisable to have it invested in good securities or investments, though in the case of a Trading concern the opposite would appear to be preferable. If the extra funds were not required, it would certainly be well to invest them, but by retaining them the working capital is thereby increased, and it is self-evident that the gains must of necessity be greater.

The following Balance Sheet will briefly illustrate a common method of treating the several Reserves.

**Balance Sheet, Dec. 31, 1901.**

**A Little Foundation Lesson for Commercial Geography**

W. F. GIESSEMAN

Try drawing a map of the United States in a rectangle nine by fifteen, divided into thirds each way, and see how easy the outline fits into the diagram. Begin with the east coast of Maine one-third down a division, New York City one fourth of the way in on a division line, Charleston half way in on another division line, the south point of Florida half way, Gulf coast near New Orleans half way up a division line, south point of Texas half way across, the Rio Grande River crosses a division line half way up, etc. Chicago is at an intersection, other points are easily located as per illustration.

After the map drawing has served its purpose of impressing form, outline, proportion and location of the most important places, it will be still cleaner and quicker to purchase outline maps from a publishing house. These are useful for marking important routes of travel, areas or sections of products or principal industries, etc., in fact a general basis for the essentials and details of Commercial Geography or History of Commerce.

**General Information**

The United States is one hundred and twenty-five years old, has grown in area about eight fold, from 420,592 (Colonies), to 9,826,000 sq. mi. (Alaska and new possessions.) The population has increased 1800%, from about 4,000,000 to over 70,000,000. The mileage of railroads from a beginning in 1830 has grown to nearly 200,000, enough to circle the globe eight times. The natural resources have been utilized to such an advantage that the country has grown from poverty to material prosperity until the United States is one of the few civilized countries that is more than self-sustaining. In other words, it can grow or make all the things that are needed by all her people for their welfare and pleasure, and have a large surplus to spare. The common people, the poor people, fare better, earn more, live more comfortably, than those of any other people on the globe.

Statistics are dry matter except to the person who is hunting for them, but a few facts in this connection are enough to kindle a desire for more and a wish to seek such information in some of the many places where it can be found.

The foreign export commerce of the United States has just passed the billion and a half point, surpassing even that of England. Our imports are a little more than half this sum, and the aggregate commerce is estimated at thirteen times the sum of the two.

The leading exports reach enormous sums, as follows: Cotton 2,252 millions; provisions 185 millions; wheat and flour, 141 millions; iron and steel, 122 millions.

The leading imports are: Sugar and molasses, 101 millions; hides and skins, 58 millions; chemicals, 51 millions; coffee, 51 millions; silk, 46 millions. The total commerce, Great Britain ranks first; United States, second; Germany, third; and France fourth.

In ten years, the exports of Locomotives have grown from a half million to four millions, or 800%; iron, 17 to 65 millions, 400%; Agricultural Implements, 2 to 6 millions, 300%; Leather, 10 to 20,000 millions, 1000%.

The New York High School of Commerce

[We are indebted to Mr. A. R. Kip, of the Brooklyn Commercial High School, and to Dr. C. A. Herrick, of the School of Commerce of the Boys' Central High School of Philadelphia, for the data from which the following report is compiled.—Editor.]

On Saturday, December 14, 1901, the cornerstone of the new building for the New York High School of Commerce was laid, in the presence of about one hundred people. The size of the assemblage did not, in any way, indicate the importance of the event, because it is the beginning of an epoch of commercial education in this country. Addresses were to have been given by Ex-Mayor Abram S. Hewitt, and Andrew Carnegie. Mr. Hewitt was unable to be present because of ill health and the fact that it was very stormy. He sent a letter in which he said:

"The necessity for a School of Commerce has been so apparent that the Chamber of Commerce of this State, in connection with the trustees of Columbia University, have formulated a plan for the creation of such an institution, which, it is my hope, will be developed in the building of which the cornerstone is laid today.

"The time has arrived when American youth ought to be trained to perform the difficult duties which heretofore men of foreign education have performed in our midst.

"I am particularly solicitous that the burden of carrying on the school shall be taken up by donors, who will consider it a privilege to maintain forever the centre of
A Packard Teacher in the Ottoman Empire

MR. EDITOR:

At last Mrs. Murray and I are in Constantinople, College has opened, and we are fairly settled in our Eastern home.

But what to say of the thousand and one things that have occurred since we left New York is a question. As I look back over the two months intervening between the present and the time we left New York, it seems quite kaleidoscopic, so much has happened in so short a time.

Well, to begin with, the ocean trip was a mountain high. However, we had a fairly comfortable voyage, as our vessel was of sixteen thousand tons burden and first-class in all her appointments. A sea voyage is so full of rest and delight, notwithstanding rough weather and sea sickness. We enjoyed our ten days at sea very much indeed, yet the shores of Merry Old England looming into view was a welcome sight.

We spent a little time in both London and Paris, though much less than we desired, for there is so much to see in these world-centers. From Paris we went to Switzerland, staying a few days in Lucerne and making the ascent of the Rigi. What an exhilarating experience is this climb of nearly six thousand feet to Rigi-Kulm! We were favored in having perfect weather, so that we saw a sunrise and a sunset in all their unrivalled beauty. The Alpine glow, the panorama of mountains, valleys and lakes, the soft notes of the bugler’s horn, the lofty height, filled us with exquisite delight. There, above the noise and din of the bustling world, in the clear atmosphere, among the rugged peaks whose summits were covered with the “eternal snows,” we could reflect upon the greatness of the Creator, the finiteness of man, and the glory of Nature.

We journeyed on by easy stages to Innsbruck in the Austrian Tyrol, and to Vienna. We spent Sunday in Innsbruck and enjoyed very much its invigorating mountain air, its interesting inhabitants, and the famous cathedral containing the tomb of Maximi- lian. The railway ride of thirteen hours to Vienna was delightful in the extreme. For a great part of the distance we went through mountains, along narrow valleys, whose precipitous sides towered thousands of feet above us, past strange mountain villages and through a country wholly un

like any we had seen before. Vienna we found to be a city of many attractions. Its beautiful monuments, its magnificent palace, its many picturesque public buildings, its arcades and modern stores are sights well worth seeing.

In the early morning we boarded a steamer and sailed down the Danube to Budapest. We were disappointed in the trip, as the water is not nearly so grand as we had been led to believe, though from Linz to Vienna it is said to be most charming. Budapest is a fascinating city, situated as it is in the heart of Europe. We learned that the people are of such a different type from the other European nationalities: they are musical in the extreme, quick to imitate modern methods of business, hospitable, and extravagantly fond of pleasure and elegance. Its hotel service is unexcelled, and our stay in Hungary, though very brief, was filled with the keenest delight.

But what an experience was our trip from two years ago, when we found that our limited use of French was of no service especially, for the trainmen spoke German, Hungarian, Turkish, Bulgarian, Greek, and a perfect babel of tongues by which we knew not to understand more and more did we find the service very satisfactory. Our meals were served in our private compartment, and our berths were large, comfortable and airy.

The countries through which we passed,—Serbia, Bulgaria and Turkey—were so barren and the people were so wretched that we were considerably depressed by the sights. We had the unfortunate experience of being roused from our slumber one hundred and fourteen years ago. The oxen were treading out the grain, and the men were winnowing it by throwing it into the air, the heavy grain falling straight down and the chaff being sent rolling away by the whirling wind. The sun was shining, the trees in the country districts, either fruit or shade, and the facilities for cultivating the soil were as primitive as in the days of Abraham and Isaac. What these people need is an education and a government giving protection to life and property.

As we approached Constantinople, we saw the turbans and fezes in greater and greater abundance. Entering the doors of the Greek church in their flowing robes of black, the multitude of soldiers in their gay costumes, the veiled faces of the women, and the scene before us, permeating every- thing, greatly interested us.

We had planned to go by Constanza on the Black Sea, but could not do so on account of the plague said to be raging in Constantinople; consequently, there was no one at the station to meet us. Immediately upon getting out of the train we were surrounded by a howling mob of a dozen nationalities who wanted to carry our baggage and show us the way to the hotel. We finally secured a guide from one of the best hotels, and he piloted us through the Customs, and to our hotel. Our books were detained to be requiring a consent of every article, but without any difficulty.

Our baggage had all been examined on the frontier the night before. In a few days we got our books, though one of them, a guidebook, which we did not expect to get. The Customs endeavor to suppress any publication that speaks ill of Turkey. Even the letter “M” is sometimes thought to stand for Mohammed, so the book in which it appears, though a work on Mathematics, is seized. However, the ordre of getting through the Customs is not nearly so hard as we had been told.

(Continued on Page 26.)
The Corner-Stone of Business Success

PAPER READ DECEMBER 27, 1901, BEFORE THE NATIONAL COMMERCIAL TEACHERS' FEDERATION AT ST. LOUIS, BY DR. ORRIN S. MARDEEN, EDITOR OF "SUCCESS"

Business men might differ as to the corner-stone of their success. Some might say that originality in method was their corner-stone; others might say, enterprise; others, good goods; still others, fair dealing or system. But if you dig right down to the foundation of any real, permanent business, you will find that it is founded upon character, the solid qualities of manhood. A business, a firm, a manufacturing concern, may be said to have character, individuality, but it is only that of the men who make it up. Its policy, its rules, must be formulated and shaped by the men who direct it. They put their impress on the business and the public with whom it deals, learns to know it as reliable or tricky, according as the men are.

A MAN TO TIE TO

What I want to impress upon you, teachers of our future business men, is that a knowledge of bookkeeping and banking customs, of commercial arithmetic, the commercial law is not all that is needed to make a successful business man or woman. All these are needed, and much other knowledge, but there must be a basis of character. It would mean much if all these teachers, working in all parts of this great country to train young people for business, would improve their opportunity to impress the constant need of business integrity, sappiness honesty, absolute reliability, that can come only as the expression of high character. This quality, which we sometimes speak of as characterizing "a man we can tie to," is always a basis of character. A bond of this sort will win an honest treasurers, and men who are themselves full of trickery will appreciate a sturdy, honest character. In fact, there is no place, no matter how remote, where an honest character is not appreciated. A little story of an Indian trader illustrates this appropriately.

Some Indians shopped about the store of a new trader and examined his goods, but offered him no business. The chief then visited him. "How do you do, John; show me your goods. Am I to take a blanket for me, and calico for squaw, three otter skins for blanket and one for anco, uh; pay you by him, then take the skins, and left. On the next day he returned with a large part of his band, his blanket full of skins. "Now, John, I pay you. He drew from his blanket four otter skins, one after another, lifting them in his own hand. After a moment's hesitation, he drew out a fifth, a rich and rare one, and laid it on the counter. "That's right, John." Pushing it back, the trader replied, "you owe me but four, I want only one more." They passed it back and forth between them several times, till at length the chief appeared satisfied. He put the skin back in his blanket, motioned to another trader, and then, stepping to the door, cried to his followers: "Come, come trade with the paleface, John. He no cheat Indian, his heart big. Then, turning to the trader, he said, 'Suppose you take last skin; I tell hief you. No people name trade with you. We drive off others; but now you be Indian friend and we be yours." Before dark the trader was

waist deep in fur, and had his till well filled with cash.
Even untutored savages recognize an honest man and confide in him.

DOUBLE STANDARDS OF HONESTY

In the ethics of many business houses, there are two brands of honesty: The one, very elastic in its application, marked "for business purposes;" the other, none of the pliable or elastic quality, being reserved for home and social use. The business man, and the man in private life, often seem to live by two different standards. Governing themselves by this double standard of honesty, men do not hesitate, in business transactions, to resort to methods which, in private or social relations, they would not, or could not, or "immoral." But if they are troubled by any qualms or misgivings in regard to their commercial rectitude, or the immorality of any particular act, all questioning is set at rest by the formula: "It is customary every one does it." Yet the Good Book says, "Go not with the multitude to do evil."
Many business men would gladly use only the home brand of honesty, if they

would be hard to give a lesser definition of self-deception or hypocrisy.

MODERN SINFULITIES

In these days, many employers require some deception, a certain compliance with the existing order of things, a certain shutting of the eyes to defects and little irregularities and customs. They say competition demands this policy, and that these practices are so common, that we have come to regard them as something to be tolerated almost with open protest. How many a clean and pure boy has gone into some establishment with the dread of his master; never heard of, and training fresh upon him, with a high sense of honor, with character strained, only to fall into the snare of the keen, long-headed business of the firm, to whom the boy had learned to look up with awe and respect?

Oh! the havoc caused by the lowering of the standard, the dropping of the high ideal!
The boy was at first shocked by the question of methods of his sharp employer, but seeing around him many of these, he learned that in a great city there are two standards of morality, that almost any means which will result in a sale are deemed permissible.

How it hurt his tender conscience at first; how he shrank from the first little provocation; how his conscience reprimanded him the first time that he told a customer that the silks were made in France when he knew they came from England, or that the labels marked "foreign" on the bottles were made in New York; that the "pure imported olive oil" was really cottonseed oil, that the wines made in France were woven in the borders of the druggist made in a New Jersey factory. But the example of a rich master, the jeers of shop mates, gradual practice in misrepresentation, cure this malady. His first fight, to save his master's sake; and then, his master's for his own sake. He opened an account with ruin. Yet what wages will ever compensate him for the loss of his moral health? He heard little silences about, and shuddered about the shrill trahs, and he soon proposed to himself a brilliant, even if an unscrupulous career.

AN ILLUSTRATION

"If I hire you," said a Detroit grocer to a boy who had applied for a job. "I propose you will do as I tell you?" "Yes, sir," "If I told you to say the sugar was high grade when it was low, what would you say?" The boy did not hesitate a minute. "I'd say it," he replied, promptly. "If I told you to say the coffee was pure, when you knew it had beans in it, what would you say?" "I'd say it." "If I told you to say that the butter was fresh, when you knew it had been in the store for a month, what would you say?" "I'd say it." The merchant was nonplussed. "How much will you work for per week?" he inquired, very seriously. "One hundred dollars a week," he answered, in a business-like tone.
The grocer came near falling off his stool. "One hundred dollars a week?" he replied, in astonishment.

"With a percentage after the first two weeks," said the boy cooly. "You see," he continued, "if I were to come high, and, if you needed you in your business, you've got to pay them the price. Otherwise, I won't come back. This is the deal. The boy caught the grocer at his own game, and got the job at three dollars per week.

Can we wonder that, with such models before them, our young men and women be led, and crooked in their view, and adopt false ideals and standards?

(Concluded in April Number)
Second Class Postal Rates for Regular Publications of Private Business Colleges.

The most important matter now being considered by the Private Commercial School Managers' Association is that of second-class postage for their regular school publications, which was granted them by the act of July 16, 1894. \textit{While} the ruling of the Post Office Department to the effect that "incorporated Business Colleges are not regularly incorporated institutions of learning within the meaning of the act of July 16, 1894." has caused almost every Business College paper to be denied the right of mailing at second-class rates. Every one at all conversant with the matter, knows the ruling to be unjust, and without any foundation whatever. In the department there have been several abuses of the second-class rates, but we fail to know of a single instance wherein Business Colleges have abused the privilege. The department claims also that the second-class rates are the causes of the deficit in the department. The real fact of the case is that the larger the amount of second-class matter handled, the less the deficit. The following figures show that if the department had encouraged and fostered second-class matter, instead of hampering it by arbitrary decisions, the deficit would soon be wiped out. The record for four years of the number of pounds of second-class matter handled, and the deficit, is as follows:

<table>
<thead>
<tr>
<th>Year</th>
<th>Pounds of Second-Class Matter</th>
<th>Deficit</th>
</tr>
</thead>
<tbody>
<tr>
<td>1897</td>
<td>3,000,000 lbs.</td>
<td>$1,000,000</td>
</tr>
<tr>
<td>1898</td>
<td>2,000,000 lbs.</td>
<td>$500,000</td>
</tr>
<tr>
<td>1899</td>
<td>1,000,000 lbs.</td>
<td>$300,000</td>
</tr>
<tr>
<td>1900</td>
<td>500,000 lbs.</td>
<td>$500,000</td>
</tr>
</tbody>
</table>

This shows that if the second-class matter could have been increased during the year from 500,000 lbs., there likely would have been no deficit.

Another way in which the deficit can easily be gotten rid of is by re-adjusting the rates paid railroads, cutting them down to the rates they would express for like service. The government pays the railroads 1c. per lb. for carrying the mails, the express companies pay 2c. per lb. for carrying their freight. It costs the railroads as much to carry the mails as it does to carry the mails. It is merely a question of hauling a certain amount of weight.

The government pays $5.74 per ton for mail from New York to Buffalo, the express companies pay $8.00 per ton, yet charge the same service. One line of railway received $8,575.75 per annum for the rent of four cars which could have been built in the best modern style for less than $7,000. Cars that rent for $8,000 are charged to the government for $7,000 per annum. One Post Master General estimated that a saving in rent alone of $1,000,000 could be made by the government owning its cars. The abuse of this privilege is an enormous leak. There are a few of the instances that should have the attention of the Post Office Department and are the "milch in the milkhouse." These are some of the facts.

The Legislative Committee have an agreed case now pending before the U.S. Court at Washington, D. C., on which we hope to get a decision at an early date. They have also employed legislative experts who are watching the action of Congress, and are looking after our interest in every way. We hope to get an amendment passed by the present Congress that will place the act of July 16, 1894, beyond the possibility of an adverse ruling by any officer of the department.

The Private Commercial School Association is actively at work along several other lines and desire to keep in close touch with all private Business Colleges in the country. We trust that every school manager that has not yet done so, will send his annual dues of $5.00 at once to Mr. G. G. Rodbrugh, Secretary and Treasurer, Omaha, Nebraska. Every private Business College should belong to this association, and take an active part in its work. We shall be glad to hear from any private school proprietor or manager at any time with suggestions, and if anything comes up in any state that needs the attention of the association, we trust the fraternity in that state will refer it to us.

Respectfully,

Endis Spencer, Pres.
Louisville, Ky.

MR. STAY AT HOME

Since seeing our report of the Federation, now feels very, very sorry he did not go to St. Louis, and will be sorrier still if he does not go to Philadelphia.

Resolutions.

The following resolutions were adopted by the National Commercial Teachers' Federation, St. Louis, Mo., December, 1901, and ordered printed in the various school papers:

1. The National Commercial Teachers' Federation, in annual convention assembled, herewith voices its renewed confidence in Commercial Education as a means of fitting our youth for capability in the practical affairs of life and for worthy citizenship in our matchless Republic.

2. We offer our congratulations to our professional co-workers throughout the land, to the business and industrial public, for the useful education everywhere, upon the recent movement among the educational authorities of our great cities and our higher institutions of learning toward the practical recognition of that department of educational training which was inaugurated by the private business schools of this country, and for which, for half a century, they stood as the sole supporters and exemplars, often under the stigma of an association of those who assume leadership in the educational thought of the country.

3. The delightful season of social and professional intercourse which we have enjoyed during the present assemblage in this city, inspires us to urge upon the members of our profession everywhere and upon all other workers in the field of practical education, the desirability of attending the future meetings of this body, and of contributing by their presence and counsel to the value and usefulness of the same.

4. We view with favor and favor the formation of state and other local organizations of Commercial Teachers, believing that the same are conducive to the cultivation of a desirable fraternal spirit, to the improvement of schools in their methods, and to the advancement of the cause of Commercial Education.

5. While we strongly favor the uniting of our efforts through the formation of local associations, we especially condemn any tendency that might arise to disunite these bodies toward discrimination against small but worthy schools, or to any interference in the individual methods of any school, so long as these are not flagrantly unprofessional or dishonorably conducted.

We hereby record our earnest protest against the recent arbitrary and extra-parlour ruling of the Attorney General of the United States for the effect that the incorporated commercial schools of this country are not "Institutions of Learning" within the meaning of the United States law which ruling un如有 deprives them of the benefit of certain comprehensive amendment that was confessedly passed especially for their enrolement, and of which they have availed themselves for nearly eight years. The commercial schools of the United States do not ask for governmental aid in conducting their business, but they do demand the right to disseminate their educational literature through the agency of the United States Mails at the same postal rates as all other educational institutions, and they especially insist that, by the terms of the Manderson-Hainer Act of July 24, 1894, which act has never been repealed (this right to send their periodical publications through the mails at the same express freight rates as was especially conferred upon them, and that the interruption of this by an executive department of the government is unjust, arbitrary, and illegal: and we hereby pledge our united efforts to carry out these requirements, and we protest against the removal of the stigma that has been wantonly put upon our worthy profession by the arbitrary and uncalled for pronouncement of a government official.

The resolution of our present, successful and enjoyable meeting we hereby tender our thanks individually and collectively to all who by their unselfish and tireless efforts have contributed to its success. We furthermore pledge our hearty encouragement and co-operation to the officers who shall have in charge the work of our organization for the ensuing year and we promise that by attendance at its meetings, and rendering every possible means to the cause of education, we will endeavor to advance the interests and welfare of this Federation.

Wants the Best

"In my estimation the PENMAN-ARTIST AND BUSINESS EDUCATOR is the best publication of its kind that has ever come under my observation; I have discontinued the other paper I was taking because I want the best," writes C. W. A. Anderson, Goodmantown, Minn.

Philadelphia.

There is no other city in the East that has the advantages of Philadelphia for a convention of commercial teachers. Beginning with the thrifty William Penn, and continuing with Robert Morris, Benjamin Franklin, Stephen Girard, Anthony J. Drexel, George W. Childs, John Wanamaker, Wm. L. Elkins, and P. A. Widener, it is notable for a class of business men of large influence, not commercial, but constructive capacity. Philadelphia is sometimes called slow, but it is distinctly superior to our greatest city in the number of its libraries, churches and schools, and in the number of its hours of workingmen. In its commercial exchanges, associations, and trade leagues, it is easily the foremost city in the United States. Philadelphia business men established and now largely maintain the Commercial Museum, than which no single private organized movement has done more for the manufacturing interests of this country. Here is the first important national exhibition, advertising the resources of the nation; here is the largest commercial high school in the world, the largest private business school in the world, and the first school of our largest commercial city to establish a Cordy for the study of commercial problems. Within two hours' ride of Philadelphia there are probably more commercial teachers than within an equal distance from any other group of cities. One commercial teacher, and these teachers are all taking a deep interest in the March meeting, which will undoubtedly be the largest gathering of commercial teachers yet held. No commercial teacher within 300 miles of the Philadelphia Commercial Cordy will peremptorily lose his best interests.

Information Trips

FAIRMOUNT PARK. This famous park containing 3,500 acres, was the site of the Centennial Exposition of 1876. In the park is Memorial Hall, a permanent memorial of the Centennial, costing $2,000,000. It contains in one of its buildings, the Museum of American Art, and in another, the Philadelphia Museum of Art, which is a part of the Philadelphia Museum of Fine Arts. The park may be seen, also, the Washington Monument, an imposing memorial costing $750,000; a fine equestrian statue of General Grant; one of the most attractive Zoological Gardens in the world, and a great number of very interesting historical buildings. Among the latter are William Penn's house, erected in 1693; "Mt. Pleasant," once the estate of Benedict Arnold, and later the home of the famous Benjamin Franklin. The beautiful Horticultural Building stands on the side of "Landsdowne," the fine country place occupied by King Louis Philippe, of France, who was living in exile in this country. The Schuylkill River and Wissahickon Drives are nationally famous for their charming natural beauty.

Government Institutions

The POST OFFICE is a splendid edifice of granite, the most expensive building of its kind, probably, ever erected by the government. It cost $2,500,000. The LEAGUE ISLAND NAVY YARD is a very interesting place to visit. The government has recently decided to make it one of the largest submarine bases in the world, and the scene of extensive building of repair shops and excavation for a large new dry dock, and work on government vessels. Well informed tourists always visit this institution. The EXCHANGE is a very old, in a penal system, from all others in this country, that there are no shops. Convicts work, eat, and sleep in their cells, not coming into contact with fellow prisoners in shops or halls, but where prevented by lack of space, and number of convicts to be provided for, each convict is given a separate cell. The prison consists of a central building from which corridors radiate like the spokes of a wheel. An arrangement of mirrors enables a watcher at the center to see the entire length of each corridor. When brought into the presence of each other or of visitors, a prisoner wears a mask so that his identity may not be known.

Educational Institutions

The UNIVERSITY OF PENNSYLVANIA, one of the greatest educational institutions of our country, was founded in 1720, by a company of broad-minded men, chief among whom was Benjamin Franklin. It broke away, in a measure, from traditional methods of commercial education, and since maintained a reputation for aggressive, practical work. Commercial teachers will be interested chiefly in the Wharton School of Finance, which is the foremost school of commerce and its higher commercial training. It was well-engaged in this school that Prof. Edmund J. James, made his instructive report on "Commercial Education in Europe," which has had a strong influence on the movement for commercial education here.

DREXEL INSTITUTE, founded by Anthony J. Drexel, the famous banker, will be visited by all commercial teachers who have not seen it, for it is the tangible expression of a great business man's belief in practical education for both sexes. Its home is in a beautiful building well worth going many miles to see, and it is under the control of the Department of Commerce, Mr. F. M. Hersh, will personally welcome visiting teachers.

GIRARD COLLEGE, founded for the benefit of poor orphan boys, by the practical and far-sighted Philadelphia mariner and merchant, Stephen Girard, is already internationally famous. The main building is an imposing edifice of Corinthian architecture, one of the finest examples in the Western Hemisphere. 50,000 boys pay regular attendance at this great school. President Pettoroli has given the members of the E. C. T. A. a special invitation to visit the school Thursday, Mar. 27. No one who misses this interesting part of the trip.

The CENTRAL HIGH SCHOOL building is a magnificent structure that cost $500,000. It is undoubtedly the finest high school building in the United States. It is four stories in height, with a basement, and it occupies practically all of a block 186 feet wide by 366 feet long. A great astronomical dome surmounts the roof of the building. This tower and dome is occupied by the Philadelphia Astronomical Observatory, and this will be open to visiting teachers. Almost everything conceivable in modern educational appliances may be found here. It is a boys' school, and there are nearly 1,100 students. Every commercial teacher will be interested to visit the School of Commerce in this institution, over which Dr. Cheesman A. Herrick presides. The school will be in session Thursday, March 28, and we shall personally welcome visiting teachers. We urge all members of the E. C. T. A. to visit the Philadelphia City Hall.

The GIRLS' COMMERCIAL HIGH SCHOOL is a great institution, and it has none of the attractive buildings. It should be visited, nevertheless, for its faculty of thirty-three teachers instruct annually more than 1,000 girls, who are preparing for commercial life.

Public and Historical Buildings

The PHILADELPHIA CITY HALL is said to be the largest municipal building in the world. It cost more than $300,000. It has a large, prominent, an impression of William Penn, a 50-foot figure, affording a remarkable view of the great city.

The BOURSE is a splendid building erected at a cost of more than $2,000,000, where the various Exchanges Commercial, Maritime, Grocers' and Importers. Drug, Lumbermen, Coal and Iron are housed, and where numerous Associations find a home, among them the Hardware Merchants and Manufacturers, the Board of Trade, the National Association of Manufacturers, and the Board of Trade. Its main room can accommodate between 4,000 and 5,000 persons. It is a great central exchange, typical of those of commercial Europe, and is the result of a thorough business education to visit and inspect it. In its splendid restaurant, on the eighth floor, the E. C. T. A. banquet will be held Thursday evening, March 27. The Minstrel Show at the Saxon Hall on the same night will afford some great banquets, but the Philadelphia banquet, and the famous dinner after dinner to the Rev. Russell H. Conwell will run the standard to the top of the mast.

The PENNSYLVANIA ACADEMY OF THE FINE ARTS is the oldest art institution in America, and one of the most noteworthy. The beautiful building, in which is a valuable collection of paintings, cost $640,000. Here are to be seen the best productions of our great American artists, Benjamin West, Charles Willson Peale, Gilbert Stuart, and Washington Allston. The Managing Director has written to welcome members of the E. C. T. A. to this point of interest.

INDEPENDENCE HALL, with the adjoining buildings, is of deep interest to every liberty-loving American. Every commercial teacher will want to see the room where the Declaration of Independence was signed, and the Liberty Bell which rang out the glad news, "proclaiming liberty throughout all the land.”

CARPENTERS’ HALL was the meeting place of the first Continental Congress. Its walls had they tongues, might tell of the eloquence and wisdom of Washington, Henry, Lee, and Randolph, all of whom were members of that first Assembly.
Sectional Meetings

Friday Morning, March 29, 1902

Commercial Section

W. R. Sherman, Vice-President, Will Preside.

10:30—Plan and Methods of Teaching Correspondence, W. J. Amos, Philadelphia.

12:00—Luncheon served by the Ladies of the Temple.

Friday Afternoon

1:00—"Business Teaching Customs in Connection with Bookkeeping," R. J. Shoemaker, Fall River, Mass.

1:30—Discussion.

2:00—General Discussion

2. "Do We Teach Bookkeeping as It is Practiced?" H. M. Rowe, Baltimore, Md.

3. Topic to be announced, S. W. Merritt, Norristown, Pa.

Program of the Meeting of the Eastern Commercial Teachers' Association.

March 25-26, 1902

To Be Held at Temple College, Philadelphia, Pa.

Thursday, March 27

9:00—All A. M. Address of Welcome, Ex-Governor Robert E. Pattison. Response, K. J. Shoemaker, Fair River, Mass.

11:30—President's Address, E. E. Gaylord, Beverly, Mass. Announcements, including itineraries.

12:30—Luncheon—served at the Temple College.

Thursday, March 28

Trips No. 1 to 6 inclusive. Start from the Temple at 1 P. M.

The Park

9:30—Trip No. 1, Leader, T. P. McNemar. Points of Interest: Washington Monument; Schuykill River Drive; Grant Monument; Zoological Garden; Penn's House; Welsh Memorial, Temperance Fountain; Memorial Hall; Horticultural Hall; Wissahickon Drive.

Public and Historical Buildings

9:30—Trip No. 2, Leader, F. R. Heath. Points of Interest: City Hall; U. S. Mint; Sub-Treasury, Independence Hall; Carpenter's Hall; Betsy Ross House; Bourse.

Industrial Establishments

9:30—Trip No. 3, Leader, W. J. Amos. Points of Interest: Baldwin Locomotive Works; Atlantic Kellinery; Cramp Shipbuilding Co.

General Meeting

Friday, March 29, 1902

Shorthand Section

F. K. Moore, Vice-President, Will Preside.

10:30—Symposium:

2. "To Whom Should It be Taught?" J. E. Gill, Trenton, N. J.

3. "How?" J. E. Fuller, Wilmington, Delaware.

12:00—Luncheon served by the Ladies of the Temple.

Friday Afternoon

1:00 P. M.—"The Stenographer in Demand," John F. Soley, New York.

1:30—Teach Typewriting. "Its Possibilities and Limitations," Chas. N. Miller, New York City.

2:00—"A Fad and a Failure," Wm. Hope, New York City.

2:30—General Meeting

Public Institutions.

Trip No. 1. Leader, T. H. M'Cool. Points of Interest: Academy of Fine Arts; League Island Navy Yard; Academy of Science; Eastern Penitentiary.

Educational Institutions.

Trip No. 5. Leader, J. N. Holdsworth. Points of Interest: University of Pennsylvania; Drexel Institute; Central High School; Girard College.

Business Schools.

Trip No. 6. No itinerary has been thought best, for these institutions will welcome visiting teachers at any time. Points of Interest: Pierce; Palmer; Mc-cool; Banks; Union, etc.

Thursday Evening

6:30—Social Hour.

6:30—Banquet, followed by Dr. Russell H. Connell's celebrated lecture, "Acres of Diamonds?" The banquet will be held at Boldt's in the Bulitt Building.

Friday Morning

Sectional Meetings.

Friday, P. M.; Sectional Meetings until 2:30 P. M.

Friday Evening

2:30 P. M. "Commercial Education as Demanded by Modern Conditions," by Dr. J. L. X. Hunt, Asst. Sup't., N. Y. City Schools.

5:20 P. M. Business Meeting; election of officers, etc.

Friday Evening, March 29

Public meeting in the Auditorium of the Normal School for Girls. Mr. John H. Converse, President of the Baldwin Locomotive Works, President.

7:30 Symposium: "What Business Education Means."

(a) To Private Business Schools, J. A. Luman, Manager of Pierce School, Philadelphia.

(b) To High Schools, Allan Davis, Principal of the Business High School, Washington.

(c) To the Universities, Chas. DeGarmo, Professor of the Science and the Art of Education, Cornell University, Ithaca, N. Y.

(d) Business Education and Our Foreign Trade. Theodore C. Search, President of the National Association of Manufacturers, Philadelphia.

Saturday Morning, March 30

At the Philadelphia Commercial Museum, 9:00, Inspection of the Exhibits and the Bureau of the Museum, with expert guides.

"What is Commercial Geography?" Dr. W. P. Wilson, Director of the Commercial Museum.

"A Working Method of Teaching the Raw Materials of Commerce," Dr. Chas. S. Delloy, Professor of Science and Geography, Central High School.

Adjournment.
The hotel Lafayette is a symposium for conferences and conventions. It has more than 200 rooms, each of which is individually decorated. The rooms are spacious and comfortable, and the staff is friendly and helpful. The hotel is located in the heart of downtown Philadelphia, close to many of the city's attractions.

The magnificent terminal stations of the Pennsylvania and Reading railroads are within walking distance of the hotel, as is the headquarter's hotel, and right in the center of the business district.

Many teachers will be disappointed in not being able to hear John Wannamaker speak during the convention, but it was not possible to obtain him, as he was in Europe at the time the program was completed, and there was no certainty of the time of his return. But next to the pleasure of hearing him speak will be the pleasure of listening to the one who may have gone into the planning structure of the hotel, its original freight house— which is the home of the famous Wannamaker store.

Some of the commercial teachers should organize an exciting outing for the teachers of the four Philadelphia regions beneath the Betz building.

If you have any money that you desire to keep, do not go to Leary's Old Book Store at 451 and Market streets. It is the largest second-hand book store in America, if not in the world. We ought to get a good fee for this reading notice advertisement if the opportunity is too good for some book lovers and the privilege of hearing the President of the Association is said to spend all of his cigar money at this old place.

There will be no apprehensive, suffering persons at the banquet this year, as there will be no after-dinner speaking, except what is done by the Rev. Mr. Conwell, and he has spoken his piece three thousand times during the last forty years, so that it will cannot be exceeded. He will certainly offer the chairman of the banquet committee an extra dollar for "value received" after you have heard Conwell's "Acres of Diamonds."

The Temple College was organized in 1918 by Russell H. Conwell, the now-pastor of the Baptist Temple at which he has gone from Boston, in 1882. The college enrolled young men of unlimited annual and its regular courses: it has 65 instructors, all college men, and the officers of the business to improve their education. Its liberal policy and its large commercial department, backed by the work of the chairman of the Banquet Committee, is worth while, the selection fittingly the E. C. T. A. should have there.

Mr. Conwell used to be a practicing lawyer in Boston, and in his lectures he refers facetiously to the "practicable" in treating his practice and gone to preaching. When he took charge of the Philadelphia congregation it numbered 3,14 now it numbers 200, and tickets are necessary for admission to its growing audiences. He has erected the beautiful granite buildings which are known as The Baptist Temple and The Pennsylvania School for Women as a public lecturer may be inferred from the fact that he has been paid $25,000 and all expenses for Mrs. Conwell and himself if he would agree to make a six months' tour of England. He traveled in India as a correspondent for the "Christian Science Monitor" and is now on his third trip through the Civil War with distinction: was left for the dead at a field hospital, was taken prisoner at another, and has seen life in most of its varied aspects. It is a long time since Mr. Conwell has failed to enjoy in being permitted to hear, without cost, this famous speaker and worker.

Professor Charles DeGarno is one of the business men. He is a retired soldier. He comes from one of the greatest families, and his message will be worth while.

Mr. Theodore Search is probably the foremost business man of this city today, as the advocate of a vigorous policy regarding commercial education. He and his associates have been successful in the highest quarters. His annual addresses before the National Association of Manufacturers have been illuminating with bright para
tons of business life, and the present one, which is an outline of educational training as one of the conditions of success in business, will be eagerly sought after by the public. His message will be a treat to hear.

Mr. J. A. Looman, the enterprising manager of Peirce School, probably the largest private business school in the world, has been qualified to represent the private business schools in the Friday evening meeting. Peirce School, it will be remembered, has made a practice of having at its graduating exercises, such national figures as Andrew Carnegie, Benjamin Harrison, Thomas B. Reed, Chancellor Dewey and Grover Cleveland. Its conservative policy and its marked success make it fitting that it should be represented at this meeting.

This meeting will afford an excellent opportunity for the National Business Managers' Association to meet. Many of its members will be present and they will certainly have as good an opportunity to hear the Rev. Mr. Conwell as was granted to them at the St. Louis meeting. We understand that President Enos Spencer of the National Association of Teachers will also be present and will have an opportunity to hear the Rev. Mr. Conwell.

Dr. Cheeseman A. Herrick, of the Philadelphia Central High School, has been most helpful with fertile suggestions in planning and organizing the Saturday evening meeting, and exceedingly effective in bringing the right points of the Friday evening meeting, one of the most powerful全新旧材料的be available in discussions on such topics, which some to the older members, often bored with the new.

If we mistake not, the "Yes," and the "No," and "Mr. DeGarno" will make a hit up the animals. Those who have attended previous meetings know that Mr. DeGarno is a hard hitter, and if one doubts the ability of Mr. DeGarno to care for himself, he need only cross-verbally express his thanks to Mr. DeGarno, who is a gentleman to have his temerity become "Mr. DeGarno" for "a hot time" with all the accessories.

It will be a battle of the giants when Zane, Collins and Flickinger get together on Peckham; then there will be "Mr. DeGarno" and "Mr. DeGarno". Each will have his turn, and all will have their turn on the same day, and that is about all the business that can be done with your dues to Treasurer M. D. Fulton, and we will be able to attend. Keep up your membership.

EDITORIALS OF THE PHILADELPHIA ARTIST AND BUSINESS EDUCATOR:

Gentlemen: Here we hand you the presses before the "Eastern Teachers to be held in Philadelphia. You may state that from present reports of educational leaders, Reduced rates have been obtained on all business cards, and the public are on the certificate plan. Be there. Nothing has been left undone to make the coming convention a success. The educators of Philadelphia are making extensive preparations for the receptions, in the teachers and all who attend will be handsomely entertained.

Very respectfully,

Editors of the Philadelphia Commercial, the East, and the Business Educator.
Change of Address—If you change your address, be sure to notify us promptly in advance, if possible, and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers.

Rates to Agents and Club Raisers
Sent upon application. Whether you are in a position to send in or receive any subscriptions, let us know, so that we can favor you with our lowest rates for the same.

Considering the fact that we issue no partial or cheap editions; that our journal is high grade in every respect; that the color feature of the cover alone costs hundreds of dollars; that "less than that" is the distinctive feature of our magazine; that the art presented is the best ever given in the field of truth; and that the department of business education is upon a more comprehensive and truly representative plan than ever before put forth, we will come and name. Provided that the P. A. and B. E. is not only the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of Its Class
The Penman Artis and Business Educator being the most popular and widely read journal of its kind, it follows that it is also the best advertising medium.

It reaches practically all persons interested in commercial education and in penmanship; it is published in both this country and in Canada. It covers the commercial school field completely, going as it does to the heads of Commercial Colleges, Commercial High Schools, Commercial Departments in Public School, Colleges, etc., and as well as a large number of office workers, public school teachers, business students, etc. Thouse who served as or fere is book subscriptions are many subscribers having it found in book form. Our rates for space are lower than those of any other high class journal published. Wherever advertisers will find from our columns money makers. Write at once for rates.

Advertising in The Penman Artist and Business Educator Pays
We confidently believe that persons who have something good to advertise, and then persist in advertising it, will find our columns unequalled, comparatively.

Surely a Joke
In the January number of the Western Penman a new course of lessons in business writing has been begun, and we notice under the head of "general instructions," the following:

"Mr. Koot. All execution in the beginning relating to form is purely through finger action.

"Now," were Editor Palmer in our position, what a fuss he would make over that. He would undoubtedly ask: Why does the Western Penman ridicule finger movement and then secure the services of a teacher to give lessons who advocates it? He would no doubt also do his best to make it appear that their Plan will teach our readers the finger movement fold, and then later on take it back regretfully. But this is enough. The public can see through a thing or two, and it has long since learned not to take Mr. Palmer seriously on these subjects.

A Good Example
Mr. Chas. J. Smith, proprietor of the well-known Iron City Commercial College, Pittsburg, Pa., not only attended the St. Louis National Educational Convention, but took three of his teachers with him and paid all of their expenses besides. He said he thought it a good investment, believing that he said it would work that much more extensively. This is what we call good sighted policy.

Mr. Smith orders each month one hundred and fifty copies of the PENMAN-ARTIST AND BUSINESS EDUCATOR for his pupils and pays for them out of his own pocket. He does this in order to stimulate interest and develop excellence on the part of his students. If more proprietors were to do likewise, we could put out a still better, more professional and socially, purpose. Nothing else can so acquaint you with the condition and progress of your profession as attendance at these meetings. It affords you a bird's-eye view of the work and its people.

Be a Philanthropist.
We hope all who can possibly do so will arrange to attend the Philadelphia Easter meeting of the Eastern Commercial Teachers' Association. The meeting is destined to be one of the greatest educational gatherings of the year. Whether one is professional as well as social purposes. Nothing else can so acquaint you with the condition and progress of your profession as attendance at these meetings. It affords you a bird's-eye view of the work and its people.

Bookkeeping at Home.
FREE: In order to convince you and others that we teach Bookkeeping more successfully by correspondence than many colleges do by giving personal instructions, and at one-tenth the cost, we will give to one person at each Post Office our Home Study Course No. 1 free. For particulars, clip this ad out, attach it to a slip of paper containing your name and address, and the name of this paper, and send to Draughon's Practical Business College, Nashville, Tenn.
Prof. C. H. Peirce, "The Electric Light of the West," is now located at Dayton, O., with the Miami Commercial College.

Mr. W. A. Thompson, Pontiac, Mich., has been unable to begin the lessons announced in "How to Make a Businessman," and his inquiries have been the cause of much worry.

The Bliss College, N. Adams, Mass., Jan. 10, 1892, gave its annual reception to students and friends. An interesting and successful recitation program was given, then dancing was indulged in, and the refreshments, and finally the good nights were said, to be followed by pleasant dreams and memories.

P. W. Clark recently accepted a position with the Elliott Commercial Schools, of Charleston, W. Va.

The Carlisle, (Pa.), Commercial College is enrolling with students. Mr. J. F. Mumont, proprietor of the institution, had to secure two additional rooms to accommodate them. He also had to secure ten new typewriters. He has an attendance of one hundred and twenty-five students. Mr. Mumont is no doubt giving his students more than their money's worth, which they have evidently found out. Success to him.

Mr. W. A. Arnold, of Redington, O., recently engaged with the Tittsville, Va., Business College, as Principal of the Commercial Department.

Mr. C. B. Munson, of the Brazil, Ind., Business University, writes that they have recently moved into new quarters, which are no doubt the finest in the State. He also informs us that they have the largest enrollment they ever had. Mr. Munson is an enthusiastic promoter of the PEXMAN ARTIST AND BUSINESS EDUCATOR, and is a permanent subscriber.

E. C. Hutchinson, President of the Salt City Junior College, Hutchinson, Kan., writes: "I now have one hundred students taking penmanship, and I have advised them all to take your journal."

We wish to compliment Mr. Hutchinson on his good work and on his ability in building up such a large school. Mr. Hutchinson writes quite a professional hand.

The Nebraska State Normal School is sending out a very neat little prospectus to make known the unusually large enrollment at Penn, Neb. Mr. S. L. Caldwell has charge of the penmanship and drawing, and from his penmanship in enrolling, and the knowledge we have had of him, he is doing excellent work.

"Lincoln Business College," Lincoln, Neb., is the place to be seen. The best catalogues received at this office this year. We receive larger catalogues, but none of better quality nor more direct in its purpose. The illustrations are not ordinary flat half-tones, but improved by the skilled engraver. The type is quite modern and plain. The printing excellent. The encolored title sign on the linen-lace cover is very artistic and suggestive. From what we can learn, however, the catalogue is the best of the PEXMAN Art School.

"As Others See Us," covered in purple and gold, and printed in blue and red containing testimonials complimentary to the above named school is the title of another pamphlet issued by this modern school.

The Springfield, Ill., Business College, H. B. Henkle, proprietor, issues a very creditable catalogue containing nice clear type and a good grade of half-tone illustrations. The school is certainly one of our best business schools and the catalogues released at this office this year.

The Penman-Artist and Business Educator

A Promising Career

Mr. H. O. Keesling, whose likeness appears herewith, was born twenty-six years ago at Deming, Ind., where he spent his boyhood days upon a farm, and in the village school. At the age of thirteen his parents moved to Noblesville, Ind., and later to Indianapolis, where he attended the High School, and later on, the Industrial Training School. While in the latter institution, he awoke to the possibilities of the future, and entered in to be a penman and business man. The school had just opened with a bookkeeping course, requiring two years for completion. He completed the course, however, in one year and was chosen assistant teacher in the commercial branches. Eighteen months after he secured a position as teacher in the Academy at Waverly, Ia., where he remained two years, after which he accepted a position as penman in the Indianapolis, Ind., Business University. Two years after, he accepted his present position as Principal of the penmanship department of the Kider-Moor & Stewart School, of Trenton, N. J. Besides keeping up his school, he is giving instruction in bookkeeping, involving rapid calculation, and arithmetic.

The May Meeting of the Ohio Business Educators Association at Dayton.

There has never been a time when it has been more important to the Business Educator to bring before the public the value of the work which he has done and which he is doing for the business public than now. The movement for Higher Commercial Education, which is attracting such universal attention, is giving some currency to the idea that the work of the Business College has been unimportant.

The facts that all Business Educators can present concerning the great number of bookkeepers, cashiers, secretaries, and phonographers employed in the business offices of the country must be generally known to give Business Educators the credit they due them.

National and State conventions afford the best opportunity for educating the public concerning us. Necessity of having education as a profession to permit it to be understood that we are in any degree hostile to this higher education, on the contrary it can but prove to be of the greatest advantage to us not only financially but professionally. Financially by emphasizing the great importance of our work and professionally by stimulating not only the Business Educator himself but his students to broader work now and hereafter.

It will always be true that nearly all office men and women of the country will be prepared by the Commercial Schools. The Higher Education requiring some time and hundreds of dollars, will keep all but a small percentage of those who annually enter business from attending these higher schools however valuable their courses may be. Because of this and many other considerations the Ohio May Meeting ought to attract every wide-awake teacher in the state.

A. D. Wilt is the preside of the association this year.

The attractions of the City of Dayton, with a National Military Home with 1600 disabled veterans and the great National Cash Register Company, with 2500 employees, aside from the highly interesting program of the convention insure a great meeting.

Now, Let's Be Fair

Great victory for vertical; tale of two conventions:
St. Louis, 191 Chicago, 167-17 vertical school children vs. 17 slant professors:
Vertical average, 18 letters; slant, 16.2. Highest vertical, 18; highest slant, 17.

Those who have been characterizing vertical writing as small writing will find much food for reflection in the result of two similar tests given before the Penmen's Association, one at St. Louis and the other in Chicago. The above figures are based on the second trial in each case. They speak for themselves. Further comment is unnecessary.

E. F. BRANDSTADT.
Akron, Ohio.

[1 was in the first contest, and witnessed the second. The main difference of opinion I could determine, was that the Chicago writing was much better than the St. Louis writing. If my memory serves me correctly, at Chicago, we tried to see how well, as well as how fast we could write, and alone the writing was not the only consideration. In this particular writing, the one at St. Louis, without the work to compare, may be misleading—Editor ZANER.]
The Passing of Ornamental Penmanship

Twenty-five years from now there is likely to be a very few top-notchers in ornamental script writing. A quarter of a century ago there were hundreds, where we now can count one. The young men of today do not exercise the patience which leads to the top in ornate writing, nor have they the time to acquire a style of handwriting for which there is only a limited market in these strenuous times. It would not be surprising, therefore, if the ornate beautiful in writing, conjured into perfected existence by Lyman P. Spencer, becomes, even in our day, a lost art. The New Spencerian Compendium of Penmanship, issued by C. W. Blakemath & Co. in the early 80's, is now out of print. I am told the initial cost of that work was nearly $1000 before a copy was printed; the launching of it was a failure. The magnifi-
cent copy-ships, fathered by Flickinger and issued, have barely kept pace with the ever-growing engraving; both of these standard works will pass away soon—more's the pity. Williams & Rogers' pen written copies (reproduced)

Zaner, Doner, Lampan, Kelchner, Mills, Conant, Lehman, Behrensmeier, Gluck, Henning, Tumbly, and others? The list is short. The balance imitate one of the above, or Madaras, and, as one critic has aptly said: "They exaggerate the faults and skip over the good points." Possbly the mistaken desire to combine the artistic with business writing is the head of the evil. These two qualities won't mix, and young penmen, if they want to become ex-

perts in either style, must work at them independently, and with different tools. The thing in ornamental writing is to not count time—in practical writing, speed is the good; legibility, of course, applying to both styles.

L. MADARASZ

COLORED CARDS

The Latest Thing Out in the Card Line

Come in seven colors. Great for advertising purposes. Schools use them. Pen-
men use them. Everybody wants them. You write a dozen and each person who gets one out of the dozen will want a dozen. They are just the thing you have been look-

ing for:

H. O. KEESLING,
Care of Rider, Moore & Stewart School
TRENTON, N. J.
Eastern Commercial Teachers' Association:

Let me to submit to you our sincere welcome to the City of Brotherly Love during your next annual meeting at this College.

The Business Schools and Colleges of the land have a far higher mission than that of making money, and must persistently keep open the avenues of learning and wealth from the common people to the more influential stations of riches and moral influences. Every good Business School is a happy port from the unproductive desert to the fertile plain of a successful life. Therefore, we shall heartily greet you next Easter.

Yours fraternally,

Russell N. Conwell
President

DESIGNER AND ENGROSSER.
Rockland, Maine.

Artistic pen and wash drawings of all kinds for all purposes. Fine catalogue work a specialty. Art posters plain and in colors. Strong, effective advertising cuts. Printing plates furnished at lowest figures. Send copy for sketches and estimates.

RESOLUTIONS

engrossed in pleasing effects of brush work and color illumination. No order too small for careful attention.

Send one-cent stamp for circular.

STOAKES' IMPROVED
large Taper Holder, Nickel-Plated Evolve
Sample, 10c Each.
STOAKES' DUPLEX
SHADING PEN.
Each pen makes four styles of mark and does a greater variety of work than any two ordinary shading pens.

SEVEN PENS
comprise one set, in sizes from No. 0 to No. 8 and the seven pens will do all and more than the old set of 24 shading, marking, and plain pen combined.

Price per Set, $1.00. Sample, 15c.

My Shading Pen Inks are without a rival for quality and color.

Sample for 12c Stamps.

Compendium, 48 Pages, 25c.

J. W. STOAKES,
Milan, Ohio.

"Write us when you will arrive in Du Bois, Pa., and we will meet you at the depot with our 'Horseless Carriage' and take you direct to the College. [The above is one of Mr. G. W. Thom's methods of advertising his college. Quite up-to-date. —Editors.]"
In this lesson we take up two more of the points presented in the last lesson and which are to be kept continually in mind in making any drawing intended for reproduction: shades and shadows and composition. Taking up composition first, I show four small sketches illustrating the idea. In the first, we see bad composition, competition without any repetition; in number two, the composition is slightly improved, still monotonous in its repetition. In three, a still further improvement is made in that it contains a principal object. In four, we have a good composition, principality with repetition relieved by variety. In the matter of good composition, one rule should always be remembered; that the arrangement or combination of values or forms comprising a picture should be so composed that an observer may easily take in the whole picture at a glance, but the eye will always come back to some leading effect standing out stronger and more conspicuously than any other, and this leading effect should always be connected with the most important part of the subject to be illustrated. It may be dark or light, or stronger on account of superior size. Composition in a composition, for interest, injurious, for the eye goes from one effect to the other without repose. In the simple sketch, fig. 5, no attempt at fine technique is made, but rather coarsely I give an example of an effective arrangement of lights and shadows. Careful study on the part of the student will obviate the necessity of a detailed explanation in these columns. In fig. 6 is shown a simple Norman sketch which well illustrates the rules herewith presented. In this drawing, we see the principal lights placed solidly against the principal shadows; a central object balanced by tower and barn at one extremity, and shed and heavy foliage at the other. The very idea of a principal object suggests the necessity of repetition. All large or special effects should be repeated by smaller ones to prevent the appearance of boldness or isolation, although this repetition should never be forced or methodical. In the next lesson we will consider the matter of technique.

This is a portrait of Mr. C. A. Bliss, proprietor of Bliss Business College, Columbus, Ohio, the largest and finest equipped business training school in central Ohio. Mr. Bliss came to Columbus a little over two years ago, and by an unusual amount of push has pushed his school to the front. Last year he sent us more subscriptions than any other school, and the outlook thus far this year is good in the same direction. Mr. Bliss is also a lover of fine horses, as well as of fine schools, and as a consequence he took first honors for both double and single drivers at the Ohio State Exposition. His motto is, "Yours for Business...and he gets it.

CHARACTER—
HOW TO READ IT—
BY C. P. ZANER.

The above is a booklet of 10 leaves comprising an illustrated lecture (chalk talk) on "Character and How to Read and Represent It," it contains the results of years of investigation, study, observation, and practice upon the part of the author. The illustrations are printed on a wide margin and are principally outline, therefore easily copied and sketched quickly. Price, 25c. It is worth much more.

Address,

Zaner & Bros., Columbus, Ohio.

E. C. MILLS,
195 Grand Ave., Rochester, N. Y.,
will send you a letter inscribed, in his business style, fresh from the pen, for 25c. It will be an inspiration to you in your practice.
I sized in numbers for the numbers come
To all whom this concerns and others.

There are a great many kinds of figures. There's the nonsense head of the ventriloquist figure. I found with a ventriloquist once, when we knew what it cost: the ventriloquist had the figures. We divided nine and the figure 9. Some people represent nineteen hundred by two ciphers. But there's nothing in it.

If the art of penmanship were lost, we could see figures of a new system. Halving numbers does not necessarily cut any figure. What's marriage but addition, divorce but subtraction, the arrival of your mother in law division and multiplication when your life troubles begin to come in.

The conductor on the train gets by the number on the ticket while he was going by the number on my ticket. I went by my station. The number of the train was thirteen. That's why we are unlucky.

Just then we made a flying switch and the new wires switching flies in the picture while a number 9. I tried to catch the 92 but the brokerman said set the 9s. The conductor said set the 9s. And the engineer smiled.

Figuratively yours,
Francis B. Courtney.

[Unique and novel figure writing by Francis B. Courtney of the Iowa Business College, Des Moines, Iowa. To read the same easily, turn the paper and look along the slant of the writing, holding the paper nearly level with the eye. Of course, this work is not given seriously for every-day usage, but it is a practical illustration of what a genius can do. Surely Courtney is no "figurhead" though his head can make use of lots of figures,—Editors.]

Get Certificates for Philadelphia

Be sure to get a certificate from your home agent, or a receipt for full fare going to Philadelphia; present the certificate or receipt to the chairman of the Executive Committee, Mr. H. G. Healey, through whose enterprise this concession has been obtained. Your return fare will then cost you one-third the regular rate. See your local agent in time to write to Mr. Healey, in case there should seem to be any trouble in your getting advantage of the reduced rate.

School Managers' Association

Arrangements have been completed for the National Private School Managers' Association to hold a meeting or meetings on Saturday, March 29, 1901, at Philadelphia, in connection with the Eastern Commercial Teachers' Association. Be there as there will be important business to transact.

A Packard Teacher

(Continued from Page 14.)

it would be. Indeed, I do not think it nearly so easy as our own. A whole volume could be written on the inconsistencies of the Turkish Customs. A small fee to the examining official will pass an objectionable book or avoid duty on a new garment. Books taken from those coming into the country are turned over to booksellers in the city and publically sold. And what is true of the Customs is apparently true of the government; it is rotten from top to bottom and is a perfect anomaly. I see at once that this is the place to study European politics, for we are in the very maelstrom of political intrigue and cunning diplomacy.

What a sight is the market place in the early morning, and the world-famous bridge across the Golden Horn! What a strange sight is that motley array of people: the high-colored costumes of the natives and the sombre dress of the European; the men called “hannals” carrying veritable wagon loads on their backs; the jabber of Greek, Turk, Armenian, Bulgarian, Russian and a dozen other nationalities: the domes and minarets of the Mosques outlined against the blue sky—well, it is a scene that cannot be adequately described; it must be seen.

Enough for the present, for I shall write again of my work and plans. I have a herculean task before me amid this Babel of tongues, complicated systems of money, and with no suitable text-books. But, while it is a difficult work, it is nevertheless a most interesting one, and I shall no doubt enjoy what I shall have to do.

Very sincerely yours,

ROBERT COLLEGE, Geo. S. Murray,
Constantinople, Oct. 24, 1901.

AUTO PEN AND INK MFG. CO., 73 Rush St., Chicago
Lessons in Engrossing—Number Seventeen—By H. W. Kibbe, 181 Tremont Street, Boston, Mass.

The letter used in this lesson is the plain Gothic outlined in a previous number. Lay out the work carefully with a rule and pencil, but in inking let the work be all free-hand. The outline of the letters should be strong or they will look weak after the tinting has been done. The panel should be dark enough to contrast sharply with the white of the letters and not too dark to contrast sharply with the black. The outer portion or border may be the same as the panel, lighter or darker, in either case the effect will be pleasing. Use 303 for all work, except the solid black, for which use a course, smooth pen.

Short Cuts. A little book, pocket size, showing how to do with half the figures and in half the time all of those little calculations which we must figure out every day. Everything from Addition to Interest and Discount, its worth is attested by the fact that its author is now and has been for years the specialist in this branch at the Eastman Business College.

Address "OPPORTUNITY" care Penman-Artist and Business Educator.

This is a portrait of Mr. Samuel D. Holt, the engraving artist of Philadelphia. Mr. Holt received his first and principal art training in the Zanerian Art College over a decade ago. He comes from a family of New England artists, and right royally bears aloft the banner of excellence in engraving art, thus maintaining his father's reputation.

Mr. Holt is the embodiment of modesty, rarely ever being fully satisfied with his own efforts. As a consequence, Mr. Holt is to Philadelphia what Rollinson is to New York City, and what Dennis is to Brooklyn. He has built up a very good engraving business, having, as it were, a monopoly of that class of work in the city of Brotherly Love.

E. C. MILLS, 195 Grand Ave., Rochester, N.Y., will send you a set of business capitals, arranged in systematic order for practice for 20c. They are fresh from the pen and will encourage you to do better writing.

Lessons in Object Drawing

Number Three

BY ALICE A. GORST.

We have in this month’s lesson, a combination of objects, each requiring a different kind of technique.

The sea bean is almost black and highly polished. Therefore its lights and shades are very pronounced. The shell, which is white, is shaded more delicately, and in short curved lines to represent its grooved surface.

The star fish will be found much the hardest object of the three, since it has a rough surface.

The technique used consists of very short, broken lines. It will be noticed that the execution of the star fish in the two drawings given is not the same. However, the little protuberances are represented in both by rough, circular shadows. Care must be taken not to get the shadows two round and even.

Moore’s Flourished Cards are considered by competent judges the best in the world. One party ordered $20 worth of the $2 grade and said they met his expectations. You know what that means. Prices range from 10c to $2 per doz. Written Cards 15c. per doz. for plain white 10c. for Writing Bristol and 15c. per package. 12 Lessons in Writing & Flourished Display Designs at bottom prices. Circular free.

M. B. MOORE, Box 7, MORGAN, KY.

A letter in a model business hand has been received from C. A. Brainerd, Parkersburg, W. Va. Mr. Brainerd’s work certainly places him among the strongest business writers in this city. It is a pleasure to say that he is an enthusiastic supporter of the PENMAN-ARTIST AND BUSINESS EDUCATOR.

Some splendid business and ornamental writing has been received from C. R. Tate, penman in the Bartlett Commercial College, Cincinnati, O. Mr. Tate’s work is indeed quite professional.

One of the most dashy, delicate, artistic letters we have received for a long time recently came from the pen of F. B. Courtney, author of the Iowa Business College, Des Moines, la. Mr. Courtney used a capital letter with which to begin almost every word, and the effect he secured is something unusually attractive. Courtney is truly a wonder with the pen.

THE PRACTICAL AGE
MOLINE, ILL.
Two Important Books.

Educational Foundations of Trade and Industry,
By Fabian Ware.

This timely book describes the educational foundations of trade and industry as exhibited in the school systems of the chief European peoples and of the United States.

The section devoted to the United States gives an exhaustive resume of the characteristics of American education, from the kindergarten to the graduate university. Since Mr. Ware treats the subject more on its practical than on its cultural side, his examination includes a thorough analysis of commercial and technological education in every aspect and branch. The latest information has been used, and a large amount of concrete illustration, drawn from the actual workings of individual schools, gives the argument freshness, clearness, and coherence.

In its special field this book is a most successful attempt to incorporate education in the cult of the goddess of Work—the modern substitute for the goddess of Caste.

Adams's Commercial Geography.

Twentieth Century Text-Books.

In this timely book are set forth, in succinct and trenchant style, the bases of the science of commercial geography, the causes and laws of barrier and exchange; the natural conditions that effect these—climates, soils, land surfaces, ocean currents, rivers, winds; the features that determine human settlements, cities and harbors, etc.

Perhaps the book's crowning excellence is its maps, charts, and drawings. These are remarkable and unique. With great labor, they have been constructed to exhibit at a glance, in the most graphic and forceful way, the comparative trade and products of the globe. Every one of these is new and specially prepared.

In this book the teachers of the country are, for the first time, supplied with a treatise in which all three of the following essentials are present: A scientific discussion of the laws of the subject; the practical application of these to the phenomena of universal commerce; a clear statement in accordance with the rigorous demands of modern pedagogy. The signal success of the book before it was three months old and the lavish praise it has brought from the leaders of commercial education are sufficient testimonies to its extraordinary merit.

Modern Penmanship Publications for Penmen and Teachers

Our publications are universally recognized as the lines along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

Zanerian Theory of Penmanship—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 175 pages, cloth binding.$1.00

Lessons in Ornamental Penmanship—A work in slip form based on the $10 mall course formerly given by us, with some extra plates. A thorough and complete work for home learners.$0.75c

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical writing yet published.$0.50c

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequaled.$0.50c

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs, showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published.$0.50c

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address:

ZANER & BLOSER, Columbus, Ohio.
The above are from the pen of Mr. F. B. Courtney of The Iowa Business College, Des Moines, la. Students of the ornate or line art penmanship can find excellent material in these signatures for a number of lessons in gracefulness of curve, harmony of line, and beauty in shade. The first is a veritable whirlpool of dash and daring with the pen. To do such work one must possess a clear knowledge of what he desires to reproduce before placing the pen on the paper. After it is once started the only thing the eye can do is to watch the general trend of affairs, as the pen travels faster than the eye can observe details. A glance at the remaining combinations reveals the fact that all capitals are equal distant, one from another, and that shades occur at regular intervals, no two being very close together.

G. WINSLOW
Mammoth Spread Eagle Design Including the Declaration of Independence (3 ft. x 5 ft.)

Artistically engraved. One of the finest pieces of Ornamental Penmanship executed, embracing all Hand Flourishing, Ornaments Lettering, Script, Pen Drawing, etc. If you want the original it will cost just $20, but a Bromide reproduction, 32½ x 43½ in., showing in every detail exactly what the work is, can be had for $1. If you are an admirer of the art you should see it. If you wish to get up artistic designs you need it. If you are not satisfied with the piece and will return it in good condition, your $1 will be refunded.

What MADELYN says, who knows a good thing when he sees it: "**The photo of your masterpiece: THE DECLARATION OF INDEPENDENCE** is worth many dollars to young penmen. There is nothing like it to be had at any price, and the student who can work with accuracy, by studying it, will be sure of success. The hand, and the original flourishing simple and intricate letters, are of the highest order of merit! The eagle at the top is a standard, while the portrait of Washington above is worth the dollar." **

H. Dunlop
357 Fulton St.
Brooklyn, N.Y.

[Signature]

Opposite City Hall
In this lesson the straight line is the predominant feature. These letters are taller than any in the previous lessons, hence you must have a larger field of movement. Hand action can be used to a large extent here, and is not so tiresome as finger movement.

In making these long strokes the general tendency is to make them too heavy, and to begin to turn too far from the bottom. All should be the same in width, and $d$ and $h$ the same, the small letter $i$. New strokes, $T$, $D$, $H$, and $K$ are twice, and $P$ three times the height of the small letters. The oval part of $D$ is the same as the oval part of $A$. The last shaded stroke of $H$ and $P$ is the same as the last one of $A$ and $M$. This is a hard stroke to make and is worthy of careful analysis. The upper third of $P$ is a right curve; the middle, a straight line on the main slant; and the lower third, a left curve.

The second part of $K$ is made a little taller than the small letters. Both these strokes are compound curves, somewhat difficult in execution, but beautiful in design. Good pen, ink, and paper are important. Have the best. If your lines are rough on one side, your holder may not be adjusted properly to suit your action.

Make shaded strokes a little more compact in the words, giving it a fine, artistic effect.

Mr. W. Cassmore, of Richmond, Ind., took upon himself a life partner in the person of Miss E. Pearl Littell, of Cincinnati, O., Jan. 1, 1902. We know Mr. Cassmore to be an exceptionally fine fellow, and we have no doubt but that it is a case of "like attracting like." Our cordial well wishes to the new firm.

Address, Zaner & Blower, Columbus, O.
This work is a Revelation of Practical and Expert Accounting of Joint Stock Company and Corporation Accounts and of the Higher Work of the Accountant. Locating Errors, Vague Statements, Distortion System, etc., etc.

In extent of subjects, in thorough mastery of material, in scientific and practical forms, in arrangement and classification in work and in ethical and philosophical discussions of accounting and of financial subjects, it STANDS ALONE AS THE MASTER WORK OF THE AGE ON ACCOUNTING.

These Books Contain 44 Years of Study, Experience and Labor. They represent the advanced thought of the age on Accounting and Practical Mathematics.

All who aspire to the loftiest planes of Accounting, or who wish to keep company with the progress and evolution of the two sciences which hold trade and commerce in their orbits, and keep in harmonious revolution the financial values of the world, should have copies of these books. The following are a few of the 1,200 subjects treated in Soule's New Science and Practice of Accounts:

Spencerian Writing.

Its Evolution, Characteristics and Claims.

READ BEFORE THE NATIONAL PENMAN-SHIP TEACHERS’ ASSOCIATION.

S. J. LOUTS, No., DEC. 31, 1904,
BY ROBERT C. SPENCER.

Observation and experience in Europe and America where freedom and rapidity of movement are employed in writing script forms which are best adapted to speed, there is a tendency to slant. It is claimed for Spencerian Writing that it recognizes and provides for these requirements and tendencies more perfectly than any other.

Standard slant Spencerian at an angle of fifty-two degrees elevation from the horizontal corresponds to the average slant of writing in Europe and America. All things considered, it is claimed for this slant that it combines more advantages than writing in any other position on the line and has fewer disadvantages.

It is also claimed that Spencerian can be written at other angles, including vertical and backhand, more satisfactorily than any other slant. This is due to the characteristics of Spencerian, and to the tendencies of the public to vary its writing from the standard position.

Vertical and backhand Spencerian are variations in position on the line from standard slant writing produced by merely changing the position of the body or the hand.

It is claimed for Spencerian that it accords liberty of choice as to forms, combination, spacing, height, position on the line and otherwise, necessary to individual requirements and tendencies, and commingling itself to varying conditions and needs.

The originator and author of Spencerian treated style as an optional and aesthetic feature to be selected according to taste or convenience. In this feature Spencerian differs radically from styles that preceded it. In the coarse round and copy handstyles, as well as in the slant styles, the design was determined by pressure on the pen, retarding movement, wasting nerve force and causing fatigue.

Unshaded Spencerian writing composed of flowing and rapid lines, entirely different according to taste and fitter, and is easily acquired and executed.

The tasteful distribution of shade in accordance with Spencerian ideas gives life and expression which unshaded writing lacks. Without the contrast of lights and shades in their proper relations, objects and imagery are more or less lifeless or imperceptible. This law of nature holds generally in art of which writing is a branch. Spencerian entitled men to a degree that gives pleasure to cultivated taste entitiled to consideration in dealing with the beautiful as a factor in education.

Spencerian is characterized by the fact that they embody and give expression to concepts that challenge admiration for utility, variety and beauty. The author of Spencerian was of a poetic and artistic temperament, and in sympathy with nature and susceptible to her impressions and inspirations which found expression in Spencerian writing through the graceful movements of his master hand and pen. The oval and undulating lines of his style were the products of his mind and heart inspired by objects of beauty about him.

The oval or ellipse so prominent in Spencerian capitals is a favorite form in nature, visible in the shapey human head and face, and in the orbit of the earth in its movement through space. The pleasing variety and refinement of curve adapted to art. Hence its fascinations observable in the pleasure with which children and young people practice its forms and combinations with the pen, in gaining muscular control, and in training the eye, the hand, and the mind.

The author of the Semi-Angular System of Commercial Script and teacher of Whitefield High School in Pennsylvania, Dr. Whitefield, speaks of his design as follows:

“Our design has been to present to the Public a System

Plain to the eye and gracefully combined.

To train the muscle and inform the mind.

To light the school boy’s head, to guide his hand,

And teach him what to practice when a man;

To give to female taste the symmetry it loves,

Bud, leaf and flower, for letter her chase mind approves.

No golden bow this humble author claims.

Utility to enlure mind his aim.”

The claims of Spencerian Writing are made clearer by study by comparison with the slow clumsy foreign innovation of vertical writing and its American imitations and modifications. The popular mind and heart of America seem to adhere readily to Spencerian. The business community which was largely ignored in the attempt to change and pervert the hand writing of the American people is rebelling against the ill conceived and unfortunate variations of both the prospects of the youth who are ambitious to enter commercial life, and to the commercial world requiring rapid business writing.

Spencerian writing is the soul of the business colleges and commercial schools of America to which they are greatly indebted for their popularity and success.

The originator and author of Spencerian writing was from their inception the ardent friend and promoter of business schools and education in which he and his pupils and disciples were actively engaged as founders, teachers and students. The writer of Spencerian was more keenly alive than he to the value of business education, and none took greater pride in the success and achievement of the thousands going out into the business world, with carrying with them Spencerian Writing as a passport to business life.

The loyalty of business colleges and business educators to Spencerian writing is evidenced by the way they continue to make it the basis of their instruction in writing, freely adapting its modifications to suit their tastes and inclinations in meeting the rapidly changing demands.

Spencerian periodical use and in Spencerian abundant resources upon which to draw for copious and varied illustrations, and methods, and for which they give credit to Spencer as the original source and inspiration.

His artistic fancy found eloquent expression regarding writing in many ways, deeply impressing superior minds drawn to him by his personality and susceptibilities to his person, ideals and teachings.

In his lecture on the “Origin and Progress of the Art of Writing” nearly fifty years ago, Father Spencer said: “The eye glances along the well-written page with as much pleasure as it rests on a beautiful grove, when nature and art have unitedly tasked themselves to blend the greatest variety with utmost symmetry. And as we travel though the rich scenery from whose depths breathe out the sympathy of a spirit of inquiry, and the voice of love and friendship, we spontaneously acclaim:

“Art, Commerce and fair Science, three,
Are sisters linked in love;
They travel air and earth, and sea.
There’s beauty in the art that flies
The voice of friendship wide;
There’s glory in the art that wings
its throbbings o’er the tide.”

In conclusion permit me to express the hope that I have not too far overstressed the bounds of modesty and propriety as the modest son is spoken of speaking Spencerian writing, its evolutions, characteristics and claims, related as they are to the history, growth and progress of our country, and to all the great interests with which commerce is related, that general education are intimately related.

Finest Supplies for Penmen and Artists

PENS AND HOLDERS

All goods listed below go by mail postpaid.

Zanerian Fine Pen Writer—The best and finest fine writing pen made—best for engraving, cursive, and business work. Gross $1.00, 3¢ Gross 25c., 1 Doz....12c.

Zanerian Ideal Pen—One of the best pens made for the everyday business man or ornamental. One of the best pens for beginners in penmanship. Gross 75c., 3¢ Gross 25c., 1 Doz....10c.

Zanerian Business Pen—A smooth, durable, common sense business pen. For unshaded business writing, beautiful and ornamental, if equalled. Gross 75c., 3¢ Gross 25c., 1 Doz....10c.

Gillott’s No. 204 Pen for drawing purposes. Gross $1.00, 3¢ Gross 25c., 1 Doz....12c.

Gillott’s Lithographic Pen No. 206—One of the finest pointed drawing pens made, 6 pens 25c., 3 pens....10c.

Gillott’s Crown Quill Pen No. 599—Very fine points. 6 pens 25c, 3 pens....10c.

Soennecken Lettering Pens—For making German Texts, with pointed English, and broad pen letters. Set of 12 numbers 1, 12, 2, 25c., $3, 5, 8, 5 and 8 single pointed and 10, 20, 30, and 40 single pointed, and all fine double pointed,....10c.

Double Holder for Soennecken Pens—Holds 2 pens at one time....10c.

Zanerian Oblique Holder—Hand made, rosewood, 12 inches long, a beautiful and perfect holder. 1 holder....50c.

Fine Art Oblique Holder—Hand made, Inlayed and faced, rosewood, and by far the most beautiful holder made. 1 holder sent in a small wooden box....$1.00

Excelsior Oblique Holder—The best low priced oblique holder made. Many hundreds of gross have been sold.

1 Holder. 10c.

2 Holders 15c.

4 3/4 Gross $1.10

10 Gross $2.15

1 Gross $4.25

Straight Penholder—Cork tipped and best for business work, with pointed English, etc. 1 holder, 10c.; 6 holders, 40c.; 12 holders....65c.

When you need anything in our line write us for prices, as we can furnish almost anything and save you money.

Cash must accompany all orders. Prices are too low to be sent even by money order, or for stamps for small amounts.

Works, Camden, N. J.

70% Our records show that 70 per cent. of the school proprietors who have written us in the past eighteen months are now using

GREGG SHORTHAND.

Some of the others will adopt it in January.

There are many reasons — sound business reasons — why the Gregg System should be adopted by every school proprietor who desires to increase the revenues of his school. Write us and we will tell you a few of them.

THE GREGG PUBLISHING CO.,
57 Washington St., Chicago.
THE HISTORY of the Sadler-Rowe Company’s COMMERCIAL PUBLICATIONS
Parallels the History of Commercial Education itself since 1895.

That was the Year the First BUDGET SYSTEM was Written.

It was immediately followed by several other systems, all patterned as nearly as possible after the Budget System, but failing in every essential feature that has made the Budget System the standard by which all others are measured and found wanting.

Later, the Second Budget System, Commercial and Industrial Bookkeeping

Was issued, and in due time another crop of imitations will follow, introducing as many as possible of the new practical features first published and illustrated in the series of sets that comprise the complete course of that system.

What Does This Mean to the Commercial Teacher?

Simply that he can safely teach any of the Sadler-Rowe books in his school, knowing that he will then have the best books on the market for the use of his students.

The credit of decided and unquestioned superiority attaches not only to the bookkeeping publications of the Sadler-Rowe Company, but also to their publications in Commercial Law, Arithmetic, English and Correspondence, Shorthand, Typewriting, Commercial Geography, Penmanship and Spelling.

This Month the Attention of Commercial Teachers is Called Especially to the Following:

Jobbing and Commission Set
Commercial and Industrial Bookkeeping

SPECIAL FEATURES:
1. A business conducted by a corporation.
2. A jobbing and commission business combined.
3. Supplementary exercises covering every phase of opening and closing corporation books and accounts.
4. The most practical system of accounting for a jobbing and commission business yet discovered.
5. The Account Sales Register introduced and illustrated.

(This special book was first arranged by the author for the Pittsburg Produce Commission Co. in 1886. Its use has since spread over the entire country—so much so that it has lately appeared in another bookkeeping publication.)

Complete outfit will be sent to teachers onceipt of $1.30, charges prepaid.

Billing’s Synthetic Shorthand (Graham-Pitmanic)

1. The FIRST book that represents the alphabet in sections and the vowels one at a time in such manner that the dullest student cannot fail to grasp the subject readily.
2. The ONLY book in which the omission of vowels is systematically taught, beginning early in the study with such as do not require vocalization for their legibility.
3. The ONLY book in which all opposite or similar principles are presented by contrast.
4. The ONLY book in which hooks, half lengths, etc., are exhibited by tables in such manner that their differences and similarities may be seen at a glance.
5. The ONLY book in which phrasing is taught systematically, beginning with simpler forms and progressing to the more complex.
6. The ONLY book presenting the subject of shorthand penmanship.
7. The ONLY book containing a comprehensive list of commercial phrases. 900 are given against 90 in Graham’s book.

FINEST SUPPLIES FOR PENSION AND ARTISTS

CARDS, INK, PAPER, ETC.

On goods listed below we pay postage on those that go by mail and purchase pays carriage charges on those that go by express or freight. Of course the cheapest way is in order to fair prices and quantities and have them go by freight.

Blank Cards—White bristol with finest surface for fine penmanship. 100 by mail postpaid $0.86. 500 by express $7.50. 1000 by express $13.80.

Black Cards—Best made for white ink. 100 by mail postpaid $0.86. 500 by express $7.50. 1000 by express $13.80.

White Cardboard—Wedding Bristol for fine pen work. Sheets are 22 x 29. 6 sheets by express $0.60. 12 sheets by express $1.00. 2 sheets by mail postpaid $0.50.

Black Cardboard—Finest for white ink. Sheets are 22 x 29. 6 sheets by express $0.60. 12 sheets by express $1.00. 2 sheets by mail postpaid $0.50.

Wedding Paper—Finest for penmanship or drawing. Sheets are 21 x 33. 6 sheets by express $0.60. 12 sheets by express $1.00. 2 sheets by mail postpaid $0.50.

Zancan India Ink—A fine drawing ink and best for preparing script and drawings for photo engraving. 1 bottle by mail, postpaid $0.30. 1 dozen bottles by express 2.00.

Arnold’s Japan Ink—Nearly a pint bottle by mail, postpaid 40c. 1 pint by express 50c. 1 quart by express 76c.

White Ink—Very fine. 1 bottle by mail, postpaid $0.25. 12 bottles by express 1.85.

Writing Paper—Finest 12 lb., paper made, 900 sheets per ream, ruling wide and faint. 1 ream by express $2.15. Writing Paper—Same quality as above mentioned but 10 lb. per ream. 1 ream by express $1.95.

Practice Paper—Best for the money to be had. 1 ream by express 1.40. Send stamp for samples of paper.

Envelopes—100 fine brite by mail, postpaid 40c. 100 fine white 40c. 1000 either kind by express $1.50.

Address, Zaney & blocher, Columbus, Ohio.
Immaturity and Prematurity.

The art of writing is the most difficult art people in general are supposed to acquire. It is the smallest art and the most skillful art. Its daintiness and its speed requirements make it skillfulness greater than any other art in common usage. This is one reason why there is so much poor writing in the world. It is also the strongest argument why our long-hand needs to be simplified as much as possible so as to make the art easier for the unprofessional writer. But there will always be some poor penmanship in the world, because there are some people who are naturally careless, and others naturally clumsy or awkward.

But even though writing is one of our most difficult arts, that does not mean that all cannot and should not acquire it. Instead, it means that our teaching should be of the most sensible, intellectual, and skillful sort. To be this, we must know when to teach writing so as to produce the best results. They say there is a time for everything, and a time even to pray. Let us, therefore, find the right time for the teaching of writing.

Being a difficult art and dainty, it requires muscles of a supple yet wiry sort—muscles not found in normal childhood nor in old age. The years of from ten to fifteen are specially suited to the acquirement of skillful arts—arts of not a heavy or straining nature. This, then, seems to be the period nature intended for such an art as writing. This period corresponds to our grammar grade in the public schools. And at no other time in our public school system of instruction have pupils so much time for and need of acquiring the art. Let us then begin to centre our energies upon that period and teach writing strenuously.

Children at the age of six are too immature for so difficult an art as writing. But being required to acquire it as they now are in most places, they acquire also habits which, forever after, stand in the way of correct learning. The two most serious habits are gripping and excessive finger action, both of which injure the child and the handwriting.

At the age of six, the fingers and their muscles and nerves are not so fully developed as the arm muscles. (Small muscles develop later in life than the large muscles.) The child is therefore too immature to acquire and use such a small, skillful art. Instruction during this period of immaturity is necessarily premature. Prematurity is always the forerunner of early decay. Premature instruction and training, no matter how efficient, is, in the long run, poor because it is not in accord with the laws of nature.

Child labor, no matter how efficient, is, in the end, detrimental to the child and to society. In fact, the more proficient and efficient the child in our factories, the less efficient will that child be later on. So it is in writing. The prodigy at six exhausts its vitality and enthusiasm, and later on becomes a notorious scribbler. This is due primarily to premature instruction during immature years. Less and larger writing in the primary grades, and more efficient instruction in the grammar grades, are the remedies for so much poor writing in the world. These are basic reforms and need to be seriously considered.

Reforms of today are forerunners of practice tomorrow, if they are true reforms and pushed to the front by sincere and enthusiastic advocates. Are you pushing anything to the front, or are you being pushed? As true specialists, you need to be the forerunners of progress, not the followers. If the things of which we have spoken are not vitally needful reforms, let us know of some that are and we will then help to push the n into practice. Until then we shall continue to advocate simpler writing, less and large writing in the primary grades, and more efficient training in the grammar grades.

I take much pleasure in submitting this as a specimen of my rapid business penmanship.

C. J. Schweitzer Jr.
Lessons in Rapid Business Writing

By

E. C. Mills, Rochester, N. Y.

Number Eight

Instructions, Plate 35.

Nearly every one learning to write has a great deal of difficulty in making the small "r" and "s." This plate has been prepared especially to give the student a great amount of practice on these two letters. Study the form of each letter carefully and then arrange the work just as it is given. Try to write straight when you turn the paper lengthwise. Finish "s" with light dot. Next make the border, using the pulling motion. Make lines compact.

Instructions, Plate 36.

Most students are prone to neglect the figures. Use a free muscular movement in making these and keep figures quite small. Connect both parts of figure "5." Next try to arrange the figures in columns for addition. The tendency is to make the figures too large and heavy. Make all lines light and write at a fair rate of speed. Wherever you find the nervous lines, work them out by increasing the motion. The border may be made with a light, rolling muscular movement.
Instructions, Plate 37.

As we near the more difficult copies, the student is liable to neglect the necessary preliminary movement practice. Always start out the lesson with a vigorous drill on large exercises and then follow it up with the smaller, toning down movements. Before beginning a sentence copy, it is well first to practice the capital letter or letters in that copy separately. Then watch the movement and see that it is applied in the small letters. Retrace small "t" carefully. Uniform spacing will help the general appearance of the writing.

Plate 37.

God gives us the strength to labor,
I am bound to succeed, I will.
Ames & Rollinson Co., New York,
The breaking waves dashed high
On eastern and rock-bound coast.
And the woods against a stormy sky
Their giant branches tossed.
Another man's trade costs money.
Signatures made with a lead pencil are good in law.

N.Y., the wealthiest State in the Union.
Both makes all things difficult;
industry all things easy.

Louisville is called the "Fall City."

Instructions, Plate 38.

Make all down lines on same slant. Swing the hand with vigor. Do not hesitate, but write these copies with a confident movement. The fingers may be used a trifle in forming the loops, but the hand and arm must be driven along at the same time. From one to two pages, or even more, should be filled with each copy. Be careful and guide the hand in an intelligent manner.

Plate 39.

"I never was on the dull, tame shore,
But I loved the great, sea more and more."

A note drawn on Sunday is void.
You should give your entire mind to the work you undertake.

Bassan, purchased from Russia, '67.
San Juan is the capital of Porto Rico.
Instructions, Plate 30.

You need not omit the movement practice just because they are not given here. There should be no shades on these copies nor heavy down lines. Be sure you make the upper parts of "m" and "n" and the under part of "u" round. Keep pushing the paper upward as the writing progresses down the page, in order that the arms may be in the same position upon the desk. Do not become careless about your position. Often read the instructions in September number regarding position, peeholding, etc., and compare your position with that in the illustrations. Now compare your work with the copy often and get the two close together so that an accurate comparison may be made. Look carefully for the little faults. If you do not see these faults your progress will be slow. Keep the hand turned well toward the left.

Mr. Lehman's Parting Words

[The following paragraph was crowded out of the March number. Mr. Lehman intends favoring our readers with work as soon as he finds time to do so. The course just closed has been very helpful and of a high grade. EDITORS.]

In closing this short course of business writing of which this is the last lesson, I wish to say, that if any one who has been following the course carefully is in need of special instructions or suggestions in writing, I shall be glad to make the necessary criticisms if you will be kind enough to send me at least one page of your difficult work so that I may give you the corrections in a way that will be helpful to you, and enclose 10 cents to cover postage, and what time it may require to do the job in your work. Kindly remember that if there is any secret in all in learning to write a good hand, it is in being industrious enough to produce good results. You should take an interest in whatever you undertake to do, if it is worth doing at all. It should be backed up with the best efforts, and all the energy you have. When you see a good writer you naturally become interested in his ability, and wish you could write as well, but it seems that few are really willing to devote the time and energy necessary to become possessors of a skillful hand. I do not believe that it is necessary for any one to fail in acquiring a good substantial hand. Failure in most cases is simply lack of concentration of effort. It is not a lack of knowledge that makes the true scholar or that keeps the factories going, as much as it is concentration of effort. It is an indisputable fact that history cannot deny, that most of our greatest men were small men, but they had the power to concentrate their efforts. At the present time it is hardly safe for one to undertake to do two or three things, for it is always necessary for one to devote his entire time to one profession to make a success of it.

H. B. Lehman.

Lessons in
Business Penmanship

BY A. K. BURNETTE, BOWLING GREEN, KY.
Number One

INTRODUCTORY

Being called upon by the editors of the Penman-Artist and Business Educator to conduct a series of lessons in business penmanship through their valuable paper, I will endeavor to give a course of lessons and instructions which I think will, with thoughtful and energetic practice, enable the student, or those following the lessons, to improve in writing. We have reached a point in civilization where a good rapid business hand is in demand more than ever before. We hope all who are anxious to improve their penmanship will follow this series of lessons from beginning to end. The manner in which you practice is of great importance. A few moments devoted to careful, thoughtful, and accurate practice is worth more than hours, or even days, of careless, shoddy practice. It is not how much we do, but how well we do the thing that tells in the end. You may stumble and fall from time to time, but if you have the pluck and "stickitiveness" you will climb the rugged mountain to success.
MATERIAL

Too much care cannot be exercised in securing the very best material with which to practice, I would recommend paper of from ten to twelve pounds weight, a straight penholder with a cork grip, a coarse pen, and a bottle of imperal black ink for business writing.

POSITION

Place yourself squarely in front of the desk. Sit in an easy erect position, and gradually push the chair back and bend forward from the hips. Do not let the body touch the edge of the desk. This position is considered by all who have given the matter careful thought and consideration to be the most healthful one. The feet should be placed flat on the floor. The hands should be at about right angles to one another. The left hand should be used to hold the paper in position, and also to assist in supporting the body. Enough weight should be thrown upon the left arm to steady the body, that the right arm may be left free for all motion. The right arm should rest upon the muscles just below the elbow, and held well out from the body. Take the pen between the thumb, first and second fingers, and hold it firmly, but not grip it tightly, letting the holder cross the fingers or hand wherever it seems most convenient. The third and fourth fingers should be well curved under the hand.

INSTRUCTIONS, LESSON ONE

If you have read the instructions over carefully you are now ready to begin on the first lesson, which will consist only of movement exercises. Begin work on exercise No. 1, which is called the straight line exercise. Make exercise from two to three inches long from right to left, with a count of 12 to 15. See that your hand is gliding easily across the page on the last two fingers, keeping the exercise straight with the blue lines on the paper, and wrist over nearly flat with the desk. Fill in several lines of this exercise.

We have next the oblique exercise made with the arm running straight in and out of the sleeve. Make from thirty to fifty downward strokes of the exercise before lifting the pen from the paper, making the lines very close together and working out all the white space. Work very rapidly on this exercise.

Exercise No. 3 and 4 are the large right and left curved line exercises forming the two sides of the large retraced direct and indirect ovals. Practice the two exercises until you can make them well, then connect the two together forming the large direct and indirect ovals like No. 5 and 6, made in direction indicated by small arrows. Fill several pages of the large ovals, counting ten for each oval.

Next comes the large oblong or flat oval exercises, both direct and indirect. Make the exercises one large space high and about one and a half inches long. Use a rolling motion of the arm in making the exercises, letting the arm rest on the large muscle between the elbow and wrist.

Start exercise 9 or the figure eight exercise at the right hand side indicated by arrow, keep exercise in the space between the two blue lines. You may also finish the exercise by throwing an oval across the center without lifting the pen from the paper.

Begin exercise No. 11 and 12 from the outside, filling in to the center, getting the lines very close together. Make exercise from one to two large spaces high. This is a good exercise to bring the movement down from large to small.

We have next the large oval exercises joined together, with the light line. Connect from three to five of the ovals together, both direct and indirect, without lifting the pen from the paper. Work very rapidly on the exercises, letting the hand glide from one oval to another with ease, counting ten for each oval. If you have worked faithfully on the exercises given, you should have by this time acquired a very fair movement, and be ready for lesson No. 2.
Baltimore, Md. 4, 9, '86

Mr. H. O. Keesling, whose ad. appears elsewhere in this journal, recently favored us with some of his colored cards, which we must say are indeed beautiful. But the cards are made doubly handsome by some beautiful script thereon from the point of his skillful pen.

Mr. F. W. Tamblyn, Kansas City, Mo., favored us with a specimen of engraving done with pen and brush which we should have engraved were it not too small. Mr. Tamblyn is a practical engraver, and has plenty of it to do.

Mr. W. W. Merriman, Thomasville, Ga., favored us with a package of cards written in a variety of hands. Mr. N. is a skillful penman as well as a hustling up-to-date commercial teacher.

L. L. Gatewood, Albuquerque, New Mexico, favored us with a certificate made for "The Woodmen of the World and Women of Woodcraft," which is done in a very good imitation of lithography. The name is printed in colors, and shows that Mr. Gatewood is losing nothing in skill, but instead, is getting better and better, which in his case means not a little.

F. V. Dunh. Pittsburg, Pa., favored us with a few cards written in an artistic hand, which are certainly above the average received at this office. They are quite beautiful.

F. L. Miller, of St. Paul, Minn., sent pen drawings of horses' heads, which indicate unusual talent.

Mr. J. C. Fowlie, of Arlington, Oregon, favored us with some colored cards written with white ink, which are indeed quite artistic.

S. C. Bedinger, Kansas City, Mo., included some dashy ornamental signatures that show unusual ability in ornamental writing. Mr. Bedinger also writes a first-class business hand, and is evidently on the highway to the top in the profession.

Some splendidly written cards came from H. A. Franz, of the Metropolitan Commercial College, Minneapolis, Minn. Mr. Franz is a master with the pen as well as a strong commercial teacher. He has charge of the commercial department, and now has one hundred and six students under his instruction.

Mr. J. D. Valentine, Pittsburg, Pa., sends specimen of roundhand script and card writing which discloses the fact that he is maintaining his expertise with the pen.

Some ornamental signatures before us from the pen of Mr. A. H. Burke, Dexter, Ia., indicates that he intends to be a master penman. The work has a strong flavor of Courtney dash, which is saying a good deal.

G. H. Kropin, Humboldt, la., favored us with some very artistic specimens of ornate and roundhand penmanship.

Some magnificently written cards have been received from Mr. E. J. Plantier, of Bath Business College, Bath, Me., Mr. Plantier is pushing his work up to the top notch very rapidly.

C. C. Phelps, of Lone Oak, Texas, furnished us with some cards written in an ornamental hand.

John D. Hartnett, Manchester, N. H., writes a wonderfully copper plate-like hand, having followed closely the lessons by Mr. Howe given in this journal.

A. K. Burnette, Bowling Green, Ky., recently favored us with a letter, which is wonderfully Nibs like in character. Mr. Burnette is certainly one of the finest business penmen in the country.

Miss Mary E. Baker, Supervisor of Penmanship and Drawing in the Bellows Falls, Vt., Public Schools, is doing very efficient work in her lines, evidence of which is shown in Initials and Headings in the School Report, which were prepared by her pupils, and photo-engraved. Miss Baker is not only a fine teacher but a fine lady as well, and one of the finest lady penmen in the country.
Practical Vertical Penmanship Copies and Hints

Keep this in mind. Vertical penmanship is not unlike any other kind. It may be written rapidly or slowly, with the arm movement, or with the finger movement, or what is still better, the combination of both. In making "t" and "d," pause at the top before descending with the retracing in order to make the retracing successfully. These letters should not be looped. The "t" should be crossed with care. The "d" should be closed, or it may resemble "e." The "h" and "k" may be looped if desired, but the loop is unnecessary, as it adds practically nothing to legibility, and occupies more territory than the angular top given herewith. The "j," "y," and "g," should be studied carefully. Remember here should be but one angle in the "r," and that the "g" should be closed at the top the same as "a." The "q" is the same as "g" with a finish similar to the letter "f." The "p" is not unlike an inverted "d." Turn it over and you can see for yourself. The "z" begins the same as "u," and is finished with a short loop below the line.

Be careful and keep the first part of "h" and "k" considerably higher than the second part. See how easily you can do this work, as well as how well. Grace is not only an element of beauty but it is the secret of ease in execution, and therefore may be both a practical and fine art quality. There is no reason why writing should not be pleasing to the eye the same as speech is pleasing to the ear. There is no reason why it should not also be pleasing to the eye as is dress. Of course, the primary function in writing is to convey thought, and the primary function in clothing is to keep us warm, but since clothing is not only serviceable, but somewhat ornamental as well, so writing may, in a secondary sense, be pleasing to the eye without being seriously impracticable.
"Teach your boys and girls some common sense, along with the writing, the figuring and so forth," said a thoughtful businessman to a commercial teacher. "If only we could..."

"Teach your students to think," said President Sheeham, at the Providence meeting of the E. C. T. A., last year; and President Hamor, of Bridget University, highly commended the worthy sentiment.

Acrs of Diamonds lie at our feet, fellow teachers. As we move among them from day to day, are we doing anything to make their potential beauty manifest, or are we letting them go from us as they came to us, merely diamonds in the rough?

President Roosevelt is the great American apostle and exemplar of the gospel of work. He is the incarnation of the underlying principle of American supremacy, be he never so much for the sheer love of accomplishing work. He thinks work great fun. Are you setting such an example for our pupils? Do teachers and students alike exemplify daily this fundamental principle of success, the pure love of work?

Selfishness is a basic defect in our character. Do we so far yield to selfishness that we have no time for the church and the Sunday School? No money for the Y. M. C. A.? No inclination to present to the deserving poor children a ticket to a lecture, a concert, or an entertainment? "It is more blessed to give than to receive." * * *

At the Federation banquet in Detroit the President, in language of exquisite beauty, asked the Divine blessing on the occasion, and expressed the gratitude that nearly everyone felt for the blessings of a year of prosperity. It was a happy thought, fully in accordance with the sentiment of the majority of the teachers present. We wish that in the business schools of the land there were more frequent opportunities for devotional exercises and the preserving influence that such exercises exert when carried out in the right spirit.

"That is just what you said," stoutly declared a bright shorthand student to his teacher, who was correcting a transcript. "Is it not possible that you misunderstood me?" said the tactful teacher. "And, in any event, do you not think that your future employer would feel more kindly toward you if you should say to him, under similar circumstances, "I fear I misunderstood you," or "That is the way I understood it?" So we, in the hurry and distraction of a multitude of school room duties, stop long enough to give our well-meaning but thoughtless students some suggestions as to the cultivation of a considerate form of speech and bearing toward others? Ought we not to do so?

Purely as a business proposition, five of the great railways of Michigan refuse to hire men who are known to drink into excess drinking liquors. Many of our large financial and trading concerns require those who seek work with them to sign papers declaring that they neither drink nor use tobacco. In every position of responsibility, nowaday, it is common to find men who have had to furnish a bond for the faithful performance of duty. The bond companies require a minute statement regarding the personal habits of applicants, and they not infrequently, as a measure of precaution, employ private detectives to shadow their doubtful "risks" until they can determine whether it is best to cancel their bond. Do we ever bring these facts to the attention of our pupils? Are we ready to say, "This may be as a lesson in business? Ought we not, simply as an indispensable part of a business education, to say nothing of the larger interests involved—to set before our students the unanswerable training he terms education any form is contrary to sound judgment? Is it really necessary to "preach" in order to do this essential thing?

**True Commercial Education**

**The Kind that Makes for Manhood and for Money**

W. R. HUMPHREYS, BENGAL RAPIDS, MICH.

A PAPER THAT WAS TO HAVE BEEN READ AT ST. LOUIS BEFORE THE NATIONAL COMMERCIAL TEACHERS' FEDERATION.

The story of civilization is the story of correlation and conservation of energy. Primitive man, in his struggle for existence, used his muscles much and his brain little. For ages he wandered through the forests on foot capturing game as best he could. By and by he applied to his brain and subjected the lower animals to his service. Still later, he applied to his brain and subjected steam to his service. A little later, and within the recollection of some of my listeners, he made another appeal, and lightning became his messenger. Hundrds of illustrations showing the evolution of brain power, bent the twentieth century man. This is distinctively the age of invention, or, in other words, the age in which man thinks. It is no longer the man with a bow, but the man with a brain. Centuries ago man discovered that he could change his environment, that he could develop and train his brain. This development and training he terms education. A hundred years ago he entered a school or college or university in order that he might become a theologian. No effort was made to educate the common people. Books were for priests, not for the masses. A little later, the lawyer and physician asked for a college. By and by the common man knocked at the depositories of learning and he was admitted.

**THE LOVE OF MONEY IS THE MOTIVE OF THE AGE**

A true history of commerce is largely a history of man's social evolution. Today, man's achievements in trade and commerce depend in no small measure upon his capacity for education. We call this education commercial. In a country rich in natural resources and with a climate that makes life a joy, men naturally seek lines of human effort that favor the rapid accumulation of wealth. In his desperate effort to accumulate wealth he frequently forgets the divine uses of wealth. This fever has touched every form of human effort. The business school, in its advertising, is ever pointing out the road to wealth. It is ever pointing out to others some new illustration of how a business education will enable even the ordinary man to get rich. This idea so dominates all forms of education that today we find men in our highways pursuing training of learning pursuing a four years' course of study for no other reason than that they may gain a livelihood without much work. They recognize the fact that Emerson was correct when he said that the key to all ages is immortality. With this startling declaration in mind they endeavor to acquire that intellectual sharpness whereby they may go forth and appropriate the earnings of the masses.

**They shall not steal.**

In order to illustrate what I mean by appropriating the earnings of the masses, I give the following illustration: In 1863 or 1865, one of my neighbors received a letter from a sharp, shrewd, Port Huron lawyer, in which he said that a real estate dealer in his city had bought tax titles to four lots on which my neighbor had failed to pay taxes for 1863. Subsequent taxes had been paid. My neighbor gave a manly explanation to the Port Huron lawyer, offered to pay all expenses and asked to be treated according to the golden rule. The lawyer made a written reply demanding a certain amount of money for the four titles. Insuch as the amount of this demand was less than it would cost to contest the case in the courts my neighbor paid the "blood" money. Here were two men, the tax shirk and the conscienceless lawyer, taking advantage of a clerical oversight. The tax had been paid but no receipt had been issued. The city treasurer was dead. It would require an immense amount of work to furnish the necessary proof. My neighbor was "held up" by two men who knew how to use Michigan laws for the purpose of enacting legalized theft. This is only
THE ABUSE OF WEALTH

The pathetic element in this struggle for money and power lies in the fact that the masses commend and applaud these despots. In Michigan, the forests of pine and hardwood have, in many instances, been bought for song. The lumber has been marketed with the result that their owners have realized millions of dollars. Ethically speaking, this timber did not belong to any one of these men who had the shrewdness to accumulate natural resources. In order to appease the masses, these money kings have only to build here and there a church; here and there a college or university; here and there a public library. I am making no attack on wealth. Without wealth, life isn't worth living. I am crying out against its abuse. The real enemies to wealth are those men and those corporations who believe that the common people dare better off without it. The dangerous anarchist of today is the man who says the common people cannot be trusted to use wealth. He says, "I am their executor; I will invest their money in libraries and send tens of millions of their money from America to help the universities of Scotland." These declarations may not be politic but they are shockingly true. Although this age abounds in books, periodicals, teachers, lecturers, preachers, and statesmen that can tell men how to get rich, the approach of the new democracy is discernible.

AGENTS OF THE NEW DEMOCRACY

What agency is in the best position for hastening the realization of the new democracy? My answer would startle the conservative institutions of learning. Many of these institutions depend for their existence upon the abuse of the agencies I have already condemned. The business school deals largely with men and women who possess, at the beginning, little wealth, men and women who have no other form of capital than brains. These men and women come largely from the ranks of the great army of industrial toilers. These are the men and women who are the most susceptible to wholesome direction. Fellow business educators, what shall these men and women receive at your hands? What will you in your announcements and publications promise them? Dare you answer, Dollars and Degrees only? If this is your answer, close your doors quickly and get out of the way of the progressive march of humanity.

If you give your answer, dollars, in order that the many may have better homes, better schools, more leisure, more books, more art, more music, then I say amen and amen! If the graduates of business schools are going out into the world to teach, by example and by precept, that nature is endowed in resources, that there is enough for all men, that success does not mean monopoly, that success means making the best of one's self without hindering any other man from doing the same, then God speed business education.

YOUR SUCCESS DOES NOT REQUIRE ANOTHER'S FAILURE

Must we accept the philosophy of the pessimist and say that these things must not come to pass until human nature is radically changed? Does David Harum, in the horse trading act, represent a sufficiently high ideal for the business student? I am aware that business school men sometimes erroneously think that the wholesome prosperity of a competing business school means their own destruction. It is, therefore, inevitable that they teach their students the same error, that the legitimate success of one merchant means the failure of others.

When the business school men cherish the larger faith that the legitimate success of one man means the chance for several other noble men to achieve success, the parasitic business school, the mongrel business school, the will o' the wisp business school, will be swept off the earth. What is the meaning of this great meeting? It means that we are brothers, not enemies; it means that the

COMMERCIAL SCHOOLS SHOULD STAND FOR JUSTICE AND EQUITABLE

There is no place in the business course for training students to get a corner on wheat, coal or any other commodity, for teaching underhanded money in their actual business practice without rendering adequate compensation. The business school is a social organism in which students are to be men first, last, and all the time, and never thieves. In the business schools, men and women are to receive visions of noble ideals. They are to be daily awakened and inspired by coming in contact with business philanthropists.

The business school does not mean a man who gives away wealth without receiving anything in return. If this is ever called philanthropy, it is not the kind that I mean. A man who gives away a dollar without getting a dollar's worth in return is a philanthropist. I do not mean a man who gives away wealth without receiving anything in return. If this is ever called philanthropy, it is not the kind that I mean. A man who gives away a dollar without getting a dollar's worth in return is a philanthropist. We should leave the business school with a love for the best that there is in literature. My brother business educator, do you say that there is not time for all this? Then close your school and live in your humanity.

Take down the picture of S. S. Packard, or else turn his face to the wall in order that your worship of the golden calf may not be thrust upon your vision.
Thus the business school trains and educates. Is this mission grand enough for the business school of America? Shall we go forth from this convention inspired and invigorated? The business school grew out of the padlock, brass, and shackle of the eighteenth century. At the dawn of the twentieth century we begin to see the light in the east. By the aid of that light we greet the world with the proclamation that we offer the kind of educational principles that Make for Man-
hood and for Money.

Occidental vs. Oriental.

Geo. S. Murray, Director Commercial Department and Burser of Robert College, Constantinople.

True education is much the same process in the Occident and Orient; the Orient places a premium on the ability to make money; the Occident places a premium on the quality of the money. It is therefore necessary for any successful man to understand Occidental methods, and for any Occidental man to understand Oriental methods.

Even Exchange is the Highest Philanthropy.

But my fellow workers ask, "Are these business graduates going out into the world with a training that will enable them to make money?" Yes. A thousand times yes. The potential wealth of the world is infinite. Making money does not consist solely in the re-distribution of wealth. It does not consist solely in the earning of a brother laborer. The legitimate money maker is a philanthropist. He is a producer, not merely a medium of exchange or rather a receptacle after exchange. He is a mediator of two worlds, and his earnings are a world to the man in the street and he turns to the left instead of to the right.

The old saying. "Time and tide wait for no man," is not applicable in this part of the world for the Turkish time does not wait for a man. For instance, a Bosphorus steamer scheduled to leave at 12:20 o'clock today leaves tomorrow at 12:21, the next day at 12:23 and so on, until the end of the month when another steamer is made, with new time tables written in Turkish and French, at the foot of which is the following note, "You are advised to come to the wharf a few minutes before the time to get the boat." The Turkish day begins at sunset, which is always 12 o'clock their time, so that this hour varies with the sunset, and time pieces must be changed as often as we change our clothes. If we dress for the sun. The Turks have a civil and a religious year, so that business documents must be made out with regard to three different years. The year is divided into 12 lunar months, which are unequal. They are divided by a leap year, and a year has, therefore, 354 days.

The first month of the year, on account of falling back each year 11 days, makes the circuit of the seasons in 33 years. We can never say that in Turkey any given date in our month is equivalent to a given date in a Turkish month. One can easily imagine what a complicated affair the calendar would be on such an apparatus of years.

Money changes were greatly varied, and there is a new Eden.

Is this a gospel for the Jew? No. this is a gospel for the many. The accountant who earns his bread and who is destined to render service is the one man in ten thousand who is sought after. Booker T. Washington, on entering Hampton In-
stitute, said: "It is a great relief to be in sweeping a room." He did it so well that he was given a place in that great school.

Only a stenographer, but a stenographer trained for service. Money for such service? Yes, money, money, more money, larger field for rendering service. Only a clerk, a man, a woman, trained in the business school, teachable, willing, polite, accurate, capa-
ble, Money? Yes, money. A business of money. There are jobs for others, homes for others, joy for others.
lisas. The buyer fluctuates himself that he has bought his articles cheap, and the seller likes to believe he sold them for the exact price he set. His first aim must be the way the merchant arrives at the value of his goods. He has no notion of adding to his cost price a certain percentage of gain, and then selling at a price that will return a profit.

A student of commerce in this part of the world must be a veritable linguist. Turkish, Armenian, Greek and French are spoken about as much as the other, and a student must be largely occupied in acquiring languages. Throughout a boy's entire course of study about one-half of his time is spent on languages.

Indeed the number of subjects a boy who is going to enter business must study is many and difficult. The conditions here are such that they require one who is successful in business to have a knowledge of human nature, and shrewdness and tact hardly equalled elsewhere. And because of the diversity of the Occident and the Orient there are mutual and reciprocal relations, the Occident supplementing the Orient, and the Orient the Occident.

The plan at the College is not to establish a separate school, but to have the commercial work run through the entire collegiate course of five years. There will be two degrees, the first to the degree of A. B., and another to the degree of B. S. The student entering the commercial work will receive the B. S. degree. Suitable offices for business practice will be modeled and an option course in shorthand and typewriting will be established. It may be necessary to use English, Greek and Turkish typewriters. The chief difficulty is to get appropriate text-books, for home study which are thoroughly applicable to local conditions. Pemanship will run through the first three years of the Preparatory School, and I am training instructors in the subject so that the boys may be prepared for the work in any quarter of the world. My limited experience I am led to believe that the youth of this part of the world are apt in acquiring shorthand and penmanship.

To plan work of this character is not altogether easy. It requires some execution to deal with an immense amount of tact and dogged perseverance, for the principle of action here is "Never do today what you can put off till tomorrow." It is significant that the first word a foreigner acquires is getten tomorrow.

Dr. Herrick Replies to Mr. Williams.

Editor of Penman-Artist and Business Educator.

Dear Sir,—The letter of Mr. L. L. Williams, published in your March number, is a defense that does not defend. Let us be misled by the attempt to shift the ground of the debate I wish to call attention to the following two points. Mr. Williams' paper at Detroit, appearing first in your magazine for November, and since printed in the N. E. A. Proceedings for 1901, made what seemed to be an overt attack upon higher commercial education. The original article of Williams says that there are three kinds of schools needed: Common schools, high schools and colleges, and professional schools; the education supplied by the first is the lowest, by the second is the medium, and by the third is technical. Though he introduces a modification that there is disciplinary value in all education, Mr. Williams leaves himself open, both by direct statement and inference, to the charge made, viz.: that he would have education for business men cut up into the three kinds—first, the classical school and college and the professional school (in this case the business college). Let me quote, "Business education is, therefore, a matter of theory and discipline in both of these institutions, and the technical knowledge necessary to adapt this knowledge to business purposes." If there were any doubt about this it is only necessary to note that Mr. Williams' conception of what is desirable, the neglect of any form of practical study, any judgment, for every young man who contemplates a business career, is to supplement a thorough rudimentary education with a good high school course, and then to secure such knowledge of business customs and office routine as is provided by the leading business colleges of the period." (N. E. A. Proceeding, p. 591.) Also Business Educator has said that "Mr. Williams arranged higher commercial education on grounds of students being required to study six modern languages and a full college course in the liberal arts and the higher elementary subjects, whereas the college has always been for the purpose of securing a modern education, the higher commercial school as a means of satisfying it as an antidote to the delusive doctrine which Mr. Williams prescribes.

Mr. Williams has devoted most of his last lecture to assaults upon Windmills. I must remind him that my defense was not of Mr. Scott or his school,—I'll trust the Wisconsin director to take care of himself. I did not mean to imply that his school had been as Mr. Williams arranged, and let us stick to the subject. In the latter part of the recent contribution the discussion is on the value of college education in general. Mr. Williams' practical education is superior to college education and it is absurd to blindly imitate the business methods of Germany or France. I am in the heartfelt accord with this statement, so are others who are pleading for higher races.

I have repeatedly said, and said in Mr. Williams' presence, a thing more far-reaching than this, we ought not to blindly imitate French and German methods of preparing men for their business in the United States. I have cited from a recent book an opinion which is, I believe, current among men who have studied the United States and the higher commercial education. "Imitation of foreign countries will never help us. The first thing we learn from a careful comparative study of foreign schools is that each nation must build up its own system best suited to its own requirements and best adapted to the natural genius of its people." (Ward, Educational Foundations of Trade and Industry.) If Mr. Williams has any basis for this charge of "blind following of France and Germany, let's have it; for myself I plead "not guilty" on the indictment.

I have the highest personal regard for Mr. Williams and his motives. I have tried to put myself in his place to see this question from his point of view, but within, I think his original article was ill-timed and did not say as much as he wished to say. I have felt therefore that I ought to enter a demur to his so-called defense.

THE Corner-Stone of Business Success
PAPER READ DECEMBER 25, 1901, BEFORE THE NATIONAL COMMERCIAL TEACHERS' FEDERATION AT ST. LOUIS, BY DR. OGDEN SWEET NARDEN, EDITOR OF "SUCCESS" (Continued from March and concluded in this number)

OLD FASHIONED HONESTY
What the world wants today is young people who will not offer "English woolens" manufactured in American mills; who will not sell "Irish linen" made in New York. The world wants physicians who will not pretend to know the disease when they do not or, experiment upon patients with questionable doses of drugs: statesmen who will not pack caucuses or pull wires: lawyers who will not urge their clients to press their suits into court to get their fees, when they know there is no chance of winning; clergymen who can hear a larger call than that of a large salary or popular applause. It wants business men who will give sixty-six hours for forty-five, and thirty-two quarts for a bushel. It wants journalists who will not write scurrilous, scandalous articles, merely because the chief editor wants them. It wants men who will not say "I'll do because everybody does," young men who will not think anything profitable that is dishonest.

There is a deal of going across lots in the hope of making a short cut to the high road to fortune; but most men make poor business of these attempts to save time, often becoming beggars or criminals, when they might have made sure although slow progress had they kept to the narrow path. Professor of success cannot be won in any such way. Generally, the business history of the short-cut people reads something like this:

Monday, I dabbled in stock operations; Tuesday, owned millions, by all calculations; Wednesday, my Fifth Avenue palace began; Thursday, I drove out with a spanking bay span

Friday, I gave a magnificent ball; And Saturday, "smashed," with nothing at all.

The straightest, surest path to respect and confidence and success is through truth; and the straightest, shortest path to failure is through falsehood.

CHARACTER IS A BANKABLE ASSET.
How were a multitude of business men who lost every dollar they had in the Chicago fire enabled to resume business at once, some in a wholesale business without means? Their record was their bank account. The commercial agencies said they were square men; that they always paid one hundred cents on a dollar; that they had paid promptly, and that they were in demand. This was the straight road to success. This record was as good as a bank account. They draw on their character. Character was the coin which enabled penniless men to buy thousands of dollars worth of goods. Their integrity did not burn up with their stores. The best part of them was beyond reach of fire, and could not be burned.

The reputation of a borrower for integrity and reliability has more to do with giving credit than his mere ability to pay. It is interesting and instructive to notice the difference in the way young men starting out in their careers gain confidence, of two men who have equal advantages of opportunity and education; who, apparently possess equal business ability; and who start out in the same city under practically like conditions. One will rapidly gain credit at the banks and jobbing houses, while the other cannot get any foothold whatever.

People seem to be afraid to trust him, not because he is vicious or dissipated, but because they are not confident of his integrity.

They do not feel that he can be depended on under all circumstances. Unlike the other young man, he has not cultivated the one thing upon which all credit is based, either above suspicion, a reputation without reproach.

In the great monetary panic of 1893, a meeting was called of the various bank presidents of New York City. When asked what he thought the condition of the banks was during the day, some replied fifty per cent, some even as high as seventy-five per cent, but Moses Taylor of the City Bank said, "We had in bank this morning $5,000,000; this afternoon, $4,000,000. While other banks were badly "run," the confidence in the City Bank under Mr. Taylor's management was such that people had deposited in that institution what they had drawn from other banks. Character gives confidence.

HONESTY IS THE BEST POLICY.
Honest money-making is a timely topic in our modern world. The principal of all right exchanges is equivalent, the quid pro quo, as the common phrase is. In all honest trade, for every good there is a rendered. In every legitimate bargain, both the persons interested are satisfied, and permanently satisfied; each gets what he want. Nathan Straus, the Brooklyn Coal Company, is one of the elements of his success that he always considered the man at the other end of the bargain. A pleased customer is a good advertisement and a friend who will send his trade. A person who feels he has been cheated may cut off a hundred times as much profit as came from the dishonest bargain. This is not the highest ground on which to urge honest dealing, but it is a practical, everyday reason, and does not at all vitiate the higher
and better ones. Of course, if every one tempted to use unfair means, or to do a dishonest deed, “should put himself in the place” of the other man, “love him as himself,” he would not do it. That is a development of Christianity yet to come. It is the slightest deviation from the line of perfect integrity, can not be too constantly kept before young people about to enter into business life. Dishonesty cannot be practiced without becoming ruinous to the one who practices it, and is usually found to be most unbeknown for way. An incident described sometime ago by the Detroit “Free Press,” shows how one dishonest man was caught:

A clergyman who had officiated at a fashionable wedding was astonished to receive at the hands of the best man an envelope containing a very meagre fee. Worse than that, it appeared that the sexton and the organist, who had been put to the trouble of several rehearsals, had also been treated shabbily.

Sometime afterward the sexton, while giving the church a cleaning, found behind a pew cushions some fragments of paper. Soon one and then a note. He passed the pieces to the rector who happened to be present, and, putting them together, discovered that the note had been from the bridegroom. A demand was made to pay such and such amounts to the clergyman, organist and sexton. These amounts were really liberal.

Now, then, the mystery was explained: and the couple, previously ignorant, wrote to the best man, who was cashier of a bank, calling upon him to set matters straight. The cashier replied promptly, enclosing the sums which he had kept back in the bridegroom’s money; and so, thinking, he felt bound to inform the bank officials of his discovery. They were surprised, but began at once an investigation of the cashier’s accounts, and had not gone very far before they came upon the fact that he had for some time been engaged in systematic robbery of the bank’s funds.

A STREAM WILL RISE NO HIGHER THAN ITS SOURCE.

Integrity in business should be taught not only for the sake of business, but for the good of every other interest. A community in which business is not going to produce a city, state or national government that is pure and honest. On the other hand, when an honest business man gets into office, his influence is far reaching and powerful.

The value of personal integrity to the state, at a great crisis, was singularly illustrated by George Peabody. In 1825, after he moved from America to London, there came a proposal from the United States. Many banks suspended specie payments. Many mercantile houses went to the wall, and thousands more were in great distress. England was aghast. The great sympathetic nerve of the credit, as far as the United States were concerned, was for the time paralyzed. Probably not half a dozen men in Europe would have been listened to for a moment in the Bank of England upon the subject of American securities, but George Peabody was one of them. His name was already a tower of strength in the commercial world. In those dark days his business was four-square in every business panic. Peabody retrieved the credit of the State of Maryland, and, it might also be said, of the United States. His character was the magic wand which in many a case changed almost worthless paper into gold. Merchants then believed that the Atlantic produced large advances from London before the goods consigned to him had been sold.

When an attempt was made to secure the passage of an ordinance of repudiation in Illinois, Peabody lay down a bill at a hotel in Springfield. He asked to be carried to the convention; and, while lying upon his mattress, wrote a substitute for the repudiation bill.

"Resolved: That Illinois will be honest, although she never pays a cent." It was adopted, and was the dead blow to repudiation, not only in Illinois, but also in all the other states. The credit and prosperity of the whole nation rose at once.

MEN ARE FAIRLY HONEST.

The present sceptical attitude of the public as to honesty in business is well illustrated by the case of a clerk, in Chicago, who gave one thousand dollars to the man who can demonstrate his ability to conduct a business with perfect honesty. Not all are so sceptical, however. Rev. Minot J. Savage said some time ago:

"In spite of all the dishonesty that you may find in business, I believe the immense majority of the men you meet are, in the main, honest. It is possible the rule does not exist on the face of the earth a perfectly honest man I do not know. But most men, I think, are fairly honest, generally honest. Nine out of ten of the transactions that were carried on in the city of Boston yesterday were fairly honest transactions. If this were not so, business would not endure, because the very basis, the underlying foundation, of any business is honesty; and if there were not a better majority of honesty than honesty in business, the whole thing would crumble about our ears, just as, in the case of the house, if there were not more honest work than dishonest, it would

And so, when you come to any other department of life, the simple fact of our social order, improving a little year after year, however slowly, proves that the majority power at work in that social order, honesty, sincerity, and health. But whether the present condition of affairs be bad or good, you and I and all of us can help to make it better. Join with the mothers and fathers, the public and Sunday School teachers in standing ever and always for the highest character, the greatest morality. You can find countless opportunities of insinuating examples. You are training for business success; your warning that dishonesty and poor character make for failure, business failure, will have more weight with your ambitious youth than similar advice from one not supposed to know about business. Doubtless all of you do something along these lines, but in the daily routine of commercial teaching, the influence of one voice must not be overlooked. If these few words of mine have roused you to think a little of what you may do, and the far reaching possibilities of your influence, I shall be more than content.

CHARACTER IS ABOVE ALL RICHES.

"Character is like stock in trade," said Dr. Hawes, of Hartford, "the more of it a man possesses, the greater his facilities for making additions to it. Character is power, is influence; it makes friends, generates funds, draws patronage and support, and opens a sure way to wealth, honor and happiness."

He is the richest man who enriches his country most; in whom the people feel rich. He is the man who has the most to do with his money; who opens the door of opportunity widest to those about him; who is ears to the deaf, eyes to the blind, and feet to the lame. Such a man makes every acre of land, every bond more valuable, and makes richer every man who lives near him. On the other hand, many a millionaire has impoverished the town in which he lives.

Oh, what a fearful price, a price that staggers belief, has been paid by many a millionaire for his money! At what a cost! The loss of mankind, the loss of all that is highest and noblest in life, the blighting and paralyzing of the finer sensibilities, the power of delicate appreciation of what is most beautiful in life!

Manhood overtops all titles. Character is always higher than character, and Hang this motto in every business college in the land, make it a part of every lesson, and your work shall indeed be blessed in producing a generation of manyy merchants and honest men.

Report of School Committee of Commercial Teachers

APPOINTED AT DETROIT, DEC. 1900

Each member of the Committee has endeavored to see all the books that have been tabulated; he here present a synopsis covering the books that have been tabulated. This being a report, the committee, and not a complete report, have given a commercial course; namely, Dallas, Texas, and Buffalo. Pough-keepsie, N. Y. With the exception of the last-named, the principal of the high schools in the state retaining this fact and hope to soon see a commercial course started. This course is of the standard course. The total number reporting. There are eight other schools in which short-hand is taught, but none have a course of about eighteen per cent.

As some of the members answer all questions asked, I will specify the number reporting in the following synopsis:

<table>
<thead>
<tr>
<th>School</th>
<th>Total Attendance</th>
<th>Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>School</td>
<td>Bookkeeping</td>
<td>349</td>
</tr>
<tr>
<td>School</td>
<td>Business</td>
<td>328</td>
</tr>
<tr>
<td>School</td>
<td>Total</td>
<td>677</td>
</tr>
<tr>
<td>School</td>
<td>Bookkeeping</td>
<td>349</td>
</tr>
<tr>
<td>School</td>
<td>Business</td>
<td>328</td>
</tr>
<tr>
<td>School</td>
<td>Total</td>
<td>677</td>
</tr>
</tbody>
</table>

Of those reporting, we find that the following subjects are taught regularly and from text-books in most cases: Arithmetic, 36; Commercial Law, 18; Civics, 31; Business Correspondence, 22; Spelling, 30; Economics, 19.

Although proper text-books, suitable for grades, is a great essential and the greatest, the success of a commercial department, there are a number who will be considered. I refer to the limited time assigned in many schools for bookkeeping work. In other studies, the time is long enough for a recitation, and it is assumed (and rightly) that the teacher can teach the lesson in a study hour or at home independent of a teacher's aid. In Bookkeeping, the teacher is more or less in the home, or even in the school unless it is in the regular school, and, with the exception of some continuous access to the bank or other offices, and is under the individual supervision of the teacher. The bookkeeping subject is not receiving proper attention, unless the student is allowed to work on his own alone a day for one year, or its equivalent, which would make a total of forty days. Forty days this time as such should be accomplished in one year as in a private business school in five or six months. This is assuming that in both classes of schools Arithmetic, Law, Business Correspondence, 22; Spelling, 30; Economics, 19.
The Penman-Artist and Business Educator

The came to Springfield, one period was devoted to Bookkeeping, another to Business Arithmetic. These subjects were not taught by the regular Teachers, but rather by the students themselves, who were selected by the Department Head, Mr. Doggett. The students were divided into groups of five, and were given specific tasks to complete. The groups were then evaluated by the Department Head, and their progress was recorded. The meetings were held on a regular basis, and the students were expected to attend all meetings.

National Educational Association
Forty-first Annual Convention, Minneapolis, July, 1902

CIRCULAR NUMBER ONE
Office of The Department President,

ALBANY, N. Y., Jan. 22, 1902.

At the last meeting of the Department of Business Education, a special resolution was passed. The resolution was submitted to the committee and the President, and it was adopted unanimously. The resolution called for the establishment of a committee to study the subject of the Department of Business Education.

RESOLVED, That the President be instructed to confer with the President of the Department of Business Education, and to request him to appoint a committee of three to undertake this study.

This resolution was adopted unanimously by the members present.

The Committee was appointed as follows:

Mr. E. G. Gaylord, Director of the Department of Education, Holyoke, Mass.
Mr. P. B. S. Peters, Director of the Department of Science, Beverly, Mass.
Mr. R. A. Grant, Director of the Department of Business Education, Rockford, Ill.
Mr. R. B. Seymore, Director of the Department of History, Springfield, Ill.

The May meeting of the Ohio Commercial and Special Teachers' Association which is to meet in Dayton May 15-17, is promising to be a decided success. You will do well to reserve your places there. An announcement may be found elsewhere in these columns. This Association is now one of the leading State organizations, if not the leading State organization in this state. It is beginning to look to Ohio for ideas for State organizations. This means that Ohioans in particular should turn out and make the meeting an annual success. Their program is all that could be desired. The programs that could be desired, as the city of Dayton is now recognized as one of the most beautiful cities of its size in the world. There are attractions here also which are alone worth going to see.

Favorable Comment

By CHANDLER H. PEIRCE, DAYTON, O.

I've been thinking how nice it would be to have something refreshing each month, something short, sharp, and to the point. It will not do to have full length, businesslike, compromising articles. The value of the paper is very dependent upon that. I have seen articles, to be sure, which did not reflect the best interests of the association, and it is my opinion that the better you write, the more you will be esteemed.

Announcement Concerning the
"New Spencerian Compendium of Penmanship."

Among Master Penmen the New Spencerian Compendium of Penmanship is recognized as the greatest work of modern times. From it the leading penmen of the present day derived their artistic ideas. This, however, has not been very generally known. To students of penmanship, and especially to those who desire to become masters, it is invaluable. To such it is cheap at $10.00 because the engraved plates are of the finest engravings of penmanship. The engraving was done by Mr. A. McLees, now deceased, who was one of the finest engravers of script that ever lived. The initial cost of the Compendium was upwards of $10,000.00. The cost is too great and demand too limited to supply the plates which have been destroyed.

YOU WILL BE INFORMED in knowing that the undersigned has purchased the entire remaining edition of this Greatest of All Compendiums from the American Book Company, and that the same is hereby offered to LOVERS OF FINE ART in Penmanship. It is not likely that this announcement will appear again as some of the parts are nearly exhausted.

The price, per part, is $1.09 postpaid, or the seven parts for $5.00, postpaid, if ordered at once. Some of these compe...
Policy Engrossing

Messes. Zaner and Blosser.

Gentlemen: In compliance with your request we herewith present the readers of your valuable journal with the result of our many years' experience as policy engrossers, and the lessons which may be gained from them.

1st. Required Application for Position as Policy Engrosser:

It is a mistake to suppose that the "Great requisites" to be a valuable policy engrosser, is mechanical skill alone. The world is strewn with wrecks of "the finest penmen" who are not worth their salt as policy engrossers. But do not conceive for a moment that fine pen-work is not a very necessary adjunct. It is, but not all. The first thing a president of a company does and thinks when he receives a fine specimen of work is something like this: "Yes, it's very pretty, but I am afraid it is too slow." A specimen of the applicant's work should not be laborcd, but be a free, easy production; and not, only is the writer judged by his mechanical skill, but the composition, the pith of the application, appeals more often to the executive than the most beautiful specimen of Engraver's Script ever executed.

2d. Duties of a Policy Engrosser:

To be a successful policy engrosser one must be thoroughly conversant with the "whys and wherefores" of the plans issued by his company. A clear conception of the legal method of writing beneficiaries is an important point in a man's usefulness to his employers. What we mean by this is not only putting in good form the intentions of the applicant, but so embodying the phraseology that when the policy becomes a claim the work of the company department will be facilitated and simplified. This is considered by all companies as very important. But this is a matter which comes only by experience, and is not a matter of penmanship.

3d. Attractive Penmanships: i.e., Combination of Skill and Speed

Fine penmanship, like fine printing, conveys a favorable impression upon the minds of all concerned, and when applied to a policy form makes it more attractive. Skill alone cannot be depended upon to insure success, but when combined with speed it becomes a potent factor in attaining it. The commercial value of a man's work is certainly much impaired, if not utterly nullified, by his inability to turn out work not only attractively but rapidly. This Company has certain policy forms which require quite a little lettering to complete them. The policy engrosser should therefore possess a practical knowledge of Old English, plain block, Italic and white letter with black background, as per specimens, to successfully fill the position. Our experience is that Modified Engraver's Script or Round Hand, with easy and graceful Spencerian capitals, is best adapted for attractive policy engrossing, especially on the front page. On the second or subsequent pages a Spencerian or shaded form of that system can oftentimes be profitably used, when carefully executed. The name of the insured and the amount of the insurance on the first page, with the name of the insured on the back of the policy and envelope, are the parts to which we give the greater prominence. The following specimens of penmanship illustrate our every day engrossing hand as they come from the pen, and are not to be considered as specimens of "accurate" penmanship. Our experience has taught us that for ease, rapidity and attractiveness this is the ideal hand for policy engrossing. Of course it must be understood that we do not claim to be the "whole show," "there are others.

There is one other point that we wish to call your readers' attention to, and it is a subject that has not been given the attention it deserves, and that is the formation of numerals. A policy which otherwise would command favorable attention for artistic merit can easily be spoiled by poorly executed figures. The above are what we find suitable in our work.

In Conclusion:

The foregoing remarks are the result of the combined experience of both the policy engrossers of this Company; and those of your readers who are not policy engrossers would do well be surprised to learn the value of an attractively executed contract, not only to the Company but to the agent. At our recent Agency Convention, held in this city, it was very gratifying to us to have many of our prominent managers and agents call and inform us how our manner of policy engrossing has helped them in their work, and the favorable comments of the insured. It only affirms the old saying that "whatever is worth doing at all is worth doing well."

We hope that this is but the initial talk on this interesting subject, and that some of our more prominent brother policy engrossers will give us the result of their valuable experience, and in this way "push a good thing along."

Fraternally,

George Endicott,
Charlton V. Howe,
Fidelity Mutual Life Insurance Co.,

NEWS ITEMS

C. S. Jackson, a Zanerian boy, is now connected with the Dallas Business University, Dallas, Texas. Mr. J. F. Smith is president and proprietor of the institution, and, before the great fire, was located at Galveston, Texas. Mr. Jackson is a very fine penman, and will no doubt win for himself quite a reputation, since he is now in the chair formerly occupied by Taylor and Courtney.

H. W. Anshutz, formerly of Morton, Ohio, is now connected with the New Castle, Pa., Business College. Mr. Anshutz secured the position through the Zaner & Bloser Employment Bureau.

The Norfolk College of Commerce, Norfolk, Va., is but six months old and reports an attendance of one hundred and eighty-six.

The Pacific Coast Business College, San Jose, Cal., now has an attendance of one hundred and seventy-five pupils. H. E. Cox is president and J. A. Chestnut, principal of the institution. This is certainly a very good attendance. It is probably needless to say that the PENMAN-ARTIST AND BUSINESS EDUCATOR is regularly received in this progressive establishment.

Messrs. H. L. Weber and K. W. Nickerson, proprietors of the Woodstock, Ont., Business College, recently purchased Mr. H. M. Kennedy's interest in the Woodstock, Ont., Business College. Mr. Nickerson will remain with the former school, and Mr. Weber will take charge of the latter.

Mr. C. C. Canan, the master penman and artist who went through an operation for appendicitis the latter part of last year, passed through a second operation on the 3rd of January of this year. A recent letter from him says, "I expect to get well." Our best wishes for his early and complete recovery.

Thos. P. Smully, formerly with Child's Business College, Springfield, Mass., has taken a position with the Southern Short-hand and Business University, Norfolk, Va.

R. L. Dickinsheets, of the Boulder, Colo., Business College, writes that his institution is enjoying a period of prosperity, and for by its proprietors, Mr. Dickinsheets enclosed two sheets of ornamental signatures written in his usual free and dashy style.

Mr. W. A. Ross, recently of the Massey Business College of Columbus, Ga., is now with the Ruskin College, Trenton, Mo. Mr. Ross is a good man, as well as a big one, tipping the scales at two hundred and seventy pounds.

Mr. H. C. Walker, who has been with the Spencerian at Louisville for some time, recently engaged with the St. Louis, Mo., Commercial College.

Mr. J. B. Crawford, Des Moines, Ia., renew's subscription to the PENMAN-ARTIST AND BUSINESS EDUCATOR and concludes his letter as follows: "I receive from your journal more inspiration than from any other of its kind, in fact, it is the only one of its kind."

In a recent letter from S. B. Fahnestock, of the McPherson, Kans., College, he states: "We have a fine school this year. The enrollment is larger than ever before since I have been in the institution." Similar reports are coming to us from all quarters of the country. They indicate that schools generally are crowded, and that commercial school men are unusually busy.

Henry D. Allison, of Dublin, N. H., writes simplified penmanship like a professional. In a recent letter he states, "I like simplified penmanship intensely for business purposes. It is intensely practical."

The one-serviceable, safe, certain, remunerative, attainable quality in every study and in every pursuit is the quality of attention. My own invention, or im-

agination, such as it is, can most truthfully assure you, would never have serve-

ed me as joint has but for the habit of commonplace, humble, patient, daily task-
ing, drudging attention.

Engrossing

By T. W. Thalhyn, Kansas City, Mo.

It is not my intention to give a lengthy article, not that there is little in the subject to say, but I shall try to express my thoughts and observations in a brief form rather than to enter into lengthy discussions and repetition of statements.

All of us who have made any pretensions in the field of penmanship know within how little of my subject, some more, some less, doubtless. And while a few may obtain their knowledge from theory only, the most of us have drunk from the fountain of experience. A penman who has been in the work for only a short time, can scarcely have failed to be called upon to execute a piece of engrossing, and if located in a city the calls upon him, doubtless, have been quite frequent. It is needless for me to urge upon the profession a knowledge of this line of work, for all are aware of its utility as a side line for the business college teacher, and not as a profession of itself. It is as a profession that I shall treat it. Many of the principal cities have those who follow Engrossing as a business, and the success achieved compels us to consider it one of the honorable and remunerative occupations of life.

Let us look at Engrossing from two standpoints: First, Art; second, Business. It is one thing to be an artist and another thing to be a business man. The two must be enmeshed in one man to make up a complete success.

The Art Side

The old adage, “Art is long and time is fleeting,” reminds us that it must be begun in youth; old age is too late; middle age is too late.

There must be some natural inclination and adaptability for the work which must be supplemented through thorough preparation. I am inclined to think that hard work added to the innate love and ardent desire to become an Engrosser, will make of any young man a fair success. However, they with natural ability will make the shining lights.

He who aspires to be an Engrosser must cultivate his taste, and he must possess the power of enlarging his knowledge of art. By art, I mean Commercial Art, principally; Fine Art, secondarily. The requirements of the Engrosser are many and varied. He is called upon to execute everything from a piece of plain script to a piece embodying Fine Art.

If, I were to say what I think one should be able to execute, and execute well, to make a successful Engrosser, I would enumerate as follows: Script, Spencerian and Copper Plate; many styles of Lettering, as many as twenty at least, among the most important I would name, Old English, of various styles; German Text, Marking, Roman, and Sickle, as well as all ornamental letters such as come into the mind of the skilled letterer; he should also be a sketch artist; a brush artist; a draftsman; a color artist, and skilled with all manner of ornamental designs.

We may acquire these by reading treatises on the subjects, studying the work for others, studying our own experiences, and the accumulation of ideas from numerous sources, from all we see, hear, and read. The first requisite is natural inclination; second, imitative skill; third, originality.

Design and Arrangement

I cannot overestimate the value of good design ability. To be an expert at this the mind must be prolic and replete with ideas, that pop up like words fall from the glib Irishman’s tongue. Only those who have given the matter attention can estimate how much time is wasted by erasing and re-sketching several times before the design wanted is at last secured. What a satisfaction, as well as saving of time, to be able to sketch quickly the first time, what we want. Then also, the skilled designer knows how to layoff his piece according to the amount of money received for it. It should be our mettle, to make all work artistic, whether plain or whether elaborate.

Getting Business

From the standpoint of the business man let us now make a few observations.

The first requisite in getting business is the ability to do it well, then don’t sit down and wait for something to turn up, but go out and turn something; go after business.

There is no more room in this business for drones than there is in the bee hive, and about two thirds of their orders are for the album form. My experience has been about equally divided between the two, but I’ve not pushed the album form so long as the sheet. However, there is no doubt that the album is excellent taste for most occasions if bound by a good binder and appropriately lettered.

I find also that in the matter of memorials those with best taste prefer black and white, no color. Grey wash is not especially objectionable, however, if colors are omitted.

No Substantial Success without Merit

We, as Engrossers, must keep improving our work, keep advancing, keep pace with progress in other lines of art. As business men, we must use the keenest perception, the most modern methods of securing and handling business. He who does the best work, is honest and prompt, who hustles in a modern way will surely achieve the greatest success.

A Word to Young Penmen

I would picture the road to success briefly as follows: Hard work, incessant study, fame for the work, a clear and high idea, indomitable courage, stubborn will, time, and above all, hard work. What obstacles will hard work not surmount, and one victory gained is but an additional weapon with which to fight the next. What a satisfaction, what self-gratification to see our efforts prosper, and a profession with humble beginning gradually grows year by year into a business with such volume, that we are crowded to handle it.

Mr. T. W. Thalhyn

They are killed off as quickly as the drone bees destroy the watchword, those not having the word must stay out.

Considerable business may be had by watching the records of deaths in the daily papers, and going after the Orders, Bodies, etc., of which the deceased were members. By following up this line of action and doing good work, a very good business may, in time, be established, but it is rather a slow process, and not advisable for the one who is making the business his profession, for such I recommend systematic advertising.

Produce a list of presidents and secretaries of all Secret Orders, Societies, Clubs, prominent Corporations, etc. About quarterly or semi-annually get out a neat little circular and mail to this list. The circular should be neatly arranged and illustrated with a few cuts of some good design, or parts of them. It should set forth the business clearly as well as attractively, and by all means, honestly.

Since Engrossing is now arranged in two ways, in album form and for framing, the question occasionally arises, which is the more appropriate? It depends largely upon the occasion, and the matter must be settled by the good judgment of both artist and patron. I am told by some artists that

Wants to hear from young penmen and others who desire to prepare themselves for the teaching of business writing. The

Madarasz Method

of teaching Business Writing is the result of 25 years’ experience, and creates proficiency swiftly. The method is applicable—in fact, if that’s worth something to you, sit down and write me fully and freely....

Do It Now

and between us we may arrange it so that you can take my Teachers’ Course next July. You will then have mastered a business in which you can make a living in any part of the world where the English language is spoken.

Is That Worth Something to You?

Don’t think for a moment that because you never had experience in teaching that you can’t do it. I tell you WHAT to say, WHEN to say it, and how to say it—equipping you with knowledge, and inspiring confidence in yourself so that you’ll be able to conduct and class with marked success.

Throughout the time allotted to ornamental writing in my Teachers’ Course to those you all the kind of man I am, and that alone is worth the price of the entire course to you if you want to improve your own writing. Think it over and write me, enclosing 25c stamp for a personal reply.

L. Madarasz,

1281 Third Avenue, NEW YORK.
The above "Japanese" writing is the product of the resourceful brain and nimble pen of Mr. Francis B. Courtney of the Iowa Business College, Des Moines, la. In a letter to us regarding the same Mr. Courtney states: "This style of writing was acquired by me while abroad. If you can't read it, have it typewritten. The first letter I sent out was sent back because the fellow thought it was back hand. This writing looks straight to the cross-eyed man. It is also a good thing in which to reply for request for money. 'Your creditor can see at a glance that you can't straighten up.' From this we can easily infer that Mr. Courtney sees more than the artistic side of things, and has in him more than mere skill. The verses herewith are given as a key to the writing. After learning that it should be read from top to bottom instead of from left to right, you will find it somewhat easier sailing than when you go after it in the usual left to right manner. It might be well for us to remark incidentally that this is not the kind of vertical writing that we hear Brother Palmer denouncing. The art, both as concerns skill and beauty, displayed in this work is of a high order. To conceive the characters with such beautifully, bended, oblique, shaded strokes takes not a little perseverance and fertility of mind. It is simply another evidence of Mr. Courtney's many-sidedness.

Key to "Japanese" Writing.

For the Penman-Artist and Business Educator, Columbus, Ohio, by Francis B. Courtney.

What joy would come to idle drones,
What hope would lighten up their way,
If they could see a great big sign
Success in here to give away.

I dreamed a dream said the busy drone,
As I fell asleep while shirking,
I had a night-mare most severe,
I dreamt that I was working.

Success is born of honest toil,
And blossoms fair on those who work
It grows supreme in honest soil,
But fails to flourish for the shirk.

Advertising in the Penman-Artist and Business Educator Pays

Cyrus W. Field, who has been patronizing our advertising columns, writes: "Advertising in the Penman-Artist and Business Educator pays. My book has gone into every corner of our great Commonwealth and Canada, and still the orders come. You certainly reach the best class of patrons. Most of my orders have come from bankers."

Any one who is looking for a good advertising proposition certainly cannot afford to miss the Penman-Artist and Business Educator.
The long strokes in the preceding lesson will have paved the way for the loops. But the loop is different from the strong straight line. The graceful curve and the gentle increase of the shade are points to be studied.

The loop is the foundation for l, b, h, k, and f. In the l, make the introductory stroke the same as i and u. Make the left side of the loop first. The height should be two and one-half times that of the smaller letters. The shade should begin about one-third of the distance from the top, and gradually increase for one-third of the distance, then be uniform until the turn is reached, which should be the same as that of i. The turn at the top of the loop should be well to the right side, with a delicate shade at this point. Make the right side downward and aim to secure a smooth, graceful hair line.

Make h the same as i, only finish it with a small dot, the same as r and w.

The first part of k is similar to l, except it is square at the bottom. The second part is made like the second part of z, the space between the shaded strokes being the same as between those of n.

The second part of k is two compound curves. Aim to make them sparkle with gracefulness and beauty.

The top of f is the same as the loop and is continued below the base line one and one-half spaces.

It requires a large caliber of movement, to make these letters. Watch slant carefully. Aim to secure uniformity.

CRITICISMS

H. W. S. Work extra fine. Some up strokes slightly nervous. Small o a trifle too rounding or wide. Your work is very precise and dainty. You can be a master.
THE STRIDES OF THE GIANT

In the fairy tale were marvelously long. He covered a great deal of territory in a very short time. But his feat was not more remarkable than that of the modern giant among books on English—"Plain English in Practical Exercises," with its companion, the text-book, "Plain English." It is absolutely unlike any other book on this subject that has ever been published. It is arranged in a fascinating manner. It saves time and manual labor. It treats only of the essentials. It is rich in both the quality and quantity of exercises it contains. It has been on the market but fifteen months, yet we have sold tens of thousands of these inexpensive exercise books.

Read What Some of the Teachers Say About It:

"Plain English in Practical Exercises" was received promptly. The exercises are just what I need in my work. I congratulate the author in successfully meeting a real need in evening high school work. A. S. Haven, English Instructor, Boston Evening High School, Boston, Mass.

At the beginning of this year a copy of your "Plain English in Practical Exercises" was handed to me for examination. I have used it considerably in my work by means of dictation and have found it very useful. William Jones, Teacher of English Composition, Providence Evening High School, Providence, R. I.

I have looked over your "Plain English in Practical Exercises," and it seems just to fit my case. F. P. Spencer, Educational Director, Y M C A, Boston, Mass.

Your English Exercise book excels all others. It gives the student work to do, and this is the only rational method of teaching English. Prof. W. H. Sibley, Dean, Capital Business College, Salem, Ore.

Lam delighted with your Lessons and Exercises in English. I am sure grammar will become one of the most attractive studies of our course by using this text-book with Plain English. Prof. S. E. Rich- mond, Kentucke Teachers' College, Richmond, Va.

Your English Exercises fill a "long felt want" in my school. I have not seen anything else which quite equals them. They are indeed a boon to the busy teacher. Prof. J. E. Cunningshaw, Stowbury Business College, Buckhannon, W. Va.

We want you to become acquainted with these books on English. We know that it will mean their adoption. We cannot give the books away but we shall do the next thing to it. We will send, charges prepaid, the text-book "Plain English" (Retail price, 30 cts.) and the exercise book "Plain English in Practical Exercises" (Retail price, 40 cents) for 30 cents. This offer is to teachers only who name the schools in which they teach, and who mention the Penman-Artist and Business Educator. This offer is open until May 1st.

ADDRESS The Practical Text Book Co.,
475 Euclid Avenue,
CLEVELAND, OHIO.
The copy given in this connection is very appropriate for a school of learning. It was used as a catalogue cover, and its symbols of education make it more effective and valuable for the purpose.

SUGGESTIONS.—Size of original drawing 6 x 9 inches. Make letters in Union Business College style 1 x 2 inches in size. Lay off a space on your paper of the above size, then arrange the lettering. Pencil out the decorative matter, symbols, etc., suggesting all the shadows. Centre the face between the two ends. Use just a few lines in finishing the face. hair, laurel leaves, etc. See that the different parts of your design hang together, and that the objects are in correct drawing. Observe the arrangement of the shade lines, and see that your shadows and half tones blend properly. Lastly, do not hurry. One hour of careful, painstaking study is worth more to you than a week of careless, indifferent practice.

IF YOU WANT A TEACHER FOR YOUR SHORTHAND DEPARTMENT OF COURSE YOU WANT A GOOD ONE

We can give you expert assistance on just this point. Write, giving particulars, regarding the position you wish to fill, and we will place you in communication with the right teacher. No charge to you or to the teachers.

THE PHONOGRAPHIC INSTITUTE, CINCINNATI. BENJ. PITMAN, President. JEROME B. HOWARD, Director.

A New Magazine

Seld is being developed by the Gregg Writer. This paper is interesting the commercial teacher, school manager, and the general "business" student as much as the shorthand teacher or pupil.

Commercial Training

is the name of a department of "view and review" that is original, interesting and profitable, and that is moulding thought in Business Education. It is

Edited by Geo. P. Lord,

who brings wide experience, a liberal education, devotion to the cause, and no small degree of literary ability to bear upon his work.

The Editorials are written in the straightforward, forcible, virile style for which Mr. Lord is noted. They strike straight and true and deal with practical questions.

The Reviews are unbiased, pointed, and pithy. They review rather than praise by silly flattery.

Advertising Talks. For the first time the advertising of schools is approached and discussed along the line followed in professional advertising papers.

Heart to Heart Talks which appear in this department are too well known to need a word. They will be continued.

Contributed Articles with editorial comment will form a new feature of this department.

ALL THIS AND A SHORTHAND MAGAZINE FOR ONE PRICE—50 CENTS A YEAR. SEND FOR FREE SAMPLE COPY.

GREGG WRITER, 57 Washington St., Chicago.
Finger Movement.
By Julia of Cheyenne.

Mr. Barnhart's hypothesis warrants his conclusions. To presuppose anything else is the wildest speculation. I wish it were possible to do away with much of the reading done so early in the child's life. But it isn't what I want or what some one else wants. It's a question of necessity; a question of substitution. Adjustment along other lines must be made before any changes can come to us. The demand for hand product is so great with present courses of study that there is no recourse, but to do the work prescribed by those in authority. Unquestionably the child should not attempt to walk too soon, nor be permitted to abuse his physical well-being. But it's done. Nor should the child be driven to such extremities. But it is, and has been for long, long years.

Let some humanitarian, some power beyond the throne, propose some ethical reform and those who know what a child can do, will rejoice at being freed from servitude and bondage. There is no retreat from present submission and the various suggestions for "very large" writing as a relief is simply begging the question where no positive cure is known.

To look at the heavens with telling effects means two things, a telescope of magnitude and well directed intellect.

To tell what children can do demands far more capability and research than many possess, whose declarations we read in open court.

No one has even a right to his or her opinion unless it is substantiated by the highest forms of evidence. Differences come most often from "half views." Primary teachers who possess a thousand virtues to the minutest detail, are unable to speak authoritatively as to the child's power of reproducing "forms" in writing, if they cannot wield a skillful pen. Nor is this all. The ability to produce beautiful forms and combinations will not permit one to speak with authority unless he has moulded many a child.

Speculation will not do, gentlemen. We want "fax," "stubby "fax," before we yield even the "error of our ways."

"Wildest speculation" is the pessimist's characterization of the untried. Finger movement advocates hold on to it simply because they lack faith in human progress. Less writing is being done in the primary grades today than yesterday. Less will still be done tomorrow. People in "authority" are declaring that no writing needs to be done and therefore should not be done, and it is now only a question until the "wildest speculation" will be a reality in writing as it has been with the bicycle, the automobile, wireless telegraphy and telephone, etc. If those who now cavil at the test of "servitude and bondage" of finger movement will most loudly proclaim that which they acknowledge as right, as they now endeavor to defend and promote that which they acknowledge as wrong, the right will be sooner prevail, for prevail it will and must.

Editors.

The Henderson Head.

The accompanying portrait was drawn from life by G. S. Henderson, No. 26 West 53d street, New York city. Artworks in the art line would do well to study these heads quite carefully and critically. Note carefully the large masses of light and dark and of middle tones. Note also particularly the nose, and the soft outline of the hair and hat. This work is far above the average, and is second to none ever present ed in a penman's paper.

MODERN ILLUSTRATIVE BOOKKEEPING
INTRODUCTORY AND COMPLETE COURSES
THE LATEST ADDITION TO THE WILLIAMS & ROGERS COMMERCIAL SERIES.

"This is by far the best work on BOOK KEEPING and BUSINESS PRACTICE that has ever been published. It combines all the best features of the other bookkeeping publications in this series, besides many new ones not to be found in any similar work. It is the commercial teacher's ideal and is destined to become

THE LEADING BOOKKEEPING SYSTEM

Representative schools in the states that are using MODERN ILLUSTRATIVE BOOKKEEPING may be mentioned those of the following leading cities: Alliance, Ashland, Allentown, Albany, Baltimore, Brooklyn, Fostoria, New York, Newark, Newton, Alu., Springfield, Ills., Scranton, Trenton, in all all of which it is giving complete satisfaction.

FOR DESCRIPTIVE CIRCULARS AND FURTHER PARTICULARS ADDRESS

AMERICAN BOOK CO.
NEW YORK, CHICAGO, ATLANTA,
CINCINNAI, BOSTON, SAN FRANCSICO.
The material represented in our lesson for this month is different from anything which has been given in this series. The bottle is dark green glass and the tumbler is clear glass.

The bottle will have very pronounced shades, being a glittering white where the light strikes it squarely, and very dark in other parts, except for a faint streak of reflected light on the darker side. The label is white and is shadowed only a little.

The tumbler has less pronounced shades, and one must be careful to get the transparent look and yet not make the object too dark.

A little care will be necessary in shading that part of the tumbler through which the bottle is seen.

The Question of Supervisors

The office of the supervisor is of a two-fold character. He plans and directs the work and teaching of others, and he teaches. In the larger places, he supervises more than he teaches, but in the smaller cities he teaches more than he supervises. As before stated, he directs and teaches. As director or supervisor, he instructs teachers and plans work for them to do. He encourages interest, and enforces by being interested and enthusiastic himself. Enthusiasm is catching. Then, too, he understands his subject thoroughly and can do more in five minutes toward arousing a dull class than a regular teacher can in an hour. So much so that not infrequently whole schools will be impatient for the time to come when the supervisor will be around again.

Then the question arises as to what will all teachers be specialists. But so long as teachers are not required to prepare as thoroughly, and pass examinations, in penmanship, drawing, music, and physical culture as in other studies, so long at least will it be necessary to employ specialists in these subjects to supply the usual deficiency.

Penmanship being a manual rather than a mental subject, needs dexterity to direct it rightly. Teachers are not schooled in skill, but in memory. Drawing demands good observation, and teachers are not trained in that direction. They therefore need help. The day is coming when teachers will be skilled as well as intellectual, then all will be specialists. Until then, supervisors are necessary.

Modern education comprises two things—knowledge and skill. The old education was intellectual only: the new is intellectual and skillful. The physical and skillful in education are of recent origin. They date back but only a quarter of a century as regards our public school system. Even today the physical is not on a par with the mental. But ere long it will receive equal attention with the latter. Then the heart, the head, and the hand will each receive equal attention.

Skill is an essential element for modern success. It was skill that made memorable the battle of Manila bay. Our public school system must recognize this new and potent element, and develop it side by side with the old.

Physical culture is one of the new forces that makes for health, strength and efficiency. Can we afford to neglect it in our schools?

Drawing is another modern factor that develops at one and the same time esthetic and skillful forces. It enlarges the conceptions of life, and it trains the eye and hand for skilled occupations.

Penmanship is not as new in education as the former subject, but it is a modern necessity. Young men and women entering business or professional life need to write legibly and rapidly. To do this much careful, systematic training is necessary.

The physical part of these branches demands technical skill to develop. Skill is the part of education that has been neglected. Teachers in general are intellectual rather than skillful. They have devoted more time to knowing than to doing. To teach successfully those branches which call into action the hand and body, such as physical culture, drawing and penmanship, requires skill as well as knowledge.

Supervisors are specially skilled in these new and needed branches, and are necessary to direct intelligently and persistently the technical training involved in learning and in doing. To discharge them means that the practical—the skillful part of our education—shall not receive due attention.

We are not complaining against the regular teacher. She earns her money, and more, and she has her hands full now; too full to be efficient enough to meet all modern conditions. We are simply endeavoring to show that under present conditions specialists are necessary for the most effective and skilled instruction.
Lessons in Engraving, No. 18, By H. W. Kibbe, 181 Cremont St., Boston, Mass.

For outside cover of an engrossed booklet. Same letter as last lesson with different finish. Avoid smooth, true lines in the scroll. Rough, strong, but, in a certain sense, accurate lines give the best effect. Do not try to copy the ornaments around the panel. Study and learn the principle then you can work rapidly and without copy.

TO ZANERIANS

By special arrangements with Messrs. Zaner & Belser, I am enabled to offer to Zanerian students only, blank cards with an exact representation of the ZANERIAN PIN printed and embossed in gold on the upper left corner of the cards. They are handsome, distinctly professional and exclusive.

PRICES:
25 cards, postpaid 25c.
100 cards 90c.
Address, W. H. VIGUS, Care Zanerian, COLUMBUS, O.

"THE HANDWRITING ON THE WALL"

Discusses in a Fearless Manner the Merits of VERTICAL and SLOPING PENMANSHIP

The address was delivered before the Business Educators at Providence, R. I., April 6, 1901. It is printed in pamphlet form for the good of the cause and sells for barely enough to cover the last cost. Single copies 15 cents; ten or more copies at the rate of 10 cents each.

E. M. HUNTSINGER,
30 Asylum St., HARTFORD, CONN.

(We think all who are interested in the art of writing and teaching writing should read "The Handwriting on the Wall."—Zaner & Belser.)

FOR SALE—A good school in a desirable location and doing a clean business. Excellent reason for selling.

COMMERCIAL.
Care Penman-Artist & Business Educator

E. C. MILLS,
195 Grand Ave., Rochester, N. Y., will send you a short letter, in his business style, fresh from the pen, for 25c. It will be an inspiration to you in your practice.

"GEMS"

is an up-to-date work on penmanship for the use of TEACHERS, SCHOOLS, and STUDENTS who desire to study AT HOME. It contains:
NINE HAND PLATES OR TWENTY-SEVEN DRAWINGS showing every position of the hand used, with full text on each.

TWENTY LESSONS IN BUSINESS WRITING present the subject in a new and fascinating manner.

The only treatise of HAND POSITIONS on the market. Read what others say of it:

W. N. Ferris, Big Rapids, Mich. "You have made a valuable contribution to the art of teaching penmanship."—Marie M. Lynds, Akron, Ohio. "I admire 'Gems.' It is one of the strongest arguments for good, clear, legible writing I have ever had the pleasure of reading. It certainly is a pathfinder for any ambitious student of penmanship, and deserves much credit."—M. K. Stoller, Mt. Carmel, Pa. "I received 'Gems' two weeks ago, and have read and re-read it carefully. I must say it is the best book on penmanship. I have examined your work very carefully. I have taught penmanship several years and will say I have never examined a more helpful book than yours."—Teachers' Journal, O. W. Ford, Business Manager, Marion, Ind.

"GEMS" Contains sixty-eight pages and is artistically bound. Price, 30 cents per copy, postpaid. Slips for class work in Schools and Colleges.

Postal Money Order or Silver. Address the Author and Publisher, CURY W. FIELD, JACKSON, MICH.

ONE OF THE THIRTY-FIVE PLATES IN "GEMS" BY CURY W. FIELD.
The Past, Present, and Future of Ornate Writing.

By Francis B. Courtney.

In Answer to E. Madaras on "The Passing of Ornamental Penmanship."

The methods of teaching ornate penmanship are keeping fully abreast of the time. The handsome models of the present generation of leading lights or top-notchers, whose experience marks the milestones of pluck and perseverance, are beacon lights to the aspirant in the field of the ornate. These forms and experience disclose to him the hidden depths, that he may enter the harbor of excellence in safety. The top-notchers today light their lamp of progress with the current of common sense. They are aware of the fact that common sense is the crown of all faculties, and that the cry of this age is for practical thinkers as well as workers.

From such teaching the young aspirant exercises more patience in the acquisition of an ornate hand than in the past. The car of human progress is no longer the ox-cart, but instead the automobile courts the favor of the hurrying multitudes.

The production of script forms have not met with the success they deserved, it was through lack of pushing qualities of those at the helm of such enterprises.

We note however that the famous "Gaskell's Complete Compendium of Elegant Writing" must have been a winner, for it met with a tremendous sale. Numerous editions were placed upon the market which netted him a dollar profit on every copy.

His success was due to judicious advertising and there was merit behind it.

Push, Pluck and Perseverance was surely his slogan.

The slow man, no matter what his capabilities are, will invariably be outdone by the men of haste and determined will.

Once on a time a man went to a millionaire, and handed him a check for a gentleman's fortune: how to make a fortune? Well, replied the old gentleman, straightening up, the best way is to follow the rule of the "Three H's." What is the rule of the "Three H's"? First, Hold on to your fortune. Hold on to it, for it was the hustling quality of Gaskell that made his enterprise a success.

Many of the top-notchers today can attribute their start in penmanship to this compendium, "Three H's" and therefore I received my inspiration and I believe Madaras, Dennis, Palmer, and others drank from the same fount.

The market for ornamental penmanship is greatly increasing at the present time in the past. This is an age of specialists. The young man who possesses skill, and can impart it to others, is always in demand.

Nothing increases the patronage of a business school of ornate writing more than the sight of the ornate penmanship of a student in the present style. This is the best advertisement that can be had. The beautiful, easy style, graceful, perfect form, and delicacy of touch in the ornate writing of the top-notchers today, are points superior to those possessed by the top-notchers of yesterday. Hence today we are as far in advance of the old school penmen as the automotives is to the stage coach; that the future of ornate writing has a glorious outlook, and I firmly believe that in twenty-five years from now ornate writing will be as far in advance of the present style, as the present is in advance of a quarter of a century ago.

"A word to young penmen." Twenty-five years from now ornate writing will be dependent upon you as its champions, therefore I would instill in your minds, these facts: To become an ornate writer requires study, practice, and industry. The man who has learned to write an ornate hand has also learned how to work.

The secret of ornate writing lies in a proper conception of form. This concept in the mind is the most distinguishing feature.

If the mind form is beautiful the product of the pen will be the same. If the creative faculties of the mind are aroused, the results will take care of themselves. Ambition and steady practice are essential requirements to an ornate hand.

There lies buried in every individual sufficient genius to warrant a fine ornate hand, and if this genius is only brought out it is from the application of proper energy. Genius is nothing but continued striving. The genius of today is the hard worker of yesterday. People say...
Thomas A. Edison, the wizard of Menlo Park, is a genius. But Edison when asked his definition of the word said: 'Two per cent is genius, and ninety-eight per cent is hard work. Some one said to him that genius was inspiration; Edison said, genius is perspiration.

The reddest apples are usually out of reach; we must climb the tree to get them. Nature does a kindness to man when she compels him to work for what he gets.

Remember that thought imparts the power for well directed efforts which alone gives confidence and skill. You must learn how to think right before your practice will enable you to write right. Concentrate your energies upon a single purpose, that purpose be the acquisition of an elegant, ornate handwriting. Keep the following thoughts from "Success" in mind, and I am positive that it will not be long ere you will have the coveted prize, "Ornate Penmanship".

It is concentration that wins. When a man has so disciplined his mind that it is proof against all unwelcome distractions, when he can make himself oblivious of every side light which might dazzle or divert his vision, and keep his eye steadily on his chosen goal, he has thoroughly learned the power of concentration.

All men who have done great things have been noted for their sincerity of devotion to a single aim, their invincible determination to cleave to their purpose, to concentrate their powers upon the single object which has haunted their lives to the exclusion of all else.

Happy indeed, is he who possesses the power of assembling all his forces at a single point, of focusing his energies, and of bringing them to bear with all the weight of his entire being upon the purpose of his life. This insures victory.

Skill is the product of power.

Under complete control, success, the cry of the hour. Cheers us on to the goal.

E. C. MILLS
Riverside Ave., Rochester, N.Y., is one of the few recognized leaders in this country in preparing fine script for photo engraving. If you have in mind script for any purpose you should send copy for estimate.

Modern Art Publications for Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, 224 pages, and bound, containing hundreds of examples and explicit instructions. $1.50

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 5 x 7 inches, of illustrations, and plain, simple, instructive text. It is just what home students need, and what all others who are not at home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. The illustrations are lithographed from actual pencil drawings and are much finer than photo engravings 50c.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning, showing the pupil how to make the simplest strokes and to gradually evolve the finished design 50c.

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with facsimile text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth $1.50

Pen and Palette—A book written especially for artists and teachers. It tells how to draw sketches from nature and how to adapt them to various purposes. 50c.

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs, such as diplomas, resolutions, etc., with complete instructions. A substantial book bound in cloth, Sample pages of this book will be mailed for 2 cents, stamp $1.00

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches. It is on the finest of fine paper, 23 x 28 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great," "It's certainly a bird" are some of the expressions many have made on seeing it. It contains no. 1c.

Cash should accompany all orders. Remit by money order, draft or stamps for small amounts. Do not send personal checks.

A REVELATION IN SHORTHAND TEACHING

"The new Twentieth Century edition of Isaac Pitman's 'Shorthand Instructor' will make every teacher of shorthand talk. I adopted the Isaac Pitman system several years ago after a considerable acquaintance with a number of the Pitmanic presentations. I have never regretted the step — was contented from the first — now I am happy. This new Instructor not only saves time for the pupil, but it does away with all drudgery and brings happiness into the school. The introduction of the word signs and sentences at the beginning: the elimination of unnecessary rules and exceptions; and the logical and masterly style in which the subject matter is presented, places it far in the lead of any text-book on the subject I have ever seen. I am confident that anyone can now acquire a knowledge of the art in one-third less time than heretofore. It is bound to be the popular shorthand text-book of the age." — E. E. MULL, (Late Moll & Kimball) Moll's School, Broadway and 6th Street, New York City.

20th CENTURY EDITION, 276 pp., Cloth $1.50
Exclusively used in the High Schools of New York

ISAAC PITMAN & SONS, 33 Union Square, NEW YORK CITY.

Has written thousands of cards — Bold, Dashing, Beautiful. One Dozen, 25c.

A. H. BURKE, DEXTER, IOWA, Teacher of Pemmaship, Dexter Normal School
A neat little invitation was handed us by Uncle Sam to be present at the minstrel show given by the students of the Iowa Business College, Des Moines, on Feb.

The Iron City College, Pittsburg, Pa., boasts, J. Smith, principal, recently issued a very attractive high-grade, forty-eight page catalogue, indicating a thoroughly modern and up-to-date business institution. The printing, engraving and illustrations are first-class. The quotations printed in red are of a less hackneyed nature than are usually found in catalogues, and are therefore refreshing to the eye. The catalogue is worth seeing.

Wood's College, Newark, N. J., favored us with a couple of posters containing views of schoolrooms, pupils, and faculty, indicating an unusually large school.

Stanley's Business College, Thomasville, N. C., has issued a creditable catalogue of forty pages, giving one the impression of a good, substantial school.

The Cedar Rapids, Iowa, Business College, A. N. Palmer, president, favored us with a circular containing program, portraits, etc., of a reunion and banquet held in Cedar Rapids, Iowa, Nov. 25, 1911, given by the ex-students of the K. B. C.

A couple of very neat and to the point circulars relative to McKee's New Standard Shorthand has been received from the McKee's Publishing Co., Buffalo, N. Y.

Messrs. Isaac Pitman & Sons, 31 Union Square, New York, announce a publication of the first year's revision of their "Phonographic Teacher," which is the two million, seven hundred thousandth edition. In point of numbers, this is perhaps the largest sale ever enjoyed by any copyright work and with the possible exception of the Bible, and Uncle Tom's Cabin, the largest sale of any work.

**Modern Penmanship Publications for Penmen and Teachers**

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

**Zanerian Theory of Penmanship**—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A book of 156 pages, cloth binding. $1.00

**Lessons in Ornamental Penmanship**—A work in slip form embodying the $10 mail course formerly given by us, with some extra preliminary work and complete work for home learners. 75c.

**Compendium of Simplified Vertical Penmanship**—In book form, and by far the most thorough and complete instructor in vertical writing yet published. 50c.

**Manual of Simplified Script**—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. F. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled.

**Zaner's Gems of Flourishing**—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published. 50c.

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address.

**ZANER & BLOSER, Columbus, Ohio.**

That was the Year the First BUDGET SYSTEM was Written.

It was immediately followed by several other systems, all patterned as nearly as possible after the Budget System, but failing in every essential feature that has made the Budget System the standard by which all others are measured and found wanting.

Later, the Second Budget System, Commercial and Industrial Bookkeeping was issued, and in due time another crop of imitations will follow, introducing as many as possible of the new features first published and illustrated in the series of sets that comprise the complete course of that system.

What Does This Mean to the Commercial Teacher?

Simply that he can safely teach any of the Sadler-Rowe books in his school, knowing that he will then have the best books on the market for the use of his students.

The credit of decided and unquestioned superiority attaches not only to the bookkeeping publications of Sadler-Rowe Company, but also to their publications in Commercial Law, Arithmetic, English and Commercial Geography, Penmanship and Spelling.

This Month the Attention of Commercial Teachers is Called Especially to the Following:

LOBBING AND COMMISSION SET

COMMERCIAL AND INDUSTRIAL BOOKKEEPING

SPECIAL FEATURES:

A system conducted by a corporation.

An actual and commission business company.

Supplementary exercises covering every detail of opening and closing corporation books.

The most practical system of accounting and commission business yet devised.

The Account Sales Register introduced.

The work was first arranged by the Baltimore Produce Commission.

It has since spread over the country so much so that it has appeared in another bookkeeping publication.

Copies will be sent to teachers on request, charges prepaid.

Billings Synthetic Shorthand (Graham-Pitman):

1. The FIRST book that represents the Alphabet in sections and the vowels one at a time in such manner that the dullest student cannot fail to grasp the subject readily.

2. The ONLY book in which the omission of vowels is systematically taught, beginning early in the study with such as do not require vocalization for their legibility.

3. The ONLY book in which all opposite or similar principles are presented by contrast.

4. The ONLY book in which hooks, half lengths, etc., are exhibited by tables in such manner that their differences and similarities may be seen at a glance.

5. The ONLY book in which phrasing is taught systematically, beginning with simpler forms and progressing to the more complex.

6. The ONLY book presenting the subject of shorthand penmanship.

7. The ONLY book containing a comprehensive list of commercial phrases. Nine hundred are given against 90 in Graham's book.

CLEVELAND, OHIO.

Modern Art Publications for Artists and Teachers

Our publications are 'universally' recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

Portraiture—A book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instruction $1.50.

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with fascinating text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth $1.00.

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 6 x 7 inches, of illustrations, and plain, simple, instructive text. It is just what home students need, and what all others who are not at home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. These illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings. 50c.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scores of objects, birds, fruit, scenery, etc. It begins at the beginning, showing step by step how to make the simplest strokes and to gradually evolve the finished design, 50c.

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs, such as diplomas, resolutins, etc., with complete instruction. A substantial book bound in cloth. Sample pages of this book will be mailed for 25c.

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lively, swinging himself through intricate curves and branches. It is on the finest of plate paper, 22 x 36 inches. The original of this design hangs on the wall of the Zaner Art College, and is valued at $15.00. It is great, it is universal, and some of the expressions many have made on seeing it. In tube 50c.

Cash dorms accompany all orders. Resolve when money order, draft, or stamps for small amounts. Do not send personal checks. Address

ZANER & BLOSER, Columbus, Ohio.
Business Writing

BY H. W. FLICKINGER, PHILADELPHIA

This paper was read at the Eastern Commercial Teachers' Association as a discussion of Mr. Zaner's paper. It is a valuable contribution, disclosing that Mr. Flickinger is as progressive as he is skilful.

The excellent paper read by friend Zaner covers the scope of our subject so intelligently and so comprehensively that it seems a waste of time, for me, at least, to attempt to add anything further.

Business writing is defined as that which is easy to write and easy to read. It could not be more concisely nor more clearly expressed.

Legibility and speed have come to be the only essentials recognized by the business world.

The ornate forms of script in use twenty-five years ago are now rarely seen except in the work of the artist and for purposes outside of the realm of business.

Since the advent of the typewriter and the telephone, business correspondence has been completely revolutionized. No business house of any prominence would think of using the pen for that purpose now. Having been relieved of the work of correspondence, what then remains as its function in the conduct of business affairs?

Accountants, telegraphers, clerks, and a multitude of assistants in almost every avenue of business, use the pen and must be trained. The vast amount of work required at their hands lays upon us, as teachers, the obligation to give our students, who may engage in business pursuits, a style of writing which can be used under the most unfavourable circumstances.

I presume it would be quite impossible for any one of us to prepare a script alphabet which all teachers would accept as a standard for business writing. We shall have our own peculiar tastes and notions, but it seems to me that the closer we conform to the Roman letter the better.

Happily, there is at the present time a disposition to draw a very clear line of separation between the practical and the ornamental. And so it has come to pass that business schools, with few exceptions, have ceased to teach ornamental writing. This fact has given opportunity for the successful establishment of special schools of penmanship, such as the Zanerian Art College, and others, where students are trained in all branches of the art and prepared to teach.

To be legible, writing does not depend entirely upon the simplicity of the character used, nor upon slant or no slant; but very much upon the setting apart or spacing of the letters. The distinctive character of each letter should stand forth and be easily recognized. Words whose downward lines are equidistant, are difficult to read, especially when such letters as $t$, $u$, $g$ and $y$ are associated.

Slant is a matter of individual taste or convenience. Some of us older teachers have been accustomed, when taught slant at all, to say that fifty-two degrees from the horizontal was about the proper thing. But I question very much whether great stress was ever laid upon any definite degree of slant; uniformity of slant being regarded as of greater importance. In my opinion, nothing more legible or graceful in the world of business writing appears than the illustrations which are now appearing in our penmanship journals. And the slant is just about fifty-two degrees from the horizontal.

Vertical writing has stirred us up somewhat and has caused us to examine the foundation of our faith in the slant. It is not without some good points. But it has failed to establish the extravagant claims which its advocates made for it. It has been on trial for several years, it has but a very limited use in the transaction of business. For this reason, business schools, always responsive to the demands of the business world, do not feel obliged to give it a place in the curriculum. It would, therefore, seem to be improper to regard it as a practical style of writing for business purposes.

The ornate forms of letters, however, would be as a vehicle for the expression of thought, or the transaction of business, unless they were susceptible of swift execution. Scriptness, however, is inherent in the writer and cannot be imparted. But it may be developed, to some extent, through the intelligent use of suitable movement exercises. I am a strong advocate of arm training or muscular movement, as it is called, but I do not teach it exclusively. I think that all the forces hidden within the arm and hand should be trained and utilized in order to secure the best results. I believe that there should exist a common sympathy and a ready helpfulness on the part of the arm and hand muscles, resulting in what is known as the combined movement. So far as I can ascertain, this is the movement used by our best writers.

As my views accord so nearly with the main paper, I close, as I began, with an apology for consuming your valuable time.

The Loving Cup

The accompanying illustration gives an idea of the loving cup presented to Mr. H. W. Flickinger by the penmen of the Eastern Commercial Teachers' Association, March 29, 1902. While the penmen were being photographed, Mr. H. G. Healy, editor of the Penman's Art Journal, New York City, suggested that we show our appreciation of our universally beloved and distinguished friend by presenting him with a loving cup. As a consequence, Mr. Collins got Mr. Flickinger away from the crowd when contributions were made, and a committee consisting of Messrs. Hinman, Holt and Zaner, was appointed to secure the cup. When the penmen met at the banquet given by Miss Peirce at noon of the same day, Mr. Flickinger received from the hands of Mr. Healy, the cup so cheerfully and kindly presented. The event was alone worth the journey to the city of Brotherly Love.

Flickinger Extends Thanks.

PHILADELPHIA, April 4, 1902.

Dear Mr. Zaner:

To be held in fond memory by those who know me, is the greatest satisfaction this life can afford. It is only second to the plaudit of my Master, whom I hope to hear one day saying "well done."

By their beautiful gift, my friends have planted a rose in the pathway of my life, whose fragrance will sweeten all my coming days.

Very gratefully,

H. W. FLICKINGER.
Lessons in Rapid Business Writing

BY

165 Grand Avenue, O.C. Mills, Rochester, N. Y.

Number Nine

Instructions, Plate 40.

While we have given particular attention to the matter of form in regard to page writing, we expect that a free movement will be used in the execution of all this work. When we say free movement, we do not mean that the writing shall be wild and reckless, but we do mean that form and movement should go hand in hand and that one should not be neglected to the detriment of the other.

Plate 40.

Body Writing.

Page writing, or miscellaneous word writing, calls for the exercise of all the skill we possess in handling the pen. It is an excellent test for the employment of our best judgment in arrangement of work, the proper slant, height, spacing, etc., of the letters.

In this kind of work, do away with every flourish and every superfluous length of line that would tend to give the writing a careless appearance.
The ability to write a good business letter has often been the means of securing a good position. This form of business letter is not the only good form, but it is one of the best and one that is used extensively by business men. In connection with getting good writing, we should carefully study the form of the letter, its construction, general arrangement, margins, etc. Some have the idea that scratchy and scrawling writing is good business writing, especially when it comes to letter writing. This is a wrong notion, and we would advise you not to use such writing in a letter of application for a position. Business men will not have such work under any conditions.

Instructions, Plate 41.

If the letter is well written and well arranged and the envelope is addressed carelessly, it is quite likely that the first impression made by this work will not be a good one. Do not get the name and address huddled together, or down in one corner, but try to have the general effect same as given in the copy. It is a good plan to make pencil rulings about the size of a business envelope on foolscap paper for the practice of superscriptions. A still better way, although perhaps a trifle expensive, is to practice on the envelopes themselves.

Instructions, Plate 42.

Be careful about the punctuation marks as well as the good writing. Punctuation marks are liable to be made too large and heavy. They should not stand out too conspicuously, but should be made about same size as given in the copy. This will be found a valuable form for a social letter. Avoid all fantastic forms of letters and keep your writing as plain and neat as possible.
SOCIAL LETTER

Louisville, Ky., Jan. 31, 1904.

My Dear Madam,

It gives me great pleasure to introduce to you my esteemed friend, Miss Emma Fry. Any attention you may show her will add one more to my many reasons for being

Your sincere friend,

Mrs. Geo. W. Schwartz,

To Mrs. E. N. Hill,
Lincoln, Col.

Instructions, Plate 44 and 45.

Besides the commercial forms given herewith you may select a number of others also. This kind of practice is very beneficial to those who have faithfully followed our instructions in all the previous lessons. Do not spread the letters out too much and string the words over too much ground. Study the little things. The superficial and unsuccessful can afford to overlook the apparently trivial things, but the earnest student who practices to win will heed our advice and will try to correct the little faults.
Lessons in Business Penmanship

BY A. R. KURNETTE, BOWLING GREEN, KY.

Number Two

Begin lesson No. 2 with exercises No. 15, 16 and 17. These exercises are given to tone the movement down for the small letters. Make exercises just the same as copy, placing from three to four of the exercises in the space between the two blue lines, getting the lines very close together. Fill several pages of the small exercises.

Line No. 18 we have the small o connected together, making a fine exercise for movement. Connect a full line of the small o's together before lifting pen from paper, getting each letter closed at the top. Work very rapidly on this exercise.

We have next the small m and n exercise. Make exercise with a rolling motion of the arm, forming a round turn at the top. Get downward strokes straight, counting one every downward pull. Line No. 20 is made with the same rolling motion of the arm as in exercise No. 19. Begin exercise with small right curve. Downward strokes should retrace up strokes about half the height of exercise.

Lesson No. 3.

Lesson No. 3 begins with the small right and left curves, and small straight line. Master these strokes and you will have little trouble in making the small letters. Line No. 22 begins with the small indirect retraced oval, counting ten for the small oval. Also review small m and n exercises. Next take line No. 23. Strive to get round turns at the tops of letters. Join several of the small m and n together, using both narrow and wide spacing. The wide spacing will give strength to your work. See that your pen is gliding easily over the paper.

Lesson No. 4.

Begin work on small oblique exercise. Make the exercise one fourth of a large space, getting the downward strokes very close together. You may review small i and n exercise, the same as given in lesson No. 2. Begin small n with right curve. Notice that the letter consists of three right curves and two downward straight lines. Join several of the letters together.
Line No. 35 we have the small a, beginning the same as small u. Slightly curve the last upward stroke, and finish letter with small dot and curve line. Spring the pen lightly in making the small dot. Take time to criticize your work and see where you can make improvement.

Lesson No. 5.

Before beginning on lesson five, review lessons Nos. 1 and 2. Begin lesson five with the small direct oval, retracing small oval from five to ten times. Fill several lines of the small e exercise. Be sure that you are getting a small loop in each letter. Line No. 31 we have the small c beginning with a left curve. Finish up stroke with a small hook at the top; down stroke should be well curved and on about the same slant as up stroke. Fill several pages of lines Nos. 32 and 33.

Lesson No. 6.

Review the small oval in beginning lesson six. Begin small o with left curve, making down stroke and last up stroke of the o with the little finger rest. Get each letter closed at the top. Small a begins like small o. Use little finger rest in making oval part of letter. Finish the a with a round turn and right curve. Fill several lines of the small a and w combined together, using both narrow and wide spacing. Line 37 is the small a and o made with light line thrown around each letter, this makes a splendid exercise. See that your wrist is kept over nearly flat with the table.

Quite a Universal Sentiment

PARKERSBURG, W. VA., Jan. 23, 1892.

GENTLEMEN: Included find a list of subscriptions to the PENMAN-ARTIST and BUSINESS EDUCATOR, with remittance for same. Your publication is head and shoulders above all other publications of its kind; please accept our heartiest congratulations.

Wishing your journal the support and encouragement it deserves, I am,

Yours truly,

C. A. BRANIGER,

With Mountain State Bus. College.
Report of the Fifth Annual Meeting of the
Eastern Commercial Teachers' Association

Held in Temple College, Philadelphia, March 27th, 1902.

Reported by A. S. Heaney, Providence, R. I.

The Philadelphia meeting was an unqualified success, socially, educationally, and professionally. It was so doubt the best meeting was held and how it could have been better is difficult to determine. Its success was due in large measure to its able, enthusiastic and unirrint president, and to the other efficient, competent and faithful officers and members of the various committees. Such loyal, good-fellowship, interest and enthusiasm, we have never seen surpassed, if equaled. Business education occupies a more solid position because of this meeting. Eminent men in other lines aided in broadening and deepening the influence of practical education by accepting places upon the program. The Eastern Commercial Teachers' Association is now a great and growing educational convention—a fit representative of the practical educational world. Long may it live and prosper.

Opening Exercises

Thursday morning, 11 a.m.

The Eastern Commercial Teachers' Association met at Temple College, Philadelphia, Thursday morning, March 27th, 1902, with about 250 members and friends present. The meeting was called to order by E. E. Gaylord, President of the Association, and ex-Governor Pattison immediately introduced to deliver the address of welcome. Mr. Pattison in opening said: "Members and friends of the Eastern Commercial Teachers' Association: I am asked to bid you welcome to the city of Philadelphia. In doing so I am sure I express the sentiments of all the people of the city, I do not know of any place more distinguished for general hospitality than Philadelphia. I am not therefore surprised that your committee selected this city for your annual meeting.

Historically, financially, commercially, socially, all the history of our country is written in the buildings, the institutions, the streets, the wharves, and the places of business of Philadelphia. Indeed it is possible to list out all the rest of the country, eliminate every other city, yet preserve the city of Philadelphia, and the history of the country would be preserved in every detail." The speaker then took up the various points of interest historically, and referred to each one in listing language, urging the delegates to visit them, and become acquainted with their history in detail.

The ex-Governor's address was responded to by R. J. Shoemaker, former president of the Association. Mr. Shoemaker said in part: "It gives me great pleasure to express, on behalf of the Eastern Commercial Teachers' Association, our appreciation of the very cordial greeting that has been extended to you by this distinguished citizen, who has welcomed you on behalf of the city of Philadelphia. A greeting coming from one who has bestowed upon him the highest gift of honor, at the hands of this commonwealth, lends a special significance and charm to the welcome we have received, and to the freedom of Philadelphia that he has given us.

We feel proud to be within her borders: to be her honored guest; and to partake of her hospitality.

Mr. E. E. Gaylord, President of the Association, in delivering the President's annual address, took for his subject, "Expansion in Commercial Education." He said in part: Ladies and Gentlemen, Members of the Eastern Commercial Teachers' Association. We meet under such conditions of general prosperity, that schools, teachers and publishers are happy and hopeful. Expansion is in the air. Growth and development are the watchwords today.

Thirty-seven years ago a blue wave broke over Washington, and flowed in ragged rivulets northward. Packard, Eastman, Saller, Peirce, Bryant, Felton, Spencer, and others had established reservoirs which were filled by those streams; but the returning soldiers found in the business college of that day, institutions quite different from the business schools of today.

It was not remarkable for a brilliant young man to walk into one of the schools of that period, pay for a complete course and, in six weeks walk out a full-fledged graduate.

Twenty-one years ago it was predicted that shorthand and typewriting would never effectually take the place of the pen for correspondence, but last year in eight of the large cities of this country, one typewriter company placed in positions 17,000 persons, representing an annual salary list of $10,000,000.

Peirce School in this city enrolled last year 1525 students in its day and evening classes.

Nearly every city of importance in the country has a Commercial Department in its high school: Los Angeles, Washington, Philadelphia, Brooklyn, and New York, have independent commercial high schools.

The Universities of Pennsylvania, California, Wisconsin, Michigan, Vermont, and New York have provided for a commercial training.

The evolutions, then, of the ideal business school, both public and private, is proceeding happily.

The Convention adjourned for luncheon, served by the ladies of Temple College, in the gymnasium rooms below.

Thursday afternoon, March 27th, after luncheon the delegates and visitors divided themselves into groups, to take the trips announced on the program.

The trips to Baldwin Locomotive Works, and Cramp Ship Building Company, proved the most attractive, about 100 electing to take these trips.
CRIP NO. 5.
LEADER: W. J. Amos.

Something like sixty-five were in the party, eager to visit some of the most noted industries in America.

The Cramp's Ship Yards were reached without event. After some brief preliminary arrangements, under the direction of Mr. Haskins, an ample supply of competent guides were furnished, and all were admitted and treated with the greatest courtesy.

We were taken first to the New Maine, a vessel almost in process of completion, a very fitting successor to the proud vessel and a formidable foe to any enemy when manned by American skill, and nerves.

The great American Liner, The Koon-lund, was barely able to float. This when completed will be one of the largest transports in commission.

There were also vessels almost of every description, whale-backs, torpedoes, single and double turrets, etc., and in almost every stage of construction.

To the writer the most interesting thing here was the wonderful effectiveness of transmitted power from one general source to all parts of the yards and for every conceivable need in ship constructing; by this every machine, every riveter does the work of twenty men under the old hand method.

Upon our return to the office so thoroughly pleased were we that the hat was passed for a contribution to our guides. The result was pleasing, both to the party and to the guides.

The next point upon our program was the Baldwin Locomotive Works. Here we met with cordiality. It was positively dangerous and practically impossible for more than twenty to be conducted through this institution at one time. Of course no one was willing to give way. So Messrs. Amos and Stevenson contrived a scheme by which every compartment was cleared and the guides took a circuitous path to places in the yard, to which all consented. With this preliminary the lucky members took cars for the plant, here again we were met with a cordial good afternoon and the party subdivided into three divisions, and started after as many guides and into as many different directions.

To trace this trip through would baffle the descriptive powers of the writer. An institution that employs 1500 practically educated and skilled men, doing the work of a quarter million near artisans without the aid of mechanical appliances, turning out an average of thirty finished locomotives per week, of every pattern and design from the famous double cylinder compound flyer of 800-ton capacity to the little suburban dummy for the west, is simply beyond comprehension of one who reads about it.

With the setting sun there was "more to follow," and a cordial invitation from the guides to remain with them. However, for want of time we left some of the great shops unvisited. We took cars, some walked, but all reached hotels in time for the banquet.

This one very grand and beautiful lesson was gathered: even in the greatest industrial institutions there may yet be time and room for the common courtesies of life.

THURSDAY EVENING, 6 P. M.

About 150 members and friends of the Association gathered in the Ballilt Building, corner 4th and Chestnut Streets, to partake of a banquet, served by Boldt, the well-known caterer of New York and Philadelphia. After partaking of a fine spread served in faultless style, the Association adjourned to the parlors of the restaurant, which had been seated with chairs during the banquet, and listened to Dr. Russell H. Conwell's celebrated lecture: "Acres of Diamonds." The Doctor was at his best in this lecture, which he delivered in somewhat of an abbreviated form, owing to the lateness of the hour; but his audience was in sympathy with him from start to close, and frequently interrupted him with hearty applause. It is safe to say that a little flame of inspiration was started in the breasts of some of the teachers present, that will grow into a mighty conflagration in time to come.

BUSINESS SECTION.

FRIDAY MORNING, 9:20 A. M.

Mr. W. B. Sherman, First Vice President, chairman, Business Section; Mr. A. S. Heaney, Secretary.

Mr. Sherman said:

"Business Training" by C. W. Haskins, C. P. A., Dean New York University School of Commerce, Accounts and Finance. Mr. Haskins said:

There are two prejudices deeply rooted in the human breast, which must be accounted for at the very threshold of the problem of Business Training. One is the prejudice against business as a calling or profession; the other is the prejudice against education. The prejudice against business as a pursuit has been fostered for untold ages by the traditions of the non-business class; especially of the educating class. The prejudice against education has been, on the other hand, one of the most lively sentiments of the commercial community itself. The present movement in behalf of business training is making very slow headway against these two powerful prejudices. True they are doomed and dying; but they die hard.

The ancient belief that to give oneself up with avidity to the acquisition of riches was to assume the attitude of a brigand toward society, because it was impossible that a Greek or Roman citizen should become rich, except by fraud, by meanness or by violence. The prejudice against instruction is an ethicalizing of a living force that is expressed in words, and is in some sense hidden; but it shows itself continually in sentiment and action. True it is gradually losing its force; but we must recognize the fact that it still exists and against which we have to fight.

The new so-called higher commercial education movement is intended to bridge over the chasm between study and business; between the scholar and the recluse, if you will, on the one hand, and the sturdy, quick-minded man of business, on the other. The material products of the world, the money-maker, if you will, on the other. It recognizes the utility of education, and seeks to adapt instruction to the exigencies of the time. It recognizes the uselessness of the old system, recognizes the utility of practical information, and seeks to render such information available to the student before he shall have been thrown out into the man-storm of business. But no school, no theory, can take the student into the innermost heart of affairs. They can give him generalities, but absolute contact with real business is indispensable to the student who seeks to become a business man.

The old apprenticeship system is almost a thing of the past; the new school of commerce is almost a thing of the future; and under present conditions it would seem theoretical. This is only our advice year; try to combine the advantage of study and experience by passing a year or two in a subaltern position in the line of business he intends to follow, while at the same time studying under professional teachers in classes arranged to accommodate the division of time between study and practice.

At the close of Mr. Haskins' address the following question was asked him by Mr. Herrick: "How far has the University School of New York provided for the education of organizers and administrators of business enterprise?" Answer: "We are trying to work out this problem. We have a good basis in New York and Pennsylvania in the Certified Public Accountants. They give point to the work. It is necessary to employ practical accountants, and we have to develop a corps of teachers. In the finance we have tried to get bankers to take up the course and cooperate as practical men with the teachers. Commerce as taught at the present time is more or less theoretical. This is only our advice year. We have not had a commencement yet. In a year or two more we will probably say more about our success."
intended for the transaction of business in the hands of business men, accountants, etc. It needs to be easily written, and easily read. Legibility in script characters consists mainly of angles and turns, retraces and loops, used sparingly to make the lettering legible and alike in generality. Our script forms are descendants from the Roman characters which were strongly shaded, and without connective lines. We have simplified the decorated shading and introduced connective lines. By this evolution we have diminished the reading qualities and increased the writing qualities. Indeed we have carried the process of evolution, until it enables one to write well and scrapping penmanship; so much so that the question now is, how shall we make better business writers rather than faster business writers. More attention must now be given to a knowledge of utility, and less to the technique of beauty.

Slant is a matter of individual quality, and a minor matter; we may use the finger or arm movement, write fast or slow, but to meet modern conditions our writing must be more rounding than the semi-angular hand in order to be legible. Extremely round writing is very legible but not very fast; extremely angular writing is fast but not very legible. Writing to be both legible and speedy, needs to be a compromise between rotundity and angularity. What we must have is smaller, plainer capitals; shorter, fuller, fewer loops; and more of the minimum of letters. This will reduce effort, increase legibility, and economize space.

Speed in writing is quite as important as legibility. It is a modern business necessity, and is governed by the style of writing, as well as by the nervous activity of the writer. Fast writers are fast thinkers, fast walkers, etc. A majority of writers use a mixture of fingers and arm movement. Arm movement gives grace and endurance, while finger movement gives detail and quickness. The two combined give the greatest degree of legibility and speed with the minimum of effort. This will reduce effort, increase legibility, and economize space.

A practical method of teaching pupils movement is to have them rely more upon the little finger rest as a means of control, and less upon the forearm rest. This gives them a firm stand, and with or without the elbow rest. It also reduces finger movement to the minimum, as those who use it less finger movement than the so-called 'muscular movement' advocates.

Mr. Collins followed Mr. Zaner in discussion and practically agreed with every point brought out in the paper. He said there was but one way to succeed; learn your business; know your pupil. He places legibility first; believes in very few movement exercises; position, pen-holding is of great importance; tries to get the pupil to write a slant of about 10 degree.

Mr. E. H. Fisher, of Boston, also discussed Mr. Zaner's paper, and added some valuable suggestions along the lines of office routine in order to make real progress. Mr. Fisher is not afraid to say to his pupils he does not know, when he does not, but that is not often, judging from the manner in which he handled his subject.

**FRIDAY AFTERNOON.**

The first exercise on the program in the Business Section was "Teaching Business Customs with Bookkeeping." Mr. J. Shoemaker of Fall River.

Mr. Shoemaker said in part:

"Business Customs is practically a branch of study by itself, and should be included in the school course. The time consumed in the study of business customs goes to the most important part of commercial course, a commercial course does not consist in merely knowing how to keep books. I do not regard my pupils as having finished our commercial course without having taken part in our Business Customs Courses. So long as the end be attained in a business school leads ultimately, nine times out of ten, to office employment; just so long will it be necessary to fit our graduates most nearly into the positions they are seeking. It is a fact indisputable that a very small percentage of our graduates find employment as bookkeepers."

"I have had some opportunity to observe what is expected of our graduates, and I have noticed that there is no particular lack in our customs.

In most instances a graduate usually begins in the capacity of assistant bookkeeper, clerk, or something of the kind, and his work may consist first, in making himself useful around the office, and I think it ought to be a part of the teacher's work to teach the customs of the average office in generalities in which all offices agree.

"A graduate ought to know how to fold a letter, make press copies after two or three methods; he should know how to handle pay rolls, including the ability to determine what denominations of money should be required, how much of each denomination, and just how to get the requisition ready for the bank; he should understand the handling of post-office money orders, how
to inadore them, whether or not they can be included in a deposit, and all about it; he should know all about special delivery, how much it costs, etc.; he should know the different rates of postage, and how the classifications are made; he should know how to do an extend, and how to go to the bank; he should be taught to be prompt, courteous and willing; he should be taught to ask his superior before he starts to go home at night, if there is anything else he can do; he should be taught not to ask useless questions; he should be taught the exact manner in which foreign exchange are handled, why they are issued in duplicates and triplicates; he should be taught the nature of a protest, and what is to be gained, or, in the case may be, the advantage or disadvantage of having an instrument protested; he should be taught to know the exact value and nature of an acceptance, as well as indorsement on a valuable instrument; he should be taught under what conditions it would be advisable to make a promissory note payable at the bank or office; he should know whether it is to one's advantage to cany an open account or to secure a note promising to pay; he should know the relations of the indorsers to each other under various conditions which may arise, or of other security or guaranty; he should understand how to apply for a money order at the post-office, and what to do with the post-office money order when he gets it; he should know how to handle the C. O. D. sales, in part, "to take a letter to Garcia." Teach him with all the force of his physical and mental powers to do whatever he is told, as he is told, and when he is told.

Here is a field for business customs that business men do not lose their positions in every case because they do not understand bookkeeping or English; nor because their penmanship is not satisfactory or legible; nor because they are not on time in the morning; nor because they come from inferior families; nor because they do not dress in up-to-date style; but because there is something—call it business customs, office routine, or being handy, or what you may—there is something the young man is expected to know when he enters an office, and the very absence of which makes him awkward; he does not know what to do when he is told; he stands in awe of the one who is telling him, and he realizes probably for the first time that he does not understand his job, and his employer has neither the time nor the patience to teach him.

"Let me impress upon you that it is my belief that the lessons that can be taught along these lines are vastly more important than the teaching of so much bookkeeping alone. Give me the young man who has a broader, more general knowledge of routine and customs, who is endowed with a fitness of things necessary; large appreciation of common sense, a fearless moral courage; one who can abstain from cigarettes; one who is not a duke; one who can "Carry a message to Garcia"; and it will not make much difference whether his knowledge of bookkeeping is profound or not, but he will make a mighty valuable man to have around.

"Do We Teach Bookkeeping As It Is Practiced?" H. M. Rowe, Baltimore, Md.

Mr. Rowe said in part:

"The subject of this paper implies that we may not. If commercial schools make one claim stronger than another, it is that their instruction is practical, and that the student is not only made familiar with commercial subjects, but he is taught to do things exactly as he will be expected to do them in business. This claim is made especially for bookkeeping and the work of the office, we include under bookkeeping:

(a) The preparation of business papers.
(b) The recording of transactions.
(c) The adjustment and summing up of the results shown by accounts.
(d) The office practice incident thereto.

"The claim that any school can supply training which is the equivalent of an actual practical experience, can never be sustained, because of our natural limitations. Many of the limitations of a few years ago have disappeared, because they were unreal and never existed in fact; just a few can never be overcome because they are inherent. For instance it is impossible to bring into the school-room the actual values represented in things and the element of actual gain or loss, both of which are controlling factors in business dealing. The transactions we employ, with the business papers and records pertaining thereto, can never be more than illustrative; they lack the element of personal advantage or disadvantage which is the underlying incentive and initiative of human action, whether it be good or bad.

"In the main, I think our claim, that we impart practical instruction, can be maintained; but some of our classes lay us open to attack at the most vulnerable points by those trained in the school of experience. The first criticism I would offer relates to the impractical nature of the form of the transactions of course is to our students. All transactions are made between persons, and the first and simplest relation that arises is that of debtor and creditor. From this we must conclude that the personal account should be considered first, and such entries as "cash to merchandise," "merchandise to cash" at the beginning of our course of instruction, must astonish the practical bookkeeper when he picks up one of our textbooks and finds transactions are known to him as "cash purchases" and "cash sales." He would tell you that in any but a retail business if merchandise were sold, "terms cash," it would be charged to the buyer on account, and the buyer would be credited when payment was received. The practical bookkeeper also would find that the student is instructed to make entries for cash received and cash paid, in the journal. He would tell you very quickly that such entries are never so recorded in a real set of books. It is easier to teach the student to enter receipts and payments of cash in the cash book, than to teach him how to record them in the journal, with the advantage that he will never have to change his method. What is the bookkeeper likely to think when he finds transactions after transaction of purchases and sales, which he knows are recorded, in the cash book, that terms of credit are now strictly adhered to? Checks are rarely received or given on account, but a separate settlement is made for each bill, and when the terms of settlement extend over a period of sixty days, a discount for cash is generally allowed.

"This fact is, in my judgment, an insurmountable barrier to the use of a variety of price-lists, and must remain a serious objection in any bookkeeping that follows that plan in which the incoming business papers are used. We fail utterly in our teaching, if we fail to impress our students with the inestimable value of credit, how to sustain it, and how it may be impaired. Now, my friends, we have no defence to offer for these things because it has been demon-"
F. R. Moore, Trenton, N. J.

E. H. Eldridge, Philadelphia.

strated that they can be taught exactly as they are disposed of in the books of a real business, with even better results than otherwise.

"The value of good character in the business world has been considered, I presume, at various meetings of this body. The phase of the subject before me is, "Should the commercial school undertake to give its students special moral training ; and if so, how should it be done."

As the average time spent by the individual student in our schools is comparatively short it may be a question with some whether it is right to consume any of the student's time with our moralizing. My own view is that we receive these young people for a limited time and, so far, as we can, to meet the requirements of the business world. The very nature of our work results in most of our students getting into positions of trust, where good character is the first essential. Therefore it is our duty to properly advise our students relative to their morals. How shall this moral training be given? A text book is hardly practicable. To accomplish this training I should make the following suggestion: Have a regularly employed lecturer on the ethics of business, good citizenship, and kindred subjects, also have a question box, and encourage students to ask questions. Take advantage of occasional opportunities to hold up before the student the high character of those who have achieved unusual success.

"McKinley day was such an opportunity. Nothing that I said on that occasion more impressed my young men than this: "The eminent surgeons who performed the autopsy on Mr. McKinley stated that his body bore silent testimony to the fact that he was a man or excellent personal habits. So far as those habits affected his body, they enabled him to endure so well the tremendous mental and physical strain, incident to the exciting and momentous happenings of much of his administration.

"Have a high standard for letters of recommendation. Let the students know that they make history for themselves in our schools, and we simply record that fact. Let us develop the self-respect of our students. Have them understand that they, in our schools, are in a miniature world of business, and that they are getting their relative positions for honesty, truthfulness, and uprightness of character for all times.

"Further, and incidentally, let us teach the student not to use qualifying words in making declarations; that there can be nothing stronger than his simple affirmation and negation—his yea and his nay. Let us give a good, wholesome, moral soundness to the morally weak. We should be more careful to employ a teacher who is not a person of good, moral character.

"The principal and the teacher are each a powerful factor in the moral training of students. It is what the principal—the teacher—is more than what he says that counts.

"Sincerity is powerful. Students know when an utterance comes from the teacher—the principal's heart, and what comes from the heart goes to the heart.

"In conclusion, I would state that as educators we are engaged in serious business. We have some opportunities, surely, to mold and fashion young lives for good or ill. Are we so unmindful of the technicalities of our work that this part has been neglected?

The opportunity is actually thrust upon us to develop good character; to contribute a better citizenship; to send our young people forth into the business world with the very highest ideals of manhood and womanhood.

Shorthand Section.

Friday Morning.

Mr. F. B. Moore, Vice-President, Chairman.
Miss Stella Smith, Secretary.

9:30 A. M.

Mr. Eldridge said in part:

About forty-five years ago in a little village school in western Massachusetts there was a humble country school teacher with the usual assortment of country scholars. Among these scholars was a tall, ungainly, awkward young man, a farmer's boy, and one who had great difficulty in committing things to memory.

One day the teacher said to him, calling him by name, "Why don't you use the method I employ in memorizing?" He said: "What is it?" She replied, "I look at the printed page and get a mental photograph of that page. Later when I wish to recall it I close my eyes and look at the photograph." That teacher was undoubtedly what the modern world call a good visualizer and the boy happened to be one also. He accepted the suggestion, followed her advice, and found he was able to remember in that way as well as his teacher.

Those of you who heard Mr. Connell in his address last night may have noticed that in describing scenes he would close his eyes and then tell what he saw. All the influences exerted upon us by surroundings are sometimes called, suggestion. In considering the influence of teachers on the pupils we must keep in mind these tendencies of human beings to imitate. Perfectly no odor. Harvard, says, "Sometimes the bad as well as the good is imitated."

Imitation shades into emulation. Emulation is the very nerve of human society. We do not wish to be cut off from doing the students that enrich our social life. Emulation is absolutely necessary in education. Other things being equal, that teacher will meet with much success who is in a position to ask his students to imitate the student. To again feel the heat and register it the way I do, will succeed; the one who is compelled to say, "Do it as the book says," will fail.

What do I mean by suggestion? Dr. Sidis defines suggestion as the introduction into the mind of an idea; met with more or less opposition at first; accepted critically at last; and realized involuntary and almost automatically.

Suggestion is sometimes defined as a social animal; again as the rational animal. It is real suggestibility which characterizes him more than anything else; that is he is the suggestible animal. Suggestibility may be either normal or abnormal. Illustration: Hypnotized people are in an abnormal condition. Dr. Small conducted a number of experiments in schools at Worcester, Massachusetts. He told the pupils he had some perfume with him. He made one or two generous sprays and asked the children who detected the odor to raise their hands. In the first grade 95 per cent. raised their hands; in the second grade 95 per cent.; the third grade 90 per cent.; the fourth grade 85 per cent., etc. In the High School 4 cent. were able to detect the odor. Really he used nothing but distilled water with absolutely no odor.

Experiments are made each year upon the graduating class at Yale University. An electric current is sent through a wire of such size that it is gradually heated. The students hold the wire between the fingers and thumb of the left hand, and when they feel the heat they press a button to register the fact. The instructor tries the experiment a second time, but with no current. He again asks them to register the fact in about the same time as they did in the first place.

Suggestions may be made either consciously or unconsciously. Teachers may
unconsciously give suggestions to his pupils which are of vast importance. While it is true that suggestions are sometimes injurious, it is also true that children are more apt to imitate teachers they like, and that one, usually one who is worthy of imitation. The teacher may influence the pupil in various ways: by overdress, or underdress, by the matter of his or her conversation.

Personal peculiarities, lip is often imitated. The likes and dislikes of the teacher; a young man says, "Four years ago I disliked grammar. As a matter of fact, I placed it in the last place. The teacher was my favorite instructor, she liked grammar, and grammar became my best brand." Out of half cases where pupils grew to like such through the teacher's influence; 11, of his enthusiasm; and 3, of his interest in the pupil. It is useless for the teacher to pretend to know what he does not know. Children are more quickly able to detect intellectual fraud than are grown people. We need to understand that it is what the teacher does, not what he says, that has an influence on the pupils.

Symposium.

10:30 A.M.

"To Whom Should Shorthand Be Taught," by J. E. Gill, Trenton, N. J.

Mr. Gill says, in part:

The answer I would have given five years ago to the question propounded by the title of this paper, is diametrically opposed to what I now believe should be the course pursued with prospective shorthand students.

There are two primary conditions that enter into a solution of the question under consideration, "To Whom Should Short- hand Be Taught," when the answer is to be satis- factorily only by asking, "Who is to do the teaching," and "What are the compulsory studies that await the candidate for a stenographic course?" The capacity or in- capability of a shorthand student makes up the pre- dominantly important question. All that is now imperatively required of the student is a fair share of ordinary ability, encour- aged by a desire to know, and a willingness to study.

I used to believe in entrance examinations for would-be stenographers, but now I am equivocally against the preliminary examinations except for the purpose of eliminating the poorest, those who are not serious and unirritating attention to gram- mar, spelling, correspondence, figures, and penmanship; then a working knowledge of these subjects would certainly be pre- requisite.

This question of auxiliary studies deter- mines the moral right a school has to min- ister to the shorthand desiderata and needs of those students. To be the practice of this pro- fession for a livelihood.

In classifying the students of a modern shorthand department, with respect to the influences that place them there, we find, first, the class of new students who enter the will and wishes, although this class may be subdivided into those who decide the matter for themselves, and those whose rela- tives and friends have given them little choice in the matter.

Then there is another class, those whom the school induces to become students. These are also subdivided into those who have every preparation to make a success of stenography and those who want preparation, but are not. Others have a gift for shorthand, or are willing to learn and practice, but lack of natural ability, makes their success problematic. Not entirely hopeless. With the first class, the school's only responsibility is to give the training that it holds forth, and its raison d'être. The first class, although critically examined, some of them are destined failures as stenographers.

So long as there are shorthand schools and teachers, there will be uninteresting abuses, just as there are in all professions and legal. But, if for every ill-conditioned youth in our shorthand departments, let us recall the number of our unprofitable students that have paved their way in our schools, for further usefulness and prog- ress.

With the second class of young people, we must beware. You can judge from what I have already said that I believe we have a right to admit all students, but that moral right is one, and legally are ours, but for every ill-conditioned youth in our shorthand departments, let us recall the number of our unprofitable students that have paved their way in our schools, for further usefulness and progress.

With the second class of young people, we must beware. You can judge from what I have already said that I believe we have a right to admit all students, but that moral right is one, and legally are ours, but for every ill-conditioned youth in our shorthand departments, let us recall the number of our unprofitable students that have paved their way in our schools, for further usefulness and progress.

I delight in steering unfortunates in our English and Commercial departments, for there they get a part of general information or education that may be valuable to them later, no matter what position they are holding.

I do not believe that any school is upholding its dignity when it sends out its repre- sentatives to gather in the ragamuffins from the street corners and the slums, irres- pective of their intentions, ability, and moral worth. But, I am in favor of giving any person, although his early training has been neglected, a chance in a short- hand school that does not slight English, providing that person has an insatiable de- sire to learn.

After all that can be said on this question, I shall still believe that the tactful saw, "circumstances alter cases," is an important argument in the discussion of this subject. The more school proprietors concert their formal action can relieve us of the individual re- sponsibility of passing on the diverse cases that demand our attention from time to time.

"How Should Shorthand Be Taught," by J. E. Fuller.

Mr. Fuller said in part:

1. I shall take the liberty of limiting the scope of my pamphlet and the teacher's sing- ular attention in reference to certain points of the general subject of shorthand teaching which appear to me to be of the greatest importance. No originality is claimed for the ideas embodied in these suggestions, but a scholar's credit is due to all authors, writers, teachers, and reporters whose writings I have read or with whom I have talked.

The inexperienced teacher often depends as much upon the personality of the teacher as upon the subject to be taught; a fact which calls for a word or two concerning the mere details of teaching. He should have a thorough knowledge and skill in the system taught.

2. He should believe in his system even to the extent of thinking it the best in the world, so that he may be enthusiastic in teaching and writing.

3. He should have the inexhaustible patience. He should have broad sympathy with the student so that he will organize over his failures and rejoice over his successes.

4. He must be resourceful, and not at- tempt to teach a subject to students in precisely the same manner.

6. He should be tactful. He should be a stenographer of exper- ience and be able to bring into the school room the experiences, prejudices, preconceptions, etc. If you want your pupil to write fast you must either tell or show him how; and if you have never written fast yourself you can neither explain properly nor set a correct example.

Most teachers of shorthand use textbooks. Inclusion such a book, great care should be exercised. A good book does not pander to the innate "write "easy words" in the text, but it calls upon the student to think, and gives him plenty of hard words to read and write.

Don't teach too much in one day or one lesson. In the course of the course, much time should be spent in emphasizing the fact that phonography is not the writing of spelling, but of sound. Make it plain to the student that in the early lessons he is learning to write pieces of words which are afterwards to be combined in a variety of ways.

Show him that the syllable is to a great extent the basis of shorthand outlines. It will not be long before he has learned one syllable or one short word in an early lesson he has mastered a com- pensating part of many longer words.

That while mastering the early lessons he is really learning a considerable portion of the succeeding lessons. This is one of the most powerful appeals the teacher can make to his pupil for thoroughness. Short- hand is not to be memorized word by word, but the student is taught to classify. The student is to learn intelligently the prin- ciples of shorthand architecture; and to learn as a stenographer he is to become a skilled joiner of phonographic letters.

The student should be required to master the vowels. It will enlarge his vocabulary by teaching him how to make fine distinctions between words which might other- wise clash.

State a considerable amount of reading aloud of shorthand notes. Do not re- quire students to begin too early to trans- crive their notes on the typewriter. Re- quire students to write with the pen. Some practice is advisable with the pencil. Ruled paper should be used in the main, but ad- vanced students ought to be required to write on unruled paper; teach them that though their handwriting may be by no means necessary. Do not let the students always have a table or desk on which to write. In some offices the stenographer takes all his dictation on his knee, and in all offices it should from time to time.

In a word, give the student his training with good materials and under favorable conditions until he has attained some de- gree of proficiency. When he is ready with inferior material under trying circumstances. Give your students practice in "Editing in the tran- script." They should be required to com- pose letters from dictation, or read the odd letters. Do not tell the student too much. Require him to look up things for himself. It makes him self-reliant. The way we teach shorthand is comparatively unimportant so long as we do it effectively. Results, not measures, count.
Friday Afternoon.

I P.M.

Mr. Soly said in part:

In assigning this subject to me it was intended that I should treat it in a general way. So frequently, however, has this been done in such a manner that the records of employment have been too crowded to dwell upon only a single phase of it—that which at present concerns you and the dearness of male stenographers. My purpose is to discuss the dearth of male stenographers, and to demonstrate the fact, but I mean also to discuss the causes that have produced this condition, and I shall endeavor to point out the remedy.

Now let us consider the records of the employment department of the Remington Typewriter Company, covering seven of the largest cities of the United States, and note that during the year 1891 they placed 1836 stenographers. Of this number there were 1140 men, less than 25 per cent. The number of men for call stenographers figure up to 4 per cent. of the total.

The largest single employer of stenographic help in the country is the United States Government, and the experience of the Government in this respect may fairly be regarded as typical. Uncle Sam pays his stenographers $1500 per annum at the beginning, with an increase to $1400 in six months where competency is shown.

In 1896, of the 39 young men who passed the Civil Service Examination, 35 were appointed. The remaining 4 received appointments, but declined them.

In 1897, of the 116 passing, 62 were appointed; a considerable number of the appointees also received offers, but declined.

In 1898, 65 passed, and of these 74 were appointed. The figures for 1899 and 1900 are not yet obtainable, but it is well known that the eligible register is exhausted at the present time.

Now we come to the situation as it exists today in the business schools. In one of the best known commercial schools in the country, we have 25 male students in the commercial division and 80 in the stenographic department. I believe that this affords a very fair picture as to present conditions in other schools.

The curious thing, however, about this subject is the demand is already exceeded. It is not an inconstant, yet the supply is not forthcoming. Surely there must be some good reason for this anomalous state of affairs, and if we could find out what the reason is, we should arrive quickly at a solution of the difficulty.

It is a common saying that "the girls are the boys of the stenographic profession." The number of girl stenographers are double what it is now, the demand for boys would be as strong as ever. They are wanted for a different class of work. I feel certain that if we could make that statement true, we could say that no better stepping stone to business success known today than stenography and typewriting in the hands of a bright boy. The brains of the business man as he passes through his fingers every day.

[Mr. Soly here named about 30 prominent business men who began business life as stenographers.] There are hundreds more of such cases, but the names I have given afford an adequate idea of the fact that the doors of success, and not ordinary success, but of pre-eminent success, are open wide to the bright boy who has mastered the art of shorthand and typewriting.

Now let us have a look at the instruction given in a commercial course, but I have shown that the boy who understands shorthand and typewriting, is able to start on a higher salary than the boy who does not; moreover, that he enjoys special opportunities for advancement of a kind that the other boy cannot.

Perhaps the combination commercial and stenographic course is now more offered than before, but the instruction given in the latter, I have shown that the boy who understands shorthand and typewriting, is able to start on a higher salary than the boy who does not; moreover, that he enjoys special opportunities for advancement of a kind that the other boy cannot.

that I dare not hope to catch up with them either in this world or in the world to come. In 1891, I commenced the all-finger, sight method and practiced for ten months, two hours daily, often all day Saturday and Sunday. As a result my work was easier, but not much quicker and accurately done. My little finger, and its habit were always dislocation from lack of strength or from stubbornness. I taught the all-finger method in three schools under my charge from 1891 to 1895 with passable results. In 1895, I took a correspondence course in shorthand and typewriting in New York, where touch typewriting was taught with deplorable results. We got one fair operator out of the entire school on a seven-months' average. During 1895, I studied and practiced touch typewriting three hours each day for six months, and gave it up. I am not despondent, discouraged or hopeless. I have never known any one who attained to any more than I have in the way of reward for his or her work in the matter of touch typewriting.

Mr. Hope gave numerous examples from different walks of life, and different schools to prove his statement at the begin of his paper, that "touch typewriting is a sad and a failure." Among the others he mentioned a lady who studied and practiced two years and who had given exhibitions for three years, and that her handwriting was always an absolute touch typewriter, and on several easy letters under a test typed from her notes at from sixty to seventy words a minute. The letters were easy, and without figures, but they were so full of errors that they could not have been mailed.

Mr. Hope mentioned a school with one hundred shorthand-students in touch typing; after a while all but ten abandoned the touch method, the touch typewriters selves together, and determined to succeed. They averaged between six and seven months, and obtained employment. They all had to abandon touch typewriting because they had not enough speed to satisfy their employers.

Mr. Hope now tested the matter personally, and last winter selected several members of his own school. They were the best that the public schools had given him. All except two abandoned touch typewriting, and these two when the others went to work had not commenced on the bank of keys containing the figures, and were not able to get out a letter under seven months at the rate of twenty words a minute. They were by far the hardest and best workers.

Here referred to a business school that posed as having the best prepared students, the finest system of typewriting, and the largest school equipment; they had to be notified by a Typewriter Employment Agency that their students were not up to the standard. Another agency claiming to place 900 students a year gave this direct answer: "There is no difference between touch, and sight operators; they are all bad."

Mr. Hope has visited a number of schools only to be disappointed; he has gone to offices as business men to see touch typing practiced, and has been disappointed, and in conclusion sums it up as follows: Touch typewriting, in an exact sense, requires a higher degree of expertise, and except for exhibition purposes, is hardly desirable.

General Meeting.

Friday Evening.

Public meeting in the Auditorium of the Normal School for Girls, Mr. John H. Converse, President of the Baldwin Locomotive Works, presiding.

5:30 P.M. SYMPOSIUM.

Mr. Luman said in part:

The last century witnessed the growth of typewriter literature, of the principles of the democratic government, and this century will prove the wisdom and stability of these principles. The last century also witnessed, especially toward its close, the wheels of industry in motion, as by an electric flash, and the present century must develop this industrial and commercial life, along the lines of economic laws. What the public school and popular education have done for the civic and political institutions of this country, commercial education must do for the promotion and growth of its commercial life, and for the business integrity and security of the people.

What shall our education be? This is the question that vitally concerns each one of us. It is answered in part by the incorporation of business sentiment into law, as a result this country has a model system of general elementary education. Our education may be liberal, but it must be special. The onward march of progress and civilization affect the old ideas and old theories of education. The best Universities and Colleges no longer have iron-clad courses in the arts or sciences, but freely permit the elective; and where equal discipline is afforded, the tendency is to introduce subjects more intimately associated with real life, and the introduction of utilitarian subjects does not make the work of such institutions less educative, but more valuable. All true education proceeds along natural laws; in nature nothing is so important as power; in being, nothing so important as physical, mental and moral force; and by the transformation of skill or knowledge into active, practical power, all great achievements in science and business have been won; therefore, the true idea of education is not, as some think, a short road to ease, to wealth or to fame; it is to create or develop power that will conserve physical energy, and at the same time be productive of a higher order of skill or a better character of work. The commercial and industrial activity, interlacing all lines of business, has become so complex, to such magnitude and proportions, that a knowledge not only of its operating principles, but of its mechanical structure is essential. The best thought of these and a different course of study and instruction, trade and finance, and as a natural consequence, schools follow as conservators, to hand down this knowledge and to especially make its application to the modern questions of the day. Good schools have their counterparts and counterfeiters—offices more of the former than of the latter. The schools in general would be on a higher plane educationally today were it not for the fact that unscrupulous individuals have seized upon the opportunity of a popular want to lure and deceive. The work of the good conservative business school and not the pretentious of the huckstering one, is the standard by which business education should be measured. There are others who do not see the school in its proper perspective, and descriptively denominate it a "clerk factory," grinding out book-keepers, stenographers and typewriters, the tools with which a business man works. This hardly needs refutation. The school gives the details and general knowledge of business, the position simply affords the opportunity; in the one, ideas, principles, and business habits are developed; in the other, applied. Our course of instruction

WILLIAM HOPE, NEW YORK.

J. A. LUMAN, PHILADELPHIA.

JOHN H. CONVERSE, PHILADELPHIA.
The question I propose briefly to discuss is this: Should an intelligent man suffer the reproach of an accusing conscience because he gives his son a commercial rather than a literary education during the secondary period? Does a commercial education promote business only at the expense of mankind? Is there one-orthodox education for young men in their teens without which their minds will be cripples, even if not degenerates?

To arrive at a solution of this problem by just degrees, I wish first to make a distinction between ideas that are merely clear, and those that are likewise vivid. A clear idea is one that produces inner illumination without the tendency to re-lease energy. It shows us the likeness and differences of the things about us, but does not stimulate us to do things.

A vivid idea is one that tends to pass into action. It stimulates and releases energy; it is charged with emotion; it pulsates with the feelings that attach themselves to vital interests.

Turning now to the school for the application of these distinctions, we find that all primitive people educate their children by means of vivid ideas alone. In the early days of Rome, the education of the son of a freeman consisted of two things: physical training as a preparation for war; and the learning of the commercial sciences. Among the Greeks it was a preparation for civil life at home, and the inculcation of civil life among barbarian peoples.

But now that education has become universal, and occupations vastly diversified, the schools are attempting to supply an education that shall prepare for everything in general and nothing in particular. In doing this they have come and placed vivid ideas by those that are merely clear, because of supposed universal validity. The academic past has furnished the college and academy; the democratic present has furnished the elementary public school. The two influences combined are producing the high school and university.

Henceforth, the academic prescription has been, one education for all through elementary school, high school, and college, and then special education for special callings.

"Public sentiment about education has its sources in tradition rather than in accomplished facts. Once academic and high school education is a preparation for the higher stages of all callings. The modern university, in short, now furnishes knowledge and efficiency in practically all the human sciences, the natural sciences and the social sciences, as the grade of the higher commercial studies are the latest to take their rightful places in the sisterhood of sciences."

The curriculum of the secondary school must, therefore, be determined, not by tradition, however venerable, but by principles derived partly from the nature of the mind and partly from the present state of society. The educational curriculum must be planned, not by the current equipment of the minds of the students, but by the conditions of knowledge. The bodies of knowledge that have made university expansion possible are in general also available for the high school. This fact makes it possible for the high schools to offer many more studies than the student can possibly pursue. Thus, five foreign languages may be offered instead of two; all the sciences, each with laboratory practice, may be added, while manual training and business technique, and commercial knowledge justly claim a place. Election on some basis is inevitable. Upon what basis?

"In our search for principles we should be able to determine at least something of the guidance that is most evident, and from that of subject matter itself. The normally constituted mind shall dwell for a time at least, upon every distinctive department of important human knowledge."

We have, first of all, the human sciences—those that pertain to man as man—to his life as embodied in institution; such as language, literature, art and history; the natural sciences; such as physics, chemistry, and astronomy, together with their basis of pure mathematics; the biological sciences, and the earth sciences, like physical geography and geology.

"Finally, we have the economic sciences—those that show the mind of man in intimate interaction with the forces of nature. These sciences embrace technological knowledge, and commercial knowledge, with its technique and economics proper. We have here, according to nicety of classification, from nine to ten distinctive departments of knowledge.

Now, in the selection of a normal boy's course of study, he should take at least something from each chief department representing a peculiar method and specific body of knowledge. The second principle is that the boy, aided by his parents and advised by his teacher, should be allowed to select what studies he will take within each department. The first principle fixes the types the student shall have represented in his education; the second allows the individual to put the emphasis where he will, to select his studies in view of his future career. In this way, the ideas growing out of his school work become not only clear the mind, but the student ceases to mark time or try to escape from school. On the contrary, he works with accelerating earnestness and enthusiasm."

Mr. DeGarmo said in part: "It is acknowledged in educational, as in other circles, that what is necessary takes precedence of what is desirable. If circumstances compel a man to forego secondary education for his son, the community gives its regretful assent; if other circumstances constrain him to send his son to a commercial rather than to a literary school, men still give a regretful assent. They concede that commercial education is bought with a price, that price being the sacrifice of the man to the exigencies of commercial success.
Saturday Morning

9:00 A. M. AT THE PHILADELPHIA COMMERCIAL MUSEUM

W. P. Wilson, Director Philadelphia Commercial Museum. "What is Commercial Geography?"

Dr. Wilson said in part: "In the struggle for foreign trade which is becoming so intense, this country finds itself best equipped of any to secure and maintain commercial supremacy in the world. Its geographical situation renders it able to grow and make its entire requirements. One essential factor, however, is lacking which our foreign competitors possess in an eminent degree; that is, a suitable body of geographic recognition of the foreign market's value, where it exists, how to enter it most effectively, and how to develop it to the country's greatest advantage.

Although many of our consul's are doing magnificent work in pointing out the opportunities of American manufacturers to trade opportunities abroad, and in explaining to them the conditions which exist and the methods which must be followed, the Commercial Museum at Philadelphia, of which I have the honor to be Director, is the only existing institution, which, operating on unselfish and patriotic lines, has been created with national and international scope, for the sole purpose of fostering American commerce.

"The aim constantly before the management of the museum is to equip the producers of this country with the same information acquired by his competitors through long years devoted to the study of foreign opportunities. It also points out to the manufacturer wherever, in any part of the world, a market may exist for his products; it gives detailed information regarding the requirements of those markets, and the conditions surrounding them; shows him what competition he must expect, what the facilities are, and the cost for transporting his goods; what method of packing must be observed, how collections shall be made, and what prejudices or peculiarities exist. Furthermore, it suggests to him, based on its investigation, the most desirable firms with which to make business connection. Aided specifically for this purpose by Congress, it is in a position to show the manufacturers in thousands of instances a sample of the foreign competitive goods sold in export markets. I would say here that I have recently had shipped from Paris 200 tons of manufactured material and raw products from all countries on the face of the globe. Commercial experts are sent frequently to this country, in order that commercial conditions may be studied on the spot. The practical value of this system is shown in the fact that during the past year nearly five thousand foreign houses applied to the Museum to be placed in communication with the manufacturers of various kinds of American goods.

While the manufacturer is making use of the institution's facilities, he is expected to pay a fee of $100 a year, based upon the actual cost of compiling and typewriting information prepared for his special benefit. The matter is turned away unanswered because he does not happen to have joined the regular fee-paying membership. The sole consideration is to aid in every way with promptness and accuracy in any particular country, which may be able to enter the foreign market.

"The Commercial Museum is able, from its files, to furnish descriptive matter regarding 10,000 leading foreign firms, covering every point of the globe where business of any importance is transacted, and during the past year 25,000 reports were sent to American manufacturers, and during the same period 1,500 special inquiries from American producers were answered, and one million words of business correspondence covering sixteen languages were translated for firms throughout the country. Until the time shall come when American producers will study personally foreign commercial conditions with minuteness which characterizes their competitors across the ocean, there can be no one weapon of such value in the hands of American Commerce, in the great international commercial struggle, which has already begun, than a great Commercial Museum properly equipped and properly utilized."

"Teaching the Natural History of Raw Materials"—by Dr. Charles S. Dolley, of the School of Commerce, Central High School, Philadelphia.

Dr. Dolley said in part: "It has been found that Greek, Latin, and Political History failed to furnish the preparation for boys contemplating a commercial career, which is furnished by the modern languages, industrial and commercial history and economics; so the traditional teaching of the natural sciences fails to meet the needs of, or to afford the same intellectual stimulus for, the boy inclined on commerce that he obtains from the ecologic and economic aspect of these subjects.

"We should prefer that the treatment of the natural science of raw materials should be somewhat broader than that offered in the average course in "Warenkunde" of German schools, yet this is far better than no treatment at all, and we may, perforce, delegate to the universities and higher institutions of learning the broader treatment which the crowded curriculum of the secondary schools makes impossible; or we may establish experimental secondary schools, open to those who prefer an insight into the science of commodities rather than to devote themselves to the arts of typewriting and stenography.

"We should present the full of nature to the boy, awaken his interest, and show him the means of securing further knowledge of it, but not in the way which has resulted in much of the mis-directed nature study of the past. Students should be directed along productive lines, rather than towards that wholesale and useless destruction which has so frequently charac- terized the amateur in his collecting, and which has resulted in extermination of many precious floras and faunas. Efforts after education should be to quicken the intelligence of the pupils rather than to load them with encyclopaedic facts. As Fr. Elbertus put it, "The education that aims at mere scholarly acquirement rather than useful intelligence will have to step down and out. The world needs competent men; then if their hearts are right, culture will come as a matter of course. Beware of education de luxe."

The Banquet

About 50 members of the Association partook of a banquet in the Bullitt building. It was a fine gathering of representative men from the various business colleges in the East. The menu cards were the finest we have seen. The banquet itself, was served in the finest style and the food was first-class. The party spent almost two hours at the table, and afterwards adjourned to the reception room to listen to a lecture by Russell H. Conwell.

The Association had selected from the sixteen lectures that this noted divine has prepared and given many times, "Acres of Diamonds." Dr. Conwell said in opening that he had delivered this lecture about 500 times, the proceeds of the lectures are devoted to sending poor boys to school. He had received from $90 to $250 per night, and had sent about 1600 boys to school. The lecture was free to the Association. It was J. B. Golli who first suggested to him to go upon the lecture platform. He personally considers this the poorest lecture he de,

DR. CHARLES S. DOLLEY, PHILADELPHIA.

MISS MARY B. PEIRCE.

EDWARD M. HULL, SPRINGFIELD, MASS.
rivers. He began to deliver it about thirty years ago. The material for the first part of the lecture was given him by an Arab, as he was being piloted down the Tigris River.

The entire lecture has been stenographically reported and is now to be found in Modern Elloquent edited by Mr. Thos. B. Reed.

**Treasurer’s Report**

Every modern institution of merit has a financial foundation, strong or weak. Its success cannot be assured without a healthy treasury.

This view of responsibility, together with a delicate sense of the trust imposed, has urged your present incumbent to the greatest activity, the closest vigilance, and the most thorough business management of which he is capable. The results you may judge from this report.

In preparing this, my third report, I have thought it wise to call your attention briefly to the great increase in the receipts and to suggest to the Association the value of familiarity with the Association’s history and its membership, and of intelligent activity and faithful compliance with the constitution and by-laws on the part of its treasurer.

The receipts for dues at the Worcester meeting in November, 1899, were $845.50; at the Boston meeting in April, 1900, the same amount was $805.60; and at the Providence meeting in April, 1901, and in response to bills sent to March 15, 1902, they have reached the grand total of $896.50.

From these figures it may be observed that there has been an increase in the receipts of about 9½ per cent, over the preceding meeting, since the Worcester meeting.

These facts should be gratifying to every one interested in the welfare of the Association. They have enabled your Executive Department to prepare and furnish increasingly enriched programs. But for these your present committee would not have hazarded the honor and dignity of the Association in arranging so broad and deep and rich and so amusingly alluring feast as you have at this time. We, ourselves, are astonished at such possibilities, and much more the actualities to the Eastern Commercial Teachers’ Association. Your humble servant earnestly urges every member of the Association present to co-operate with the officials in seeing that every one in attendance at this meeting, who is eligible, becomes a member. In this connection, we would recommend, however, a more faithful observance of Section 4, Article 2, of the constitution.

**Summary**

Balance on hand April 15, 1900 $ 26 98
Receipts as before described 109 50
Total cash received $136 48
Sundry bills paid as per vouchers approved 5 78
Balance cash on hand March 15, 1902 118 75

**Addenda**

Receipts from dues to date 187 30
Sundry bills, as per vouchers approved 30 75
Balance cash on hand at this time 148 81

The Auditing Committee hereby certify to the correctness of the accompanying treasurer’s report.

**Officers, 1902.**

President—E. H. Garlow, Beverly, Mass.
Vice-President—Miss Cora Elisabeth Burbank, Boston; R. S. Sherman, Providence.
R. I.; F. B. Moore, Trenton, N. J.
Secretary—A. S. Heaney, Providence, R. I.
Assistant Secretary—Miss Stella Smith, New York.
Treasurer—M. D. Fulton, Auburn, R. I.

**Standing Committees.**

**EXECUTIVE COMMITTEE.**

**MEMBERSHIP COMMITTEE.**

**BANQUET COMMITTEE.**

**AUDITING COMMITTEE.**

W. P. Richardson, Brooklyn; C. B. Post, Worcester; L. N. Thornburgh, Paterson.

**RECEPTION COMMITTEE.**

**Special Committees.**

Committee with Commissioner of Education—C. C. Brittle, Boston; G. H. Miller, New York; W. H. Kinyon, Providence.

**Election of Officers for the Eastern Commercial Teachers’ Association for 1903 Resulted as Follows:**

For President, Mr. Charles M. Miller, New York City.
First Vice-President, Warren H. Sadler, Baltimore, Maryland.
Second Vice-President, Mr. A. P. Cobb, Banks School, Philadelphia.
Third Vice-President, W. P. Richardson, Hatfield School, Brooklyn.
Secretary, Mr. A. S. Heaney, Providence, R. I., for three years.
First Assistant Secretary, Miss Stella Smith, Boston, New Jersey.
Second Assistant Secretary, F. H. Reed, English High School, Providence, R. I.
Treasurer, M. D. Fulton, Auburn, R. I.
Assistant Treasurer, A. T. Swift, English High School, Providence, R. I.

**EXECUTIVE BOARD.**

George P. Lord, Salem, Mass., one year; W. P. Sherman, Providence, R. I., one year; H. M. Rowe, Baltimore, Maryland, two years; J. E. King, New York, two years; C. T. Platt, Hoboken, New Jersey, three years; W. C. Ransdell, Middletown, New York, three years.

**The Peirce Banquet.**

The crowning feature of the Convention was the banquet given by the Eastern Commercial Teachers’ Association at Boldt’s Saturday noon, by Miss Mary H. Peirce, Prin. of the Peirce School of Business, Philadelphia. By this act Miss Peirce demonstrated that woman is quite as quick and capable of grasping opportune conditions as man. By her thoughtfulness and generosity she has set a precedent that will hasten many school proprietors to follow.

**Business Education and Foreign Trade**

BY THEODORE G. SEARCH, PRESIDENT OF THE NATIONAL ASSOCIATION OF MANUFACTURERS, PHILADELPHIA

To one who is not daily engaged in business as an instructor, it cannot be expected that details as to the very best methods calculated to reach certain results in the matter of education can be laid before you with that scientific knowledge and accuracy that they should possess. I therefore disclaim at the outset any ability on my part to so argue for these results in a manner that will be satisfactory to modern educators. It is, however, I think, within my province more particularly to define, as closely as I may, the qualifications that go to make up the kind of a man that I think the world is now demanding, especially that part of the world engaged in business matters, and while the subject of my lecture is "Business Education and Foreign Trade," it necessarily follows that the Foreign trade will include domestic trade, and that it will not only apply to the man who travels as agent for the house, but must refer to all those who are engaged in business, either as principals or as assistants to them.

So far as my own investigations are concerned, I find a great deal of literature at this time referring to the matter of business education along commercial lines, but seldom find any reference made to the means which must be used in order to produce results. It would seem, from the inability on the part of the general public interested in this matter to make the proper discrimination, that there must either be a wide diversity of opinion concerning it, or there must be a dearth of ideas relating thereto. I prefer to consider the first proposition and to ignore the latter. From my standpoint it does not appear that the subject is one that is in any degree a very special puzzle. It simply means this: That the education for this work must have for its foundation the same breadth of treatment and the same basic features that constitute the foundation of education as it is today and has been in the past. Our country's greatness at this time rests upon the fact that education is so general throughout the land, and if this be true then it follows that
Let me then state, as a first proposition, that I am inclined to believe that the student of the present day is pushed along much too rapidly for his own good, and further, that he is made to work hand at one time in order to produce the best and greatest progress. I am also inclined to the belief that he is not as well equipped as the German student who should be. In making these strictures, as strictures they may be considered, I do it entirely from the standpoint of an employer, having had frequent opportunities to observe the results obtained from those who have applied to me for positions.

I find, likewise, more or less weakness concerning the subject of letter writing, and feel that this department has suffered somewhat from lack of drill, the drill itself being impossible on account of the introduction of so many other studies.

These strictures only indicate, somewhat, the run of my mind upon this matter. But nothing is said of the possibilities of the subject; for the pupil, on the one hand, in order to become a scientist he enters into the "Real Schuule," which is in effect a lower scientific school. From this school he passes into the "Real Gymnasium," which is in effect a higher one. From this he passes to the Polytechnicum. His course embraces the sciences, mathematics, history, modern languages, and practical and theoretical training in various technical branches. But, in the course of his education, he is required to pass through courses of study as follows: a course in the cannery business, in which he is required to learn the branches of the profession, and to be conversant with the equipment of the cannery. He must also be familiar with the laws, grants, contracts, charters, and the like, who understands the history of transportation; the principles of border and exchange; the tariff regulations of various countries; one who understands at least three modern languages, and who is, to a considerable degree, versed in historical literature, especially of the modern period, and one whose mathematical attainments are excellent, and who is conversant with the great development of our trade and industry.

The type of man needed in the business world is one who has a comprehensive knowledge of the political and commercial geography of the United States, who understands the history of transportation; the principles of border and exchange; the tariff regulations of various countries; one who understands at least three modern languages, and who is, to a considerable degree, versed in historical literature, especially of the modern period, and one whose mathematical attainments are excellent, and who is conversant with the great development of our trade and industry.

The point here is that the student who is sent to a university for the purpose of acquiring a knowledge of the principles of geography, should have the greatest consideration by the student during his commercial education. I will not undertake to determine at what point should begin the teaching of such an education, but I will consider them to be helpful to the man who aspires to conduct business transactions with eminent success.

South America Spanish is the current language, Portuguese is the language of Brazil. One should know that Hong Kong is not a part of the Chinese Empire, but a British Colony. These are, and lack of familiarity with geographical relations often lead to annoying mistakes which make a business man appear ridiculous in the eyes of his foreign correspondents.

I have known manufacturers to refer to Bogota, Columbia, to an agent in Caracas, Venezuela, without knowing, or with the most surprising discrepancy between these two capi"ts is that there is only land across, a small country, or by a long, circuitous route by rail and water, which makes the two cities further apart, commercially speaking, than either of them is from the city of New York.

Knowledge of the fact that Java is a Dutch colony suggests to the thoughtful student of foreign commerce that the trade of this island nation may be of use to goods destined for this city must be packed in small parcels and properly protected against damage by water and rough handling. While on the other hand, Caracas, the capital of Venezuela, is on the seacoast by a high mountain range, has such railroad facilities as to permit of the carriage of heavy merchandise direct from the seacoast to the city. It is also advantageous that the goods, wherever they are, may be transported for large steamers, enabling them to discharge cargoes direct to cars or ware-houses, and also in what ports everything has to be lightered to shore, or, in other words, wharves have to be broken up by a small boat of sufficient draft to permit of its passage through the shallow water to the docks. It is evident at once that thorough familiarity with the facilities — the ports, the seaports — and the important seaports of great value in determining the best way in which to pack and ship goods. If it is known that there are no warehouses at Beizgoa Bay, and that all merchandise to be forwarded to Johannesburg must lie exposed to the weather while awaiting shipment, careful attention will be paid to the packing of all goods destined for this route.

Knowledge of the different routes which connect the different countries and often lead to channels through which trade may be developed to advantage. One would hardly go to Copenhagen to seek trade for the far East, unless with the knowledge of the fact that the trade of some of the countries in the Asiatic trade which has made Copenhagen an important centre for export trade to Siam and other Oriental countries. Indeed, the knowledge is assistuated by study of the destination of exports from the great ports like London, Hamburg and Antwerp.
by any other means, short of a personal canvass of the field, and the establishment of direct contacts.

DISTRIBUTION OF PRODUCTS.

Information concerning the sources of supply of leading articles of commerce is of great utility, indicating where certain goods may not be sold, and suggesting where their possible market may be. For instance: We may not expect to sell cotton yarn in Bombay, if we have knowledge of the existence of a domestic industry or of the milling machinery with which to utilize a portion of the vast wheat crop of that country, and this we do. It follows that knowledge of the primary produce of the different countries, and a study of the distribution of the toils of each nation—all help to afford a more intelligent idea of what the world buys and from whom it is bought, as well as much for the geographical consideration.

Dealing for a moment with the subject of history, we may say that knowledge of the salient points of political, commercial and industrial policy, which devotes his life to trade with other nations. It broadens his view of the world’s commerce and helps him to account for many conditions which present themselves. Familiarity with the political conditions of Portugal and the Netherlands at one time explains the influence of those nations in the remote parts of the world, an influence remaining long after every trace of their dominion. A knowledge of the absolutely fundamental value of such knowledge may be slight, it is helpful in enlarging one’s view of the commercial world. A study of great historians is helpful in this connection.

A word or two as to languages. Without a command, more or less thorough, of the important modern languages one is heavily handicapped in such a career as we are now considering. It is necessary to have at least a good reading and speaking knowledge of German, Spanish and French, and the completely equipped business man should be able to write a correct business letter in each of these languages. If this fits the position, he may also be able to pass a test in ancient languages. It is in the office that a man who undertakes to travel abroad in any business capacity. Acquaintance with languages is almost a necessary element in international business. It is the practice of many concerns to require that a letter be written in Spanish or German or French. There is pain and grief occasioned by the foreigner’s struggle with our language, but at the same time we do not hesitate to fearlessly essay the framing of a reply in a tongue with which we have but scant acquaintance. This ignorance of foreign languages, which is displayed in correspondence and printed matter, is appalling, and shows a need of the most careful training in this particular branch of business education.

Commercial study of the commercial conditions of a foreign business with entire success without knowledge of any other language than English, depending upon competent assistants for translation, the man who undertakes a business trip with no broader linguistic accomplishments, finds himself at a serious disadvantage at every step. Of course interpreters can be had, and the traveler can himself be taught how to speak the language of the country, how much consideration would we give to a French or a German salesman who was compelled to employ a third party in soliciting trade? No foreign house ever thrives to business, with no broader linguistic background.

German and Spanish are, perhaps, of the most importance in the importance of diplomacy almost throughout the civilized world, yet in the introduction of new business ideas it is of less value today to the American than either of the others. With all due respect to the future value of Spanish and French, in addition to English, one can make himself understood in correspondence and conversation the world over. While we acknowledge this, it is interesting to note that English is not the world’s language, and the language of trade. This tendency makes it less difficult for one to transact business.

BUSINESS METHODS.

The term “business methods” embraces a wide range of information of prime necessity in international trade, which includes all the details of sales, banking, credits, the method of calculating and remitting for foreign shipments. These questions, very plain and simple in our business at home, involve many intricate problems when transactions are international, and details very peculiar to the transactions.

To the uninstructed the handling of an order from India, which is to be shipped in care of a London banker, with 60 days sight draft against documents, is often perplexing. Whether the bank is able to make the payment, whether the bill of lading and invoice are presented.

Business methods differ in various countries, and familiarity with differences of one is one of the essential elements in foreign trade.

Credits vary widely according to the country, and they often differ in various branches of trade in the same country. Such practice is a valuable commercial policy. There are innumerable details which present themselves in widely distributed foreign business, radically different from methods at home, but thorough knowledge of these methods is an indispensable part of the training of the man who expects to achieve success in export trades.

It is necessary to know weighing, measures and monetary units used in different countries. For instance, a kilogram may be 100 pounds or 220 pounds, according to the country and to the commodities to which it is applied. A dollar may be 50 or 100 cents in the same country; or in India, it may be Mexican, and worth, say, 45 cents; or gold, and worth 100 cents of our money. In some Spanish countries they have the rather unique custom of giving discounts to wholesale customers by making them pay, say, 20% in advance and accepting settlement in 50 cents dollars.

An enumeration of the peculiarities of business customs and methods in different countries would fill a book. But nothing is more helpful than a thorough familiarity with these local or national commercial characteristics. Many of them are facts not found in text books, and may be learned only from the experience of ourselves or others.

Banking methods and the principles of exchange, the use of Letters of Credit, customs governing contracts of purchase or sale, and the laws of these countries are established, the laws relating to licenses for traveling salesmen—all must be embraced in the fund of information which constitutes a large part of the qualifications of the successful man in the export trade.

CUSTOMS TARIFF.

Careful study of the Customs Tariff of foreign countries yields much information of the most value. The duties themselves, except as they show what goods are taxed so as to prohibit their importation, are not of the least importance. It is essential, however, for the exporter to know to what extent the country imposes a specific duty upon the gross weight and baggage, or upon the net weight of the goods alone, or an ad valorem charge. Sometimes, the latter is an arbitrary valuation determined by the government and made a part of the tariff law. It is important to know that sometimes lower duties are charged upon the exportation of good and complete article. The inclusion of brass parts or fittings with a piece of machinery will sometimes render the whole machine subject to duty at a very much higher rate than the parts themselves, and that the parts of higher priced metal. Sometimes a lack of finish, or even a simple coat of German paint, will change the classification of the article in the tariff of some country, and increase the duty to the point of prohibition. In some foreign tariffs, articles of iron combined with wood are dutiable at a higher rate than articles of wood combined with iron, and when the predominance of either material is not plainly apparent, the classification may be influenced by the manner in which the article is made. Sometimes some other lines of goods so small a matter as this may mean very much to the buyer and to the seller.

There are innumerable details of packing, marking, invoicing, and all manner of dealing which many of the foreign tariffs are very explicit, and impose heavy penalties where they are not carefully regarded.

In the time allotted to a discussion of a matter of this kind it is not possible to cover all the essential points that should be included in an education, shaped with such an end in view as we have spoken of on this occasion. I have only tried to formulate a few suggestions from a practical point of view, to show the importance of this education, and at the same time leave abundant
opportunity for elaboration on the various topics.

Permit me, therefore, in closing, to say that if there be any one thing needful in the shaping of business careers, apart from book knowledge, it is that young men shall be inspired with intelligent purpose and impelled with such effort as shall lead them to the desired aim. There are plenty of men who have ideas in general but none in particular. Men who have laid foundations for successful business careers, but have never built thereon. Or if they have commenced to build, have changed their plans so frequently that their work amounts to nothing.

From an old poet of Armenia, the ancient Brittany, there has come down to us through more than twelve centuries a beautiful aphorism, which seems to express exactly the thought I have in mind: "He who will not answer to the rudder, must answer to the oars." And this sentiment applies to a business career, as well as to any other walk in life. Without the guidance of intelligent purpose and the impetus of determined effort, success is not attainable. As Shakespeare says "the flighty purpose never is overthrown, unless the deed go with it." This is essentially an age of specialization, and from my standpoint and with the knowledge that there are many intricacies in business, which the men out of business cannot know, and many incidents in a life of export trade which the person not familiar with that branch of business can understand or appreciate, I have reached the conclusion, that whatever be the policy adopted for our commercial education, nothing could be better than to have the last year of a student's course in our public schools culminated by an arrangement to be made with practical men, direct from the different business fields, to give them lectures out of their own experience, to the end that they may be familiarized with the life that is shortly to be theirs, and that from the experience of others, an experience not found in books, they may have a proper and higher appreciation of the difficulties before them, and of some of the influences which may be brought to bear to ameliorate these conditions. Such a course of lectures given by men who may not even be literate in their cast of mind or thought, would be vastly instructive from the fact that they deal with practical things and with active life.

One word more—it is demanded of every man who claims the right to succeed that he shall establish the justice of his claim by obvious superiority—by ability to do something, to say something, or to write something better than his fellows. So it follows that men who succeed today are masters of some particular branch of commerce, industry, finance or professional life.

More than twenty years ago Theodore T. Munger in addressing young men said: "The successful man is not the one who can do many things indifferently, but one thing in a superior manner. There is a certain value in having many strings to one's bow, but there is more value in having a bow and a string and an arm and an eye that will every time send the arrow into the bull's eye of the target."

Specialized training is giving the world today more brilliant men who can "do" things, men who achieve real success, than have been created in many generations. No system of education, be it classical, scientific or commercial, which does not give proper weight to purpose and effort, can be accepted as providing the proper equipment for any walk of life.

And now one brief view of the international situation of our country and I close.

The geographical location of the United States territory seriously handicaps all other nations who are engaged in the great task of conquering the world's trade.

A glance at the map reveals the fact that our country is practically included between the thirtieth and fiftieth parallels of latitude, and extends solidly east and west for about 2,500 miles, embracing a region second to none on the globe. The Temperate Zone gives life and vitality to its people as does no other. A uniform Government controls the land from the Atlantic to the Pacific. Nowhere else in the world exists such elements of rapid communication for quick delivery of products as this region shows. The railroad communication alone is nearly equal to that of all the rest of the world combined. The economic handling of freight by railroads has been reduced to a science in the United States. Enjoying as we do a rate of railroad freight of only about one-third of that of other favored nations, we are enabled to transport the products of our industries to our shores and place them on board ship at a less cost than can be done by any other nation.

The unity of our State Governments insures a safe and rapid transit from ocean to ocean that cannot be duplicated by any of the great nations of the earth.

Russia, with its vast area of land, is hemmed in by the Scandanavian Peninsula and by Germany, which almost effectually block the free transportation of its goods through channels of the least friction. On the Pacific ocean it has opened but few ports and these can only be reached by passage through a mountainous country. Nature herself on the eastern coast has imposed an insurmountable barrier against the free transportation of the products of Russia.

China, lying to the south of Russia, and almost between the same parallels as those of the United States, is on its western side completely shut off from the ocean. There
is therefore, no free traffic of the products of China through its own dominions to the ocean, excepting in the direction of the United States.

While the borders of Germany, hamper Russia's transportation, Russia blocks Germany so that the Germans can only reach the great highway of the nations through the North Sea and English Channel.

The same argument applies to the other nations on the continent of Europe—France, Turkey, and in a lesser degree Spain, while Africa is as yet too small a factor to be seriously considered in this discussion. It is controlled by so many different nations, whose interest, politically and industrially, are mutually hostile, that there is practicaly speaking no free intercourse throughout any part of its dominions at the present day.

But with the United States the way is open to the east—to the west—and to the south, and to as large a degree as that of any other nation, to the north. The whole boundless world is, therefore, within the easy reach of our industries. We fail to appreciate, without careful study, the exact meaning of the facilities we enjoy.

If we sail to the east, we are bringing ourselves into direct communication with an immense aggregation of the world's activities, reaching the western shores of Europe, where vast hives of industry are located, many of which are now looking to us for their machinery and supplies.

On the west, we find directly in line with ourselves, the great Empire of China now being opened to the world; and China, with the eastern coast of Asia, imports $30,000,000, worth of material annually. China, being a non-producer of nearly all the articles of which we are now manufacturers, offers us one of the greatest inducements. No country is more readily accessible. From the eastern ports of Shanghai, Hong Kong and Tsin-Tsin we are in direct communication with her rivers, which reach for 3,000 miles into her interior, opening up a vast population who desire our products and are willing to pay for them, and who are friendly to us, and who are anxious to have us come in and possess their trade. This trade alone should carry us into the far interior of the great Chinese Empire, and as far as relates to all other countries in the world who are exporting their goods there, we are nearly 3,000 miles nearer this market than they are.

Geographically considered, therefore, if the people of the United States were free to make choice of territory for themselves anywhere upon the globe, nowhere could they make a selection which could in any degree equal that which they now own.

There are also other considerations worth calling to mind at the present time, concerning the value of our own country. Should the Nicaraguan Canal, or some other canal cutting the isthmus, soon be built and this admits of little question—it will be of the greatest value to the United States. For all practical purposes it will make one solid wall of our sea-coast that will stretch from north to south, and east to west, and south to north at least 5000 miles. It will open up the whole western coast of the South American continent, extending from the twelfth parallel of North Latitude to the thirteenth of South Latitude, and place us from 2000 to 200 miles nearer the market of that vast country than any other Government on the globe. Here is a buying power of possibly $200,000,000, which can be served by our country better than any other.

But while our coast line is being thus extended we must not forget the great value which will come to us from the opening of the Mississippi Valley. This great water-shed includes some of the largest rivers in the world.

The Mississippi is navigable for 2,800 miles to the Falls of St. Anthony.

The Missouri is navigable for 2,400 miles to St. Louis.

The Ohio is navigable for 555 miles to Pittsburg.

The Tennessee for 1,200 miles, obstructed only by the Nickels Shoals.

The Red River, 1,300 miles long, is navigable to Shreveport.

The Arkansas throws its forks nearly to Pike's Peak.

Here we have a vast system of rivers, extending North, East and West. On the one hand, tapping the great coal, iron and oil fields of Ohio and Pennsylvania, and the vast mineral, lumber and agricultural sections of Kentucky and Tennessee.

On the other, watering one of the richest agricultural divisions of the globe and reaching the greatest mineral regions known; while the central stream pierces the heart of the great lumber regions of the North and the grain fields of the Northwest.

Who shall predict the great future of the Mississippi Valley?

God intended this noble river as a great commercial highway, and some of us now here shall see it fulfilling its mission. Truly, it seems prophetic that the United States has been foreordained on the surface of the globe to command and control, to a large degree, the markets of the world.

The free and undisputed passage of our products from one side of our country to the other, with the privilege of shipping them at our eastern and western ports to the remotest parts of the globe, without taxation or political tribute of any kind, insures to us a strength and power such as is represented by no other nation in the world.
The victory at Manilla closed the record of the past and opened that of the future.

Let us interpret the handwriting on the wall.

Our flag will sail on every sea. The starrybanner of this broad and enlightened nation shall shelter under its folds the most progressive people of all time. It shall shelter a commerce upon which the sun shall never set; a commerce which shall ebb and flow unceasingly as the everlasting tide.

The picture is not overdrawn. A great work is before us.

It has to be a task of the young men to rise up and crown with glory this prophetic vision.

Our traveling salesmen will shortly marshal themselves in grand array and penetrate to the furthest quarters of the globe, and before the American Flag will soon be transformed into the versatile French, Spanish and German linguist.

The occasion and the times demand that you teachers shall decide the destiny of this great Republic.

To you we commend the education of our youth—men through whose veins shall ebb and flow our national virility. To you we look for the full fruition of those hopes that have been sponsors of this rising sun of our national destiny. In the time past you have not failed to set up the highest standards of educational progress, and in coming years we feel, indeed we know, that the teachers will stand out in the front rank of our national advance.

The work is not easy. The financial reparation is not large, but the ever-growing sympathy of our people in your success should give you a good grounding of the national destiny. In the time past you have not failed to set up the highest standards of educational progress, and in coming years we feel, indeed we know, that the teachers will stand out in the front rank of our national advance.

INVESTMENT OF SINKING FUND

It is not an easy matter to make the Sinking Fund realize the same rate of interest as the debtors. In order to have a safe investment; therefore, as stated, it is not well that its earning power should be calculated at a higher rate than ordinary savings bank interest. Municipalities, however, are permitted to invest their own debentures and those of other municipalities, also in government securities. In this way a higher rate of interest may be realized than is paid by the average bank. Security for these investments should be lodged for safe keeping with the trustees of the sinking fund, with a Trust Company or with a bank. In case the municipality invests in its own securities the coupon interest may be disposed of at the end of the year by cancelling entries.

ABUSE OF THE SINKING FUND

It has been said that the Sinking Fund is a curse to the average municipality, and the statement is no doubt true in cases where there are few guardians. The principal causes that would lead to such a conclusion are lack of knowledge of the finances, inability to keep the Sinking Fund properly invested, ignorance in computing the true requirements of the fund by designing and dishonest officials, etc. As a rule the officials are anxious that the rate of taxation be as low as possible. Often to redeem pledges made before election, and therefore they may raise the amount required for the Sinking Fund in the preparation of yearly estimates. It may be, however, that the requirements of the municipality are adequately provided for, yet it is possible that the funds so raised are not applied as originally authorized. Greater expenditures are made in some directions than were originally intended or provided for, consequently, to meet this contingency, some other fund has to suffer and the Sinking Fund is usually made the scape-goat.

CALCULATING THE ANNUITY

Before calculations in Annuities, Sinking Funds, Debentures, etc., can be understood, it is first necessary to have a thorough grasp of the principles underlying Compound Interest. For instance, what causes an investment of $1,000 to amount to $1,27628 if out at Compound Interest for five years? Simply an increase of five per cent added for it, which, in its turn, gathers interest at the same rate. A knowledge of logarithms will be of great assistance in thoroughly grasping this class of problems.

For a brief illustration of the Sinking Fund calculation, and the use of the table, the following debenture will be taken.

On Jan. 1, 1902, the City of Woodstock purchased the Electric Light Plant for $20,000, saying, that it is to be raised by debentures payable in 5 years, interest payable annually. (The short term debenture is selected to illustrate the working with less labor.) The annual appropriation in this case will be, first, $1,000 for payment of coupons, and second, the required installment to the Sinking Fund which is capitalized at 4 per cent. To meet the obligations conveniently, the equal annual installment is required for a term of 5 years which will, in turn, accumulate interest at 4 per cent.

Each dollar deposited Jan. 1, 1903, bears compound interest at 4 per cent. for 1 year. Similarly, each dollar deposited Jan. 1, 1904, bears compound interest at 4 per cent. for 2 years, etc. (The installments are set aside at the end of each year and begin to draw interest on Jan. 1st, of the following year, owing to the fact that the installment will be paid on Dec. 31st of the year, and the interest will be credited to the account as of Jan. 1st of the following year.)

(1) Suppose $100 were paid into the Sinking Fund on Jan. 1st, 1903, at the end of the year be worth $100 X $1.04 = $1,040.

(2) On Jan. 1st, 1904, will be worth $100 X $1.04 X $1.04 = $1,081.60.

(3) On Jan. 1st, 1905, will be worth $100 X $1.04 X $1.04 X $1.04 = $1,124.84.

The Accumulation Table shows the amount that $100 is compounded for different periods of time at a given rate, and the compound interest payable annually.

The Accumulation Table shows that $100 is compounded for different periods of time at a given rate and the compound interest payable annually.

The Accumulation Table shows the amount that $100 is compounded for different periods of time at a given rate, and the compound interest payable annually.

How Penmen Register

The above is a facsimile of a page where the penmen registered when they had their portraits taken as shown on the previous page. The group and this combined make interesting material.
Program of the 6th Convention of the Ohio Commercial and Special Teachers' Association.

Field at Dayton, May 15-17, 1902.

Officers.
A. D. Wilt, President, Dayton; E. A. Hall, Vice-President, Youngstown; Lenna A. Dickenson, Secretary, Elyria; J. S. Merrill, Treasurer, Columbus.

Executive Committee.
Jerome H. Howard, Chairman, Cincinnati; P. F. Mudrash, Lakewood; T. W. booker, Sandusky.

Thursday, May 15, Evening.
3:30 to 4:00 P. M. Round Table at the parlor of the Phillips House.

Friday, May 16, Morning.
At the Miami Commercial College.

General Session.
9:30 A. M. President's Address.

Business Section Papers and Discussions.
9:00 A. M. Discussion led by H. H. Beck, Hauck Commercial College, Cleveland.
9:00 A. M. Discussion led by F. T. Weav- er, Ohio Valley Business College, East Liverpool.
9:00 A. M. Paper—"Modern Bookkeeping: A Review of the Most Radical Changes Fluctuations in Bookkeeping in the Last Twenty-Five Years," by E. A. Hall, Hall Business University, Youngstown.
9:10 A. M. Discussion led by L. L. Tucker, Mt. Union College, Alliance.
9:30 A. M. Paper—"The Business Course," by H. C. Ditmer, Public Schools, Cleveland.
9:10 A. M. Discussion led by S. L. Beene, Newark Business College, Newark.
9:15 A. M. Adjournment to Soldiers' Home.

Pompanity and Drawing Section—Papers and Discussions.
9:30 A. M. Paper—"What is the Educational Value of Writing," by Mrs. Belle Wil- liams, Public School, Streetsboro, Canton.
9:10 A. M. Discussion led by C. G. Cahoe, Public Schools, Elyria.
9:10 A. M. Discussion led by Miss A. S. Gillespie, Zanesville.
9:10 A. M. Discussion led by A. J. Creamer, Public Schools, Chillicothe.
9:00 A. M. Paper—"Drawing," by Miss Parsons, Public Schools, Youngstown, O.
9:10 A. M. Discussion led by Lenna Dickenson, Elyria, O.
9:00 A. M. Adjournment to Soldiers' Home.

Shorthand Section—Papers and Discussions.
9:10 A. M. Discussion led by Charles E. Berry, Hubbard School of Business, Nor- walk.
9:10 A. M. Discussion led by S. Elizabeth Smith, Oxford College, Oxford.
9:10 A. M. Discussion led by Louis C. Klise, Lima College, Lima.

Friday, May 16, Afternoon.
11:50 A. M. Discussion led by F. W. Wills, Wills Business University, Spring- field.
12:10 P. M. Adjournment to Soldiers' Home.

Friday, May 16, Evening.
12:40 to 2:00 P. M. Visit to Grounds and Buildings of the National Military Home.
2:30 to 3:10 P. M. Dinner at the General Dining Hall of the Hotel, Soldiers' Home. The charge for the dinner has been fixed at seventy-five cents. Members desiring to attend should notify the President by letter before reaching Dayton.
3:00 to 4:00 P. M. Visit to Factories of the National Cash Register Company, and Address by Mr. J. H. Patterson, President of the Company.

Third Session—Public.
Friday, May 16, Evening.
7:30 P. M. Address of Welcome and Response. General Address by Dr. W. N. Hallman, Superintendent of the Dayton Public Schools.

Saturday, May 17, Morning.
At the Miami Commercial College.

Business Section Class Method Demonstrations.
9:00 A. M. Demonstration—"How I Teach Bookkeeping," by L. L. Hudson, Ohio Wesleyan University, Delaware.
9:00 A. M. Discussion.
9:40 A. M. Demonstration—"How I Teach Interest and Discount," by A. D. Wilt, Miami Commercial College, Dayton.
9:10 A. M. Discussion.

Penmanship and Drawing Section—Class Method Demonstrations.
9:00 A. M. Demonstration—"How I Teach Penmanship and Movement," by J. F. Hart- nart, Public Schools, Akron.
9:40 A. M. Demonstration led by Ella Dow, Public School, Bellefontaine.
9:40 A. M. Discussion led by Genevieve Humphreys, Public Schools, Delaware.
10:00 Discussion.
10:00 Discussion—C. P. Zaner, Columbus.

Shorthand Section Class Method Demonstrations.
9:00 A. M. Demonstration—"How I Teach the Stroke and Circle Forms for S and Z," by H. C. Haid, Head School of Shorthand and Typewriting, Columbus.
10:00 A. M. Discussion.
10:10 A. M. Demonstration—"How to Conduct a Dictation Class of Beginners," by C. N. Shafer, Netherly Business College, Zanesville.
10:10 A. M. Discussion led by Chas. G. Becket, Columbus High and Correspondence School, Columbus.

General Session.
11:00 A. M. Report of Committees on nominations, resolutions, etc.
11:30 A. M. Election of officers; choice of place of next meeting.

Miscellaneous Business. Adjournment.

Concerning R. R. F. A. R.

The Executive Committee has secured the usual special rates on first and second class fare to members and other persons actually attending the convention. To secure this rate, full fare must be paid on the trip to Dayton and a certificate must be asked for of the agent who issued the ticket to Dayton. If a through ticket to Dayton cannot be obtained at the starting point, a ticket should be purchased to the nearest point where a through ticket can be had, and in purchasing this ticket a certificate should be obtained. These certificates must be retained, and on May 16th, at Dayton, they must be shown to an agent of the railroads who will be there to endorse them and they will then be exchanged by the ticket-seller at Dayton for a return ticket on payment of one-third the regular fare. This reduction cannot be obtained unless at least one hundred persons show certificates. It is important, therefore, that every member and visitor should procure the certificate. Persons who live within so short a distance of Dayton that the regular fare is seventy-five cents or less, cannot obtain a reduction, and to them the certificate will not be issued.

Persons living outside the state cannot obtain a reduction except for that portion of their trip which is within the State of Ohio. They will therefore purchase tickets from their homes to the nearest point in Ohio and there repurchase tickets to Day- ton, asking for a certificate.

A MASTEBPIECE OF PENWORK! FOR ONE DOLLAR.

of course not the ORIGINAL, which is 8 x 5 feet, but a BROMIDE PRINT, 12 x 18 x 12 inches, which reproduces every line in the original exactly. Those who have seen it say it is a most wonderful reproduction.

WHAT IN! A large spread eagle, enourmed and drawn in a graceful and unusual manuscript. Below is the declaration of INDEPENDENCE: "THE UNITED STATES OF AMERICA," as it is written in different styles of Penmanship and Drawing with a pen pointed and filled with ink, to be used as a "penmanship practice" or "drawing exercise" for any student of Penmanship or Drawing. It is moderately priced and is a very practical "first piece of penwork" for future teachers. It is also a pleasant and interesting subject.

If, after ordering it, you are sorry and would rather have your dollar back you can have it by returning the piece in good condition.

357 Fulton St.
Brooklyn, N. Y.
OPPOSITE CITY HALL.
Another great gain results to the community from the practical character of such education, in that it causes a large increase in high school attendance. The increase of public commercial education will be slight, compared with the gain that will result to the State from having citizens trained to perform their duties more intelligently, and stimulated to take an interest in current events and political matters. At present the public high school is a finishing school, so far as commercial education is concerned; it practically never prepares for college, although excellent courses are now offered by many universities; however, it is only a question of time when commercial high schools will become a feeder of the commercial course of the college, much to the advantage of both institutions. To the teachers of other high school courses, the commercial instructor will probably always stand as an example, in that he is in close touch with those who practice what he teaches. If the commercial public school shall lead teachers to visit business houses, to get into touch with those who are actually doing the world's work, to combine theory with practice, it will have conferred a lasting and needed benefit upon our common school education. Finally, and most important, it seems to me to be certain that business education, as defined, is the most broad, and at the same time the most generally useful education.

We are not all doctors, lawyers, physicians, mechanics, engineers or theologians, but we are all business men or women, and one of the chief factors of our efficiency is degree and thoroughness of training, and I confidently believe that the next addition to our American high school system will be a broad, well-planned business course, which will serve as the best means of general education for an increasingly large number of students.

William E. Doggett, Commercial High School, Brooklyn, N. Y.
W. T. Bookmyer, principal Sandusky City Business College, Sandusky, Ohio.
Alian Davis, principal business high school, Washington, D. C.
H. M. Rowe, accountant, author and publisher of business textbooks, Baltimore, Md.
J. H. Prances, principal commercial high school, Los Angeles, Cal.
O. Crissy, State Inspector of Business Education, Regents office, Albany, N. Y.

This committee will make an earnest and extensive effort to formulate an efficient course of procedure for the conduct of business education in American public schools which may be generally adopted throughout the country. The first meeting will be held in Philadelphia during the last week in March. It is expected that a preliminary report will be made at the next N. E. A. convention, Minneapolis, July 7th. 1902. All who are interested in the subject are invited to send suggestions to any member of the committee. An open conference meeting of the committee will be held in Minneapolis, Thursday, July 10th, at 3 o'clock, P. M., in the room assigned for the regular meetings of the Department.

Brown's Summer School

We desire to call the attention of our readers to the announcement made elsewhere in these pages concerning "A Summer School for Commercial Teachers," under the management of G. W. Brown, Poclain, Ill.

Mr. Brown writes us as follows: "Prospects are good and already we have promises of from forty to fifty young teachers who will be with us for the drill, and I am glad to announce that Mr. W. N. Parris and half a dozen or more others of our most distinguished commercial teachers are already booked for more or less time with us during the drill. We shall also conduct our Annual Institute from June 25th to July 8th, when we shall assemble all our officers, principals, teachers, and associates, etc., and we confidently expect to bring together a body of Ed Commercial Teachers, including the young teachers in the drill."

This summer school idea is a good one, and G. W. Brown is just the fellow to hatch out such a timely idea. You will do well to look into the matter.

Committee of Nine

State Inspector I. O. Crissy, Albany, N. Y., president of the department of business education of the National Educational Association, announces the completion of the Committee of Nine appointed to prepare a monograph on business education, with particular reference to courses in public schools, as follows:

Durand W. Springer (chairman), director commercial department, high school, Ann Arbor, Mich.

(Continued from Page 17.)
Flourishing, like everything else in its place, is all right, if well executed. In a business college, it reminds us of patent leather shoes in a cornfield. Ordinary, everyday writing on a resolution to be kept and displayed reminds us of cloth-hopper shoes in a cornfield. A few to comprehend fitness is why flourishing is now and then declared to be devoid of merit solely because it is a nuisance in the commercial college in the hands of incompetent practitioners.

A Hint

"I am not one of those penmanship teachers who instruct their pupils in the line, Mr. A. N. Palmer.

In the Western Penman, March, 1902.

Good! Just what we have been preaching! Vertical writing deserves the credit, however, for calling out that liberal statement from Mr. Palmer. But when will Mr. Palmer also see the folly of insisting on one movement for all?

Ye Editor

While at Philadelphia, called upon his friend and former pupil, Mr. C. C. Canan, Norristown, Pa. Mr. Canan was still confined to his bed as a result of two operations for appendicitis. He is a very sick man, but wonderfully patient and hopeful. The visit revealed hints that Mr. Canan had nerve that not only produces wonderful script, but the kind that "pulls through" operations without a murmur.

Many and sincere were the regrets expressed at the Association concerning his condition. Had Mr. Canan heard all the good things said of him, he might have occasion to need a larger hat. He is a second Flickinger in modesty as well as skill, and I am not able to circulate among the brethren in body, as he did in spirit. Here's to his recovery.

Two Events

At Philadelphia stand out prominently from all the rest. They are Miss Pierce's generous hospitality in the form of a banquet to the entire Association, and the penmen's recognition of Mr. Flickinger's long years of service in the teacher's profession. Mr. Flickinger enjoyed good health and the association as well. His "spur-on-the-moment" speech in response to the presentation by Mr. Healy of a Loving Cup by the penman present, was as happy as it was sincere. Mr. Flickinger has, ever since he was old enough to do so, stoutly declared that he could not make a speech, but we now know better. He is a master in that as well as in modesty, skill and kindness.

We know there will be joy all along the line when we say that he is seriously thinking of going to Milwaukee and taking his loving cup along—for your use rather than his.

Banks'

While in the City of Brotherly Love the Editor had the privilege and pleasure of addressing the students of Banks' Business College on the subject of writing. In his varied exhortations to this land of opportunity he expressed a more attentive and appreciative lot of students than he found in this institution. The teachers in charge, Messrs. Hayward and Ren-haw are producing results in the way of writing, he has never seen excellent. He was impressed while there that they registered over 1,500 pupils yearly, 180 positions having been offered them during the year previous that would pay from $7 per week upwards. We found them teaching touch typewriting with 110 typewriters in operation.

Romance

On the March, 1901, cover of the PENMAN-ARTIST AND BUSINESS EDUCATOR, appeared a design by, and within a portrait of Miss Fanny Sargent, of Columbus, O., a pupil of the Art department at the Art College. Mr. Carlton V. Howe of Chicago, but more recently of Philadelphia, the expert script "impressionist," was so impressed with the same design and portrait, that he made it illustrates through Mr. Zaner concerning Miss S. and the propriety of opening correspondence with her. As titles on both sides were clear, the correspondence was begun, formally at first, friendly later on, and finally it became lengthy, frequent and intimate. As a consequence, an engagement followed. On April 6, 1902, Mr. Howe journeyed to Columbus to meet his fiancée—an arranged marriage. All arrangements having been made to do so under Mr. Zaner's fatherly eye and slate-thatched, humble home. The meeting, the numerous walks along the famed banks of the Lena, and the conclusion and the confection of Presidentship thereby, resulted in a marriage a week later in the home where they had met. Mr. and Mrs. Howe left for Philadelphia with the beauty and sincere well wishes of their friends.

What part whole-arm movement played in the final enactment of this social romance, no one but the lovers themselves know, but we know that it was munificent movement that cultivated the faculty culminated into a marriage. Who says the pen is not mightier than the sword?

Here's to the happiness, health and prosperity of Mr. and Mrs. Howe!

The Coming Convention of the Ohio Business Educators and Special Teachers Association at Dayton.

The executive committee of the Association, of which Mr. Jerome E. Howard, of Cincinnati, is chairman, has pushed matters vigorously. The reports of President Wilt are now well assured of a large attendance, an interesting program, and a successful meeting.

In addition to the interest exerted in the convention work itself the attractions offered by the Soldier's Home and the National Cash Register Company, as places well worth seeing, are being very generally considered. The railroads and the hotels afford remarkable rates.

There has probably never been a time in the history of commercial educators in this country when so much intelligence has been taken in the problem of the school man.

The situation of the business world for the highest grade of workers makes it imperative upon the profession to do everything possible to keep abreast of the finest in learning and accomplish this better than such cooperation as our conventions afford.

The discussions of the St. Louis and Philadelphia conventions were great stimuli for the Ohio schools and the fraternity of Business Teachers owe it to themselves to come together once a year to consider not only matters of general interest, but some that pertain to our own State particularly.
Mr. R. A. McDevitt of Newcomerstown, O., who has been on the sick list is now swing- ing a wide swing in health, and is pleased to know that he is in shape to regain his professional work.

J. E. Paul, of Elliott's Business College, Burlington, Ia., is now connected with the Southern Shorthand and Business College of Chicago. Mr. Plummer is a Zanerian boy, and is quite a fine penman.

Mr. S. M. Blue, the well known penman of the Broken Bow, Nebraska Business College, reports that the school will close out his class. Mr. C. W. Koush, proprietor of the institution, is working on buildings for having built up such a large school in so short a time.

Francis B. Courtney, the handwriting expert of the Iowa Business College, Des Moines, Ia., has recently been doing expert work in the courts of Edwardsville, Ill.

Mr. N. A. Albin, the accomplished penman of the Toppen, Kansas Business College, has contracted with Prof. A. F. Russel, of Portland, Oregon, as teacher of penmanship and engraving-artist.

H. G. Voss, an assistant manager of the North- west, O., Actual Business College and Box- er Business College of Wooster, recently purchased the W. A. Williams College of Business College. This is an old and well established school, he will be a valuable acquisi- tion to his already large private commercial school interests.

Miss Emily E. Watts, Superintendent of pen- manships in the Youngstown, Ohio, Public Schools, presented a very readable and attractive little book entitled "Penmanship," in the March number of the Commercialist, published at Scranton, Pa.

In the same number Mr. Charlton V. Bush, of the Commercialist, illustrated a little book entitled "Engrossers Script." You will do well at least to get that pamphlet. W. H. Shayler, of Portland, Me., recently renewed his sub- script to the PEN, W. H. Shayler, a capable Irishman, says in the following lan- guage: "Inclosed find the 'mighty dollar to pay for a mighty good journal.'" My life long and grow beautifully greater.

We certainly appreciate these good words of support, coming from such a source.

The Mountain State Business College of Ali- sona, Pa., has been changing, or has been changed to the Zeth School. Mr. G. G. Zeth is principal and pro- fessor of the school. The school has been changed now into a new and probably the finest in that part of the country.

In the same number, Mr. E. F. Mountz, of the Carnegie School of Art, in Pittsburgh, Pa., says: "I am not sure if I can call it an opinion, but I think the term 'business college' once appro- priate for the Carnegie School is not broad enough for a school that now prepares its students for so many positions in life, in addition to those of a purely business nature." Mr. Mountz is a graduate of the Carnegie School.

Mr. F. B. Bridges of Portland, Oregon, con- tacted with the San Francisco Business College as teacher.

Mr. David Wolfe Brown, Washington, D. C., of the American News, expresses a desire for information concerning the work of the National Shorthand Teachers' Associa- tion, which has recently published a book of 160 pages devoted to the teaching of shorthand.

Mr. W. O. Farnham, Secretary of the National Shorthand Teachers' Associa- tion, has recently published a book of 160 pages devoted to the teaching of shorthand.

Patrick J. Sweeney informs us that graduates have been able to obtain the American News Company, New York, to handle subscriptions and orders for single copies of "The Gregg Shorthand Book," which is sold for five cents each, by mail.

The Gregg Shorthand Book, by John Robert Gregg, published by the Gregg Pub- lication Company, Chicago, IIl., is an eight-page, vest pocket, dic- tionary in size. This publication is one that has been needed by the users of this method. It is a revision of the work issued two years ago, and is destroyed by fire at that time. The shorthand out- line drawings are given by Newell A. Power and photo engraved, and she is to be con- gratulated upon the skilfulness of her work.

"Proof-Reading and Punctuation," by Adele Mills Smith, Drexel Inst., Phila- delphia, Pa., published by the author, price, gold line gilt top, $1.50, postpaid, is a book which should be read by all students and business men.

It is issued also as a text book where proof reading and general knowledge of printing is taught and as an aid to the non-professional reader. The book was written by one of the best known and most capable business men with the needs of many people. The con- tent are as follows: Proof-marks, Printers' Marks, Preparing Reading, Reading Types, The Point System, Fencers of Type, Width of Types, Type Setting, Stringing and Typesetting, Reproductive Processes, Paper-making, Technical Terms, Punctual Marks, etc.

The part relative to punctuation is especially interesting, as the editor is very interested in this subject and has written a number of articles in correct English. We take pleasure in recommending the work as the finest book of its kind ever written.

We desire to call our readers' attention to an advertisement elsewhere in these columns of Lazen & Blosek, Publishers, Cleveland, Ohio. They are publishing one of the most successful and modern works on hand written, which is used in all schools. It is not only useful, but it is really one of the finest books ever written, and are offering at the present time, at the present time, at an unbound form at an unusually low price.

If you are interested you should write them.

Mr. M. A. Albin, the accomplished penman of the Toppen, Kansas Business College, has contracted with Prof. A. F. Russel, of Portland, Oregon, as teacher of penmanship and engraving-artist.

Do you know Mrs. Albin? You'll think more of the profession when you see such men. He has been gaining steadily since I first knew him, and in the "round up," you will brand him, a leader.

Look at those figures on page 5, of April issue. Aren't they beauties? What better copies could you ask? Ask him how they were made?

On page six (under "Instructions," Plate 3), one line, "The fingers may be used a trifle, in forming the loops, but the hand and arm must be drawn along at the same time." How does the general manager imply that the fingers must be used for the best results, or that if you are not so disposed, you can do as well without their assistance? Do you understand that if you execute as well as he, or better, you are driven to the extremity of finger action?

If he, or any one else, who is entitled to praise and admiration, admits that finger action exists in the "figures" and a "trifle" in the loops, we must conclude that there is an infinitesimal part in other letters. If there is a "Combined" movement, there must be composed of more than one element, and what must be your conclusion? The Fingers do move! When, How, Little, Much does not come in the province of this short sketch.

If the "ingredient" is used, then there surely is a best use.

Because it has been abused, and because its innate applications are not understood by the multitude, do the giants of all branches of writing, and dispose, but the ghost will not down.

On line nineteen (9), in Favorable Comment, April number, of the "Favorable Comment," has been passing some bad news.

"The Penman-Artist and Business Educator" is published weekly by the Penman-Artist and Business Educator Company, 210 S. Sixth Street, Chicago, Ill.

The above is the best text book where proof reading and general knowledge of printing is taught and as an aid to the non-professional reader. The book was written by one of the best known and most capable business men with the needs of many people. The content are as follows: Proof-marks, Printers' Marks, Preparing Reading, Reading Types, The Point System, Fencers of Type, Width of Types, Type Setting, Stringing and Typesetting, Reproductive Processes, Paper-making, Technical Terms, Punctual Marks, etc.

The part relative to punctuation is especially interesting, as the editor is very interested in this subject and has written a number of articles in correct English. We take pleasure in recommending the work as the finest book of its kind ever written.

We desire to call our readers' attention to an advertisement elsewhere in these columns of Lazen & Blosek, Publishers, Cleveland, Ohio. They are publishing one of the most successful and modern works on hand written, which is used in all schools. It is not only useful, but it is really one of the finest books ever written, and are offering at the present time, at an unbound form at an unusually low price.

If you are interested you should write them.

FINES SUPPLIES FOR PENMEN AND ARTISTS

On goods listed below we pay postage on those that go by mail and purchaser pays carriage on goods that are shipped by express or freight.

Blank Cards—We supply cards with finest sur- face of fine penmanship.

Practise Paper—Best for the money to be had.

1 ream by express

$1.40

Send stamp for samples of paper.

Envelopes—100 fine blue by mail postpaid 10c.

100 fine blue by express 25c.

1000 either kind by express

$1.50

Address, ZANER & BLOSEK, Columbus, O.
PICTURE PUZZLE.

CAN YOU FIND EIGHT FACES?

Short Cuts. A little book, pocket size, showing how to do with half the figures and in half the time all of those little calculations which we must figure out every day. Everything from Addition to Interest and Discount. Its worth is attested by the fact that its author is now and has been for years the specialist in this branch at the Eastman Business College. Price, cloth, 50c. Address, GEO. A. DEEL, Poughkeepsie, N. Y.

IF YOU WANT A TEACHER FOR YOUR SHORTHAND DEPARTMENT OF COURSE YOU WANT A GOOD ONE

We can give you expert assistance on just this point. Write, giving particulars, regarding the position you wish to fill, and we will place you in communication with the right teacher. No charge to you or to the teachers.

STUDENTS

For 16 cents I will send you

13 COLORED CARDS 13

Written with white ink on six colors. Something new, and all your friends will want them. Every thirteenth student who orders gets an extra dozen FREE.

WANTED—A student in each town to take orders for colored cards. Send 10 cents for sample outfit.

H. O. Keesling,
With Rider Business College,
TRENTON, N. J.

THE PHONOGRAPHIC INSTITUTE.

CINCINNATI.

Benn Pitman, President.
Jerome B. Howard, Director.
"Opportunities" is the title of a little, to-the-point booklet of twelve pages with colored cover, by the Manhattan Reporting Co., No. 19 Nassau St., New York City, Patrick J. Sweeney, Proprietor. If you are interested in stenographic work you should write for it. It is free.

The Kearney, Neb., Normal School and Business College issues a very neat and attractive catalogue, giving one the impression of a worthy school.

"Peirce School Alumni Journal" of Philadelphia, comes to our desk regularly, well laden with choice contents.

S. D. Holt, the popular, progressive, and practical engrosser of Philadelphia, recently issued a circular printed in upwards of a half dozen colors, the equal of which we have perhaps never seen. A recent visit to his studio revealed the fact that he was doing unusually high-grade work, and that he had his hands full of orders as well. Mr. Holt has the leading engrossing office of that great and growing city.

Advertising literature has been received from the following: Heal's Business College, San Francisco, Cal.; Capital City Commercial College, Des Moines, Ia.; The Columbia Commercial University, Lancaster, O.; Massillon, Ohio, Business College.

"The Packard Budget," published by the student of the Packard Commercial School of New York, is the title of a new school periodical. It is one of the very best journals of the kind ever received at this office. It contains, besides colored cover, twenty pages 7 x 10 inches. The tone of the magazine is of course in keeping with the name it seeks to honor. We wish it the success it deserves.

Attractive commencement exercise programs, etc., have been received from the Western Normal College, Shenandoah, Ia.

Boyle's Business College, Omaha, Neb., greeted us with a catalogue indicating an up-to-date, well attended, prosperous institution. The colored cover is above the average in excellence, design and taste.

The Correspondence Institute of America, Scranton, Pa., is issuing a very presentable catalogue. In it we notice that Mr. E. S. Norris, a Zanerian boy, won one of the prizes offered by this institution. The cover is very attractive and telling.

"The Magazinophone," monthly, published by the students of the Rider, Moore and Stewart Schools of Business, Trenton, N. J., is another excellent publication put out in the interests of the school mentioned, its students, and business education.

The Scranton Business College, Buck and Whitmore, Principals, recently favored us with some half tone illustrations of their school and city. The same indicate an unusually prosperous institution. The proprietors are men not only of energy, but of ability as well.

Recent advertising literature has been received from the Elliott Commercial Schools of West Virginia, Wheeling, Charleston, and Fairmount, and the Boulder, Colo., Business College.

**Lessons by Mail**

**In Practical Drawing and Designing**

**NO PRINTED MATTER**

All drawings and designs are original and fresh from the pen and pencil. I have no long stories to tell and no extravagance to try at the penman's expense, but instead, will give the most common sense instruction in drawing and designing at the following prices:

Two lessons on sketching from life...$1.50
- from nature 1.25
- " parts of human head 1.00
- " designing 1.25
- " " (advanced) 2.00

The complete course for six dollars. Address:

GEORGE JENSEN, POST CLAYTON, OHIO.

---

**A1 Penman, solicitor and commercial teacher, 32 years old, now with a large EASTERN SCHOOL, desires to purchase a good school or take one in charge. Would join a capable shorthand teacher in starting a school or purchasing one. Good references, a live man. 2 years experience and $5.00 to put into the business. Address INTERESTED.**

---

**Colored Cards.**

The Kind That Bring the Dimes.

Something new and they catch the eye. Tickle the fancy and loosen the purse-strings of your customers. Come in six colors. Great for advertising purposes. Schools use them. Penmen use them. Everybody wants them. You write a dozen and each person who gets one out of the dozen will want a dozen. They are just the thing you have been looking for.

Doubt it? Write for free samples and price list.

H. O. KEESLING,

With Eider Business College,

I am now open to the profession to receive orders for my pen work and I promise all who order of me my very best efforts. A letter in my very finest ornamental style $5.00 A set of my finest ornamental capitals 5.00 One dozen reputation cards 1.50 One dozen cuts, any size, any style, and very fine .25 A specimen showing my skill .25 My work is unexcelled. You will agree with me when you see it. Write me regarding mail lessons.

S. M. BLUE, BROKEN BOW, NEB.
In this lesson we have a more complicated study on the same lines as in Figure 2, of last lesson. The original drawings were made rather coarse and the composition, as a whole, presents a good study in grouping, light and shade and technique. The outlines of the buildings are produced by placing the clear highlights against the sky. This is rapid work and will afford ample study and practice.

In the next lesson we shall take up the matter of detail, the indication of materials used in building, the details of foliage and scenery.

The Question of Supervisors

Number Three

Music touches the soul more universally than any of our fine arts. Educationally, it is a potent factor in awakening and uplifting character. It is one of the agencies that shall help to make the twentieth century humanitarian.

Physical culture makes “the home we live in” serviceable and enduring. It recognizes health as the foundation for a successful life, and the key to moral as well as physical strength.

Drawing opens the “windows of the soul” to the beauty of art and nature. It also unlocks the secrets of the mechanic arts and teaches the boy how to become a successful mechanic. It trains the eye and hand to accuracy.

Writing, rightly taught, schools the hand to accuracy, neatness and dispatch. It prepares the boy and girl to step into the business office and begin successfully life’s duties.

Special teachers are the guardians and promoters of these forces. It is not dead languages that we are needing, but living, tangible, subjects. These are enumerated above. Without them culture and progress would be seriously impeded. Latin blocks rather than opens the way to industry, while Greek shuts it to idleness and more intellectual.

The cry against supervisors is not as unanimous as some would have us believe. It comes largely from dollar squeezers, a group whose one argument is economy. Such economy is “penny wise and pound foolish.” The cry is raised by those who are opposed to thorough, popular, modern education.

Those opposed to supervisors are also opposed to fair wages for the grade teachers. They are in favor of one thing—cheapness. It is not economy in our teaching forces that is desired, but economy of the administration of our city governments. Poor streets may do harm, but they can be more easily and quickly repaired than defective education. The best is the cheapest in the long run.

That education is best which is practical and cultural. These special studies are intensely practical and aesthetic. Music develops feeling and moulds character. What is man without either? Physical culture not only makes for health but for morals as well. Drawing is doubly valuable as it is both practical and aesthetic. One phase of it develops mechanical ability, while the other phase of it develops the sense of the beautiful in nature and art. How are we to enjoy Heaven without this faculty properly developed. Writing is pure and practical, enabling more young men and young women to get a foothold as office assistants than any other one branch of an education, unless it is English. As before suggested, supervisors are the guardians or promoters of these subjects. The most effective way to discourage the subjects is to dispense with the supervisor. The mere employment of supervisors, on the other hand, insures interest, enthusiasm, and instruction in one or more of these subjects.

Made and Filled

Columbus, Ohio.
The studies for our lesson this month are not the same but are both composed of shells.

The small shell in both is the same, though different views are given. The small shell is nearly white, while the large shell in each drawing is much darker.

Care must be taken with the shadows, as much expression is given to the picture by them.

A. A. G.
A New Magazine

Commercial Training

is the name of a department of "view and review" that is original, interesting and profitable, and that is moulding thought in Business Education. It is

Edited by Geo. P. Lord,
who brings wide experience, liberal education, devotion to the cause and no small degree of literary ability to bear upon his work

The Editorials are written in the straightforward, forceful, virile style for which Mr. Lord is noted. They strike straight and true and deal with practical questions.

The Reviews are unbiased, pointed, and pithy. They review rather than praise by silly flattery.

Advertising Talks. For the first time the advertising of schools is approached and discussed along the line followed in professional advertising papers.

Heart to Heart Talks which appear in this department are too well known to need a word. They will be continued.

Contributed Articles with editorial comment will form a new feature of this department.

ALL THIS AND A SHORTHAND MAGAZINE FOR ONE PRICE—50 CENTS A YEAR.

GREGG WRITER, 57 Washington St., Chicago.
Central Commercial College,
Clarksburg, W. Va., Nov. 21, 1901.

My dear L. Madarasz,—* * * * My vocabulary is insufficient to give you a good report as I would like to, as to the value of my course with you. Really, I do not know what I would have done had I not taken the course. I secured work with the above school within ten days after completing your course, and began to instruct the students in shorthand "muscles" with such success that the President, Mr. Bower, compliments me in the highest terms. Mrs. Bower, the principal of the shorthand dept., is taking the shorthand lessons, and has made such improvement that she is delighted. * * * * Your method of instruction, and drills, enabled me to start in right, and eliminated all possibility of enunciation fallacies. * * * * The other fellows were experienced teachers, while I was an entire stranger in that line, and if they got more good from your instruction than I did, they got a great deal. I feel, and shall continue to feel greatly indebted to you for what I received.

Sincerely,

P. WEBSTER CLARK.

Public Schools of Mt. Carmel,
Mt. Carmel, Pa., Sept. 31, 1901.

Mr. L. Madarasz,
New York.

My dear Madarasz,—* * * * Kindly accept my warmest thanks for your untiring interest in me in following me up as you did. I owe you a debt of gratitude. At the best, I can but reflect your generalship, your disposition, etc., in my work as a teacher of shorthand. I put it lightly when I say that your course was worth double its cost and I have no doubt of it. I shall soon double my salary.

-- I just received an issue of the * * * * * * With my best regards given by L. Madarasz you may be sure that I could criticise it in proper style; and I did, too. After I finished cutting out all the "trash," there wasn't much left.

Sincerely,

HERBERT W. ENGLISH.
(The above-mentioned paper was not Zander's. —L. M.)

Plainfield Business College,
Plainfield, N. J., Nov. 2, 1902.

On learning that L. Madarasz was to have a special class in business writing, and how to teach it, I was at once interested and wrote for term. They seemed a little high and I was somewhat skeptical as to the results to be obtained in four weeks. However, I attended. I was fortunate, and consider it the widest expenditure of the amount of time and money I would like to.

The confidence and satisfaction with which I am able to teach, and the results I am getting justify me in making this statement.

For one who wishes to acquire a good rapid style of writing, and the ability to teach it, the course of instruction under Mr. Madarasz is invaluable.

E. N. FAST.

Passaic Public Schools,
Passaic, N. J., Jan. 20, 1902.

To the Public,—

This certifies that I have taken Mr. Madarasz's course of lectures on teaching writing, and have adopted his method in my present work with such success that my field of labor has just been increased as a result, with corresponding increase of salary. I have studied all the leading systems of writing published, and been in contact with some of the best known teachers of writing—the result is, I prefer the "Madarasz Method" over all others. I have seen the results secured by the reputed leaders among the writing teachers, and a comparison of them with the results I have obtained after changing to the "Madarasz Method" proves conclusively its superiority: it is a well-defined plan of work, with all the nonsense omitted: logical, concise, practical, and based on common sense. Madarasz's method of counting has proved especially valuable.

WM. BILLINGS,
Supervisor of Penmanship.
ENGLISH HIGH SCHOOL,
Providence, R. I., Nov. 23, 1901.

My dear Professor,—I esteem my work taken with you last July so highly that I hardly know how to begin to express my appreciation of it. Perhaps, however, I can state briefly the two-fold advantage it was to me. First: Your instruction revolutionized my own handwriting in the direction of radical improvement. Second: Your Method in my hands has produced admirable results in the two hours per week, for the ten weeks that I have taught penmanship this year. In accordance with your idea, I have endeavored from the outset and at the same time to emphasize position, movement, and correct formation of letters. I have had to contend with pupils who have acquired for the most part an abominable, sprawling outline of vertical writing, or rather printing, and you know what that means. For my especial purpose, namely, as we are directed not to "force" the slant system upon pupils in the High School, your method has been especially well adapted; for by the slant system can be taught about as well as the slant, the same rules prevailing in both respects. I think so highly of your ability as a professor of penmanship that I hope to have the privilege some time or other of continuing work in that line under your instruction. * * * * I am glad to be sure that the other men in the class are succeeding so well.

Very cordially yours,

AUGUSTUS T. SWIFT.

It's your think—July 1, 1902, I am going to give a Teachers' Course in Business Writing and the "Madarasz Method" of teaching it. There are to be 24 sessions; in that time I will cover the entire field of practical writing and fully illustrate my way of handling classes, giving such drills and trials as will qualify everyone in attendance to handle a writing class successfully. No such work, or instruction, has ever been given before by anyone else, and I offer it as the best I am capable of doing; with the positive assertion that it is the best plan to create practical writers. While preparing yourself as a teacher of writing, why not get the best instruction possible?—In a method having the dollar-mark of merit? At the same time, I'll criticise your own writing so pointedly, that you'll be forced to improve your work if you follow my instruction. In every lesson I'll cover more important ground than other teachers do in ten—simply, because, this one thing I know, and, I am not a repeater.

Now then—The Cost. The tuition fee will be $30. If you can't pay all cash, satisfactory payments will be arranged. Board and lodging need not cost more than $30. You can figure the railroad fare.

Results Count. The important qualification of a teacher is the ability to get the best results in the quickest time possible. The "Madarasz Method" of teaching Business Writing does that. Of course, if you know it all, my method won't appeal to you, yet, I'll say this; no course of lessons ever given in any penman's paper, no published work on penmanship, no other teacher of writing (except those I've taught) in the United States has as many vital points—result-producing points, as I give and explain in my teachers' course. I back my reputation on this assertion. So, you should come to me if you want to

Be a Leader. * * * *

* * *

You are standing in your own light when you are satisfied to continue going along in the medium class of teachers. Catch on to some new ideas—ideas that stand for the best. My plan of teaching business writing is based upon common sense, it's simple when you know it, and is as sure of producing results as that the ocean is salt water. * * * * * * * * "Be a Leader," and raise your work to the highest standard. You will then be in line to

Get your Salary Raised!

Your employer knows better than you do when that pleasure is due you, and the way for him to know, is for you to teach better than you have in the past.

Corroborative Words.—The extracts herewith given are taken from letters of some of last year's pupils—they are not from enthusiastic boys; they are from men experienced in teaching, with one exception—the Clark letter—and that one should appeal to young men wanting to qualify as teachers. I tell you what to say, when to say, and how to say it.

In addition, enough time is allotted to ornamental writing to show you all the kinks of which I am master, and that alone is worth the price of the entire course to you, if you want to improve your own writing. I am not a college and have no power to grant diplomas, but the fact that you have taken my course will prove to be a marketable asset. Perhaps you know of some young person working in this line; you may be the means of starting him right by calling his attention to this announceement. If you've any questions to ask of me, write freely.

Sincerely,

L. Madarasz,
1281 THIRD AVENUE,
NEW YORK.

THE PENMAN'S ART JOURNAL.
202 Broadway.

"The Madarasz Method," as a result-giver is equalled only by the extraordinary skill of its author as a penman. By its use, anyone who can make a chirographic oval and a rhomboid may become master of a good business hand.

HORACE G. HEALY, Editor.
Vertical vs. Slant.
By Cyrus W. Field, Jackson, Mich.

AUTHOR OF "GEMS," ETC.

(This paper was read at St. Louis but because of its length we can only present a summary and extracts.—EDITORS.)

It is stated that writing had three stages of development. First the form stage, then the movement stage, and now the slant stage.

Each style has its friends but most people favor slant.

When we look at slant and vertical, what we see is governed largely by our prejudices. The effect of our view point is to narrow our outlook, like the men looking at the house the one coming from the north said it was red; the one from the west, it was green; the one from the east, it was brown. Each one had reported correctly, but each had seen only one side of the house. That is the fault in our view of writing. We get on our hobby horse and when we ride up to take a look, we see but one side, and that is likely to be the agreeable side. It is all wrong friends.

The following plate is submitted to show how some of our Jackson, Mich., business men write. Of course we cannot show the writing of all, but here is a fair representation embracing many different professions. These men are used to let letters would know how they write, or of the fact that they favor slant. They were approached one busy Saturday morning and without preparation wrote the specimen sentence.

(1) Is the writing of the gymnasmus instructor at the Y. M. C. A. It is claimed that continued muscular exercise is not conducive to a good hand. This gentleman is constantly engaged in teaching large classes. His handwriting is free and shows a good command of the quill.

(2) Is written by a young man engaged as bookkeeper for a large lumber firm. He is lefthanded. He writes a bold, rapid, backhand, which supports the theory that nearly all left-handed writers are good writers, and also that they write a backhand. Right-handed, the slant.

(3) A prominent clothier held the pen for this. He is interested in good writing, and his clearcut hand shows it. His position calls for some writing which he executes with force and precision.

(4) Shows how at least one druggist writes. It has about twelve different slants, but is readable.

(5) This fine specimen was executed by the popular Secretary of the Y. M. C. A., who has a great deal of writing to do and does it all equally well. He strongly favors slant writing for he fully realizes its commercial value.

(6) This was written by one of the finest engravers in the city, a jeweler. Notice the slant. Did you ever see engraving done in the vertical?

(7) Was written by a bank cashier. He used a coarse pen and wrote rapidly. It is claimed he can turn off more writing in a day than any other man in town. This is a specimen of his every day work. Not a bit of finger movement on this specimen.

When people say they favor vertical, see if they write it. The writer looked over the hotel registers of the four city hotels, and of the 235 traveling men who had registered during the two weeks immediately preceding, but 16 wrote the vertical. To teach young people the vertical, and then have them when they enter business, that slant is required is an unpardonable sin, and handicap them as certainly as though they were taught false principles in arithmetic.

SHORTHAND SYSTEMS, VERTICAL AND SLANT PURSUED TO A FINISH.

There is no inducement in the vertical to cause a young man of push and ability to take it up. We are doing the young people an absolute harm by teaching it. Business men have no use for it. It is inseparately linked with sluggish muscular or finger movement. Then join to put it out. It is already on the road. Come, Boys. All together! Push! Out it goes! Goodbye. Respectfully.

Wm. Savers.

305 Bell St.

E. C. Mills.

Editorial, Inc., Rochester, N. Y., will send you six line of fresh from the pen copies for 50c; 20 lines for 1.00. The 1.00 package is quite a complete compendium of business writing.

MODERN ILLUSTRATIVE BOOKKEEPING

INTRODUCTORY AND COMPLETE COURSES

THE LATEST ADDITION TO THE WILLIAMS & ROGERS COMMERCIAL SERIES.

This is by far the best work on Bookkeeping and Business Practice that has ever been published. It combines all the best features of the other bookkeeping publications in this series, besides many new ones not to be found in any similar work. It is the commercial teacher's ideal and is destined to become

THE LEADING BOOKKEEPING SYSTEM.

If at the Ohio Commercial and Special Teachers' Association Meeting at Dayton, May 15-17, talk with our representative about the Modern Illustrative Bookkeeping, Office Routine and Bookkeeping, New Introductory Bookkeeping, New Commercial Law, Commercial Arithmetic, Seventy Lessons in Spelling, and many others, descriptive circulars of which will be sent on request.

AMERICAN BOOK CO.

NEW YORK, CINCINNATI, BOSTON, SAN FRANCISCO.

CHICAGO, ATLANTA.
W. W. Fike, penman in the Manistee, Mich., Business College, sent us a specimen of "applied business writing executed by a student, Mr. C. A. Preston. The writing is exceptionally smooth, strong and rapid looking, and shows that Mr. Fike is giving his students splendid instruction.

Easter Greetings in the form of beautiful script and some business writing came from Mr. R. A. McDevitt of Newcomerstown, Ohio. Mr. McDevitt is a very fine penman and a very fine young man as well.

Mr. Geo. A. Smith, Elkader, Ia., sent in a specimen of business penmanship that shows that he has it in him to make a very fine penman. The loops are a little too flat on the left side, and angular at the top.

Specimens of student's work were sent to us for inspection from the Willimantic, Conn., Business College. The work shows splendid improvement. Earnest R. Church made no improvement in his N. E. Wood made second best, and Miss Emma D. Wood made third best. Under the head of quality Miss Emma C. Smith, Miss Emma W. Ferris, and D. Julian Burgees, B. A., third.

Mr. J. G. Christ of Lock Haven, Pa., favored us with some of his graceful, skillful business and ornamental writing.

T. J. Evans of Wilkes Barre, Pa., favored us with some cards written in the ornamental style which, though from the hands of one not following penmanship professionally, are above the work done by the average professional.

Howard Harbach, a thirteen year old boy of Reading, Pa., sent some pen drawings done in imitation of Mr. C. D. Gilson's work, which shows that Mr. Harbach has in him the material for becoming a very fine artist.

E. E. Kent of the Rider, Moore & Stewart School of Business, Trenton, N. J., sends written cards in a variety of styles and colors, revealing a high order of execution. We recently met Mr. Kent at Philadelphia and was quite favorably impressed with him. The school mentioned evidently believes in good penmanship, as it has a number of fine penmen in its faculty.

Mr. Kent also favored us with a photo of a very unique and skillful set of resolutions that he engrossed for the Mason Carpenters' and Builders' Association.
TO ZANERIANS

By special arrangement with Messrs. Zaner & Bloser, I am enabled to offer to Zanerian graduates only the best pens and cards with an exact representation of the

ZANERIAN PIN
printed and embossed in gold on the upper left corner of the cards. They are handsome, distinctly professional and exclusive.

ALL KINDS OF COMMERCIAL DRAWING AT REASONABLE PRICES.
ADD A LITTLE TO THE COST.

This is economy to the commercial teacher, it is necessary, in order to get first-class results from his students. The educational excellence of the Sadler-Rowe publications is well known, but it is worth while to consider the quality of the materials out of which these books are made. Notwithstanding high grade papers have greatly increased in price within the last four years, our blank books and stationery have been reduced in price and the grade of stock has never been lowered one iota. We make no attempt to compete with some of the cheap blank books on the market.

Customers will note that we have lately adopted a uniform style and grade of book paper in the manufacture of all our books. We now employ the very best book binders obtainable, and our books represent the very highest attainments in the book makers' art

This is the time of year when teachers are considering readjustments of their courses of study for the coming school year. We find there are many schools that would like to make a change, but they don't want to do so until they have first made a test of the publication they are considering. To meet this well defined want, we have arranged a very attractive offer for those who wish to test any of our publications. Indeed, it is so advantageous that every teacher thinking of making a change should write to us. We will be glad to supply full particulars.

The last half of MacFarlane's Commercial and Industrial Geography will be ready for distribution shortly. This will be good news to a great many teachers. The issue of this half has been delayed over eight months waiting for 1900 census figures for Internal Commerce and Manufactures, which have just been received from the census bureau. We could have issued the book with 1890 figures, but then we do not do business that way. We were bound to issue a 20th century book even if it cost us heavily to do so, but that is a secret of our success in book making. We will not issue any book if it is not the best of its kind to be found.

Our booklets, price lists, and other information will be sent to all teachers and school officers on application, free of charge.

Modern Penmanship Publications for Penmen and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low, reckoning the saving in time and character of the work. All books mentioned below are sent by mail postpaid.

Zanerian Theory of Penmanship—A thought-provoking work that deals with the many problems pertaining to penmanship. Some are termed the Shakespeare of penmanship literature. All who intend to reach writing should read it. A book of 176 pages, cloth binding

$1.00

Lessons in Ornamental Penmanship—A work in slip form containing 100 more newly composed forms formerly given by us, with some extra plates. A thorough and complete work for home learners.

$2.00

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical writing ever published.

$2.00

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. F. Zaner, all in the simplified style. For rapid business purposes, many person believe this style of writing unequalled.

$2.00

Zaner's Gems of Flourishing—A book devoted exclusively to the finishing of flourishing. It begins at the beginner, showing the student how to make the simplest strokes and execute them with the greatest degree of skill yet attained in the art. Two editions of this popular work have already been sold out. It is probably the best work on flourishing ever published.

$2.00

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks.

A. E. PARSONS, CRESTON, IOWA.

WHY DOES A HEN LAY AN EGG?

This was once the famous subject of a rib tickling, post-prandial discharge of verbal artillery by a man-of-war. It did—as it ought—a great deal of execution. Why? For the same reason that the hen, during the next step in the process of evolution, brought forth a chick from that egg—the subject had been brooded over.

An aspiring young woman once wrote to Henry W. Longfellow asking where he found all his vivid illustrations, his apt comparisons, his beautiful figures. She was sure that she, too, could control such a wealth of ideas and illustrations. Certainly. So we might all. We are "shovel" off the nest too frequently. Our thought-eggs get cold. We do not brood enough. No psychologist can tell why certain conceptions form themselves in the mind—"hatch out," so to speak—as a result of meditation and reflection. But we all know that indulgences of thought do thus flutter into existence.

TO INDUCE YOUNG PEOPLE TO HATCH CHICKS

of the mental variety is the proper object of schools and school machinery. Are the kindergartern and kindred methods and influences to be blamed for the present-day tendency to entertain pupils in our schools? Whatever may be the cause, there is today all too little of the brain-sweating, that, for their and their country's lasting good, our grand-parents had to undergo in the schoolroom.

Our students do too little downright thinking of the kind that develops self-reliant judgment, probably the most valuable of the proper results of school training. We meet this need in our text-books, by so presenting the exercises for schoolroom work that the student is not dawdling along like an infant, unable to walk, but is, with assistance in the beginning, required to do his own walking—his own thinking. One of the best illustrations of this policy is our Bookkeeping and Twentieth Century Business Practice. A complete and logical method of presenting modern accounting and business forms and usages, it is attractively arranged to excite the student's interest, yet it makes him think. It develops concentration, accuracy, judgment.

To each teacher who names his school and mentions this paper, we offer to send one set of our complete Bookkeeping and Twentieth Century Business Practice, express postage prepaid, for $1.05 (retail price, $1.20). This is simply another bargain-counter offer, used as a means of testing the value of this paper as an advertising medium. The offer will be open until July 15th.

ANNOUNCEMENTS FOR THE COMING YEAR.

As heretofore, the policy of this journal will be to say little, and do much. Nevertheless, it is well to simply announce a few of the many excellent features we have looked for publication.

The Policy of giving all sides a hearing; of allowing each contributor full sway to his opinions; of presenting the latest and best possible, will be continued as heretofore. A broad-gauge, progressive journal is still our purpose.

The Pennmanship Department, as in the past, will be high-grade, progressive, and liberal. Mr. A. K. Barnett's lessons in practical business penmanship will be continued indefinitely. Mr. E. E. Mills will continue to favor our readers monthly with work from his masterful pen. He will contribute a series of business forms, such as notes, drafts, checks, etc. This work will represent his very best efforts, and will be just what students of penmanship need, especially those taking a business course. Mr. S. M. Blue will delight lovers of dash with specimens of his ornate hand. Mr. H. O. Keeling will present one of the most practical and best graded series of business writing ever printed. See for yourself. His work will be a surprise. We have already seen the greater part of the course and we feel that we cannot commend it too highly. It contains much valuable material for students. Mr. C. C. Lister, of Sadler's Business College, Baltimore, Md., is working on a series of lessons in business writing which he is endeavoring to make the finest of his life. He says: "I want to make this the effort of my life." Those who are aware of Mr. Lister's skill and ability know what this means. He is the author of "Writing Lessons that Teach," published and sold by the Sadler-Knowe Co., of Baltimore. His work as an author, his wide experience as a teacher, and the high order of skill he possesses, admirably fit him for preparing something unusually valuable and interesting for our readers. Mr. A. D. Scheles, Temple College, Philadelphia, will present some work which is sure to win him many new admirers. Mr. T. Courtney, the accurate, forceful penman of Providence, R. I., has on hand a supply of his work. Mr. F. B. Courtney, the all-round pen wizard, has work prepared in advance to delight, amaze, and instruct our readers for a year or more to come. Mr. W. E. Dennis, of Brooklyn, N. Y., the inimitable genius of grace, will present a series of lessons in flourishing. Mr. Dennis states that he shall endeavor to excel all previous efforts in this line of work. This means that he will present by far the greatest course of lessons in flourishing ever attempted in a penmanship journal. He has long been known as the prince of flourishing. Sharpen your quills and get ready for these lessons. Mr. C. E. Doner, the young man who has won the reputation of being a model penman and gentleman, has promised our readers something from his pen from time to time.

Is this not a dollar's worth? We have given a mere outline, however, which is not at all complete.

The Business Department, under the able editorial management of Mr. Gaylord, promises even more in the future than it has realized in the past. The work given in this department has been beyond anything ever attempted along practical, business education, and it has but fairly begun. Keep an eye on that department.

The Art Department will continue to present, high-grade, helpful, and timely examples of script, lettering, engraving, designs, illustrations, portraits, etc., etc. The best is none too good for our readers.

The Editors promise to be as timely, terse, conscientious, and forceful as in the past. The news items, etc., will be as interesting and up-to-date as heretofore.

The Covers will be, no doubt, as cheerful, artistic, seasonable, and varied as they have been since their inauguration by this journal. They cost a good deal, but they are widely admired and are a step in the right direction.

Keep Us in Mind for Clubs, and single subscriptions. Our friends on all sides tell us that we are giving too much for the money. That may be true, but in the future we shall endeavor to give more rather than less. We are aware that our journal has already set a high standard. So many experts have never before been engaged to give lessons and contribute articles to the same journal at the same time. Heretofore such enterprise has been something entirely unheard of in the realm of this class of journalism, but we are determined that the standard shall go still higher rather than lower.

So we wish to ask our friends, one and all, to keep us in mind for subscriptions. Those who can send clubs should write for club rates.

While we have every reason to be thankful for the support in the past, a still larger patronage will enable us to make further improvements, to more nearly reach our ideal journal.

Remember that we publish but one edition, and that persons taking our journal get the best of it and the whole of it—no cheap or partial numbers. The editors believe that students especially should be encouraged to read the highly instructive articles by the leading business educators of our country, and that they should therefore receive the whole journal. You should support our journal because it is worth the money, and because it is to your interest to carefully read every number, and see that students get the benefit of it.
Lessons in Rapid Business Writing

By

E. C. Mills

105 Grand Avenue, Rochester, N. Y.

Number Ten

A good handwriting may be the means of securing for you a much better position than the one you now occupy. You cannot make a mistake in writing some of your spare time in practice.

The best positions are ready for those who are thoroughly prepared to fill them.
Instructions, Plate 46.

You will derive but little benefit from this practice unless you give the closest attention to every particular. Do not allow yourself to scribble for one minute, but follow the copy exactly as it is given. Remember that this miscellaneous page writing is difficult and requires your most thoughtful practice.

Instructions, Plate 47.

Copy this form of receipt and try to arrange your work exactly like the copy. It is splendid training to cultivate the eye to take in every detail of a copy: not only the forms of the letters, but the general arrangement as well. If you do not follow the instructions carefully you can blame no one but yourself if you do not make satisfactory improvement.

Instructions, Plate 48.

See that you have no shades on any of the letters in these copies. We want to strive for a perfectly light, uniform line. The practice of light lines in your writing will encourage lightness of touch, which is a very important thing for the beginner to learn. While writing the difficult copies, do not forget that a good position should never be neglected. We want to think about this matter of position so often during the writing hour that a healthful position of the body may become habitual.
Instructions, Plate 49.

In practicing writing suitable for entries in bookkeeping we should keep several important things in mind. Some of them are: Legibility, size of writing, arrangement, good figures, etc. To copy this, either take regular journal paper or rule the lines on foolscap paper. The heading, January 1, 19— should be the most legible. Write this reasonably large and keep in the center of the page, that is, leave as much margin on one side as on the other. The journal entries, i.e., Cash, E. C. Mills, etc. should be written in a little larger hand than in the day book explanation column. After filling a page, step back out at arm's length and see if the general effect is good. Keep working away on this copy until you can see a decided improvement over your first copy of it.

Instructions, Plate 50.

As this is our last lesson in this series, the author would be glad to receive a copy of this letter written in your very best style. We will not be able to answer these letters or criticize them, but it would be a great satisfaction to hear from all who have faithfully followed this course of lessons.

I wish to thank my many friends for their kind expressions of approval regarding these copies and instructions. Your friend,

E. C. MILLS.

Concerning Mr. Mills' Lessons

We said some nice things regarding Mr. Mills' course of lessons before we ran them, but we now desire to say that in our opinion, in the line of graceful, accurate, professional penmanship, they have never been equaled. Our dealings with Mr. Mills but conform our opinion of him as a true gentleman, and one of the most skillful penmen the world has ever produced.

ZANER & BLOSER.

Lessons in
Business Penmanship
BY A. K. BURNETTE, ASHLAND, O. I.

Number Three

Lesson No. 7.

This lesson consists of word practice. Use both narrow and wide spacing. Fill several pages of each word. Try to use a free and easy movement in writing these words. Much depends upon the way you practice if you succeed.

Lesson No. 8.

We will begin this lesson by filling several lines of the small compact indirect oval exercise. Begin small s with right curve. Retrace top part of up stroke slightly. Notice how down stroke is curved. Get letter quite wide through the center, and close at the base line. Line No. 13, we have the small t beginning like s. The up and down stroke of this letter is separated by a very in pound curve. Practice the letter.

38. mine mine mince mouse
39. ounce ounce come wine
40. mine mine mince
41. ounce come wine
42. s s s s s s s s
43. r r r r r r r r
44. w w w w w w w w
45. v v v v v v v v
singly, then in groups of five or more without lifting the pen from paper. The small \( x \) is made up of simply the last part of the \( n \), with a straight line crossing the down stroke. Make cross stroke upward from base line. We have next the small \( r \) beginning like \( x \). Finish letter with small dot and horizontal curve, the same as found in finishing the small \( W \).

**Lesson No. 9.**

This should be one of the most important lessons that has been given so far. Everyone should be able to make good figures. Fill several pages of line No. 16, the small direct and indirect ovals and oblique exercises. Notice that the first part of figures 9 and 7 begin almost on base line. Their is a little more finger action used in forming the figures than in the small letters. Practice each figure separately before grouping them together.

**Lesson No. 10.**

We now come to the loop letters above the base line, which are quite difficult to master. Spend quite a little time on the three exercises given. Make oval one large space high, retracing from ten to twenty times. Join the curve line and oblique exercises together without lifting the pen from the paper. Make several lines of the up and down strokes of loop before combining them together. The two strokes should cross about the same height as the small \( i \) would be made. Strive to get a round turn at the top of each loop. Combine from six to eight of the loops together, using both narrow and wide spacing. Study the two parts of the small \( b \) given. Finish letter with small dot and horizontal curve line. In combining the letters together try to get the loops all the same height.

**Lesson No. 11.**

Begin this lesson by reviewing the curved line and oblique exercises. Master these exercises and you will have little trouble in forming the loops above base line. The \( h \) is a loop joined to the last part of a small \( n \). Slight finger action may be used in forming the down strokes of the loops. Study carefully the last part of the small \( k \). Fill several lines of the word copy.

**Lesson No. 12.**

Fill several lines of the oblique exercise, make about 50 downward strokes per minute. The small \( t \) is the \( i \) made higher and the top half being retraced. Second style given is usually used as a final \( t \). Cross first style with a horizontal stroke about one small space from the top. The small \( d \) is composed of the small \( a \) and \( t \). A great deal of time should be spent on the word copies.

**Lesson No. 13.**

Begin small \( p \) with first stroke of \( t \). Long down stroke should be straight. Be sure that you are getting round turns at the bottom of the loops. We have the small \( j \) joined to a lower loop, forming the small \( j \). In forming this letter be careful not to get loop too large. See that the two strokes of the loops cross on base line. Use both narrow and wide spacing in combining the letters together.
The small r is composed of the first part of the small a and a plain lower loop. Be sure that you are getting a round turn at the top of the first part of the letter; the tendency is to get a sharp angle at this point. We have next the small z, beginning with the first part of small n joined to a lower loop. Observe how the downward stroke of the loop is curved. Try to get your work the same size as copy, and do not neglect the word copies.

Lesson No. 15.
Begin this lesson with the curve line and oblique exercises joined together, letting oblique exercise extend above and below base line. The small j is the upper and lower loops joined together with downward straight line. Finish lower loop of oon base line. The small y and g are formed by the oval part of the a joined to a lower loop. The loop of the g is made just opposite from that of the g. Write with a good movement and a fair rate of speed. This lesson finishes the small letters. It would be well to take general review of all the small letters before taking up the first lesson of the capitals.

Practical Vertical Penmanship Copies and Hints

We have for practice this month the loop letters. Be sure to have the t and b full in the loop. Keep the crossing low and the loop wide. Be careful to finish the b with a small loop and to keep the finish high, so that it does not resemble h, which it is very apt to do if finished carelessly. We have given two styles of f. You may choose the one you prefer and practice it. Some finger action may be employed in making these letters, although they may be made quite successfully without. Do not forget the fact that arm movement makes writing easy in execution. Do not forget also that arm movement requires practice to control. Do not forget that writing, on account of its smallness and swiftness, is one of our most skillful arts, if not the most skillful. For this reason it takes more practice, more care, and more perseverance than almost any other art.
The first set of capitals is by Larita F. Dennis; the second, by John J. Boyle, both pupils in the Commercial Department of the Beverly (Mass.) High School. It is almost unnecessary to say that they take the P.-A. & B. E., and practice daily from its copies.
Mr. W. H. Vigus, whose portrait and penmanship appear herewith, is a product of Hallowell, Me., having spent his boyhood days in the public schools and stone quarries near his home. In '96 he graduated from the high school of his nativetown, and in '98 he graduated from the Shaw Business College of Augusta, Me. In 1900 he entered the Zanerian, since which time he has served in the capacity of student, all-round office rustler, and assistant teacher. Mr. Vigus had little of the so-called natural talent in penmanship, but through perseverance has developed a hand which speaks for itself. Few indeed, have worked more unceasingly, or made greater progress, but his ambition is still unsatisfied. He hopes to improve still more, and we believe will.

Mr. Vigus not only possesses a handwriting of more than usual strength, but he possesses a straightforward moral character as well, and we predict for him a successful future. He intends remaining with the Zanerian for some time to come.

IF YOU WANT THE

GREATEST OF COMPENDIUMS

Address ZANERIAN COLLEGE, Columbus, O.
Educational Strabismus; or, a High-Caste Hindu.

Cross-legged on a rug, in the city of Gotham, deep in thought, sat a great high priest, of the order C. P. A. His weekly paper had become a monthly, and now it looked as though it would dwindle to a quarterly because advertisement space was being excused and the subscription list was painfully brief; his Self-Assurance Company, Unlimited, was working overtime, but it needed advertising; his job of "professor" seemed sufficiently lucrative, his half-dozen other little schemes were not producing shekels in visible quantities. The spirit of caste was upon him, and he sought a worthy object on which to visit his holy wrath, "I have it," said he at last, "I shall inscribe a diatribe against those insufferable Pariahs, the commercial teachers."

Thereupon he prepared a derisive attack on commercial schools and commercial teachers, based on a report of the St. Louis meeting of the National Federation of Commercial Teachers and then, with the fatality of an ostrich, he signed the name of "Vannant," to his article, thinking that his name being concealed, his identity would be unrecognizable. The lion's skin was a good disguise until the ass began to bray.

Who is "Vannant?" Unless all signs fail, "Vannant" is a graduate of an Ohio Commercial School, but the proprietor of that school is not proud of the fact. On the last page of the paper which "Vannant"'s"strictures appear is an advertisement of a company, the principal member of which is supposed to be responsible for a system of accounting which is called the Balance Sheet System. The advertisement modestly says: "The Balance Sheet System of Accounts is the first and only accounting system that the business man of average attainments has been able to understand and intelligently direct as a part of his office machinery." If John D. Rockefeller only knew! How in the world do J. P. Morgan, John Wanamaker, Marshall Field, Nelson Morris, et al manage to fling along in their counting rooms? "Vannant" used about one-third of his space in treacherously quoting extracts from an address by H. M. Rowe, on "The Balance Sheet: What it Represents: How Made?" Is "Vannant" especially interested in The Balance Sheet System? Is that his reason for trying to discredit Mr. Rowe's article by quoting only such parts as suited his purpose, omitting illustrations? Our reviewer, H. M. Rowe, we are directly informed by a New York accountant of the first rank, is technically correct. But Mr. Rowe is amply able to fight his own battles, as is also Mr. Enos Spencer who was in like manner singled out for censure. It is, therefore, not our purpose to take up the technical side of this attack.

"Vannant" as a Teacher. "Vannant" presume to set himself up as a judge of the proper qualifications of a commercial teacher, and yet, unless somebody is countering closely the characteristics of the man we have in mind, "Vannant," is not a being destined to determine the effectiveness of a C. P. A., as such, in the class-room. We have recent letters from some men well qualified to judge, who think that "Vannant" is their teacher. The sentiment is the same in all of them. We quote from one: "If we take him [the writer is speaking of the man he believes to be "Vannant"] as an instructor to be a standard, then the very humblest commercial teacher is a howling success. They may be ignorant in general and thoroughly unlearned in "accounting," but no one can accuse them of the unpedagogical trait of trying to stuff raw beef down the throat of the infant that three nights before they believed should have, and to which they gave, a milk diet. From a two-hour lecture on Tuesday on the ledger, its modified forms, etc., to a lengthy and profound discourse on the "going system," on Friday, nearly upset our tender digestive apparatus. The pupils have caricatured his hobby and he has learned of it. The protests made to the authorities will, we think, result in different methods for next year." So much for "Vannant"'s"qualifications as a censor.

The Work of a Commercial School. The charges in "Vannant"'s"article are so absurdly untrue that they really deserve no reply but silence. Our excuse for noticing the attack is that a number of our readers requested us to do it, and that it affords us a desirable opportunity to set forth at some length, the purpose of business schools and the deliberate opinions of notable business men, regarding the value of a commercial school training in their relation to successful business life.

The business of the commercial school is to teach elementary matters indifferently related to the work of the public accountant, but primarily bearing upon the work of the prospective business man. The theory of the expert accountant's work may, perhaps, be successfully taught in those institutions that are offering courses in higher commercial education. There, the students are of a class entirely different from those that attend a private business school, but the private business schools of our country, as a class, have never represented that they were sitting students to enter directly upon the work of public accountants. The commercial schools take all kinds of material—

even embryo "Vannants"—and give them a thorough elementary training for subordinate places in business offices. Contact with the practical affairs of business life does the rest; and it is exactly thus that "Vannant" has risen to such places as he occupies. His position does not seem secure enough, however, to justify him in kicking down his ladder.

Commercial Teaching a Distinct Profession. The commercial teacher has to perform a work absolutely different from that required of an expert accountant. He must teach principles, and he must do it so well that his students can afterward themselves apply these principles in adapting themselves to the many different conditions that they will meet when they enter business life. Contradictions of the commercial teachers have no occasion to use the expert knowledge that a public accountant is a daily requirement, nor have they the time to acquire it. It might be well if the commercial teachers of the country would all qualify themselves for expert work, but it is far from being necessary. A man may be a good editor without being a Watterson or a Pulitzer; a good ship-builder without being a Cunarder or a N. Y. C. S.; a good teacher of chemistry without being an Ira Remsen; of electricity, without being a Lord Kelvin or a Nicola Tesla. What would become of our young people who study English literature, if no one might teach the subject except authors? How many Choates, Knoxes, Dills, Griggses, Olneys, and Roots are there among the law schools of our country?

Commercial Teachers in Business. Nevertheless, commercial teachers do much to sign books for business men, make expert examinations of the affairs of corporations, etc., and we believe it will not be surprising if they succeed quite as well as the public accountant who leaves his special field to make an occasional excursion into the field of teaching. Says "Vannant," "Where is the commercial teacher that is really wanted in a business office, or who could, in fact, hold his place in the practical work of business if perchance he once made his entrance therein?"

We humbly suggest that the Secretary to the President, Geo. B. Cortelyou is a graduate of, and for a time was a teacher in, the Walworth Business Institute of New York city. Mr. Cortelyou could fill important business positions before he was chosen for his present place, among them being the private secretarship to the Appraiser of the port of New York. It may interest "Vannant" to know that Edgar M. Barber, who is now connected with the Ap-
Mr. John R. Sparrow, C. P. A., Chief Examiner in the Controller's Office, New York City, and one of the three state examiners of Certified Public Accountants, was for many years a teacher in the Long Island Business College, Brooklyn, N. Y. He received his training in the public schools and his start in public accounting from Mr. Henry C. Wright, C. P. A., President of the Long Island Business College. He says: "I have your letter of the 11th inst. I spent eighteen months in the purchase and direction of one of the best business colleges, and in the process I accumulated some experience in commercial education, and left the school room to pursue actively my profession. In the practice of it I have had a fair measure of success. I do not agree that commercial education, as such, is impractical. On the contrary some, yes many, men of my acquaintance, are filling honorable and responsible positions, who are indebted for their early training to the commercial school.

"The wide awake, up to date, commercial instructor and practictist, not a mere theorist, is the best mentor a youth can have. He can and frequently does arouse in the lad an interest in the practical side of life by unfoldling before him a view of the whole realm of Commerce, which he can obtain in no other way. The lad studies and does business, and the great difficulty is to keep him running to the mill and not going to battle for himself. It is not to be wondered at that bright men, whose lines were laid in the commercial schools, are to be found in the front rank in every walk of life throughout our broad land. So much for the boy. A teacher bright enough to fire a boy in matters commercial very often chases at the confinement of the school-room and book learning. It is not surprising then, that many men prominent in business and the professions began life as commercial college instructors."

In view of "Vannant's" oracular utterances, is it not a bit singular that Theodore C. Search and Geo. R. Cortelyou, two former business college teachers (and therefore outcasts from the sacred circle to which this Brahminical high priest belongs) should be chosen for the presideship of the new Department of Commerce about to be organized by the government?

Shades of Alexander Hamilton! Can it be possible? An ex-business college tea her to be Secretary of Commerce? Oh, "Vannant," bide thee away to some sylvan dell, and there, on a mossy bank, beside a babbling brook, to the merry music of the birds, laugh thyself to death!

O. M. Powers, of Chicago; L. L. Williams, of Rochester; W. H. Saller, of Baltimore; H. T. Lake, of Kansas City; Jas. C. Miller, of Paterson; E. P. Heath, of San Francisco; A. J. Rider, of Philadelphia, and H. E. Hibbard, of Boston, are but a few, a long unbroken line of business college teachers who have won eminence and influence in business pursuits, aside from the reputation they have made as eminent commercial teachers.

Moreover, commercial teachers everywhere acquire knowledge of their indebtedness to pupil accountants as practicing true commercial teachers. They know the difference between Jackee and Dixie. They are grateful to such men as S. S. Dawson, Benjamin T. Norton, G. E. Stuart Whately, J. Alfred Fisher, F. Whitney, J. Stuart, Wm. H. C. Fisher, Charles W. Haskins, and Joseph Hardeman.

Through the writings of these men the majority of the best commercial teachers have become acquainted with the technology of the higher accounting, and the terms "trading and profit and loss accounts," "statements of affairs," "deficiency account," "income and expense accounts," "machine rate," "depreciation," "cost accounting," etc., have a place in the range of their thinking. The obituary of these eminent accountants will be read with genuine regard and sympathy through the entire country. Their attitude toward the commercial teacher, as toward honest men and women the world over, has been one of forebearance and respect, and allegiance.

The Discrimination practiced, the hard-listed, condemnation of the innumerable men of business, is a code of arguments as often as these papers [containing reports of commercial teachers' conventions] come out, why he should discriminate against commercial college graduates whenever he needs more clerks. By these proceedings he is affording opportunity to the uninstructed and those in which the deluded youth of the land who go to these institutions are loaded, and which must of course be removed before they are worth anything to themselves or to the country.

Do business men discriminate against business college graduates? Without going all over the United States, we shall confine ourselves to a very few of the large number of examples furnished by the Packard School, in New York, and by a half-dozen other reputable business schools. The following New York business institutions employ Packard graduates, as indicated: Fifth Avenue Trust Company ... 14 Chase National Bank ... 18

The following distinguished commercial men are Packard graduates:

Jas. G. Cannon, Vice-President, Fourth National Bank, New York; one of the most eminent among American financiers.

Herbert H. Wayer, Secretary Fifth Ave. Trust Co., New York.

Henry A. Patten, Cashier Astor Place Bank, New York.

Albert I. Voorhis, Cashier State Bank, New York.

Wm. B. Gennerich, President United National Bank, New York.

Wall P. Lawrence, Treasurer Mercantile Trust Co., New York.
RALPH SHAINWALD, President Standard Paint Co. (large factories in the East, on the Pacific Coast, and in Germany).

H. J. WOODSON, Judge of the U.S. District Court, Des Moines, Iowa.

Cornelius Doremus, President Germania Insurance Co., New York.

Erastus Young, Auditor Union Pacific R. R. Chemung R. R., Member Boise Bros., Beef and Pork Packers, New York, Kansas City, etc.

These examples might be duplicated over and over again, if we had space and patience to compile lists from the many other available first-class schools. We speak especially of the Packard School because "Vannant" must know of its first-class work. Below we mention a few other schools with names of some of their eminent graduates:

ALBANY BUSINESS COLLEGE, ALBANY, N. Y.

John A. McCull, President N. Y. Life Insurance Co.

SPENCERIAN BUSINESS COLLEGE, DETROIT, MICH.

Wm. B. Thompson, City Treasurer, Detroit.

F. T. Titlowton, Cashier Citizens' Savings Bank, Detroit.

EASTMAN BUSINESS COLLEGE, POUGHKEEPSIE, N. Y.

A. W. Teele, C. P. A., Member of Teele & Dennis, 39 Broad St., N. Y.

D. A. Keister, Public Accountant and Auditor, 88 Wall St., N. Y.

James B. Duke, President American Tobacco Co.

Mr. Miller, General Counsel American Tobacco Co.

Mr. W. Hicks, Auditor American Tobacco Co.

Thomas J. Jeffries, Director and Manager of the Richmond Branch of American Tobacco Co.

Frank A. Munsey, Publisher Munsey's Magazine.

S. S. McClure, Publisher McClure's Magazine.

Mr. Werner, Publisher Modern Culture.

T. J. Foster, Founder and Manager of the International Correspondence Schools, Scranton, Pa.

Timothy L. Woodruff, Lieutenant-Governor of New York.

BRYANT & STRATTON SCHOOL, BOSTON.

J. E. Toulin, President National Bank of Redemption, Boston.

Daniel W. Field, Shoe Manufacturer, Brockton, Mass. (Mr. Field has made an independent fortune, and has paid the tuition of at least twenty young men whom he has sent to the B. & S. School).

E. J. Dillaway, Treasurer Jenny Manufacturing Co., Boston.

Lester E. Diller, Treasurer Boston Rubber Shoe Co. (one of the largest concerns of its kind in the world.}

B. & S. SCHOOL, BALTIMORE.

Sierrett McKim, McKim & Co., Bankers, Baltimore.

Robert Rother, President Hopkins Savings Bank, Baltimore.

Jno. W. Sipple, Cashier Third National Bank, Baltimore.

PEACE SCHOOL, PHILADELPHIA.

T. J. Ferney, Secretary and Treasurer National Hardware Association, Philadelphia.

F. N. Thompson, Chief Accountant, U. S. Mint, Philadelphia.

Jacob L. Read, President Wm. F. Murphy's Sons Co., largest stationers and printers in the country.

Does the commercial student have to unload "a mass of misinformation before he is ready for any use to himself?"

The Language of a Great Financier.

"I knew about the power to analyze financial propositions; it taught me how to keep accounts myself, and when I passed away from the period of apprenticeship or clerkship to higher duties I was enabled by the wisdom I acquired in that school to determine the quality of those discharging similar functions over whom I had charge.""—Vannant" says further: "It [the United States] is the only nation in which the commercial college has found root and grown, and the business public of which has allowed itself to be bluffed into supporting the foundation of other systems of which it was taught by the avoidance of experience and conscience to go to its schools that commercial college will secure a well developed and well trained mind, the possession of which is a valuable complement to my college or business course, and the same is true of the many college magazines which lists the most conscientious in his work, will secure a well developed and well trained mind, the possession of which is a valuable complement to my college or business course, and the same is true of the many college magazines which lists.

I am a graduate of the Richmond Branch of American Tobacco Co. where I have been selected as a member of the Commercial College. I am a graduate of the Richmond Branch of American Tobacco Co. where I have been selected as a member of the Commercial College. I am a graduate of the Richmond Branch of American Tobacco Co. where I have been selected as a member of the Commercial College. I am a graduate of the Richmond Branch of American Tobacco Co. where I have been selected as a member of the Commercial College. I am a graduate of the Richmond Branch of American Tobacco Co. where I have been selected as a member of the Commercial College. I am a graduate of the Richmond Branch of American Tobacco Co. where I have been selected as a member of the Commercial College.

In the execution of the many different duties I have to perform, I find myself proficient in the use of the equipment of my college education. I have been instructed in the use of the equipment of my college education. I have been instructed in the use of the equipment of my college education. I have been instructed in the use of the equipment of my college education. I have been instructed in the use of the equipment of my college education. I have been instructed in the use of the equipment of my college education.

The graduate who has been taught to think, as well as use his fingers, must fail to be better equipped for his life work than he could possibly be were the details incident to his daily work kept, according to our training.

Yours truly,

H. F. STARKS.

[& S. Providence.]

PRESIDENT ACCOUNT & ASSURANCE CO, 25 PINE ST., NEW YORK.

I am in receipt of yours of May 8th, and note your comment that you have been misinformed by whom it is asserted that I have been a graduate of a commercial school. I am a graduate of a commercial school. I am a graduate of a commercial school. I am a graduate of a commercial school. I am a graduate of a commercial school. I am a graduate of a commercial school.

Replying to yours of the 7th, I take pleasure in acknowledging my indebtedness to you for your valuable book, "Vannant," which I read with great profit.

The book is the best book I have read in this field. It teaches the principles of practical business life.

Vannant is a great business book. It is a great business book.

The book is the best book I have read in this field. It teaches the principles of practical business life.

Yours truly,

W. A. KELLOGG,

[& S. Boston.]
We have kept in touch with the spirit of organization in our profession, and our columns have contained carefully prepared reports of the conventions held by the three large associations, as well as of those held among the states. Carefully selected papers from these read at the various conventions have been published, but we have not attempted to make this department a place for publishing any of our own work. The space at our disposal has not been sufficient to permit us to publish all of the papers that we should have been glad to publish, but not a little of what passes for sermons treatment of important topics, at our conventions, is really too hastily prepared to justify our printing it, or your reading it.

Miss Laura E. Horne's practical review of 'The Textbook of Commercial Geography,' by the teacher of Commercial Geography, is a feature that has caused much favorable comment. An increasing interest is being felt among commercial teachers regarding Higher Accounting, and we have been fortunate in having a series of articles on this subject, introductory to what we intend to do along this line. Mr. Bennett is a commercial teacher of extended experience in this country and Canada, and besides his present work as teacher in the Woodstock, Ontario, Commercial School, is the city auditor of Woodstock.

It has been, and is our policy to serve the interests of all departments of commercial education, whether the work be done in a private commercial school, a public high school, or an institution of higher education. In this connection the spirited discussion participated in by Doctor W. A. Scott, of the University of Wisconsin, Doctor C. A. Harrick, of Philadelphia, Mr. J. O. Crissle, of Alban, Miss Agnes M. Deshler, of Chicago, has been of much interest and profit. In harmony with this idea, too, were the descriptions of high school commercial work.

The article by Mr. Bishop, in this number, is indicative of a class of contributions which we expect to utilize freely during the coming year.

Mr. Bennett will contribute the next two more numbers on the subject of Higher Accounting Articles giving an account of the Council, Educational, from the point of view of a commercial teacher who is taking the work as a student, will prove interesting Glimpses of the schoolroom will provide some experience meetings for practical teachers in search of practical ideas. Commercial Geography in Current Literature will continue, with special contributions on the subject, from eminent teachers outside of our profession.

The Editor's impressions, by the way, during his annual summer pilgrimage among the schools will find a place not too conspicuous, and the editorial page will set forth, from time to time, a consideration of subjects that are deemed worthy of such attention. Educational Neglects, in this number is an instance of our purpose.

We desire to obtain next year, from practical and successful school managers short contributions on practical topics of daily interest. In short, with eight pages instead of five, at our disposal next year, we hope to increase the quality of our material in proportion to the increased quantity.
4. Necessary Elements,
   1. All elements of a contract.
   2. When of importance.

5. Competent Parties.

   2. Same—ordinary contract
   3. Certainty—why?

The method used in the recitation depends entirely upon the class of students. A school located in one of the larger cities, where the average age of students is much below that in the smaller places, would be apt to find that his methods should change with a change of places. Our students are older than those in many schools I have visited; in fact, to have a student under sixteen years of age is an exception. It necessarily follows that methods must be adapted to suit the age of the students. Then, many of our boys and girls come from the farm, they have had little or no business experience, their reading in this line has been very limited, and they find the subject hard. Great care must be observed or the guns will be pointed to shoot over the heads of the majority of the class. Classes also vary during the year. The more advanced and apt students usually complete the work earlier in the year, and the slow ones, and those who find it necessary to take work over in order to receive proper credit, are sometimes found to be largely in the majority later on. When this occurs, one must resort to methods that will suit the students of particular classes.

In class, I sometimes call upon a student to recite upon a certain topic; but usually it involves a direct question to him. I have tried the lecture method, but failed. I was not cut out for a lecturer. I found it an easy way to teach; it was good practice for me, but the examinations of the class as a guide in conducting the recitation. It also saves much time in the daily preparation. A few minutes spent in looking over the outline will usually bring to mind the entire subject. As to time, it is very helpful in preparing the lesson. At least, it is very helpful in preparing the lesson. As time goes on, I find it necessary to make changes in the outline. The courts hand down new rulings, new illustrations are found, and additional information is gathered from general reading. These things are jotted down on the outline and when the paper becomes too badly marked up, a revision takes place and a new outline is made. This furnishes the teacher a convenient, up-to-date fund of information and illustrations. A portion of an outline is given below.

NEGOTIABLE INSTRUMENTS.

1. Assignability.
   1. Transfer.
   2. Delegation.
   3. Action in name of assignor.
   4. Illustration—A, B, C.

2. Negotiability.
   1. No set-off.
   3. Action by assignee.
   4. Substitute for money.
   5. Illustrate.

3. Definition.

4. Submit to the court. Frequently the answer is "yes" or "no." If so, I follow the rule that if "yes," how many agree?" is generally the next question following the student's answer, and then we hear from those who disagree. Sometimes when the student asks "yes," or "no," he is immediately called on for the reason. When a wrong answer is given, I sometimes ask other questions, going back to something the student knows to be true, and grasp the question until he sees his error; or I call on someone else to answer the same question and keep calling until the correct answer is given. These calls are made without comment on any call so go.

To illustrate the use of a case: When we are studying Notes, Bills, and Checks, a student is called and I put the following question to him: A check was given and the payee failed to present for payment. Eight days after it was drawn, the bank closed its doors. The day before the bank closed, the drawer of the check drew out all his money, part in favor of himself and part in favor of another. Was the drawer discharged from liability? I ask the answer and discussion, the holding of this particular case is given. This case is given to bring out the information, that if neglect on the part of a holder of a check prevents the same within a reasonable time does not prejudice the drawer, he is not discharged. Had the drawer sufficient funds in the bank at the time of the failure, the case would have been different.

Of course, explanations are frequently given by the teacher, thus combining the lecture and question, or class-room methods. Presenting cases to a class excites interest, secures attention and aids retention. Great care should be observed in selecting cases. Those arising in our own state are usually given. These cases may be obtained from the state reports. If they are not to be found in your public library, local attorneys will be glad to turn you loose among their books, and also make many helpful suggestions.

Good illustrations are very helpful. As far as possible, I am careful to use cases under my own observation—cases in which I am familiar with the particulars. When this cannot be done, actual cases are taken from the reports. If questions arise over on railroad, marine and other types of forms to the class. As was said before, reports of cases can be gotten from the libraries of local attorneys. Now that so many case books have been arranged for students of law schools, the teacher can, at a very moderate cost, supply himself with books on all the subjects treated in the text. The writer has found the following case books very helpful: Helmer and Woodruff on Conveyance of Real Property, Woodruff and Folger on Partnership, and Waller on Bills and Checks: Helman on Agency. These books can be procured of Little, Brown & Co., Boston, Mass.

We insist on students making good use of their eyes when studying Commercial Law. When we take up the subjects of Conveyance of Real Property, and Landlord and Tenant, we have students study a set of the following: deed, mortgage, lease, and assignment of mortgage, and release of mortgage. For five cents the school furnishes each student with sufficient blanks. These are printed on hand-made paper, the correct blanks being used in Nebraska. For instance, the we recite on the requisites of deeds, each student has with him, having previously filled it out from the form furnished by the
teacher, a warranty deed full covenant. He has used his own name as grantor. When we talk about the parties signing, covenant or warranty, relinquishment of dower, attestation, acknowledgment, etc., he has the paper before him and the eye assists the mind in grasping the essentials. Genuine deeds, releases, abstracts, etc., are brought into the class and passed around for inspection. This gives the teacher an opportunity to drive home practical points, such as the purchaser requiring an abstract, an examination of same, which so many learn through the school of experience, where the instruction is thorough but motion high. The same plan is followed in the study of Mortgages. A bill of sale is filled out when we study sales of Personal Property. This method is also used in the subject of Notes, Bills and Checks. In the study of Life and Fire Insurance, a liberal supply of policies is on hand. Students see, read for themselves, and thus learn much of a practical nature that they would get up without these papers before them. Policies showing transfers, vacuity, and building permits, and other special conditions attached, are there for them to examine. These recitations are always informal. However, this best order is retained and there is no lack of interest. After having studied and recited in this manner, it is an easy matter to sum up the whole subject and have the class note the importance to the man who buys insurance.

Of course we do not try to make lawyers out of our students in the short time we have them. If we succeed in leading them to know the elements of a contract, to know what to do in an ordinary business transaction, to know that when in doubt it is best to seek a good attorney's advice, that trouble may be avoided, we have accomplished all that can be expected.

In teaching Commercial Law many opportunities arise for inculcating right ideas of life in the minds of the students. I do not advocate preaching to students, but just a word dropped in class at an opportune time may entirely change a student's idea of life, questions of right, justice, duty and of obedience to law, frequently arise, and when they do, the teacher should leave no uncertainty in the minds of his pupils.

Nothing short of the highest type of manhood should at all times be held before students, and I should consider myself unworthy of a place in the profession did I not strive to have students leave my classes with higher ideals of life than when they came.

A. D. Wilt, President

The Sixth Convention was a success. The program, as carried out, was by far the best this was ever enjoyed. The attendance was not as large as expected, or as large as heretofore, but more was accomplished in the way of directness and timeliness of discussions, and in the number of them. And that is the primary function of such meetings.

The social phase of the meeting was a delightful success. Cordiality was the password. Discussions were remarkable for their candor and consideration of the feelings of those therein.

The rooms of the Miami Commercial College in which most of the meetings were held were large, convenient, and cheerfully lighted. The president succeeded in having the meetings called to order on time, something quite unusual but most commendable indeed.

Put-in-Bay was selected for the next meeting in 1903 at the time of the Ohio State Teachers' Association, usually in June.

SATURDAY MORNIG

Committees reported, business was transacted, officers elected, resolutions offered, place of next meeting decided, etc.

THE OFFICERS

Elected for the ensuing year were as follows: President, W. S. Rogers, Sandusky; Vice President, H. C. Dittrier, Cleveland; Secretary, Miss Minnie Kieglemann, Springfield; Treasurer, J. J. Rogers, Cleveland; Executive Committee, L. W. Stiehl, Urbana; K. H. Davis, Toledo; J. S. Merrill, Urbana. Delegates to the National Commercial Teachers' Federation: Association, Jerome B. Howard; Business, M. L. Meredith; Shorthand, F. W. Williams; Penmanship, Mrs. Belle Wilcox.

After considerable discussion, Put-in-Bay was selected for the meeting in 1903, at the time of the State Teacher's Association. The question of such place and time was to come in contact with other educators and to secure the reduced railroad rates which the Association failed to do at Dayton.

FRIDAY NOON

The Convention adjourned to the National Military Home, where, after inspecting the grounds and buildings, an excellent banquet was served and enjoyed by all, after which a visit was paid to the famed National Cash Register Company, too much of which can scarce be said in its favor.

FRIDAY EVENING'S

Public meeting was held in the auditorium of Steele High School. Mr. E. M. Thresher, President of the Board of Trade, etc., welcomed the Association in a most cordial and instructive manner. Mr. L. A. Hall responded to the principal address of the evening, entitled "The Public Schools and the Practical Concerns of Life," by Superintendent W. N. Hallmann, Dayton Public Schools. Mr. Hallmann is one of our foremost educators, and the talk was unusually instructive and interesting.

Report of the Ohio Commercial and Special Teachers' Association, Dayton, May 15-17, 1902

Mr. A. D. Wilt, President.

Mr. A. D. Wilt, Dayton, President Ohio Commercial and Special Teachers' Association.

Dayton, 1902.
Mr. D. D. Mueller, on behalf of the Bartlett Commercial College, Cincinnati, cordially invited the Association to meet there, but the tide was running out. The usual resolutions thanking the city, press, officials, etc., were adopted and the following was ordered engrossed: "Resolved, that the thanks of the Ohio Commercial and Supervising and Inspector Association are due and hereby extended to the National Cash Register Company for their courteous and instructive object lessons in the humane treatment of our fellows."

Slight changes were made in the constitution, the music and manual training sections were dropped and shorthand substituted.

The city of Dayton proved beyond doubt to be the Gem City, not only of Ohio, but of the middle west. It is worth seeing in itself.

At the conclusion of the session the Association adjourned to the splendid parade of Ringling Bros. (Continued after which the several sections held their closing, interesting, instructive sessions.

Penmanship and Drawing Section.

E. F. Musshat, Chairman.

The first number on the program was a paper by Mrs. Belle Wilcox, Supervisor of Writing, Dayton, entitled "What is the Educational Value of Writing?" The paper was able, sincere, and progressive. The same was discussed and commended by Mr. J. S. Merrill, Sup'r. Writing and Drawing, Urbana.

The second number on the program was a paper by Mr. J. J. Rogers, Sup'r Drawing, E. Cleveland, entitled "Drawing, a Potential Factor in Education." Mr. Rogers said many helpful, truthful, inspiring things. The paper was gracefully discussed by Miss Gillespie, Sup'r. Drawing, Zanesville.

The third number on the program was a paper entitled "Poisons," by C. H. Peltre, late Sup'r. Writing, Evansville, Ind. The paper was peppy, well laden with inexcuses, but sincere and courageous in its attempt to joust with the two leading and deadly poisons.

The fourth paper was by L. P. Stichel, Urbachville, entitled "Utilitarian Penmanship." The paper was noted for its liberality. The same was discussed by Miss Lenna Dickinson, Sup'r. Drawing, Elyria, O.

Saturday Morning.

The first demonstration was by Mr. J. F. Barnhart, Akron, entitled "How I Teach Penholding and Movement." The same indicated that Mr. Barnhart was experimenting and discovering some new and valuable things concerning the first principles of handwriting.

The second demonstration was by Miss Humphreys, Sup'r. Drawing, Delaware, entitled "How I Teach Water Color Work from Nature." The talk and lesson consisted in part of painting a flower before the members, and disclosed the fact that Miss H. is in touch with the soul and technique of modern art instruction.

Miss Wilcox spoke on an exhibition as fine lot of specimens of students' writing as we have ever seen.

Business Section.

E. L. Meredith, Chairman.

The first paper on the program was entitled "Accounting in Business," by Mr. E. L. Meredith, Meredith Business College, Zanesville. The paper was to the point, thorough, and up-to-date. Discussed by H. H. Beck, Hamilton Business College, Hamilton.

The second paper and blackboard presentation on shorthand was by Mr. W. T. Walcutt, E. W. Davis Business College, East Liverpool.

The third paper, entitled "Modern Bookkeeping-A Review of the Most Radical Changes That Have Been Made in Bookkeeping in the Last Twenty-five Years," by Mr. E. A. Hall, Hall Business University, Youngstown, was interesting and instructive. Discussed by Davis, Meredith, and Wilt.

The fourth paper by Mr. H. C. Ditter, Public Schools, Cleveland, entitled "The Business Course," was what might have been expected from this progressive, able gentleman.

Saturday Morning.

The first number on the program was a demonstration entitled "How I Teach Interest and Discount," by Mr. J. H. Rill, Dayton. The same was ably presented and heartily received.

The second Demonstration was by Mr. W. G. Ferrari, Cincinnati, entitled "How I Teach Business Correspondence." Mr. Ferrari presented the subject in a practical and modern manner.

Shorthand Section.

J. H. Howard, Chairman.

"The Educational Value of Phonography," by Miss M. Elizabeth Stein, Stetler High School, Dayton. Discussed by Cha'sk, Berry, Norwalk, and A. C. Van Sant, Columbus.

"Shorthand in Colleges," by Mabel J. Walcott, Ohio University, Athens.

"Phonography, its Place," by Mr. J. H. Walcott, N. High School, Columbus. Discussed by F. W. Wilhiss, Williss Business University, Springfield, O.

Saturday Morning.

"How I teach Bisyphonlic Diphthongs," by Clarence Balthaser, High School of Shorthand and Business, Circleville, was the first number on the program.

Those desiring a complete report of the shorthand Section should secure a copy of the phonographic magazine, Jerome R. Howard, Editor, Cincinnati.

The Iowa Commercial Teachers' Association.

A meeting of the special teachers of Iowa has just been held at Cedar Rapids, in the Cedar Rapids Business College. Mr. A. F. Harvey of the present organization, was elected temporary chairman, and Mr. Herring, teacher of shorthand in C. K. B. College, secretary, and the program well carried out.

The greetings at the meeting were particularly appropriate, and sounded the keynote of character building and high ideals.

This idea prevailed in many of the papers prepared, so that a bond of fellowship and good feeling was maintained throughout the session. In fact there was scarcely enough counter-discussion to make a lively meeting. The principal debate was over the extension or restriction of the course of study, both points of view being ably defended.

The event of the day was the ten course dinner served at the Delavan, the members being gathered around a long table. The length of time consumed is not indicative of a teacher of business or shorthand branches.

In the afternoon some of the sections organized, and as much as possible of the separate programs carried out in the main room. Mr. A. F. Harvey of the Waterloo Business College was majority speaker for the ensuing year, and Miss Carrie A. Clark, of the Capital City Commercial College, Des Moines, Secretary. The procedure of meeting being the best named city and school, but the date is to be selected later by the committee on program and arrangements.

Certain it is that all present felt amply repaid for time spent, and that Iowa now has an organization second to none of the states in the union.

[We are indebted for the above to our good friend E. C. Gresemund, C. C. C. D., Des Moines, Iowa.—Editors.]

Rational Educational Association.

Minnesota, Minn., July 7-11, 1902.

Department of Business Education.

Sessioris in Minnnesota School of Business.

L. O. Criss, President, Atlanta, Y. T.

J. H. Francis, Vice-President, Los Angeles, Cal.

T. P. Twigg, Secretary, Detroit, Mich.

Wednesday Afternoon, July 9.

2:15 standard time.

Registration of members.

1. President's Address—J. O. Criss, State Inspector of Business Education, Board of Regents, Minnesota.

General Discussion; questions answered by the speakers.

3. Objectives of Business Courses in Public Schools—William E. Doggett, Assistant Principal Commercial High School, Brooklyn, N. Y.

4. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

5. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

7. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

8. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

10. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

11. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

12. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

15. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

16. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

17. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

18. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

20. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

22. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

23. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

25. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

27. Length and Content of Commercial Courses in Public Schools—William E. Doggett.

(Continued on Page 28.)
The Penman-Artist and Business Educator

Entered at the Post Office at Columbus, Ohio, as Second Class Matter, September 10, 1866.

Edited and Published Monthly (Except July and August) by ZANER & BLOOMER, Columbus, O.

VOL. VII. NO. 10.

COLUMBUS, OHIO, JUNE, 1902.

Subscription Price, $1.00 a Year. 10c a Copy.

Change of Address—If you change your address be sure to notify us promptly (in advance, if possible) and be careful to give the old as well as the new address. We lose many papers each issue through negligence on the part of subscribers.

Rates to Agents and Club Raisers

Sent upon application. Whether you are in a position to sell it, or not, let us know, so that we can favor you with our lowest possible terms and an example.

Considering the fact that we issue no partial or cheap editions: that our journal is high-grade in every way, and that the demand in England, of the cover alone costs hundreds of dollars: that "lessons and tests" constitute the chief feature of any magazine that the art presented is the best ever given in a journal of this nature; and that the department of education is the most comprehensive and truly representative plan ever offered to public opinion, we believe that the P. A. and B. E. is not only the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of Its Class

The Penman-Artist and Business Educator being the most popular and widely read journal of its kind, it follows that it is also the best advertising medium.

It reaches practically all persons interested in commercial education and in penmanship, in both this country and in Canada. It covers the commercial school held completely, as going as it does to the heads of Commercial Colleges, Commercial High Schools, Commercial Departments in Public Schools, etc., as well as to a large number of office workers, public school teachers, home students, etc. Then it is preserved as a business property, and many subscribers have it bound in book form. Our rates for space are correspondingly lower than those of any other high class journal published. Wide-awake advertisers will find our column money makers. Write at once for rates.

Advertising in The Penman Artist and Business Educator Pays

We confidently believe that persons who have something worth saying will and then persist in advertising it, will find our columns unequaled, cost considered.

"If you have something worth the money, and then persist in calling attention to it. That seems to be the advice of all successful advertisers. One advertisement as a rule does not amount to much, but there are certain advocates of Morgan, Ky., who has been carrying a small advertisement for fifteen years, and every time past, received one order for pen work with the cash accompanying the small amounting to $20.45, and that was paid for in England. But Mr. Moore inserted his advertisement once or twice, it is not likely that it would have accomplished much for him. He writes—"Business is certainly looking up, and my little ad in the P. A. and B. E. seems to be getting in its work." Of course it is quite different with some other advertisers, as one school located in Chicago, people forget, and will not hunt for forgotten addresses, etc. By being continuously present, however, you familiarize the public with your goods and con- tend to remember your name and address. Think of the advertisers who have compelled you to memorize their names and addresses, and you will find that as a rule, you have the necessary ones. They didn't do it with one advertisement.

Be Thou Consistent!

For sometime we have been hearing not a little about the "slant," "medium slant," "uniform slant," and "slight slant." We hear that almost any slant will do as long as it is uniform and not extreme." In fact we have heard it whispered that "many old-fashioned slants will do," as a rule, these new names are used by persons who disdain or acknowledge that they ever taught fifty-two degrees or any one slant to all. Also by those who are most interested to point out that this will do. As a rule, however, that these names and their corresponding conditions were unheard of before vertical came.

Another strange part of this question is that may be said of liberal slant: are still held on the movement question. If slant is a flexible, individual quantity, why not so of movement? If one person can use one slant advantageously and another pupil's slant, why not one pupil use one movement advantageously and another pupil some other movement? Certainly, if we have flexibility in the slant question, we must have flexibility in the movement as well, or be inconsistent.

Where are the "one-movement" advocates at all, since they have embraced "natural," or "individual," or "slant" slant? They are now in the act of finding new names such as "vigorous," "business-like," "practical," "elastic" movement, etc. "Muscular" one-movement, "simon-pure," etc., now seem too narrow as they were, in fact.

For some years the editors of the PENMAN ARTIST AND BUSINESS EDUCATOR have advocated individuality, not only in slant, but in movement as well. They have insisted that there was no slant that was best for all, that slant was best for all, but that there was for each. They have for some years contended that the individual was greater than any system, and that systems should be adapted to the individual, instead of the individual to the system.

The "one-movement" system for all must go, just as surely as the "one slant" system for all has gone. The day of narrowness is past, the day of universality is here.

Pennon and Milwaukee.

Those who are interested in the Penmanship section of the National Penmanship Teachers Association will meet Milwaukee next holidays, and who have ideas or suggestions to make concerning the same, will do well to correspond with C. P. Zaner, A. N. Palmer, Cedar Rapids, Iowa, or J. F. Fish, Chicago, Ill. The Executive Committee is desirous of arranging an unsurpassed program, and to do so will require the cooperation of the entire profession. If you have a subject you wish to present, write to the name of some one you wish to submit whom you should like to see placed on the program, let us have it.

The Battle of Life.

It is true that life is a battle to the serious and earnest soul. One has many things with which to struggle in this life, and the young man and woman who fights to subdue evil is the one who in the end stands the best chance of receiving a crown of life. The battle in life does not mean a battle for bread, though that is a battle; nor does it mean a battle for place or position, although this, too, means much to one. While we strive for position it does not signify, in the keen rivalry and wholesome competi- tions of life, we should do anything to hinder another from rising in the world. The story is told of Garfield when he was in college that a young class-mate of his used to have his lessons better than he, and Garfield resolved to ascertain why this was. He found that the young man was giving just fifteen minutes more a day to his studies than he was. Young Garfield deter- mined to get ahead of him in some way, so he commenced to give fifteen minutes more a day to his studies than the other young man had been giving, and in so doing made better recitations than his class competi- tor. Garfield did not do this by injuring his class-mate in any way, not at all. He simply determined to work a little harder himself so as to get better grades than his rival, and in doing this he aroused other young men in his class to harder and better work. The battle of life is the battle between right and wrong, be- tween good and evil, between light and darkness. This is the real battle of life. Try to suppress the wrong with the right, that there will be a brighter, better, and more flourishing life.

E. P. KUEHL

Pennon in Elliott's Coun'th School.

Fairmont, W. Va.
Mr. D. A. Casey, of the Woonsocket Business University, has recently been elected principal of the commercial department in the High School of Woonsocket, R. I.

Mr. S. McVeigh, of North Adams, Mass., on April 5th delivered an interesting and instructive lecture entitled "Business Training" before the Men's Union of the Baptist Church of that city.

H. C. Bentley, former proprietor of the Winsted, Conn., Business College, is now on the staff of Haskins & Sells, public accountants and auditors of New York. This is probably the leading American firm of its kind, employing in different cities upward of two hundred men.

W. W. Merriman, of Stanley's Business College, Thomasville, Ga., has contracted with the Lanier Southern Business College, Macon, Ga., for the coming year. Mr. Merriman is one of our up-to-date, hustling, skillful penman and commercial teachers.

Prof. G. E. Weaver, our old time friend and former pupil of Mr. Morris, Jr., is about to sever his connection with the Mt. Morris College with the view of going on the platform professionally as a chalk talk artist. Mr. Weaver has two good qualities which are rare today, and when you find the two combined you are sure to triumph. We wish him the best of success.

Mr. D. W. Hoff the accomplished penman, artist, and supervisor of Lawrence, Mass., delivered, on Thursday evening, April 3rd, before the Daily Club of that city, a lecture entitled "Sea Mosses." From extracts published in the daily papers we infer that the lecture was one of unusual interest. We compliment Mr. Hoff upon his extensive research in this intensely interesting and little known field of knowledge.

Mr. S. L. Caldwell, teacher of penmanship and drawing in the Nebraska State Normal School, Frem, Neb., has been re-elected at an increase of $200 per year. Mr. Caldwell is preparing an exhibit of his work for the National Educational Association at Minneapolis in July.

Mr. E. W. Engles severed his connection with the Literary and Commercial College of Fall River, Mass., as principal of the Commercial Department, to accept a similar position in the English High School of Lynn. He began work in his new field on the 15th of April, the beginning of the spring term.

Frank K. Moore has been elected principal of the Commercial High School, Brooklyn, N. Y., and James J. Sheppard has been chosen principal of the New York High School of Commerce.

We acknowledge an invitation to the Thirteenth Annual contest between the Ema- mon and Knickerbocker Societies of Pittsburgh Academy at the Carnegie Music Hall, Pittsburgh, Friday evening, April 5th. Mr. E. T. Overend is in charge of the commercial department of this very popular Pittsburgh school.

J. A. Zeigler is the new teacher of penmanship and commercial branches in the Hazelton, Pa., Business College. Mr. Zeigler is an old Zanctian boy, and we wish him much success in his new field of labor.

Redmond Kerr & Co., of 4 Wall St., N. Y., and 25 LaSalle St., Chicago, are sending out a pamphlet describing the letters of credit they issue. The pamphlet is well printed and contains good business paper, and will be found of interest by commercial teachers. The firm announces that it will be glad to send these pamphlets to commercial teachers for instruction purposes.

T. J. Riesinger, the accomplished penman and teacher of Utica, N. Y., of Commerce, recently engraved a handsome set of resolutions which were presented to Admiral Schley. They were passed by the Chamber of Commerce of that city, of which Mr. Riesinger is a member.

Mrs. L. H. Packard and Mr. and Mrs. I. L. Williams recently returned from a delightful Mediterranean cruise on the great steamer, "Celtic." They visited all the countries of the Levant, including Egypt and the Holy Land, Switzerland, France and England were also in their itinerary. We welcome them home again.

The 1902 Announcements of Drexel Institute, Philadelphia, are at hand. The commercial courses outlined are very suggestive. Every commercial teacher should examine them. The Director of the Department of Commerce and Finance, Professor Parke School, will be glad to mail copies free to inquiring teachers.

Announcements of the courses in higher commercial education, in the University of Michigan and the School of Commerce of the University of Wisconsin, have been received. We trust that the teachers among our readers will write to Dr. W. A. Scott, Madison, Wis., and to Professor Edward B. Jones, Ann Arbor, Mich., requesting copies of these announcements.

H. E. Wyman, formerly with the Willi- mantic Business College, Willimantic, Conn., has been chosen commercial instruc- tor in the High School, Livingston, Mont. We trust that the teachers of this school will write to Mr. Wyman, enclosing a letter, if necessary.

We acknowledge an invitation to the forty-fourth anniversary and commencement exercises of the Packard Commercial School, Friday evening, May 23rd, at Carnegie Hall, New York.

The Packard Budget is the name of a very bright little school paper put up by the stu- dents of the Packard Commercial School. Such work is excellent drill for students and fosters a spirit of fraternity among the students, a spirit which the brief courses of former days did not permit to develop.

The high schools of Revere and Hyde Park, Mass., and of Boston, are putting in commercial departments for next year. The salary will probably be from $100 to $200. No doubt many commercial teachers in private schools will be, as usual, in such cases, applicants for the positions.
The editors recently had the privilege of looking over some specimens of writing done by Mr. W. V. Naper, a student of Business College, Minneapoulis, Minn., Mr. H. A. Franz being the teacher of penmanship. The specimens showed first rate work, and disclosed the fact that the pupils, one and all, were doing a great deal of grading work. In fact, we do not remember of having ever looked over specimens that showed more uniform improvement on the part of all. Mr. Franz is teaching simplified penmanship, which also means individual penmanship, as each one’s writing partakes of the individual’s characteristics. No one would mistake Franz material work. Josephine McIver, made second; Martin Hanson, third; and Della Frystok, fifth. All deserve much credit, as does also Mr. Franz.

M. W. Cassmore, penman in the Richmond, Ind. Business College, writes a thoroughly professional hand. He recently favored us with some specimens of his penmanship, in writing from the pens of his pupils, which indicate that he is teaching an unusually practical style of penmanship. His pupils averaged upwards of twenty-five words per minute of five letters the word, and the writing was good at that.

Mr. C. A. Braniger teacher of penmanship in the Mountain State Business College, Parkersburg, W. Va., writes fine work on figures and wide spaced writing of students. The work is among the best received at this office, and his work has had professional approval, and leads one to conclude that Mr. C. A. Braniger is doing something more than merely business penmanship. The skill he is developing is something certain.

Mr. W. W. Fike, of Manisteer, Mich., favored us with a number of “before and after taking” specimens in writing, which show that Mr. Fike is doing a very high grade of business penmanship, as his pupils have made unusual improvement in their handwriting in such a way as to develop a character in their handwriting. A half dozen or more of the ones sent could become professional penmen of more than average excellence.

W. N. Currier, Principal of the Commercial Department of the Danville, Va., Military Institute, writes fine specimens in penmanship, which show unusual ability. The one making what seems to be phenomenal progress is W. N. Currier, and one doing nearly as good work is Ernest Wilton. Mr. Currier writes a most beautiful hand, and he has the faculty of inspiring his pupils in such a way as to lead them on to a high degree of excellence. Mr. Currier’s method of inspiration consists of hard work by himself as well as his pupils.

Mr. E. E. Gaylord, Principal of the Commercial Department of the Beverly, Mass., High School, writes a large number of specimens which clearly demonstrate that he is doing quite as proficient work in penmanship as in the other branches of his work. The specimens received from his pupils are the best received by this office. One specimen in particular from Frank E. Delius demonstrates ability capable of becoming one of the finest.

Specimens of students’ writing from the Rider School of Business, Trenton, N. J., H. H. Keating, teacher, were received. They are intensely practical. They are not fine from a professional standpoint, but from a purely business standpoint, they are excellent, and in that way the students paid money to acquire. Such work and such teaching deserves the highest praise.

Mr. G. A. Henry, whose portrait and signature appear herewith, was born March 4, 1860, on a farm near Vernon, Iowa, where he attended country school, and later high school at Keosauqua, Iowa, graduating therefrom in the Spring of 1876. He next attended a Business College in Ottumwa, Iowa, afterward attended the Capital City Business College of Des Moines. On January 2, 1890, he entered the Zanerian, and graduated in the professional course. After leaving the Zanerian, he wrote policies for the Des Moines Life Insurance Co. of Des Moines, until he secured a position as penman and bookkeeping teacher for the Iowa Business College of Des Moines, which position he held until April, 1900. The same month he was employed by the Central College of Business and shorthand of Kansas City, Mo., as principal of the Business Department of that Institution, which position he still holds.

Mr. Henry is a young man of excellent character, a splendid penman, and a progressive, practical teacher of penmanship and commercial branches.

Situation

How to apply for one and get it. How to make advertising pay. And "Every Day Pays for Every Day People." The titles of three books which should be in the hands of every young person just starting in to make a living. The regular price of these three is 75c, but we will get you three other books such as "How to Read Character From Handwriting," "How to Read and Write of Make a Speech," "How to Handle People, Knobs and Wrenches," etc., if you will send us 20 cents in stamps.

Hand it to "Uncle Sam," and you will receive by return mail something which every good bookkeeper and progressive business man who wishes to keep up with the times should possess.

Guide to Success in Practical Drawing.

This is unlike anything heretofore published, in that it is not a cheap picture book, but a work of original pen and pencil drawings, the author being a practical artist. He has spared no effort in making this the most practical instructor in the art of drawing for the advanced student, as well as the beginner. The pages are here made plain and simple in a true and practical way, and are written on a basis that is most practical. The author was receiving personal instruction from the author. All the drawings in this book are just like the original drawings. The size of the book is 8 1/2 x 11 x 1/2 inches, and contains 42 illustrations.

By J. R. V. MARCHANT, M. A.

For Business Colleges and High Schools

Fully Illustrated, and 12 black and white, and 12 colored maps. 272 pp., cloth, $1.00.

Isaac Pitman & Sons, 33 UNION SQUARE, NEW YORK.

PUBLISHERS OF

"ISAAC PITMAN’S SHORTHAND INSTRUCTOR," 272 pp., $1.50.
"THE 20TH CENTURY DICTATION BOOK & LEGAL FORMS," 272 pp., 75c.
Adapted by N. Y. High Schools.
"Business Letters", by Benn Pitman and Jerome P. Ham, is a six-page book containing model letters in Pitman's shorthand with keys to the same printed in a neat, standard typewriter type. Price twenty-five cents. You will do well to secure a copy of this book, as it is a very compact, to-the-point, practical work.

"Business Correspondence in Shorthand Number Two," is a valuable correspondence book, and one in which there is actual correspondence, giving the form and expressions generally met with in the office of various branches of business. Forty pages, price twenty cents. Isaac Pitman & Sons, 33 Union Square, N. Y. City.

"The Science and Art of Phrase-Making," by David Wolfe Brown. This 35-page reservoir of invaluable information to the shorthand writer was prepared by a veteran reporter whose ability and authority is recognized everywhere. We touch briefly but imperfectly on a few of the salient features of the book.

The author's comments on the requisites of a good phrase are excellent. He calls attention to the fact that phrasing, if not naturally done by combining those words which come together in speech, not only destroys legibility, but at the same time retards speed instead of increasing it. His comment on the bad or difficult junctions to be tolerated, should command the attention of every student, and would appal those uncertain phrases because they seem hard to execute at the beginning of the phrase. The remarks on expression, variation, and vocalization of outlines used in phrasing are worthy of most careful study by every shorthand student.

The distinction between "implication" and "expression" is a good one; it puts the subject in concrete form so that the student can readily understand these points, which always seem far or less difficult of comprehension. This explanation being supplemented by exercises, affords excellent practice to fix the principles.

Under the heading of "contra normal Expedients" phrasing is set forth which, though different in form, is in the same spirit in which repeating, seems somewhat difficult for the beginner.

The "Tick" word signs, the use of the cir- cles, the brief "w" and "v" the "h" and "p" books, special word signs, the double-length principle, its possibility and restriction, the "m" and "a" the "i" and "r" books, the middle and shortening, the "l" and "r" books, the use of phrases are taken up in their order and disposed of in a clear, distinct, and common-sense manner. The splendid list of phrases to illustrate pronunciation, sound, matter, etc., is small in importance. In short, it is work worthy of the highest commendation.

"Pitman's Complete Writing," published by Sir Isaac Pitman & Sons, Ltd., London, this book of 252 pp, is interesting and concise. Beginning with Assyria, Babylonia, and Egypt, a rapid survey of commerce among the ancients is made. Beginning with the Middle Ages, a somewhat more detailed presentation is attempted, although it is well arranged for classroom use. The main purpose is to present the subject from the English point of view, and with especial reference to British commerce. Nevertheless it is a book that should have a place in the library of every teacher of the History of Commerce.

The book is profusely illustrated with maps and half-tone plates, wherein it sets a much-needed example to our American publishers of our National History and Geography. The maps representing British and Continental Europe are particularly good, but the map representing trans-continental lines here is quite inaccurate.

"Guide to Success in Practical Drawing," by George L. Och, Clifton, Ohio; price $1, is the title of a book recently received. The same is intensely practical and to the point. The style of the book is very good, language is particularly good, but the map representing trans-continental lines here is quite inaccurate.

If you want good reading, good copies for home practice in writing, letters, school work, writing, the new system of Pitman'salford, writing, send fifty sets and get in return mail written, annotated copies of The Pitman'salford Journal. More than 900 pages of the best text so far printed containing the latest subscription price of The Pitman'salford Journal and $1 per year. if you order the 300 assorted cards and a 3-year subscription now, we'll make both for $1.50.

The Pitman'salford Journal, 310 Broadway, New York City.

"Moore's Flourished Cards" are considered by judges the finest in the world. One party ordered $9 worth of the $2 grade and said they netted their expectations. You know how in most cases, but the range of prices is $5.50 to $12 per doz. for plain cards; for Wedding Invitation and $6 for Wedding and 26 for Bevel. Written copies, 25ct. per package. 12 Lessons in Writing, $3. Flourished Display Designs at popular prices. Circular free.

"Position Secured" by J. M. Moore, Box 7, MORGAN, KY.

"Typographical and Artistic Handwriting" by J. M. Moore, Box 7, MORGAN, KY.

"A Concise Handwriting Course" included in "Typographical and Artistic Handwriting," 100 pp., price $1.50, with a preface by H. D. Nettleton, M. D., President of Hastings College, Nebraska. The book is illustrated and contains a comprehensive study of the different forms of handwriting. The student is instructed in the principles of design and composition, and is also taught the rules of orthography and punctuation. The book is designed for use in schools, colleges, and private libraries. It is also useful for the study of the history and development of handwriting and the art of calligraphy. The book is written in a clear and concise style, and is illustrated with numerous examples. It is a valuable resource for anyone interested in the art of handwriting.
The Steel Pen, Its Manufacture, and How to Test It.

By Francis B. Courtney.

One of the greatest inventions of the 19th century was the steel pen, the instrument used in recording thought. The steel pen belongs to the age of mighty machinery. It could not have existed in any other age. The demand for the instrument and the means for supplying it came together. When the steel pen came into use, it is hard to say. It is certain that steel and other metals are brought into the closest contact and used to a large extent before they came into general use, but they were not sufficiently hard and to find much favor.

In 1853 the first metallic pens were regularly introduced for sale. They were made in barrel form, being adapted to the shape of the hand, and under the name ‘Perpetual Pen’ were industriously distributed throughout the stationers’ shops of London. The prejudice was strong against them, and up to 1855 there was a decided fall in the trade. Joseph Gillott devoted much pains to the improvement of the material and manufacture of steel pens. One of his patents was in 1857.

It is certain that the advent of the steel pen, with its crispness and delicacy, its strength and elasticity, and its expressive temper, marks a very important and high intellectual and material condition of the world’s population. This crispness and delicacy, this strength and elasticity, this expressive temper were imparted to the material and developed under the hand and management of the firm of the true founder of the steel trade, Joseph Gillott. He was the first to substitute the swift, precise action of machinery for the slow work of the human hand. From the day of his introduction to the world, until to this day, we find the pens of Joseph Gillott & Sons the finest product of the 20th century. This plant, which turns out millions of pens which are used with favorable consideration in all parts of the world, is one of the foremost in Eng- land, the home of the pen industry.

The penmen of America, and there are none so skillful in any other nation, can attribute their high skill and pleasing effect in making a pen to the perfection of the steel pen, which is produced by Joseph Gillott & Sons.

The raw material out of which pens are made is steel, which must be the finest kind and of equally grain throughout, for other metal or alloy which possesses the elasticity or durability of steel. The process of manufacture is as follows:

1. The material is thoroughly annealed, to soften the iron and make it more malleable. Each piece is polished, and the excess is removed.

2. The strips or ribbons are then rolled cold under enormous pressure, thus acquiring uniform density.

3. The strips or ribbons are cut into the size and shape desired, and the ends are sharpened.

4. The pens are then placed in perforated baskets and immersed in a tank of boiling soda water, which prepares them for the next process.

5. Tempering. This is accomplished by placing the pens in a barrel containing hot water, which softens the pens without changing their character. This is done to make the pens pliable, yet strong.

6. Hardening. This is done to make the pens hard, yet strong.

7. Cooling. The pens are cooled to room temperature, then placed in a refrigerator, where they are allowed to cool completely.

8. Cleaning. The pens are washed to remove all impurities, then polished to a high shine.

9. Drying. The pens are dried in a furnace, and then packed for shipment.

10. The pens are then ready for use.

The process of manufacture is a long and complex one, requiring skill and patience. It is a process that requires a great deal of care and attention to detail, and it is a process that is continually improving.
The pens are now finished, but before they are offered to the public they are carefully looked over and sorted, and placed in boxes worthy of their quality. It is surprising how many different styles of pens are manufactured, each having its own special mission, and each being a favorite for all sorts of hands.

To test a pen to show its real worth, place the pen between the thumb and forefinger of the right hand. Then place the nibs or split points on thumb nail of left hand. Then by a flick of the thumb nail spread the nibs apart as seen in illustration. If the nibs fail to return to their former position the pen is worthless, and illustrates the fact that it did not pass through the fifth stage, that of tempering, which is so essential to the high grade pen.

Exhibit 2 represents numerous makes of pens, tested by the flick of the thumb nail. The spread of the split points show that it does not possess the spring temperature, so essential to the high grade pen. Gillott's are the only ones which stand this test. This proves that they are the most perfect of pens.

Exhibit 3 represents a complete set of Gillott's pens. Here you will find pens adapted to all.

It has been stated that Joseph Gillott was considered the most wicked man in the world; because he makes the people steel pens and then tells them to do write.

The sort of handwriting you would depend to a large extent upon the implement you use. A careful critic will always select a good article, because he knows that poor pens mean poor results.

We are indebted to Henry Hoe, sole agent for Joseph Gillott & Sons of New York, for assistance in furnishing data to make this article interesting.

Manufacturing Plant of Joseph Gillott & Sons, Birmingham, England, the home of the pen industry.

Resolutions

Arthetically Engraved

by E.P. Laner, Columbus, O.
Bull on Penmanship
EVANSVILLE, IND., May 3, 1892.
Mr. C. P. ZANEK, Columbus, O.
DEAR SIR:

We are greatly pleased with the last issue of the PENMAN-ARTIST AND BUSINESS EDUCATOR, and we hope to soon be able to show our appreciation in a more remunerative way. The general arrangement as well as the educational features are worthy of the consideration of the profession at large.

I am much interested in the discussions relating to the comparison which should be employed in practical work; and by practical work, I mean work executed under the pressure of business, and not such as we see paraded before the public through many of our journals.

For the past five years I have, in a way, investigated the arena of penmanship; including the pen Qualities, the executive and teaching results of the fraternity and, in my opinion, the real possibilities are yet to be developed. There is a wide difference between the penman and the teacher of penmanship. The latter is not only trained for the former but is trained for the former and the latter is necessarily included in the latter. Some of our friends recognize this fact and are giving their talents to such special lines as best suit their inclinations, thereby making practical work. The latter, however, is not to take your time with a discussion of the subject as a whole, nor to condemn those who are laboring under disadvantages, but to unload a few true thoughts which have been developed by school-room experience.

The successful teacher must possess an educational power, together with a personal magnetism, that will awake within his pupils the latent faculties and interest with a desire to excel. The average student recognizes form as a product, but from a lack of mental discipline, his creative faculties are inactive. He must first be taught to understand and appreciate his handwriting as a subject of pride, by which the public not only judges his writing, but judges his stability and character.

Writing is a confession; a strong testimonial of general character written in open view. The writer, whether the writing is legible or not, he judges his stability and character. Writing is a confession; a strong testimonial of general character written in open view. The writer, whether the writing is legible or not, he judges his stability and character.

We have four groups of pupils—First, those who have already been taught to write; Second, those who have not had any previous training; Third, those who are not prone to study; Fourth, those who are not interested in the subject. In the first group, the writer has to do with a pupil who has already been taught to write; in the second group, the writer has to do with a pupil who has not had any previous training; in the third group, the writer has to do with a pupil who is not prone to study; and in the fourth group, the writer has to do with a pupil who is not interested in the subject. In the first group, the writer has to teach the pupil the principles of writing; in the second group, the writer has to teach the pupil the principles of writing; in the third group, the writer has to teach the pupil the principles of writing; and in the fourth group, the writer has to teach the pupil the principles of writing.

But pupil and teacher are prone to seek the lines of least resistance, thereby robbing themselves of a power which can be developed only through persistent mental and physical exercise. Physical penmanship, motion, mental penmanship is conception, and practical penmanship embodies all. A great army are teaching it physically, a great number are teaching it mentally, and a few are teaching it practically. But pupil and teacher are prone to seek the lines of least resistance, thereby robbing themselves of a power which can be developed only through persistent mental and physical exercise. Physical penmanship, motion, mental penmanship is conception, and practical penmanship embodies all. A great army are teaching it physically, a great number are teaching it mentally, and a few are teaching it practically.

The above paper is "pat to the purpose." The specimens Mr. Hill enclosed were practical, and disclosed the fact that he is teaching that which possesses not only legibility and speed, but individuality as well. Yes, brother Hill, the "Pure Muscular Movement" monstrons used must go. You are helping out the old and in the new and true.—EDITORS.

Lessons in Engrossing, No. 19.
BY H. W. KIDDE, TREMONT ST., BOSTON, MASS.

Lesson 15 was engraved same size as the original. We intended a reduction of about one-half in width, which would have shown the cover of an engrossed memorial booklet, 8 by 10 in. This lesson is for the first page, inside of such a booklet, and should be placed a little above the middle of the page. The dates of birth and death are sometimes added in very small, neat lettering or script, but for simple elegance the name alone is better.

FINEST SUPPLIES FOR PENMEN AND ARTISTS

CARS, INK, PAPER, ETC.

On goods listed below we pay postage on those that go by mail and purchaser pays carriage charges on those that go by express or freight. Of course the cheapest way is to order in fair sized quantities and have them go by freight.

Blank Cards—White Bristol with finest surface.
100 by mail postpaid 35c.
200 by express postpaid 60c.
1000 by express postpaid $1.35

Black Cards—Best made for white ink.
100 by mail postpaid 50c.
200 by express postpaid .75c.
1000 by express postpaid $1.35

White Cardboard—Wedding Bristol: for fine pen work. Sheets are 22 x 29.
6 sheets by express 30c.
12 sheets by express 50c.
28 sheets by mail postpaid 1.00

White Cardboard—With hard finish, much like ledger paper. Sheets are 20x23.
6 sheets by express 10c.
12 sheets by express 20c.
28 sheets by mail, postpaid .50

Black Cardboard—Finest for white ink.
Sheets are 22 x 28.
6 sheets by express 30c.
12 sheets by express .50
28 sheets by mail, postpaid .80

Wedding Paper—Finest for penmanship or drawing sheets. 22 x 23.
6 sheets by express 30c.
12 sheets by express .50
28 sheets by mail, postpaid .80

Zanerian India Ink—A fine drawing ink and best for preparing script and drawings for photo-engraving.
1 bottle by mail, postpaid 40c.
1 dozen bottles by express 2.50

Arnold's Japan Ink—
1 bottle by mail, postpaid 40c.
1 pint by express 45c.
1 quart by express 75c.

White Ink—Very fine.
1 bottle by mail, postpaid .25
12 bottles by express .85

Writing Paper—Finest 12 lb. paper made.
666 sheets per ream, ruling wide and faint.
1 ream by express 2.15

Writing Paper—Same quality as above mentions but 1 lb. paper.
1 ream by express 1.85

Practice Paper—Best for the money to be had.
1 ream by express 1.40

Send stamp for catalog of paper.

Envelopes—100 fine blue, n. postpaid 40c.
100 fine white 40c.
1000 either kind by express 1.00.

Address, ZANEK & BLOSER, Columbus, O.
Slant Writing, Vertical, or Both?

At the school board meeting in the City Hall last Monday evening many good speakers brought out some good points in favor of both systems of penmanship, and, to a close observer the slant advocates had the advantage, but they were in the majority. Only a few favored the vertical, and all of its good points were not brought out. The writer does not wish to be understood as favoring the vertical system, but has contended right along that the vertical taught to children below ten years of age in the public or parochial schools has some advantages in its favor, especially in the matter of uniformity, neatness and accuracy. Again, I do not favor returning to the old system of copybook writing, with its shading, slant, engraved forms, etc. I often heard the remark that some persons spoiled their handwriting on account of the vertical taught them in the public schools. This opinion should not be considered seriously, for the reason that pupils do not receive enough practice in the schoolroom to become fixed in their habits, which are only acquired through many years of constant work in the office.

This question of teaching writing can be considered from three or more standpoints. The principal or superintendent of the public school discusses it for his purpose. The business man who employs clerks knows pretty well what he wants, and the business college man who tries to satisfy his patrons and supply the wants of business houses, teaches another style of writing, which, in his judgment, is the best. For composition work in the public schoolroom and for neat work the vertical excels. Many business men prefer the vertical for record work on books having lines with narrow spaces, as the work mainly resembles print. Where speed is not a consideration, for instance in a life insurance office, in the city offices for recording taxes, etc., or any other places where large books of records are kept, the vertical is preferred and even called for. The expert or professional penman's views should not be taken as conclusive, as his ideas are sometimes one-sided. The matter of teaching pure muscular movement to small children is still in an experimental stage, and it must be first demonstrated that this plan will meet with practical results. The teaching of slant writing and movement to young children is likely to lead to scriveling and careless writing. The pure muscular movement, as advocated by some penmen, is too cumbersome, even for advanced pupils, and practice should be confined to develop the muscles of the arm only, but for making capitals and small letters, the combined movement should be employed. The hand movement, which may be called the business movement, and which is generally used by people who were not taught writing in the modern way, should not be condemned or confounded with the schoolboy slant movement, which is so near like drawing. The "hand movement" is principally the result of teaching penmanship in the common schools in the old way where form is the main consideration, be it either vertical or slant.

At this point I would like to add that we have little or no trouble in changing the vertical writer of the eighth grade to slant writing, and must say that the style of writing developed by such students is a "happy medium" between the vertical and the slant, and instead of producing the old slant of 52 degrees it is nearer to the slant of 60 degrees, which is more satisfactory to the average business man than the slant or vertical. The business college will no doubt continue to teach the slant writing, but some of the larger and better colleges are producing some excellent results by teaching an unshaded style of writing with a coarse pen, small capitals and small letters a little larger than the usual. It will be noticed that some business men are inclined to favor the style of writing which is more vertical than the old style of 52 degrees, and if the public school people would at least compromise the matter by adopting the semislant system, with a different style of capitals and small letters than the present vertical, a slight change in positions and pen holding, the subject would be advanced considerably, and I believe, to the satisfaction of the public, business men and school principals.

O. A. Hoffman.

You can Materially Increase Your Earning Capacity

BY A JUDICIOUS USE OF YOUR SPARE MOMENTS.

Learn to Letter Signs, Price-Cards, Etc., WITH THE

AUTOMATIC SHADING PEN.

A Profitable and Most Fascinating Line of Work Which is Coming Into Demand More and More Every Day.

We manufacture, and always have ready for shipment, a large and complete line of the best supplies for Automatic Pen workers. Goods first class in every particular and prices reasonable. Your inquiries shall have prompt attention.

WANTED: A well educated teacher of the Commercial branches, Address: Bryant & Stratton College, ST. LOUIS, Mo.

THE TEACHING OF BUSINESS WRITING.

An Arabian Proverb winds up with — "But he knows, and knows that he knows, is a wise man; follow him." I am applying the first part of that statement to myself: I know that the concluding advice is pertinent to many — especially to those who use penmanship in their life's work, or, who teach it.

I've been in penmanship for 25 years: in that time many penmanship problems confronted me as an executant, and as a teacher. I've solved them. The solutions are reserved for those who will attend my Teachers' Course this July, 1902. This course outlines a definite plan of teaching writing from start to finish. It culminates in the "Madaras Method," which, analyzed, means success with 99 pupils out of every 100. You who wish to teach writing, it is indicated that you have had long experience.

There are only two essentials in business writing — legibility and speed. HOW to secure both in the quickest time possible should be the aim of the conscientious teacher. The "Madaras Method" is that HOW. It's a revelation of pointed illustration with common-sense instruction, simple and progressive as the addition of numerals — children of ten see it quickly, adults grasp it instantly. No time is wasted away: nothing left to chance.

Remember, you get EVERYTHING I know about teaching and writing, if you join my class July 1-26 inclusive, 25 two or more hour lessons — $30, the price; if you haven't got all cash, we can arrange suitable payments — HEFFLEY SCHOOL, Brooklyn, the place.

It's up to you — my arguments are closed.

Yours, for success in writing.

L. MADARASZ, 1281 Third Ave., New York.
The Question of Supervisors
Number Four

Five hundred years ago it was generally believed that the many could not successfully or profitably be taught to read, write, and cipher. We now know how narrow was such a vision. One hundred years ago free public schools were but a theory. How true some theories are!

A quarter of a century ago it was questioned whether music and drawing should become a part of our public school course of study. Today they are two of the most potent factors in modern education.

It has taken all these years to learn that the mind feeds upon many subjects and develops best from all sides. Many studies prevent one-sided development. The cry of fewer studies is not in accord with educational progress. The attempt to abolish supervisors is the first determined step against modern education. It means that drawing, music, physical culture and writing shall receive less attention.

Supervisors in the grades are as necessary as special teachers in the high schools. This is the era of specialization. Our public school system must partake of the spirit of the times. Nothing can prevent it. Narrow policies may check, but they cannot prevent progress. Most of the arguments put forth against supervisors apply with equal force against superintendents and principals. Are these luxuries also?

Economy is the principal argument against supervisors. These false economists believe that a few dollars saved at the expense of health, music and art on the part of thousands is a good investment. It is (?) for the one who loves culture less and dollars more. Nothing is too good for the pupils of the grades, and that is where most of the supervisors labor. Drawing and music are two of the things most needed during the first years of school life. Without supervisors they are neglected.

Let the ideal and the practical, the aesthetic and the mathematical, the artistic and the matter of fact continue side by side in our schools. Noble-hearted, broad visioned, clear-sighted, beauty-loving, skilled citizens will be the result.

It is a step backwards to drop supervisors. It is not a question of incompetency. It is a question of giving the many that which they pay for—efficient, modern, practical instruction.

It is not the educated, progressive, modern members of boards of education who are not in favor of supervisors, but the close-fisted, narrow-headed, short-sighted members. As a rule, the latter are in a minority, and as a consequence it is the occasional and not the average supervisor who is in danger of being dropped. The thing to do is to educate the public to the needs of supervision as well as to the need of electing only liberal minded men and women to membership in the board of education.

A REVELATION IN SHORTHAND TEACHING

"The new Twentieth Century edition of Isaac Pitman's 'Shorthand Instructor' will make every teacher of shorthand talk. I adopted the Isaac Pitman system several years ago after a considerable acquaintance with a number of the Pitmanic presentations. I have never regretted the step — was contented from the first — now I am happy. This new Instructor not only saves time for the pupil, but it does away with all drudgery and brings happiness into the school. The introduction of the word signs and sentences at the beginning; the elimination of unnecessary rules and exceptions; and the logical and masterly style in which the subject matter is presented, places it far in the lead of any text-book on the subject I have ever seen. I am confident that anyone can now acquire a knowledge of the art in one-third less time than heretofore. It is bound to be the popular shorthand text-book of the age." — E. E. MULL, late Roy A. Kimball's Mullan School, Broadway and 46th Street, New York City.

20th CENTURY EDITION, 276 pp., Cloth $1.50
Exclusively used in the High Schools of New York

Publishers of "The Twentieth Century Dictation Book and Legal Forms," 522 pp., 75c.
to obtain the suggestions and advice of College Professors, Superintendents and Principals of Schools, Members of School Boards and others interested in Business Education, on questions concerning the work assigned to this committee, viz.: To prepare a Monograph on Commercial Education which shall formulate an efficient code of procedure for the conduct of such education in American public schools.

FRIDAY AFTERNOON, JULY 22-2:15 standard time.

1. The Preparation of Commercial Teachers for Work in the Public Schools—Professor B. H. Myer, Acting Director School of Commerce, University of Wisconsin, Madison, Wis., Discussion by Allan Davis, Principal Business High School, Washington, D. C. General discussion; questions answered.

2. Requirements for Actual Business Graduate: A. Smith, The Booth Preparatory School, New Haven, Conn.

Discussion by J. M. Anderson, President Metropolitan Music Company, Minneapolis, Minn.; T. F. Twiggs, Director Commercial Department, Central High School, Detroit, Mich. General discussion; questions answered.

3. What Shall the Public Schools do for the Commercial Student and What for the Business Man Wanting Help in His Office:

H. M. Kove, Accountant, Author and Publisher, Baltimore, Md.

Discussion by T. W. Bockmeyer, Principal Sandusky Business College, Sandusky, O.; Henry E. Brown, Director Commercial Department High School, Rock Island, III. General discussion; questions answered.

Discussion by P. J. Twiggs, Director Commercial Department, East High School, Cleveland, O. General discussion; questions answered.

5. The Education of Amannences—Charles M. Miller, Principal the Miller School, New York, N. Y.

Discussion by Selby A. Moran, Principal Stenographic Institute and Teacher in High School, Ann Arbor, Mich.; Mrs. M. L. Veenhoffs, Principal Alpena Business College, Alpena, Mich.; Miss Susan M. Henley, Principal The Henley, Syracuse, N. Y. General discussion; questions answered.

7. Reports: Reports of special committees; election of officers.

COMMITTEE OF NINE.

Durand W. Springer, (chairman), Director Commercial Department, High School, Ann Arbor, Mich.

William E. Doggett, Commercial High School, Brooklyn, N. Y.

Cheesman A. Herrick, Director School of Commerce, Central High School, Philadelphia, Pa.

E. E. Gaylord, Director Commercial Department of High School and Editor Business Education, Beverly, Mass.

T. W. Bockmeyer, Principal Sandusky City Business College, Sandusky, O.

Alton Davis, Principal Business High School, Washington, D. C.

H. M. Kove, accountant, author and publisher of business textbooks, Baltimore, Md.

J. H. Francis, Principal Commercial High School, Los Angeles, Cal.

Last month the famous Cleveland (Ohio) Commercial School, founded by F. R. Spencer, Jr., and E. R. Felton, and for the last fifteen years under the management of H. T. Loomis, moved into its splendid new home on Euclid Avenue.

The above illustration affords a good idea of the new structure. Not only in its location on one of the world's most beautiful avenues, but also in its architectural features, are evident the good taste and excellent judgment of the manager.

Instead of a towering office building with rooms for the school in the "sky parlor, a two-story building has been erected, thus conforming to the best modern ideas of construction for school purposes.

The building site, at the corner of Euclid Avenue and Huntington Street, is almost ideal, being just outside the rattle and flurry burly of the business section, within the charming domain of Euclid Avenue's semi-sylvan residence district, yet not more than five minutes' walk from practically every important business point.

The buildings are constructed of red pressed brick and stone, with white enameled terra cotta trimmings, and the roofs are of slate. The front building is 40 x 60 feet in size and the other is 42 x 16. The buildings are twelve feet apart and are connected on every floor. They are two stories high on Euclid Avenue and three stories on the Huntington Street level. The lot is 134 x 300 feet, the building being more than 200 feet back from Euclid Avenue. The school occupies exclusively for its purposes a total floor space of 2,300 square feet.

On the right side of the first floor of the front building are beautiful reception rooms and offices, finished and furnished in quartered oak. On the left side of the handsome entrance hall is the typing room, about forty feet square, furnished with the individual quartered oak typewriter cabinets and Austrian bent wood chairs. The Practical Text Book Company occupies, throughout the buildings, about 4,000 square feet of floor space.

The second floor of the front building is used for office practice, class rooms, penmanship work, advertising, etc. Here in a private office sixteen feet square, is where H. B. Lehman swings his skilful quill on all kinds of expert pen work.

In the large rear building are spacious rooms, all newly furnished in oak, for the Shorthand, Bookkeeping, and English departments of the school.

The buildings and grounds represent an investment of nearly $200,000.00, and the location is such that the land is rapidly increasing in value.

No modern device in school equipment seems to have escaped the quick eye of Manager Loomis. Individual lockers, bicycle room, lunch room, building telephones connecting all rooms with each other and with the principal's office, local and long-distance telephone systems, combined electric and gas light fixtures, electric program clock, numerous conveniently arranged filtered water drinking fountains, and the latest and best sanitary equipment—"all and more are to be found installed in the new home. We wish we might have been at the "housewarming."

Doubtless, Mr. R. E. Felton, the genial gentleman who, as one of the founders and proprietors of the school, has been with it for nearly half a century, takes justifiable pride, with Mr. Loomis, in the delightful conditions under which the Spencerian is beginning a new epoch in its influential life. Here's hoping that the more than 3,000 students who ascribe to the influence of this great school much of the success they have achieved in life, may be but the corner stone of the living monument still to be erected by this worthy institution.

THE NEW HOME OF THE SPENCERIAN, CLEVELAND, OHIO.
Illustration
No. 5

BY G. WINSLOW PLUMMER.

In this lesson we have three different styles of technique. In the large cut of the cathedral the building itself with its adjoining chapter house forms the entire picture. This cut is especially to be studied as showing detail to a degree. The stone work, the Gothic tracery, the windows are all brought out as much as possible. The clear space in the adjoining street and simple building used as a balance gives the desired result, namely: the production of a heavy, massive appearance. A building whose solid, stately strength is indicative of the character of the religious purposes for which it was constructed.

The interior view presents another style of technique producing the "dim religious light" so often shown for in art productions. The lesson heading gives a totally different style of illustration and is full of tone and feeling.

GREGG WRITER, 57 Washington St., Chicago.
DEPARTMENT HEADINGS.

Lay off the headings about 7/8 inches long, aiming for correct spacing, and accurate forms. Use appropriate symbols in making headings wherever practicable. The ink bottle and pen suggest the work of the penmanship department, and add greatly to the effect of the heading. Simple and neat designs are in much better taste than elaborate ones for this purpose. These headings contain a good variety of lettering and decorative ornaments, and we believe they can be studied and practiced with beneficial results.

A SUMMER SCHOOL FOR COMMERCIAL TEACHERS,

AT PEORIA, ILL.

10 WEEKS—OPEN: JUNE 9th, CLOSES AUGUST 18th—10 WEEKS.

25 NEW TEACHERS at least will be required for our increasing work the next year, beginning September 1st, and other schools have applied to us for as many more. We can locate fifty or more good teachers, at fair salaries, if we get the right material.

EXPERT TEACHERS will be in charge of this special school and the work will cover all features of the business, or Bookkeeping Course, and the Shorthand and Typewriting Course. Only those who have a good English education and who have completed a Business or a Shorthand Course, or both, are eligible to enrollment. If they have taught for a time or have had business experience, so much the better. METHODS OF TEACHING will be the paramount aim of the Drill, and each member will be required to do a certain amount of actual teaching.

Young Teachers Can Surely Increase Their Earning Capacity by Taking This Drill.

All interested persons should write at once for the Prospectus giving further particulars. Address:

G. W. BROWN, Pres.,

P. O. Box 833,

Peoria, Illinois.

L. E. Stacy of Spencer's School, Kingston, N. Y., favored us with a bunch of splendidly written cards—colored cards with a white ink. Mr. Stacy is certainly doing some magnificent work.

We have received some business cards executed by J. C. Searcy of Bowling Green, Ky., a pupil of A. K. Burnett, which equal the work of this class executed by many professional penmen. Surely Mr. Burnett is getting results.

C. W. Ransom, now with Hill’s Practical Business College, Sedaris, Mo., favored us with some very graceful script, some of which we hope to present to our readers of these times.

A bunch of very beautifully written colored cards came from N. A. Adams, of Marietta, O. Mr. Adams did some time past; for that reason was unable to fill a few orders for cards some months ago. He now writes that he is about well and will be able to turn out work as usual.

Have you ever used a pen for business writing that gave absolute satisfaction? We have that kind and will send you a dozen for 10 percent stamps.

Card Writing: Fine, Artistic, Beautiful. Any name, any style, 10c per dozen. Colored Cards, White Ink, 20c per dozen. Lessons by correspondence in writing, cartouehng, Sample 10c. Circular free. Address, ARTIST.

Six.

We are now ready to begin on the capitals.
Make them three times the height of the
small letters. Raise the pen where you can
do it to advantage. Study form and grace,
these coupled with quality of line, go to
make up the necessities of successful script
writers.

Make the long heavy stroke of C first with
an increasing shade. Make the right side
of the loop and the initial stroke downward,
with a slight shade on the initial stroke.
Study the shades of B. Make the turn of
the large oval low. Do not make the little
loop in the middle too far from the line of
your shades. Make the turn at the top

downward.

e^iai

Secure a graceful oval in U. Finish the
down stroke with a swell shade. Make
the top of O downward with a delicate
shade at the turn.
We have the same initial oval and stem
in Q as in X. The slant of this oval should
be more than the main slant. A little shade
on the first down stroke adds beauty.
Make the loop of Q well to the left. In ,\',
make the stem the same as Q, only finish it
is like the
with a dot. The second part of
main stroke of C unshaded. Finish the last
oval with a slight shade as in C and E.
Make down stroke in the sentence to appear rather compact. Space a little wider

Mr. C. H. Peirce.

Favorable Comments.

Number Three.

By CHANDLER H. PEIRCE, DAYTON, OHIO.

I’ve been thinking, and thinking, and thinking over the entire list of our fraternity and concluded that the man of many virtues, whose name inspires for work and worth those who have met him as well as those who have read of him, lives in the city of “Brotherly Love.”

His modest and unassuming demeanor since first I heard his name, (I won’t say when) coupled with the fire and vigor of unsurpassed skill, will send his name down the ages as one admired for his goodness and greatness.

We love him for his nobility of character, for his earnest determination and for the standard he has helped to maintain through the long years of his useful pilgrimage.

He stands a model to our profession and is worthy the highest praise. To emulate his example is to adorn a calling; a blessing to mankind.

In his trinity, as author, teacher, artist, he is supreme. We are proud of him, and have no false modesty in declaring him the embodiment of the gentleman and scholar.

His convictions are infinitely more valuable than countless thousands who live in the shallows of our art, and to whom prudence has never been revealed.

If conversion could come through a single living testimony, then would the many mistakes, which shadow the general presentation of the art of writing, have been avoided by our untiring Flickering, of Philadelphia.

SPECIAL OFFER

To Teachers

and Students

of Perspective Drawing

A few sets of our new work on “Linear Perspective,” for self-instruction, will be furnished complete in the original plates on heavy bristol board as follows:

Send One Dollar With Your Order

and we will send you the set of plates containing everything that is in our $10 ed.

If you find them satisfactory, send us $1.50 more and we will send you receipt in full; otherwise, return them to us and we will refund your dollar. Isn’t this fair? We think so, and know you will be pleased.

Announcement Concerning the Winning of the Zanerian Gold Medal For the Year Ending June 1, 1902

As announced a year ago, Mr. E. S. Gause, Principal of the commercial and penmanship department of the Kansas State Normal School, Emporia, an honored graduate of the Zanerian, donated three Gold Medals to be given one each year for three successive years to the "Most Deserving Pupil" of the Zanerian Art College, Columbus, Ohio, said medal to be given to the pupil "making most improvement and receiving best grades," and possessing a good character. It gives us (Zaner and Bloser) much pleasure to announce that

Mr. E. W. Stein

has honestly won, and is hereby publicly declared the winner of, the said Gold Medal. Mr. Stein is to be congratulated. He won it by perseverance rather than by talent, as his first specimen herewith shows. The medal was a strong incentive, without which he would not have worked so faithfully as he did. In this particular the donor's desire has been fulfilled, as his object in giving the medals was for "stimulating excellence" in penmanship and kindred arts.

Two More Gold Medals remain to be won. One will be given June 1, 1903, and one June 1, 1904. Who will the winners be? Why not put on the armor of unflagging interest and perseverance and win two medals at one time—the medal of improvement as well as of gold? Pupils in attendance at the Zanerian during the year ending June 1, 1903, are eligible. If interested, write for further details.

Address the President,
C. P. ZANER, Columbus, O.

A line of easy business writing

Modern Art Publications for Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail postpaid.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instructions ........................................ $1.50

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with fascinating text and instructions. Get this book and go out and learn to see and sketch nature. Bound in cloth ........................................ $1.00

Light and Shade—A manual on drawing by Mr. Zaner. It contains 108 lessons on shadows, illustrations, and plain, simple, instructive text. It is just what home students need, and what all others who are not at home in drawing need to make them feel at home. Any one can learn to draw by the aid of this book. The illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings .......................... 50c.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning, showing the pupil how to make the simplest strokes and to gradually evolve the finished design ........................................ 50c.

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs, such as diplomas, resolutions, etc., with complete instructions. A substantial book, bound in cloth. Sample pages of this book will be mailed for 2 cent stamp ........................................ $1.50

Progress—C. P. Zaner's masterpiece in flourished writing. It represents an eagle, forceful and lifelike, winging itself through intricate curves and branches. It is on the front of plate paper, 22 x 28 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great," "It's certainly a bird" are some of the expressions many have made on seeing it. In tube ........................................ 50c.

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address,

ZANER & BLOSER, Columbus, Ohio.

INSTRUCTIONS BY MAIL IN AUTO PENVANSHIP

A course of 48 lessons in plain, practical lettering, 12 different alphabets. Price $6.00. Write for particulars.

Lessons in Practical Business Writing

BY

LAWRENCE, MASS.

M.R. Keesling.

CANNON'S BUSINESS COLLEGE.

Don't foul, don't flinch, and hit the line hard!  — PRES. ROOSEVELT.

Today, young men and women, the person who succeeds must be able to do something well, willing to do it without grumbling, and then do it, whatever it is in a manner that will please the one for whom it is being done. Since all cater to some one, and in many cases to more than one, the power of pleasing others, courteously toward them, and the ability and determination to push forward, will win many seemingly hopeless battles.

Just at this time the teaching of Penmanship is occupying a great deal of the attention of educators, probably more than it ever did before. The causes leading up to this are many, and I will not take the space here to go into detail regarding them. Good teachers of Penmanship are in demand, but no more than good business writers. A teacher should know what he is going to teach, how he is going to teach it, and then teach it as if it were the only subject in the world.

Now students, you who are going to follow me in this course of lessons, I ask your co-operation, close attention to both the copy and instruction given. Go in with a determination to win. Take the copies as they are given. Stick to them until you have mastered them and the game is yours.

Materials and Position.— Foolscap paper, a medium line pen, and black ink, are indispensable for good work. For position sit squarely facing the table. Have front edge of chair under edge of table. Sit with hips well back in chair. Lean forward, bending at the hips, and rest both arms on the table. Place the paper so that it is exactly parallel with the right arm; then pull the bottom edge of it toward you at least two inches, so that the arm goes diagonally across the sheet. The left hand is always placed just above the writing line, so as to hold the paper down. Lean a little more on your left arm than you do on your right. Do not grip the holder. Keep the wrist almost level, and do not let it touch the desk. See that the penholder points over the right shoulder.

Lesson One.

Copy 1. Direct retrace exercise. Make it two spaces high. Use a push and pull movement. No fingers. Make it rapidly. See that the arm glides in and out of the sleeve. If your shirt sleeve is tight or heavy, cut it off just above the elbow.

Copy 2. Round exercise two spaces high. Same direction, as you make capital O. Make it just as round as you can, trying to keep it regular in height and width. Use no shade.

Copy 3. Two-space ovals, made one third higher than they are wide. Same direction as capital O, and reverse. Watch right left oval in the centre. Keep your work up together in columns, so as to give it a good appearance.

Copy 4 and 5. Make from left to right, and retrace with curve. Copy 6 and 7. Given for review. Remember use no fingers.

Lesson 2.

Work hard on copy 1, six times around and loop. Copy 2. Close "O" at top, watch loop carefully. 3 and 4 make sharp at top, round at bottom. Watch spacing.
Lesson 3.

Try copies 1 and 2. Copies 3 and 4, make capital "A" sharp at top, and close it, retrace about one-half way down the stroke. Copy 5. Small "n" should be made sharp at top; study figures; try copy 7 and 8.

Lesson 4.

Copies 1 and 2, will develop the capital letters. Copy 3. Start to the right above the base-line, finish with the oval; keep oval and loop separate. Copy 4. Start left and down, keep downward stroke parallel. Copy 5. Make all sharp turns at the top, round ones at the bottom. Watch retrace stroke, divide parts equally; study copy 6, try 7 and 8.
Lesson 3.

Copies 1 and 2 develop movement and form; don't slight them. Copy 3. Start with dot, and make small loop in center point down, finishing oval same as capital "C." Copy 5. Be sure to have a visible loop in small "e." Copy 6. Are all figures made the same height? Copy 7 and 8 should receive a great deal of practice.

Lesson 4.

Both round turns at top, and one at bottom; keep downward strokes parallel. Copy 7. Watch height and spacing, keep pen on paper until it stops at base line. Remember haste makes waste. Copy 5. Shows how to join capitals and small letters. Make about two pages of the words.

Lesson 5.

Copy 1. You can't afford to lose these exercises. Copy 2. Keep toe and heel of capital "D" on line, watch width and finishing loop. Copy 3. Has three round turns at top, two pointed, and one round at bottom. Try to space parts equally; keep lines parallel. Copy 4. Start down with loop, and finish with short straight stroke parallel with base line. Words "one" and "mine" are a review on the small letters.
Lesson No. 16.

We will begin lesson 16 with the large direct compact oval exercise. Work very rapidly on this exercise, working out all the white space. Try to keep the exercise one large space high, the full width of the paper. Line 70 is the direct retraced oval finished with a small loop. Retrace each oval ten times. By close study you will see that the capital "O" conforms more closely to the indirect oval than any other capital under this group. Count two for each capital "O."

Lesson No. 17.

Start this lesson with the large direct retraced oval exercise. The small oval exercise given is an excellent one to develop the beginning part of the "C." The two down ward strokes of the "C" should be parallel. Make first part of letter about the size of the small "o." Second style of letter given is used a great deal in business writing. Notice that the first part of the letter is formed like the small "I." Start beginning stroke about half the height of the capital, and finish letter with a small oval. Fill several pages of the word copy.

Lesson No. 18.

In beginning this lesson spend some time on the large retraced oval. Second exercises given are fine to develop the capital "E." Begin capital "E" with a dot or small straight line. Top part of the "E" is one half as large as the base part. The small loop connecting the two parts of the "E" should point downward. Second style of "E" begins almost like second style of "C." Try to write the word Evans without lifting the pen from the paper. Don't hurry over the copies, but study each one carefully.

Lesson No. 19.

Begin this lesson with the large direct oval, finishing with the capital "A." Notice that the under stroke of the "A" is quite straight. Let the upward stroke reach to the height of the letter, and let down stroke retrace some about half way to the base, curving to the right and ending below base line about one small space. See that you are getting four words to the line of the word copy.

Lesson No. 20.

We will begin this lesson with both the direct and indirect ovals made in the direction indicated by small arrows. Retrace each oval from ten to twenty times. Practice the two parts of the letter separately until you can make them well, before joining them together.

The difficult point will be to bring the two strokes together correctly. Watch spacing and height of small letters in line No. 70.

Lesson No. 21.

Lesson 21 begins with the capital "M" and "N" exercise. Use rather a rolling motion of the arm in executing this exercise. See that you are getting round turns at the top, and that the up stroke retraces down stroke about half way. You will find that each part of the letter is shorter than the preceding one. Compare your work with the copies given, and see where you can make improvement.
Practical Vertical Penmanship Copies and Hints

Keep in mind that vertical penmanship is not unlike any other kind of penmanship, except a slight difference in slant. Keep in mind that it may be executed successfully with the arm movement—as successfully as any other style of writing. Also keep in mind the fact that the paper may be held parallel with the desk, parallel with the forearm, or at any angle between these two extreme positions.

The accompanying exercises are given as preliminary practice and training for the capitals which follow. There is need of little or no finger action in the exercises, or in many of the capitals. All circles should be made freely with the arm movement, and the straight lines should be made without much finger action.

Study the forms carefully and learn to criticize your own work. Learn to see good forms as well as to see wherein your forms are poor. In the sentence practice, be watchful of the spacing between letters and of the space in the letters. Observe critically at all times the matter of angles and turns, being careful to keep the n's rounding at the top, and the u's sharp.
The above capitals are from the skillful pen of S. M. Blue, penman in the Broken Bow, Neb., Business College. Being plain—they require the very best control of movement. Many persons can execute flourished letters fairly well, but fail miserably when plain forms are attempted. We would therefore advise all who wish to thoroughly master ornamental penmanship to give the above style considerable attention. He who can execute this style will need have no fears about mastering the usual flourished ornamental style.
J. D. Valentine, of Pittsburgh, favored us with some white and black cards written in white and black ink which display considerable skill.

J. E. Leamy, penman in the Troy, N.Y., Business College, is doing not a little of high grade engrossing, as indicated by some press notices received recently from that city. Mr. Leamy is one of our most accomplished penmen.

Mr. M. K. Staller, Mt. Carmel, Pa., submits some business and ornamental writing and flourishing which disclose skill. Mr. Staller states that the most of his skill is the result of instructions received from THE BUSINESS EDUCATOR.

W. H. Anstine, of York, Pa., swings quite a professional quill, as indicated in a letter recently received.

Mr. Gettie Fore, Ardmore, Ind. Ty., while not following penmanship professionally, is giving some attention to that branch as a side issue, and his writing is far above the average of those not engaged professionally in penmanship.

Mr. S. M. Funk, of Hagerstown, Md., favored us with a few specimens of his ornamental penmanship, which shows that he is losing none of his skill in this line.

Some of the most finely written cards in white ink we have ever had the pleasure of receiving, recently came from the pen of Mr. C. H. French, penman in Goldy's College, Wilmington, Del.

Mr. W. Cassmore, penman in the Richmond, Ind., Business College, sent some specimens from the pen of Mr. Herbert C. Schneider, which disclose the fact that he is doing some splendid business writing. Mr. Cassmore writes a vigorous, simple, business hand and believes in teaching that style.

J. T. Evans, cashier and paymaster for the Vulcan Iron Works, Wilkes-Barre, Pa., swings the pen like a professional. A number of signatures and cards recently received from Mr. Evans show truly a high order of ability. Were he to devote his time and attention to this work, he certainly could become one of the few.
DEPARTMENT OF BUSINESS EDUCATION
EDITED BY E. E. Gaylord, Beverly, Mass.

Impressions by the Way

The new building fever has become epidemic. Only last year the Lynn (Massachusetts) Business College took possession of its last new building occupied by its beautiful and sumptuously furnished new quarters on Euclid Avenue. There is probably not in the world a more richly finished and furnished suite of reception rooms than are those in the new home of the Spencerdale in Cleveland; and schoolrooms better equipped and more convenient would be hard to find.

The Bartlett Commercial College of Cincinnati, is moving into handsome new quarters on the top floor of a new ten-story business block. Mr. Bartlett is a live, aggressive school man, and his energetic policy is already carried out by his efficient principal, Mr. D. D. Mueller. These gentlemen will be glad to welcome to their new home members of the guild of commercial teachers.

Colonel George Soule, of New Orleans, will spend this school year in a fine new building erected especially for the use of his school.

A large force of men is at work on the foundation of a new commercial school in Brooklyn. A new building at the corner of Walash and Monroe Street, Chicago, several floors of which are to be occupied by the Metropolitan Business College, Mr. O. M. Powers having sold the stock and business of his old school occupants.

Mr. O. L. Treanor of Kenosha, Wis., moved his College of Commerce into a new building of his own last fall. This is one of the nicest little schools in the Northwest, and "little" it is not, for there are more than 200 students a year with coming. They are sure to come to a school that offers to its students all the advantages of a high school and a business college in one.

On the way to Minneapolis we dropped in at the headquarters of the Illinois State College of Commerce, and found Messrs. Zaner and Bloser very busy with an unusual amount of business. Great changes have taken place in the city since, as a student, we were there in 1899. Then H. C. Rowland was a student and librarian, now he is the proprietor of an excellent commercial school in the Y. M. C. A. Building, Broad Street, though charming, is not so superlatively beautiful as it seemed in the old days of Kelch, McCloskey, Ware, and Weaver.

Furthermore, twelve years ago our chiro- graphic report wore a heavy high silk hat, and a white funnel suit. He discarded whiskers, and he paid assiduous court to a charming young lady. Now he wears a very sober suit, and plenty of whiskers, he would make a good model for a Murillo portrait—and the lady is now the gracious hostess who welcomes her husband's guests to their ideal home. Long may the vine and fig tree yield the fragrance of happy days to Mr. and Mrs. Zaner.

In 1906 E. W. Rinsler was not a part of the Zanerian; now his earnest work is an indispensable feature of that successful institution, and especially of the BUSINESS EDUCATOR. Mr. Bloser is at his best in his pleasant personality, and we found that even the enthusiastic praise of his old friends did not do him justice.

In the early nineties Columbus had, in its high schools, no commercial teaching; now each of her three high schools has a commercial department, Mr. J. H. Wescott, in charge of the commercial work of the North High School, is to be congratulated because of the excellent new quarters into which his department is to go in September.

The infection of soliciting has reached the business schools of several of our large cities.

New York, Brooklyn, Philadelphia, Newark, Chicago, and Milwaukee are among the unfortunates whose appeal for business has been forced to a lower level. In Milwaukee the business is badly cut up by this practice, and the various schools maintain a disagreeable attitude toward their competitors, fighting from a haughty assumption of superiority which affect not to recognize the existence of competitors, down to the contemptible use of irresponsible newspapers to publish scurrilities about competing schools. The city has been over-run by solicitors, amateur and professional, generally incompetent to teach, and often so devoid of the natural instincts of manhood that they have lied shamelessly about their competitors in order to get business; and they have spared no one who could by any hook or crook pay the price, regardless of age, race, character or mental condition. The result is that a visitor to the office of the average business college in Milwaukee is liable to run up into a veritable shambles of solicitors making their reports or getting their instructions; or he will be compelled to listen to a loud-brained performance and the force of a contract which some Polish or German parent has signed, unable to read English and ignorant of the meaning of the paper.

Here is one of the contracts that...
Mr. William’s Closes the Debate.

Mr. Editor—

A three months’ absence has prevented a reply to Dr. Herrick’s article in your April issue. It seems apparent that the discussion of my paper read at Detroit last summer will not end before the time for the next convention comes. This, however, shall be not the end of our discussion.

Dr. Herrick is disturbed because I ignored his challenge to point out a university college of commerce in this country that “rewards its students for their ability to study six modern languages.” I find such a statement in anything I have written; but, while we are on that subject, I would like to ask Dr. Herrick how the young man, who is pursuing a course of study in a university college of commerce, is to determine which of the six modern languages he shall study. He cannot know in advance which one of the six, nor what two or three of the six he will find use for when he goes out to “solve the great problems which confront the business men of the country.” If he take Spanish, the first business house into which he may be invited to apply his knowledge of “business organization and management” may have use only for English and French, or, probably, for English only; hence he have been unable to see any other rule for his pursuit than to take all of the six. Am I not surprised that Dr. Herrick did not see this point.

Some Unschooled Business Men.

Dr. Herrick expects a university college of commerce graduate to make more rapid advancement than the young man who has been unable to acquire knowledge of “medieval, modern, and American history, trigonometry, economic geography, industrial history of England, business organization—(business organization being a member of the College of the City of London—branches are the feature of the course which aroused this discussion) who has acquired a good English education and such knowledge of modern and American history as the business man requires in his clerical work.” He has “done so and can do so.” There may be exceptional cases where he has done so, but exceptional cases prove nothing. Since Dr. Herrick has cited the “amusing expressions of Mr. C. Search” in support of his contention, perhaps he will permit me to state the fact that seven of the nine wealthiest men in this city never saw the inside of a college, and the fathers of the other two, from whom they inherited their fortunes, had only a common school education, and I might say of all the boys who have been made to be built on as he begins to realize the profession of a noble cause to serve a merely mercenary purpose.

There is a kind of calling at the houses of powerful men, which is not illegitimate and sensible. Honest men know where to draw the line, at least until the spur of un- worthy competition causes their sensibilities gradually to become numbed. If that kind of calling is to be ended, the world will be made to believe he begins to realize the profession of a noble cause to serve a merely mercenary purpose.

I do not accept the term; then we do not deliberate insolently, but when the house to house canvass of the humankind is resorted to, combined with all kinds of menace—response to ignorant people, we protest.

Mr. Editor—

It will be seen from the subjoumn extract from President Hadley’s report to the Trustees of Yale University that I am not entirely alone in my contention that the commercial college course by those who contemplate going into special activities is not compensated for by the knowledge acquired and discipline secured. The main point of the report that has the widest general interest is the one which deals with the relation between the professional schools, the colleges, and the secondary schools. It is well known that there are those who require a college course to get a bachelor’s degree as a condition of admission to the schools of law and medicine. With this view President Hadley takes issue. Although he admits the brilliant training young men require for a career in law and medicine, he believes that the proposition is a mistake and involves a dereliction of public duty, none the less grave because it is unconvincing.
The Minneapolis Meeting of the National Educational Association

Perfect weather, an invigorating temperature, a splendid new city thronging with the titanic task of stupendous production and transportation, an all but unprecedented enrollment of business-like preparation for guests—all united to make the Minneapolis meeting of the National Educational Association one of the most memorable meetings of this powerful organization.

Comparatively few realize the magnitude and influence of this Association. It has eighteen principal departments, of which the Department of Business Education is one, though, as yet, in point of numbers, a small one. It has more than 3,000 active members, and this year more than 12,000 teachers and tourists enrolled during the meetings.

The Association now has a surplus fund—called a Permanent Fund—of $8,180. Its total receipts last year were $32,268.

General Sessions

The opening session consisted of the usual surpassage of a ceremonial in the form of welcoming speeches by all sorts of Minneapolis dignitaries. Economic discussion from professional teachers representing a variety of the higher notches in the educational scale.

From the educational point of view, probably the greatest address of the week was that given by President Nicholas Murray Butler, on “Some Pressing Problems.” He chose from many problems these two: one—struggling in our educational system, and the other—struggling in our civilization. In both these cases, he brought in a wealth of literature and an element in the civilization of the world. The distinguished speaker held the closest attention of a great mixed audience while he spoke of the waste of time in our elementary and college teaching; but when he came to the second problem, his masterful analysis of causes and results, and his eloquent plea for more attention to the literary activities of our libraries, and the academic storehouse from which all the notable writers of modern times have freely drawn; he stirred six thousand auditors to enthusiastic applause.

Second in order to President Butler’s address in interest was that delivered by President Jacob Gould Schurman, of Cornell University. His subject, “Education in the Philippines,” was treated with the philosophic insight, which President Schurman always brings to the discussion of civic, economic and educational questions. He thinks the Filipino should be given independence as soon as he is ready for it, but he does not think him ready for it yet. President Schurman, Chairman of the first Philippine Commission sent out by President McKinley, is in full sympathy with the sentiments contained in President Roosevelt’s Memorial Day address.

The eminent services of Secretary Wilson, and the high rank of the Minnesota Agricultural College, combined to bring out an unexcelled large and earnest crowd to hear Wilson’s address on “The Education of the American Farmer.” He held that teachers are needed who can discover the principles that underly production and can teach these truths in their application to farm life. Pioneer work along this line is waiting—even nearer the frontier than the work of commercial training. The organi-
zation of faculties for instruction, apparatus, laboratories, textbooks, everything, from start to finish, for post graduate work, is waiting. Said he:

"We have adopted much in our system of education from people who have not been trained for a profession. We have men of leisure, passion, class, privilege, caste, birth and blood. They should be educated with a view to their development along the lines of their work with which they are familiar in business."

"What can be done for our producers that they may find in it respect and happiness, that they may help the weary world? Discipline and academic subjects have more time to devote to intellectual, moral and spiritual life? is the previous question which the educator of the great producing states of our country are called on to forget or answer.

"Why should not our system of education be the best? Inferior animals advertise that the farmers' education has been overlooked; draught-stricken fields show that; all cry about for better education. American people always find the man for the hour, and the hour is now crying for the man to organize the class branch of the people who produce 65 per cent of the wealth.

Very interesting and thoughtful addresses were also made at the general sessions by President Attredar of Tulane University, New Orleans; Archbishop John Ireland of Minnesota; Mr. J. H. Finley, Princeton University, and the Hon. Michael E. Sadler, Committee of Education, Lon don, England, who pointed out the fact that space and the requirements of our special department forbid us to give abstracts of these admirable addresses.

The Department of Business Education.

The first regular meeting of the Department of Business Education was called to order in the rooms of the Minnesota School of Business, by President Crissy, Wednesday afternoon, July 9th, at 2:30 o'clock, and continued in lively session, with more than one hundred persons present, until after six o'clock that evening.

President Crissy's annual address explained the reasons for the arrangement of the program and the appointment of the Committee of Nine, and gave so thoughtfully a presentation of the problem of commercial education, as it affects the public high schools, that we present it in full on another page.

Dr. A. E. Winship, Editor of The Journal of Education, read the first paper entitled "Have Commercial Studies Disciplinary Value?" Professor Winship seems to take pleasure in naming his speeches to suit himself, regardless of the title under which they may have been advertised. He is glad to add that the speech is to be held in its place, and glad to vary the review charge in honor of the position that it is possible to do, to teach commerce, banking, and practical economics as to give young people good mental power as as we teach algebra.

"Whatever adds vigor, pose, and alertness to mental activity is disciplinary, and all those who are so impressed in activities that touch the earth's surface is in those that touch it nowhere."

That word 'practical' is robbed of its terror. Columbus was practical because he "got through" the necessary preliminaries, and is one useful, and there is no less discipline required to save human life or to add to its comfort and prosperity than there is in neglecting it by abstract dreaming.

"Commerce has had a new birth on the threshold of the twentieth century, and it is no longer a question whether commercial studies have disciplinary power, but whether in comparison with other studies have any."

"It is a matter of congratulation that men with the keen intellectual perception of commercial studies in the hands of their teachers, their standards of discipline must be current."

D. W. Springer, of Ann Arbor, Michigan, in discussing Dr. Winship's paper, made clear the relation of commercial education to the common school. He believed in the value of shorthand to the high school pupil as a means of getting complete abstracts of class-room instructions, etc.

Dr. E. W. Stitt, of New York, in discussing Mr. Springer's paper, has been making some extended inquiries among business men as to the age at which they thought pupils should begin a four-year commercial course. The ages ranged from ten to sixteen, ten per cent, said at 12 years of age; 14 per cent; said 15; 16 per cent; 15; and the rest were scattered. More than 400 replies were examined. Dr. Stitt thought that a boy ought to graduate from the common school in the eighteenth years of age. In choosing a foreign language, Spanish, for the next few years, will probably be the most necessary. Constant and progressive work in English grammar and composition, and cultural, and thoroughness should characterize everything.

E. B. Bonnell, of St. Paul, followed in discussion, speaking against short courses, and favored the extension of such technical subjects as shorthand and bookkeeping near the beginning of the course, inasmuch as it begets a notion of dropping out of school before completing it, and would be a case of mental and physical parting of the business subjects. The meeting was adjourned at this point, until Friday afternoon.

Thursday, the Committee of Nine held July 10 an open conference meeting in the rooms of the Minnesota School of Business. The object was to draw out the views of men engaged in public school work as principles and superintendents. The attendance was not large, but the remarks were interesting. The committee was ready and able to defend his position regarding the subjects to be included in a Commercial course, their proper position in the School, their relative value, etc. The conclusions arrived at had an influence on the report made by Chairman Springer on Friday.

President Crissy called the meeting, in order promptly, and, after the business of the day, opened an entertaining solo by a Minnesota baritone, E. H. Meyer, of the School of Commerce, University of Wisconsin, read a thoughtful paper on "The Preparation of Commercial Teachers for Work in the Public Schools." He said in part:

"In the preparation of Commercial Teachers I assume thorough training in the commercial branches, such as English, History, Modern Languages, Mathematics, and a thorough mastery of those basal studies which more advanced work in the institution of commerce has been taken with success. Among these may be mentioned the American Almanac, History of Commerce, Political Science, Finance, Exchange, Accounting, etc. Superficial knowledge of arithmetic has now generally recognized the importance of a certain degree of specialization on the part of their teachers. The old fashioned all-around teacher, loose-jointed and laid out on the department store plan, without having the foundation complete, not to speak of the upper stories, must submit to
a process of metamorphosis or else give to an educational system, we are well aware that making our commercial courses a refuge of educational vagrants, we must at the very start entrust a man of great knowledge and judgment to the task of making the whole educational efforts of the best equipped in any other department.

Commercial branches have been spoken of repeatedly, and it behoves us to consider their influence on the preparation of Commercial Teachers. Taken as a whole, these branches may be characterized as studies in an incipient state, they are in a process of becoming. Hence the necessity of thorough familiarity on the part of the teachers in reference to the relative branches of which these branches are being constructed and the study of domestic and foreign government publications, transactions of learned societies, and financial records.

The pedagogical side of the training of Commercial Teachers is becoming. For example, we may utilize the experience of R. S. Booth, whose paper, it was an independent address, as indeed it had to be, Mr. Booth having prepared his paper after he received Mr. Babcock's manuscript. He goes beyond the nominally principal address in tone, treatment, and power, and that we suspect most persons went away with the idea that Mr. Anderson's was one of an educational address, and not merely a discussion.

"A Practical Commercial Course for a Massachusetts High School" gave E. F. Gaylord, of Beverly, Mass., an opportunity to show forth his interest in, and his appreciation of, the cardinal subject of the convention. Amid a running fire of comment and question he outlined a course which allowed to the technical subjects, as much time as is necessary for business schools. He placed Bookkeeping, Shorthand, Typewriting, and Office Practice in the latter years of the course to serve as a bait to hold pupils through a four-year period of instruction.

Mr. Gaylord maintained that a large percentage of the pupils in the commercial departments of the public schools as now organized, are confusing the technical branches and are not able to hold business positions without further training in a private business school. He ascribed these results to the insufficient time given to technical training and to the over-enthusiasm of the courses by the introduction of subjects only indirectly having to do with training for business.

The President's address was of much interest. Professor W. T. Booth, of New Haven, Conn. He showed bad taste by naming and commenting on his competitors, and he disqualified himself as a man of judgment. This is not the best manner in which to hold the attention of the pupils in the commercial branches. He has a large experience in the field and his mind is trained in its requirements.

"Requirements for Actual Business" was the subject of an instructive paper by Geo. A. Booth, of New Haven, Conn. He showed bad taste by naming and commenting on his competitors, and he disqualified himself as a man of judgment. This is not the best manner in which to hold the attention of the pupils in the commercial branches. He has a large experience in the field and his mind is trained in its requirements. This address was of much interest.

Mr. Babcock has been a leader in the movement for the education of business men. He has a large experience in the field and his mind is trained in its requirements. This address was of much interest.

Mr. Babcock has been a leader in the movement for the education of business men. He has a large experience in the field and his mind is trained in its requirements. This address was of much interest.

4. Your Committee of Nine, appointed in conformity with a resolution passed at the Detroit meeting, respectfully report progress, as follows: This Committee was assigned the work of preparing a pamphlet on Commercial Education which should formulate an efficient code of procedure for the conduct of such education in American public schools. The meeting was held in Philadelphia, March 5, the only absentees being Messrs. Booknery and Francis. At a second meeting held the following day, the Committee was once more in attendance of Prof. Charles De Carne, of Cornell, and Dean Haskins, of the School of Commerce, Accounts and Finance, of the University of New York. Discussion of the general problems of education in this field was the principal subject of the meetings. It was agreed that the course of study outlined should be four years in length, that each member of the Committee should formulate a commercial course to submit it to the other members of the Committee in time for examination before the Minneapolis meeting. The Committee has held three sessions this week, attended by Messrs. Babcock, Gaylord, Rowe, Francis, Crissy and Springer, and an open conference meeting. Each member present has defended the course submitted by him, and criticized those offered by others. The following minutes are the result of these meetings and have been agreed upon as governing the Committee in its deliberations:

The paramount factor in shaping commercial courses in the schools is the student who goes directly from the high school to his work. It is expected, however, that such courses will provide a training of such character as will fit the student for those schools of commerce and industry now being established by many colleges and universities.

We believe that where possible separate courses in these subjects should be provided; but we realize that, in the great majority of places, the work must be given in the regular public high schools as one of the several courses thereof.

The following courses include many subjects now taught in public high schools although the methods of presentation in some cases may not be those best adapted to the needs of the business student. We realize that in most schools it will not be possible to organize separate classes for the commercial studies with methods specially modified to meet the business student's wants.

A discussion regarding the proper classification of such technical subjects as should be given in a business course, and the order of their presentation, has consumed much time, and it is expected that the Committee will be able to report next year a comprehensive plan of four courses of that will satisfactorily meet the wants of the high school.
COMMITTEE OF NINE
Durand W. Springer, (Chairman), Director Commercial Department, High School, Ann Arbor, Mich.
William E. Doggett, Commercial High School, Brooklyn, N. Y.
Chester H. Herrick, Director School of Commerce, Central High School, Philadelphia, Pa.
E. E. Gaylord, Director Commercial Department of High School and Editor "Business Educational Guide," St. Louis, Mo.
W. T. Bookmyer, Principal Sandsburg Business College, Sandusky, O.
Allan Davis, Principal High School, Washington, D. C.
H. M. West, Director and Author and Publisher of Business Text Books, Baltimore, Md.
J. H. Francis, Principal Commercial High School, Kansas City, Mo.
J. A. Crissy, State Inspector of Business Education, Albany, N. Y.

The election resulted in the choice of the following

NEW OFFICERS
President, J. H. Francis, Los Angeles, Cal.
Vice President, J. P. Twigg, Detroit, Mich.
Secretary, C. E. Stevens, Cleveland, O.
Secretary of Committee of Nine, W. E. Doggett, Brooklyn.

REGISTER OF ATTENDANCE
J. H. Francis, Com'l High School, Los Angeles, Calif.
J. P. Twigg, Central High School, Detroit, Mich.
G. C. Seeberger, Commercial High School, Brooklyn, N. Y.
Mrs. W. S. Shepard, Minneapolis, Minn.
W. F. Wilkinson, Principal Agricultural College of Utah, Logan, Utah.
Edwin H. Silt, Principal Public School, New York, Line Ave and 15th St., N. Y.
D. W. Springer, Director Com'l Dept, High School, Chicago, Ill.
Evelyn Watson Espy, American Book Co., Chicago, Ill.
H. F. Buck, Principal Business College, Chapin, S. Dak.
A. K. Merritt, Eastern High School, Great Falls, Mont.
Evelyn Bryant, Grand Forks, N. D.
Arthur T. Adams, Minneapolis, Minn.
J. M. Dillon, Elmhurst, N. Y.
Kathrine G. Teachin, Prin. S. H. Dept, Lake City, Minn.
Sophia Hagmeister, Ass't, S. H. Dept, St. Cloud, Minn.
F. H. Evans, Winwood Institute, Montevideo, Minn.
Mark A. McNab, Capital City Commencement College, Des Moines, Iowa.
Katharine A. Shaffer, Carthage High School, Ft. Dodge, Iowa.
Chas. X. Haskins, 125 Fulton St., Chicago, Ill.
G. H. Towsley, Prin. School of Commerce, Gustavus-Adolphus College, St. Peter, Minn.
W. J. McAdams, Prin. Oak Park School, Stillwater, Minn.
J. H. Anderson, Principal, Fisher, Minn.
Katheryn A. O'Brien, Chicago, Ill.
H. C. Stuart, Chicago, Ill.

John Winkes, Minneapolis, Minn.

As is often the case, many of those who attended the meetings failed to register.

More than one hundred different persons attended the sessions.

Conveniion Notes.

The three sessions of the Committee of Nine were held at the Hotchkiss Hotel in Crissy's room at the West Hotel. Every- thing was arranged to the satisfaction of all, and the sessions were held in a room adjoining the hotel. The Sessions were held afternoon.

The care with which Mses. Rickard and Grumman looked after the welfare of the vis-

It looked like old times to see the youth-
President's Address.

The work of the present convention of this Department was practically laid out a year ago, when, during the closing hours of the annual meeting the following resolution was unanimously adopted:

Resolved, that the portion of the president's address which refers to the matter of program be referred to the incoming president with the suggestion that as far as possible its ideas be carried out, and that a "Committee of Nine" be appointed to prepare a monograph upon commercial education.

COMMITTEES ON COURSES OF STUDIES FOR BUSINESS SCHOOLS

I was not present during the closing hours of that session, but from reports received from the retiring president, the mover of the resolution, and others who participated in the discussion of the resolution I felt justified in interpreting its meaning to be that the Monograph on Commercial Education be prepared by the Committee of Nine should relate specially to business education in the public schools, and that the work was intended to include the formulation of a general course of procedure and detailed courses of study for business education in such schools. This conclusion was also justified by precedent, in the fact that in earlier years similar work had been done in the interests of the private business schools. At the Denver meeting in 1895, on the suggestion of Mr. Mahan, president of the department—the manner of whose sterling work and charming personality is cherished by all who had the privilege of knowing him—a committee was appointed to formulate a course of study for the "business colleges." Mr. Mahan became the chairman of the committee and an elaborate preliminary report of its labors, printed in pamphlet form, was placed in the hands of members of the department at the meeting in Washington in 1898. The final report, signed by the chairman, was presented by ex-President Springer at the Los Angeles meeting in 1898, and may be found in full in the Report of the U. S. Commissioner of Education for 1898-9.

PRIVATE BUSINESS SCHOOLS NOT SHUT OUT.

This statement seems to me a sufficient apology for the close connection of the present program with the work of the Committee of Nine, appointed in accordance with the foregoing resolution. In my circular of January 22nd, outlining the work, I said:

It must not be supposed that in this suggested program there is manifested any intent to limit this department of business education or the consideration of public school interests. The business college men were first in the field, and must continue to maintain their interest in this department, whose conclusions and discussions influence throughout the educational world. Between the private business schools and the public schools having commercial courses, there is perhaps from the money side a certain rivalry, but from the educational and intellectual side the interests of the private school and the public school are practically the same, and there is no reason for their not working together to perfect harmony to the advantage of all concerned.

To this statement I now wish to add that while the present program is essentially a monograph on commercial education in the public schools, which throughout the country are taking up the matter of business education in response to a constantly increasing public demand, yet the work of the Committee of Nine is so broad and the papers bearing on it cover so wide a field that the meeting cannot fail to benefit all who are interested in business education. Though the public secondary school is the special subject of consideration, there is not an educational question involved that does not concern the private business school; and for this reason representatives of private schools are most cordially and earnestly requested to participate in all the discussions of this convention. The committee particularly desires to have the benefit of their large experience in this large and important field. Entire freedom of discussion (subject only to time limitations) is invited and expected.

COMPOSITION AND MEETING OF THE COMMITTEE OF NINE.

In the selection of the "Committee of Nine" I have been governed necessarily by two leading considerations: First, to secure men who would serve, not merely in name, but with their best thought and with a keen sense of the responsibility involved; and second, to secure men recognized as having large experience and intense interest in business education. Although another less vital consideration was to have the members represent different sections of the country and also differing views regarding certain phases of the problem in behalf of the public schools, while at the same time cherishing an earnest desire for the complete success of that work, it was evident from the first that the committee could not complete its work in that year. Two meetings were held at Philadelphia, March 27 and 28, at which all but two of the members were present, and a definite line of work was laid out. The program for the current school year has been a free and informal exchange of views which disclosed a harmony on the vital principles under discussion that was highly gratifying. At the second meeting the committee was honored by the presence of Prof. Charles DeGrazia of Cornell University, and Prof. Charles Waldo Haskins, dean of the School of Commerce, Accounts and Finance of the University of New York, each of whom contributed valuable suggestions.

As the members of the committee were selected from Mauclaire to California, no further face to face conference was possible till the present week, but in the interim the work did not languish. Each member of the committee was charged with the forwarding of his individual commercial course for secondary schools, to be sent to the department president and copies prepared and sent out under his direction to all the other members for comparison and suggestions. With one exception of the committee (with the exception of Dr. Herrick, who was unable to attend the convention) has also prepared a formal paper discussing some one of the prominent questions before the Committee of Nine, which was presented as a report at the meeting. Two meetings have been held during the present week and considerable progress has been made. Tomorrow afternoon at a.m. a meeting at 1 o'clock, will be held in this room an open conference meeting, through which the committee hopes to be materially aided in its work by the suggestions of prominent educators who take a keen interest in this subject. The preliminary report of the committee is to be made by Chairman Springer on Friday afternoon, when it will be open for general discussion. I earnestly recommend that the Committee of Nine be formally continued for another year and that the chairman have power to fill any vacancy.

IMPORTANT OF THE COMMITTEE'S WORK.

I could not if I would foreshadow at this time what may be the conclusions of the Committee of Nine at the end of this convention, or who will be the members. It is, I believe, an epoch-making event. The rapidity with which this course has found favor throughout the country, and the steady gain in the number of students entering it, leads me to think that the convention and the right of existence of such courses has passed beyond the stage of argument, quite as much as that older question. "Can young people learn anything of business in school?" If this assumption be correct and these courses have come to stay, there can be no more urgent work for this department than to mark out a line of procedure that will help to bring about the best results, both for the student and the commonwealth.

THE PRIVATE AND PUBLIC SCHOOLS UNLIKE.

In taking up this work it should be recognized at the outset that it would be impossible to model the business course of the public secondary school after even the very best business schools wherever they existed. Both kinds of schools are needed, and both are in a certain sense working toward the same end—the fitting of students to earn a livelihood in business—but the public school is not a business school, private, with no source of revenue but tuition fees, takes paying students at any time in life and in any condition as to previous education, with the object of fitting them at an age when this kind of work by the most direct empirical methods and in the shortest possible time. The public tax-supported secondary school takes into its course every resident boy or girl, rich or poor, who has the required preliminary ed-
ucation—the education of the grammar schools; but as the public school is first of all for the state, for the whole community, its first duty and its first object is to make good citizens and safe members of society, and in order that they may be able to keep themselves safe, to give them finally a reasonably certain means of support. The method by which the public school commerce accomplishes its object is to give to the student a sound general education and to add to that such knowledge of commercial law, business methods, accounting, and amanuensis work as will make it possible for him, if need be, to go directly from the school into a business house and earn his living, and also give him the opportunity, through the use of his trained faculty, to play a high and more responsible position in the world of business. It is in the last mentioned studies that the private business school and the public business school run practically in parallel. I believe that the first lines that our Committee of Nine needs the counsel of our fellow teachers of the private schools. In this respect both classes of schools are seeking to do the same work, both solve the same problems, and there need be no rivalry between them, except only that generous rivalry as to who shall be most helpful to the student and to one another. It is to the students of the fabric of business education that I shall speak when I speak of the business of business education till it shall become an honor to this young and vigorous nation, which manifest destiny is pushing to the very forefront among the great commercial powers of the earth. 

The right making of a citizen requires of education much more than a knowledge of the three R's, as Dr. Hyde, of Bowdoin, said in a recent article: "Education aims to fit for three things: to earn a living, to support the institutions of society, and to enjoy the products of civilization." It will be observed that the first branch of this triad of Dr. Hyde has to do with man's necessities, the second with his citizenship and patriotism, and the third with his capacity for enjoyment.

Such an education must have that foundation in general culture which is the first stepping stone to the accumulated experience of mankind. There must be first and foremost a careful study of English, that the student may hold the key to all the other studies and be able to express his thoughts clearly and forcefully. There must be a study of history, that he may see what the race has been and what it has done—its failures and its accomplishments; a study of physiology and hygiene that he may know his body and how to keep it sound, as the fitting casket of a sound mind; a study of geography, to broaden his mind, through a knowledge of the vastness of the earth and of the variety of its peoples and its products; a study of civics, that he may understand and appreciate the principles and ideals under which the government by which he is protected and be able to compare it with the governments of other countries; a study of some foreign modern language, which aside from its practical value for actual use, will add much to that mental discipline so necessary to quick and accurate thought; a study of mathematics—arithmetic, algebra, geometry—to develop the powers of exact reasoning; a study of science, that he may be acquainted with the underlying principles of trade and the foundations of national wealth; a study of the best literature, that his imagination may be broadened and there may be open to him the keenest enjoyment of the products of art and civilization; and finally, a study of the sciences—physics, biology, chemistry and kindred subjects. Not only for their practical utility, but that in the field and in the woods and in the retirement of the laboratory, he may acquaint himself with nature's laws, wrest from her her most intimate secrets, and thus be brought into closer harmony with the Great Creator of the Universe.

Where the business branches come in.

If to the foregoing we add a competent knowledge of bookkeeping, commercial paper and business forms, as complete a study of business practice and methods as can be made in a secondary school with proper equipment, a study of commercial law covering the subjects of contract, agency and bailment, in their application to the affairs of ordinary business; a study of drawing, shorthand and typewriting, and business correspondences, I think we shall have satisfied pretty fully the comprehensive trial laid down by Dr. Hyde, and furnished such an education as should make a self-supporting and valuable citizen.

Bookkeeping in the high school.

I am not in accord with the contention that the commercial high school course should not train students in the art of bookkeeping. This idea seems to carry with it a faint suggestion of the play of Hamlet with Hamlet left out. Let no man presume to enter upon any manner of business without a knowledge of the manner of regulating books," said the immortal Dr. Johnson. I esteem these words as a "golden text" for the business man, and it seems to me that whatever things he can afford to neglect in his education, a working knowledge of accounts is certainly not one of them. Without this knowledge he can never be truly master of his affairs, but must depend on others to tell him his exact financial condition. Of course this does not imply that the merchant prince should be his own bookkeeper. What I mean is simply that he should be able to read with quick understanding the story which his books have to tell, even though it should happen that incompetency or dishonesty had been making the entries.

President Crissy's educational creed.

Now if you will kindly hear with me another moment, I will undertake to recite a few of the tenets of my educational creed as it stands today; but I wish it to be understood that this is without prejudice to the Committee of Nine, and, like the railway time-tables, is "subject to change without notice."

I believe that the great fountain of business education for the masses of the people is to be the four year commercial course in the public secondary school.

I believe that this course should and will possess educational content and development of power equal to any course in the school in which it is given.

I believe with the Committee of Ten, that the required studies of the commercial course in the public schools should be taught in the same way and order, whether the student is or is not expected to complete the course.

I believe, with Commissioner Michael E. Saller, of the London Board of Education, that "It would be a blunder from the point of view of the later efficiency of the pupil, to deprive him of a liberal education in order to impart to him an early knowledge of the technicalities of business life."

I believe it would be impolite and unjust for the public day schools to receive pupils for the sole purpose of instructing them in the technical business subjects.

I believe that as matter of sound policy and growing necessity the normal schools and the universities must establish courses for the technical training of commercial teachers for the secondary schools.

I believe that the high school commercial graduate should have such knowledge of the technical business subjects as would fit him to keep the accounts of any ordinary business, or to perform the duties of an ordinary clerkship as soon as these were clearly made known to him.

And finally, I believe, with Prof. De Garbo, that, "If he has equally efficient teachers and is supplied with equally good facilities, the student of the commercial course is not inferior to his brother in the arts course in the range of his education, in the quality of his discipline, in the dignity of his work, or the worthiness of his destination."

By B. F. Courtney, Iowa Business College, Des Moines, Iowa.
To
Mr. Nathaniel Dove
Master of the Academy
In Hoxton.
Sir,
Aug. 30. 1740.

The great Improvement you have made in the Art of Writing is a plain Proof of an uncommon Genius, and that Modesty which attends your Merit has justly gained you the Esteem of the ablest Penmen.

As you have been pleased to favour me with several Pieces for the Service of my Universal Penman, I think it incumbent on me to pay you my grateful Acknowledgments for your friendly Assistance.

However, I must still desire you to write a Piece or Two more for me in your legible, free, and expeditious Manner, which, I doubt not, will answer the Expectations of the most Curious. And the sooner you oblige me in this Particular, the more acceptable it will be to

Sir,
Your most Obliged
Humble Servant
G. Bickham.
The Business Educator

Entered at the Post Office at Columbus, Ohio, as Second Class Matter, September 10, 1900.

Edition and Published Monthly (Except July and August,) by ZANER & BLOSER, 118 N. High Street, Columbus, Ohio.

VOL. VIII, NO. 1.
COLUMBUS, OHIO, SEPTEMBER, 1902.

SUBSCRIPTION PRICE, $1.00 A YEAR. IOC. A COPY.

Change of Address If you change your address be sure to notify us promptly in advance, if possible, and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers.

 feal.

Rates to Agents and Club Raisers Sent upon application. Whether you are in a position to send a few or many subscriptions, let us know, so that we can favor you with our lowest possible terms and a few sample copies.

Considering the fact that we issue no partial or cheap editions; that our journal is high grade in every respect; and that the color feature of the cover alone costs hundreds of dollars; that "lessons that teach" are a distinctive feature of our magazine, that the art presented is the best ever given in a journal of this nature; and that the department of business education is upon a more comprehensive and truly representative plan than ever before attempted; you will readily see that the Business Educator is not the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of Its Class

The Business Educator being the most popular and widely read journal of its kind, it follows that it is also the best advertising medium.

To the heads of Commercial Colleges, Commercial Schools, Commercial Departments in Parochial Schools, Colleges, etc., as well as to a large number of office workers, public school teachers, etc. Then it is preserved as few journals are many subscribers have long known that this is the best book for finding rates for space are extremely low—lower than those of any other high class journal published. Wide awake advertisers will find our columns money makers. Write at once for rates.

Change of Name

The name, PENMAN'S ARTIST AND BUSINESS EDUCATOR, has never been quite satisfactory. It is unwieldy, awkward, and too long. It has therefore been changed to THE BUSINESS EDUCATOR, beginning with this number.

Of course the policy of the journal remains the same. Penmanship will receive the same attention as before, looking after it in the past, or even more. We have simply shortened the name, and in no way altered our purpose.

We believe this change will receive the approval of many friends and supporters of the journal.

Penmen and Lovers of Good Penmanship

The National Commercial Teachers' Federation, of which the National Penmanship Teachers' Association is a part, meets in Milwaukee next Christmas holidays. The object of these meetings is to further the cause of practical education and benefit all connected therewith. As a penman, you can benefit the cause of good writing and be benefitted in turn by being in attendance.

Co-operation is the law of progress and prosperity of the twentieth century. This is as true of education as of commerce and industry. You cannot live and teach by yourself, but the result of present day needs, which means that all who love progress and are ambitious to succeed should bend every energy to be there.

This year being the semi-centennial of Specenerian penmanship, it is particularly desired to celebrate the event by as large an attendance as possible at the home city of the oldest son of Platt E. Spencer, as well as the old home of his family. We are therefore connected with that historic family of penmen.

The Executive Committee are endeavoring to provide a program of unusual interest and to that end are desirous of hearing from any who have suggestions to make for services to offer. Be free to communicate such information as you may have to give without delay to the following:

C. P. Zaner, Columbus, O.;
A. E. Dix, Kansas City, Mo.;
J. F. Fish, Chicago, Ill.
Executive Committee.

An Official Report

The National Commercial Teachers' Federation is now one of the leading educational associations of the world, and practical education, for which it stands, is the very essence of the American education system. Is this bearing true, why should it not have an authoritative report of its yearly proceedings reported and published in permanent form as other similar associations?

Such reports will be of the greatest value to educators and schools. As an object of financial aid, moral support, and to reformating the papers and speeches presented there. By so doing, all interested would apply to the Federation for extra copies of the proceedings in order to get it in the professional journals. This would insure its success from a financial point of view. The membership fee could be raised to $200 instead of $100, and a contribution of $250, for $50.00 to all who are not members. A permanent membership, with annual dues of $200 each, whether in attendance or not, could be created at the commencement of the annual meeting, for the annual meeting, and that several thousand are taking his course will be a matter of pride and honor of success. The Richmond, Ind., Business College secured a modern reformer, Mayor Samuel M. Jones of Toledo, Ohio, to deliver the address at its commencement. Mr. O. C. Cushing, author of the series of lessons now running in our journal, and with the Rider, Moore & Stewart Schools of Business, Trenton, N. J., is now one of the superintendents of the Cannum School of Business, Lawrence, Mass.

From Commencement circulars and invitations issued by the Columbus University, the editor of the Commercial Record, Mr. W. C. Stevenson the well known penman and commercial teacher, formerly of Emporia, Kansas, and more recently of Port Deposit, Md., was a candidate for the degree of Bachelor of Science in the law school of the above named university. Our congratulations.

W. E. Luther, recently of Seio, Ohio, is now with the Bliss Business College, North Adams, Mass.

Mr. E. B. Bush, the wide awake and progressive supervisor of writing and drawing in the public schools of Sandusky, Ohio, recently had a public school pupil, the student's work in the schools, offering prizes for the best work in writing and drawing.

The Typographical Error

More aggravating than usual occurred on page 33 of our July issue, under ‘‘ Favorable Comments,’’ by C. H. Flickinger, of the “Flickinger,” of Philadelphia. The copy was all right but the compositor set it “Flickinger” instead of Flickinger and the proof readers failed to catch the blunder. This is the 58th time we have been bothered ten times over as much as any one else—hence this note of explanation.
The Business Educator

W. X. Currier, recently with the Danville, Va. Military Institute, is now with the Rider, Moore & Stewart Business Colleges, Trenton, N. J.

T. J. Kisinger, Proprietor of the Utica School of Commerce, Utica, N. Y., on the evening of July 2d will hold an open house, to overcrowding with the capacity of the New Century Auditorium of that city, where he expects to overgrow the commencement exercises, presided over by distinguished citizens of Utica and New York.

J. M. Peterson, of Bridgeport, Conn., is now connected with the Douglas College of Mercantile, N.Y.

Mr. M. M. Link, of Racine, Wisconsin, has taken charge of G. W. Brown's Terre Haute, Ind., Business College.

Mr. P. B. McElroy, formerly of Content, Texas, is now principal of the Commercial Business College, Brownwood, Texas.

Mr. A. C. Moss, formerly of Rome, Ga., is now principal of the commercial department of the Business College, Athens, Ga.

Mr. H. R. Parsons, formerly of the Columbus, Ohio, Commercial College, has accepted the position in the Meadville school made vacant by Mr. Carrier.

W. H. Carrier, formerly of the Meadville, Pa. Commercial College, re-signed his position with that institution and purchased a new location and the building of the old building, and the commercial department is in an office building today.

J. B. Macc, who few years ago published the National Penman, recently opened a commercial school in Natchez, Miss., and will locate there permanently. His brother, A. D. Macc, is principal of Macc College, Tompkins, N. Y. The report splendid business.

W. J. Kinsley, the well known expert examiner of forged handwriting, of No. 29 Broadway, N. Y. C., has prepared a lecture entitled "Tales of Commercial Writing," which he delivers before schools, church and literary societies, lecture bureau, etc. He has heard the same spoken of in the highest terms. From what we know of Mr. Kinsley, we think the lecture will be successful. We therefore hope to have him visit our city sometime and be interested in the same.

Mr. H. T. Loomis recently sold his financial interest in the Spencerian Commercial School, Golden, Mo., to S. Van Vliet, of Kansas City, Mo., Caroline T. Arnold, and Ernest E. Merri, who for many years have been connected with the old Buffalo College. He has rented to them the new building, and the school has been opened.

The thirty-eighth annual catalogue of the Peirce School of Philadelphia came to our desk covered in gray and without illustrations. It has a distinctly literary appear and is without the appearance of a school catalogue, but is one of the most serious publications of the year.

A very artistic and interesting catalogue is at hand from the Remington Typewriter Company, Chicago.

The Brockton, Mass., Business University, C. W. Jones, Prin., greets us with a maroon covered prospectus of 32 pages which is aygroveau.

The Wilmington, Del., Business School, which has been issued one of the finest catalogues of the year. S. B. and R., Kider, Proprietor, of the Practical Text Book Co., Cleveland, Ohio.

"Read and Butter" is the title of a monthly journal of splendid thought, published by Mr. C. H. Rutland, Minn., is issuing one of the best illustrated and printed catalogues that have been seen. The vignette half-tone illustrations as the school are of a very high grade.

One of the most unique and illustrated and newly opened schools dropped into our mail box from North Park, Bloomington, Ill. The catalogue is printed with the most elaborate and costly illustrated journal devoted to business education and the building of the school, that we have ever had the pleasure to examine. Papers and thickness of paper, a distinctness in the cause of educational education which is the school catalogue is printed and embossed in a most effective manner in these colors.

The Michigan Business and Normal Colleges, of both the men and women, is printed on gray, artistically printed, well illustrated catalogue--such a catalogue and publishing of the press--that there is a good school back of it.

The Fort Smith, Ark., Commercial College in issuing its 18th annual catalogue has again given the beaten path in the way of preventing some portraits of the pupils of the typography department, by having them photographed in the act of working upon the machine. The catalogue indicates a most prosperous institution.

Some specimen pages from "The Rogers' Compendium of the Grammar System of English," published by the Rogers' Press, of Macomb, E. T., are very appropriate. These institutions in this system will do well, we believe, to investigate the matter. It is the South and the North and the West, from the publishing Co., Battle Creek, Mich.

The Elliott Commercial Schools of W. Va., located at Wheeling, Charleston, and Fairmont, are securing a most prosperous business.

The New Albany, Ind., Business College journal compares favorably with others in all respects, and the work that is done is done well. The drawing illustrations of the school which we are told are the most realistic that have been made, as they were made from wash drawings of not a very high grade, and as consequence the realistic appearance now demanded.

The Birmingham, Ala., Business College, Willard J. Wheeler, proprietor, is issuing a catalogue of the place, indicating a high grade prosperous school.

The Salt Lake Co., of Baltimore, Md., is issuing a neat folder with grey cover en. The work is most complete and attention is given to detail. What they modestly call a few walls to the old school is shown and the catalogue goes to show that this firm is very careful to not magnify facts concerning themselves and their school, but an excellent work.

A unique and artistic folder dropped into our mail box from the Greek School, No. 57 Washington St., Chicago, III. You had better get an early one.

The Danville, Va., Military Institute is issuing one of the most beautifully illustrated and printed catalogues that have been received by us. The whole book has a distinctive, refined and progressive appearance, and the内阁 paper has been cut with a deckle edge. The half-tones are printed very finely, and show the appearance of a genuine photogravure.

The Bliss College journal, Columbus, O., is one of the most expensively and attractively printed. It is a large magazine paper and unusually large room crowded with pupils.
Finger Action.

Article Number Two.

Chandler R. Peirce, Dayton, Ohio.

It might well be to make a distinction without any material difference between the "finger action" and "movement." Action as compared to Movement or Motion, is in a restricted sense, not possessing the quality and degree of freedom implied in Movement. I'm contending for the legitimate use of the "fingers" in the process of passing through the various stages of transformation.

ONE OF MY CREEDS.

1. The "fingers" have a function as an incipient power.
2. In the introduction of movement, (with small letter forms) the fingers act as perceptible auxiliaries.
3. When control of the "Arm" has been attained, through the degrees, its rapid action, (seemingly) reduces that of the "fingers," to the minimum.

To declare that they have a minor use, but not of sufficient importance to want some consideration, is assuming that neglect of little things, is counterbalanced by magnanimity in greater things.

Comparisons are odious, especially when you intend to convey the magnitude of importance of the "large" over the "small." Why compare salt with flour? What is one without the other, to humanity? And how comparatively insignificant is the former to the latter? Separate them, and what have you in the staff of life? Combine them, with all the intelligence of the hour, and your heart is made warm and rich in sympathy for the unfortunate ones.

To tell the truth, the little niceties cannot be satisfactorily explained in print, or other wise so that immaturity can appropriate a full meaning. None but those who have passed beneath the shadow, can fully understand.

The discrepancy first comes from not knowing the limits, of "finger action," in following the blind copies which bear no semblance of gradation, and in consequence produce impossible barriers, which even the most precocious cannot surmount. After good "form" is established, (which is only consistent with proper gradation and systematic teaching) the child is ready to be introduced to a higher power, which nature in the mean time has fitted him.

Here, let me challenge the indiscriminate teaching of movement, without any conception of good "form," simply because it is prominent in the building of a great structure. Because the boy is old enough in years and wants to work in advanced mathematics, does not warrant his doing so, if he does not know the rudiments.

Anyone can give medicine, but who can prescribe and proportion it to the existing conditions, so that the greatest good will accrue?

The teaching of "Movement" is dependant on conditions, like every thing else, and to misapply them is dangerous and misleading. If you don't know how to ride astride, don't attempt a bronze at the outset.

With no form development, you go up in the air just as certain, as attempting your perils ride. With proper preparation the bronce can be ridden, so also, can the child be trained in Movement, (but not successfully without some previous knowledge of "form") and led along with a certainty and confidence which begots not only a liking for practice, but a fascination which is positive evidence of victory. But who shall lead the child? ??

The application of "Movement" to "Form" is as varied as the applications of Percentage. Each development of any subject is co-existent with superior judgment (plus * * * ) and unquestioningly penmanship is made an exception by * * *

And now, the child is gliding over pages and "rice paper," paper, which, to a marked degree, is permeating the written lessons. (Lessons written at first, mainly with the fingers), and demonstrating that the large and small muscles can act in union, can always equal proportions.

The leading power in the beginning, in time, becomes a modest factor, but the stroke has not lost its savour. Because you cannot see it in general consumption, is no sign of its absence. Different individuals imbibe in different degrees, till they learn by experience that a "pinch" is all that is necessary. So with the child, by constant repetition, the combination is effected and "just how," may remain a mystery. Nature responds proudly to intelligent practice in any field of art, and when once the key-note is discovered the recipient has reasons for rejoicing. Because the Lord High Executive dashes off with the speed of the wind his lightning bolts, (which to you dear, deluded mortal, seems to come from the Arm alone) you afterwards conclude that just what you see the leading power, (?? ??) and the requisite qualifications in our art. It is as delusive as the movements of the prestidigitator, and unless you are imbued with the secrets, you will deceive every time. Let us not deceive ourselves. These implements of war and subjugation, can be made far more powerful if rightly manipulated. While courage depends very much upon the mode of defence, the man behind the gun must be thoroughly informed in the art of war.

In descriptions and directions, the minute is often left to the discretion of the recipient. While a few may interpret the real meaning and profit by it, the mass are blind, to all except what is on the surface. Because you can't see the "action" of the fingers in rapid execution, you cannot conclude it is not present.

The eye always contains "salt," but no house wife was even put to try in any.

---BECOME A STENOGRAPHER---

We teach Shorthand, Typewriting, Etc., successfully by mail. Best and most popular system taught by up-to-date method. Typewriters furnished with Typewriting course. Low tuition and thorough instruction. If you are interested, write us for full particulars. Address: FISHTON, Ill. Central Correspondence School.

Bachler's Practical Exercises in English
Hill's Foundations of Rhetoric
Maxwell & Smith's Writings in English
Hefley's Manual of Pitman Phonography
Clark's The Government

American Book Co.,
PUBLISHERS,
CINCINNATI, OHIO.
"Penman's Art Journal Library, Volume 1: Ornate Writing" published by the National Penmanship Press, No. 206 Broadway, N. Y. City, is the title of a publication comprising a compilation of specimens of ornamental penmanship in the form of letters, capitals, versæ, etc., contributed to the Penman's Art Journal during the past twenty-five years by noted penmen of the country. The book is nearly 9 x 12 inches in size, and contains forty pages, with manila board cover. To professional penman the work is of special value in that it contains a collection of specimens easily referred to, and to amateur penman it is valuable in that it contains some of the best possible examples for imitation. Price 60 cents.

"The Ideal Arithmetician," a manual for self-instruction by L. B. McKenna, L. L. D., Quincy, Ill., is the title of a very compact yet extensive book of one hundred and ninety-eight pages bound in flexible covers. The object of the book is to place in the hands of aspiring young men and women a manual with which to train their minds to work with modern business conditions, especially concerning reasonings and the application of figures. The largest set, 11 x 16 inches, was next advised all interested to write for further information.

"Complete Shorthand Manual for Self-Instruction and for Use in Colleges" by Alfred Day; published by the Burrows Bros. Company, Cleveland, Ohio, is the title of a two hundred and fifty-page manual of Pitmanic shorthand. The book is certainly well gotten up, and is recommended as one of the leading books of its kind. Those interested in the latest and best shorthand methods will do well to investigate this publication.

"Ames on Forgery," by Daniel T. Ames, San Francisco, Cal., is the title of a book all teachers of penmanship should have. We called the attention of the public to this work some two years ago, but we do so again to direct the notice of our readers to a good thing. No one stands higher on the subject of forgery than D. T. Ames. All interested will do well to notice his advertisement in this number.

"Three Sets of Capsules," photo-engraved from the master pen of A. J. Taylor, C. S. Jackson, Columbus, Ohio, publisher. Price, 50 cents. A very fine job of work, 11 x 16 inches, was made by Mr. Taylor shortly before his death and is the finest set we have ever seen from his marvelous hand.
SPECIAL OFFER
To Teachers
and Students
of Perspective Drawing
A few sets of our new work on "Linear Perspective," for self-instruction, will be furnished complete in the original plates on heavy bright board as follows:
Send One Dollar for Your Order
and we will send you the set of plates containing everything that is in our $10.00 edition. If you find them satisfactory, send us $1.00 more and we will send you the set in full; otherwise return them to us and we will refund your dollar. Isn't this fair?
We think so, and know you will be pleased.

The Agency receives many calls for commercial teachers from public and private schools, and business colleges.

W. M. O. PRATT, Manager
The Question of Supervisors

One of the supervisor's chief annoyances is the textbook. That is, he frequently finds that he is expected to secure superior results by means of a text not in accord with his opinions. He is not consulted as to what he thinks is right in that particular, but is expected to push the work en-thusiastically and successfully. As a rule the best thing to do is to push ahead with full steam, endeavoring to produce practical results in spite of rather than because of certain text books which he must use. Should he refuse to do this, either the school board will rebel, or the book company. And between the two, he is in a tight place.

Book companies will sell their wares regardless of supervisors. As a rule they have that which they think is best and they will do all they can to get and to keep business. To do this they do not hesitate to buy members where they may to influence their judgment. It is only natural that the book company would antagonize the supervisor who antagonizes its books. The thing to do is to use the books or "light it out if it takes all summer." Supervisors ought to be consulted as to what they desire and they usually are and then held responsible for results. The average member of a school board does not have enough time to determine the relative merits of textbooks. This should be determined by the supervisor, superintendent, and committee of principals.

All of these things but emphasize the need of supervisors; of supervisors who are intelligent, skilled, and strong enough to win in the line against unenlightened or moneyed opposition. Much trouble along these lines could be avoided by the employment of tact. Were the writer appointed to a position as supervisor his first efforts would be in the direction of pleasing the child, the teacher, the parent, and the school board. He would do this with a view of gaining and establishing confidence. After that he would then endeavor to secure textbooks to his liking, and as a rule success would crown his efforts. The right text book is seldom the one that wins.

Textbooks are important, but between a good text and a poor teacher, or a poor text and a good teacher, the latter combination is the better by far of the two. But, better still, is the good text and the live teacher.

Supervisors themselves are sometimes at the bottom of this textbook business. They sometimes have books of their own which they wish used for the money they may make out of it. Naturally this looks suspicious, and the school board really does not know whether the supervisor is bent on results or riches.

The average supervisor succeeds in securing what he desires by tactful methods, and no one has a better opportunity of winning popular approval if he desires. This he can do by displaying the work of his pupils at public gatherings, conventions, etc. Displays of penmanship and drawing stimulate interest and arouse enthusiasm. Classes in music and calligraphy are in demand at entertainments. Through these and other means the work of the supervisor may be shown for what it is worth.

This is a pen sketch of Mr. Dave Parkinson, the illustrator, who is responsible for our new heading for the Department of Business Education. It easily discloses, as does also the above sketch, that Mr. Parkinson is doing up-to-date drawing and designing. He is a native of Canada, attended the Zanerian in '90, and has since been employed in Columbus, Detroit, and Cleveland. Doing the work he can do best, Mr. Parkinson owes what he has largely to industry and optimistic perseverance. He is possessed of a fine physique and good health which in turn are in part at least responsible for his congeniality. You'll have the pleasure of seeing more work from his head and hand in the Business Educator.

PROOFREADING AND PUNCTUATION,

BY G. E. CRANE, MINNEAPOLIS, MINN.

The foolish and obtuse are often deceived by others, the shrewd and quick are often deceived by themselves. Without that best of all qualities of the mind, common sense, there is little to choose between the two.

There is not so great a fool on earth as the civilized man, when he is one.

G. P. R. James.

BY T. COURTNEY, PROVIDENCE, R. I.
At a Special Meeting
of the Board of Directors of the

UNION SAVINGS BANK

EATON, MASS.

held at their Banking Rooms, Wednesday,
February twenty-second, Nineteen Hundred and one,
the following preamble and resolutions were unanimously
adopted:

Lessons in Engrossing, No. 20, by H. W. Kibbe, 181 Tremont St., Boston, Mass.

For second inside page of an engrossed booklet. The letters in the scroll are made without outlining. Use a very coarse pen for the first strokes, and a finer one to put on the finishing lumps and fine lines. The principal line may be on a simple curve if desired. The lines of script can be separated more when it is desirable to cover more space. In a booklet with pages eight inches wide leave a margin of one and one-fourth inches.

Cash must accompany all orders. Prices are too low to keep accounts. Remit by money order, or stamps for small amounts.

Address, ZANERIAN & BLOBER, Columbus, O.
Demand for Sign Show Cards, Advertising Signs, Tickets, etc., is on the increase. The general competition in the display of advertising is responsible for this. Retailers in all progressive cities and towns content strongly for first position in the attractiveness of their windows, and the publicity that can be given to the entire store and goods through neat Sign cards.

Original ideas that will increase business are always rich in opportunity for the alert. From a merchant's viewpoint, show cards and tickets call attention and sell goods that otherwise, very often, would lay on the shelf. Now show cards are assistant clerks. An artistic display card in the window speaks louder than words. The art of show card lettering can be acquired by the student with a reasonable amount of patience, and plenty of practice.

The student who has acquired a fair degree of proficiency in this class of lettering will find a steady and increasing demand for various styles of display signs and cards in any locality. Good show card writers are always in demand, they have no "dull season." Lettering of this class is today a recognized business necessity, and a valuable accomplishment for any young man, clerk, or window-striker in business.

In order to begin practice in lettering soon as possible, we will now get ready for business.

How to Hold the Brush.

The brush or lettering pencil should be held similar to the manner of holding an ordinary pen or lead pencil, except that the brush head should be held in the hand with the fingers, and the handle will lay on the table or desk. This will allow the hand to roll on the fingers without disturbing the pencil. For card work the arm should rest in a natural way upon the table or desk. This will allow the hand to roll on the fingers without disturbing the pencil. For card work the arm should rest in a natural way upon the table or desk. This will allow the hand to roll on the fingers without disturbing the pencil.
Lettering and Designing

Number Fourteen

BY E. L. BROWN, ROCKLAND, MAINE

This design was made and used for a catalogue cover, and it contains much practical lettering and designing.

Suggestions: Size of original about 9 x 12 inches; sketch words "Business College" first, making initial "B" seven inches long, and arrange the bulk of the decoration around this letter. The remaining letters should be one inch in height. Strive to obtain the graceful sweep of the scrolls containing words "Annual Catalogues," "Union," etc. Observe that the curves are well formed and that your design hangs together, so to speak. Don't use profusion of lines in shading around the scrolls and letters. Study the shade lines of the copy very carefully. Observe the points where the darkest shadows occur. The lettering was all executed freehand with the exception of the words "Business College." Many of the letters should be stamped in with a broad pen, and afterwards finished with a common pen.

Students' Specimens

The Rowe College, Johnstown, Pa., held its commencement exercises on Thursday, June 30, in the Opera House, at which time 15 pupils received diplomas, being the largest graduating class in the history of the college.

Messrs. Joseph Lening and D. E. Waitman, who have been connected with Bank's Business College of Philadelphia, have started a school of their own, the name of which is Philadelphia Business College. We wish them success.

Miss Mary E. Baker, the accomplished penman and teacher of penmanship and drawing of Belness Falls, Vt., has been elected to the position of supervisor of drawing in the public schools of Rutland, Vt. We congratulate Rutland upon this accession to her schools.

Mr. E. A. Plummer, penman in the James-town, N. Y., Business College, submits specimens of students' work showing that he is teaching an intensely practical hand, and that they are acquired in the same.

J. S. Clay, penman and commercial teacher in the Bingham School, Mebane, N. C., submits specimens of students' work showing that he is a practical teacher of practical writing.

S. X. Falder, penman in Jones Commercial College, St. Louis, Mo., sent a batch of specimens from his summer class in business writing, which not only disclose splendid teaching and practical writing, but a large school as well. The specimens are among the best we have received at this office, indicating a strong tendency toward individuality, as the specimens are not all alike, and with but few exceptions are all splendid business writing. Mr. Falder is certainly one of our most progressive and practical teachers of writing.

Do you want a better position?

If so, register with us, free, and we will show what we can do for you. We have vacancies in almost every state.

Lessons in Off-Hand Flourishing.

BY

W. E. Norton

Brooklyn, N. Y., 357 Fulton St.

Number One.

It is doubtful if any line of art work requires more practice than off-hand flourishing, and yet in the eyes of some, nothing has less utility. If one begins to practice this branch of penmanship with the sole idea of making money out of it directly, he will very likely be disappointed. But still it has its uses, as the practice of off-hand flourishing is not altogether a waste of time and skill. To that work known as artistic engraving, it is almost indispensable, for nothing trains the hand and cultivates a light touch like flourishing, and the designer who has become an expert in flourishing can lay out a piece of simple or elaborate work with far more ease and dexterity than one whose hand is untrained in this direction. Such work in the designers and engravers line consists in drawing scrolls, curves, etc., and when done with the off-hand movement as used in flourishing it possesses a great deal more life and spirit than when worked out in a slow laborious manner.

Flourishing is used to a great advantage in embellishing certain styles of lettering, Old English and German text especially, and unless done off-hand it never looks right. Thus it is, this much condemned art has its place, and in a way can be made profitable if combined with other kinds of skilful work.

The market for flourishes, swans, eagles, birds, etc., is indeed small, but as the practice of such is very pleasing and fascinating and a fine training for the hand and eye, we will have to touch up on it in the course of these lessons. Writing teachers who can throw off these little designs in a rapid, easy manner will find such skill a great factor in waking up a class and keeping up an interest in the subject of penmanship.

Movement.

Movement is almost everything in flourishing. A bold, free, whole-arm movement, with a strong yet delicate touch is the thing. Fore-arm movement is also used in some of the minor strokes and occasionally the finger movement; a little judgment combined with practice soon tells which is best. Control of arm seems to be the main thing in execution. So much of this whole arm practice is necessary that right here it may be said that it is a great help in blackboard writing, and while one is practicing flourishing he is at the same time constantly bringing into play these movements so necessary for bold, strong blackboard work. Here then is another incentive to practice flourishing, as the blackboard is not always at hand.

Exercises.

It is impossible to do a good piece of work before acquiring strength and precision of movement, therefore practice as much as possible on simple strokes and curves, ovals in particular, as given in the exercises herewith.

Learn to make ovals in every position. Practice also on straight lines, then slightly curved, then combine simple and compound curves and see if you can get harmony, symmetry, and a pleasing effect. You will find it exceedingly interesting when you can make these free, rapid strokes of the pen represent and mean something, then it will be no effort or drudgery to practice, but rather a most fascinating pastime.

Form.

Some imagination and idea of form are just as important as the most perfect control of hand and freedom of movement. Graceful curves and fine smooth shades amount to very little unless well arranged. So it may be seen that in flourishing two very important things are required, form and movement, as when used together beautiful effects can be produced.
In this lesson we take up again the study of texture. As an illustration I have prepared a drawing from one by Mr. D. A. Gregg, one of the masters of architectural rendering. The cut is of an old blacksmith shop, Swanton, Vt. The sunlight effects in this are an exhibition of masterly skill and directness. The student will note that the lines of brickwork are everywhere brought out, while a few of the bricks are indicated quite clearly. This drawing is of an entirely different style of technique from any shown in this course of lessons, and the student will do well to try and appreciate the general tone and feeling expressed in this particular rendering.

I will qualify you at your home to fill any position where...

Modern Art Publications for Artists and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below are sent by mail, postage prepaid.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book, luxuriously printed and bound, containing hundreds of examples and explicit instruction $1.50

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. Contains a large number of examples with fascinating text and instruction. Get this book and go out and learn to see and sketch nature. Bound in cloth $1.00

Light and Shade—A manual on drawing by Mr. Zaner. It contains 48 pages, 5 x 7 inches, of illustrations and plain, simple text. It is just what home students need, and what all others who are not at home in drawing need to make them feel at home. Anyone can learn to draw by the aid of this book. The illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings 50c.

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning, showing the pupil how to make the simplest strokes and to gradually evolve the finished design 50c.

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs, such as diplomas, resolutions, etc., with complete instruction. A substantial book bound in cloth. Sample pages of this book will be mailed for 2 cent stamp $1.50

Progress—C. P. Zaner's masterpiece in flourishing. It represents an eagle, forceful and lifelike, winging himself through intricate curves and branches. It is on the finest of plate paper, 22 x 28 inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great," "It's certainly a bird," are some of the expressions many have made on seeing it. In tube 50c.

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks. Address, ZANER & BLOSER, Columbus, Ohio.
Remington Typewriters

HAVE

1. The most compact keyboard.

Modern Penmanship Publications for Penmen and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low, considering the quality and character of the work. All books mentioned below are sent by mail, postpaid.

Zanerian Theory of Penmanship—A thought provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. Each book of 150 pages, cloth binding ........................................... $1.00

Lessons in Ornamental Penmanship—A work in slip form embodying the 100 mail course formerly given by us, with some extra plates. A thorough and complete work for home learners. 75c.

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical writing yet published ............................................ 50c.

Manual of Simplified Script—A work containing a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequalled ............................................. 50c.

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs, showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best book on flourishing ever published ............................................. 50c.

A COMMERCIAL TEACHER

WHO IS UP TO DATE is continually adding to his information regarding the commercial subjects. One of the subjects that must receive the attention of every competent teacher is Commercial Geography, and the SADLER-ROWE CO. publishes the book that every teacher should have. It will be sent prepaid for $1.20.

MACFARLANE’S COMMERCIAL AND INDUSTRIAL GEOGRAPHY

Is a book of over 400 pages. In addition to the large number of charts, maps, etc., it contains 40 product maps in colors. It contains a mine of intensely interesting information for the commercial teacher and the commercial student.

A TEACHER’S HANDBOOK

Is in course of preparation. It contains a complete outline of the course of study and refers teachers to Government Reports and other original sources of information.

COMMERCIAL AND INDUSTRIAL BOOKKEEPING

“COMMERCIAL AND INDUSTRIAL BOOKKEEPING”

The famous BUDGET SYSTEMS that represent the highest development of instruction in the theory and practice of accounts and that supply practical courses of instruction suited to any school.

Every commercial teacher or proprietor owes it to his school and patrons to supply them with the best teaching helps obtainable. The SADLER-ROWE series of commercial publications are more largely used, more highly esteemed, and secure better results than any other obtainable.

BUSINESS BOOKKEEPING AND PRACTICE

In writing for information, teachers should be explicit in their inquiries, so that we can give desired information. Correspondence solicited.

SADLER-ROWE COMPANY, EDUCATIONAL PUBLISHERS, BALTIMORE, MARYLAND.
Colored Cards.
The Kind that Bring the Dimes.
Something new and they catch the eye, tickle the fancy and loosen the purse strings of your customers. Come in six colors. Great for advertising purposes. Schools use them. Everybody wants them. You write a dozen and each person who gets one out of the dozen will want a dozen. They are just the thing you have been looking for.

Doubling it! Write for free samples and price list.

Opportunity is Bald

behind. You cannot grasp it after it has passed. Seize now the opportunity to put into your school,
books on

SHORTHAND......that presents the Graham system simply.
TYPEWRITING......that teaches the all-finger method, but does not stop at that.
BOOKKEEPING......that is brief in text matter; full in forms and data; and logical in development.
BUSINESS PRACTICE......that is elastic, interesting, and inexpensive.
COMMERCIAL LAW......that was the pioneer in using the "case method" of presentation; that is simple in direction and costs but little.

COMMERCIAL ARITHMETIC, that is well balanced, not favoring any one department at the expense of another; that contains practical work, not puzzles.

ENGLISH......that hits the mark; fascinating, time-saving, popular wherever known.
LETTER WRITING......reduced to graded lessons with incidental work on English and punctuation. Used in the largest schools of the country.

SPELLING......that is in a class by itself. It has called forth the highest tribute ever paid to merit: it has many imitators; but none equals it. The largest schools in every large city in the country use it. Excepting one, it is used in every business school of any importance in Chicago.

DICTIONARY......that is of pocket size, containing 33,000 words defined, syllabified, pronounced, capitalized when necessary, and printed in bold-faced, beautiful type. "A gem of the book-maker's art."

Our terms are liberal. Our books are kept up-to-date. Our customers represent the cream of the trade among buyers of commercial text-books. You will be in good company if you join the ranks of our army that is marching against ignorance, armed with effective weapons. Write to us about your needs, or call at our elegant new buildings on Euclid avenue, when in Cleveland. Address,

"GOOD BOOKS"

Taylor's Natural Method of Shorthand
Third Edition—Revised
This system has been successfully taught in the Manual Training High School, Indianapolis, for the past seven years. It combines the best features of the Graham and Pitman's systems. The method is natural. The learner writes and reads from the beginning. Complete, including reporting style, in one book.

The Nelson Commercial Arithmetic
Revised Edition. By RICHARD NELSON
This thoroughly practical arithmetic has been used for years in the Nelson Business College, Cincinnati. The new edition includes mercantile and business calculations taken from different lines of business. Copious exercises in billing and invoices. Accuracy and rapidity are the end, sought.

Spencer's Commercial Law
Fourth Edition. By EDWARD W. SPENCER
"Undoubtedly the best book for commercial schools." Developed from years of practical experience in the class room. Clear and attractive in style. Chart analysis showing the relation of the various topics. Practical cases illustrating the text.

A sample copy of any one of the above books will be sent express paid to teachers for EXAMINATION PURPOSES upon receipt of fifty cents in currency or stamps.

The Bowen-Merrill Company
Indianapolis, U. S. A.
Important Announcement.

Last May we received the letter herewith presented from Mr. Huntsinger. It caused us to resolve to do that of which we had already given some thought. We immediately entered into correspondence with Mr. Hinman, with the result that he consented to undertake the task of preparing a History of Pennm and early Business Education and Educators in America.

Mr. Hinman is the one man living to do the work, and from what we can determine from the correspondence we have had with him, and from what he has already had from pioneer business educators who are still living, we can assure our readers that a most interesting and valuable series of articles of indefinite number is in store for them.

The work will demand much of Mr. Hinman's time and effort, and on our part no small expense. The profession will be the richer for it. We would advise that you secure each and every number containing the History, as it will sometime be prized beyond price.

MR. C. P. ZANER.
COLUMBUS, OHIO.

DEAR SIR: The Business College Profession lost its historian in the death of the late S. S. Packard. There is no man now living who could write so complete a history of what the Business College Profession has done; its stages of disappointments, prosperity and progress, as could the late S. S. Packard. The point I am about to make is: What may be done in the way of preserving the history of our war horses, or veterans as you would probably call them, in penmanship? There are but few of the old members left, who know details, from the famed Platt Spencer down to the present generation. Would it not be a capital idea to publish in book form a history at some length, with possibly illustrations, of the work and character of penmanship, from the time of P. K. Spencer, Sr., to the present day? The only man that I can recall now, who is able to give that information as it really is, is the person of A. H. Hinman, of Worcester, Massachusetts. Hinman has all this information at his fingers' tips. I believe he could make a readable article on the subject. I am equally sure that the profession would be more the gainer by publishing such an article. Possibly it would stir up the old memories of the remaining few men, who can recall from actual experience, the teaching power of the renowned John D. Williams and William H. Duff of Pittsburgh. It seems to me that such a history should be preserved in type form. I feel sure that Mr. Hinman would be willing to lend a hand in this matter. Possibly L. L. Williams might be induced to write a column or two on the subject. J. F. Mosar of Boston would also be able to furnish some data. I should rather like to see this history written by men outside of the Spencer family. The judgment of outsiders would be better than the descendants of the families. Then there is that inimitable penman, that true type of manhood, H. W. Flickinger of Philadelphia, who could render some exceedingly valuable assistance in giving data concerning the great penmen of the land. Who does not believe in H. W. Flickinger? To me he seems to be the essence of all that is great and good in man. He combines the judgment and skill of an expert with a modesty of demeanor that is not equaled by any other man in the profession.

Now, Mr. Zaner, as an exponent of good writing, of all that goes towards making up the sum total of skill and judgment, you are the man to publish such a history.

May 16, 1902.

I know full well that there cannot be any money in it, but the best things of this life are not purchased with money. You have done a great deal of real service to the profession of the present age, and that of the profession yet unborn. Your name will be handed down to posterity as a progressive educator.

I trust this letter will appeal to you, and I also trust that you will publish in the near future such a history.

With very best wishes for your best health, your business success and prosperity generally. I have the pleasure to subscribe myself,

Yours most sincerely,

E. M. HUNTSINGER.

Mr. A. H. Hinman.

Mr. E. M. Huntsinger.
Lessons in Practical Business Writing

By

N. O. Keesling. CANNON'S BUSINESS COLLEGE.

Lesson 8.

Copy 1: Review reverse oval one space high, then try exercise on capital Q, start with the loop. Copy 2: Start left to the line down, keep loop at the bottom parallel with base line, watch slant. Copy 3: Make round at top, and on base line. Retrace same as small n. Copy 4: Start same as figure 2, make small loop in center. Backslant shows about the right slant. Copy 5: Work hard on the review words.

Lesson 9.

This lesson is to develop capital stems, and if mastered, will assist you in making one third of the capital letters. Start the stem left to the line down, stopping on the base line of the last downward stroke; watch the slant carefully, then try joining the capital stem with the other copies as shown by illustration.

Lesson 10.

Copy 1: Review exercises on capital W, it is a good one. Copy 2: Watch height and width of capital W, and remember that the parts gradually decrease in height. Make turns round at top. Copies 3 and I show two styles of small w. Try to keep all parts the same height. Copy 4: First stroke shorter than the last; watch width; stop the last downward stroke just after crossing the stroke parallel with base line. Copy 5: Keep small letters all the same height.
Lesson 11.

In making capital X, retrace the downward stroke at least half way up. Remember to stop at all sharp turns. Finish with a curve. Small o should be made one third higher than wide. Close it at the top. Figure 5 should have a sharp angle in the center. Join the dash to first part and keep parallel with base line.

Lesson 12.

Try capital Y exercise, making the first part reverse and last part direct oval. Watch beginning and finishing loops in capital Y. They should be made about the same size. Make small a pointed and close at the top. Watch turn at base line. Start figure 6 with a straight line and watch finishing loop. Give the words plenty of practice, watching height and spacing.

Lesson 13.

In capital IF we again make use of the capital stem. Notice how capital IF stands on the line. Keep all parts open and angles clean. Small c is made similar to the first part of small a, with the addition of a little hook at the top. Do not lift the pen. Watch the compound curve in making a figure 7 and make the downward stroke longer than usual.
Lesson 14.

I prefer the last style of capital H, and suggest that you start it just a little above the base line, making sharp angle at top and finish first downward stroke with a dot. The last downward stroke starts with a curve and gets straight as it approaches the line. Curve the upward stroke in small r, make a sharp angle at top, a square shoulder and bring the last stroke down parallel with the first one. Figure 8 starts with a dot and the upward stroke gives it the slant.

Lesson No. 22.

We have for this lesson the capital H, beginning like M. Learn to make the two parts of the letter well before combining them together. Make last part of the H with a downward stroke, pausing at base line and finishing with a small loop, joining the two strokes together.

Fill page after page of the word copy.

Lesson No. 23.

You may begin lesson 23 with the indirect retraced oval, finishing the same with a small flat loop and a compound curve. Drop last part of the 2 in below base line. The 2 may begin with a small loop or small straight line. See how many times in a minute you can write line No. 80.
Lesson No. 24.

Beginning this lesson with the capital I' exercise, which is composed of compound curves. Turns at the base and headlines should be round. Gradually let the exercise diminish toward the base line as you move the pen across the paper.

Finish letter slightly below full height of letter. Line 91 begins with large indirect oval exercise. The capital I' is similar to the I, except that the up stroke is retraced same as in capital A. Practice the words with a full and easy movement.

Lesson No. 25.

We have for lesson 23 the capital I', beginning exactly like the U. Care should be taken in finishing the letter not to get the loop too large. The up stroke of the loop should cross down stroke on base line. Second style of I given makes a splendid business letter. This style of letter is finished on base line, with two compound curves and a sharp hook. A great deal of systematic practice on the words and sentence given will mean a great deal to you in the way of improvement.

To develop the Z we have two indirect retraced ovals combined together above and below base line. Oval below base should be smaller than the one above. Fill several lines of the oval finished with the loop. Make a short pause at base line on downward. Top part of second style of Z is made like figure seven. Write the word Zanerian without lifting the pen from the paper.

Lesson No. 27.

Make light line oval exercise one large space high and make from 125 to 150 downward strokes of the oval per minute. Second exercise is the oblique straight line with connection. Start exercise full height of letter and diminish toward base line. The first part of the W will be found similar to the first part of the X. Make second part of letter as high as first part. Notice that the second down stroke curves slightly at the base line. Last part of letter should be about two small spaces high. Practice each word separately until you can see some improvement before leaving it.

Encouraging Words from I. O. Crissy.

Renewing his subscription to THE BUSINESS EDUCATOR, part of Mr. Crissy's letter is as follows: "I congratulate you most heartily on the change of name of your journal, and also congratulate you on the excellence of your editorial department. Your September number, thanks to the indefatigable work of Brother Gaylord, presents the best report of the Department of Business Education, N. E. A., that has come to my notice, and I thank you sincerely for the very handsome presentation of my address as president.

My extensive list of periodicals since I began my work as Inspector has been rather a heavy draft on me; but I am going to cut off some of them at the end of the year. I take pleasure in enclosing $1.50 for which please enter my subscription to your journal one year, and also please send me a few extra copies of the September number."

Inspector Business Education, Albany, N. Y.

Truly encouraging and appropriate words from one who looks below the surface of things. It shall be our constant endeavor to make our journal so valuable to the great cause of practical education that Mr. Crissy's name will always be found on our list.
Failures in learning to write well are due, to some extent, to the same causes of other failures. "Stick to your text" is an old saying and a good one. Stick to the base line in writing and you will be less likely to write illegibly. Then try to write between the ruled lines, using the eye only to regulate the spacing. See how uniform you can maintain the appearance. Write one word over and over many times until you see material improvement. Do not go from one copy to another until results are plainly noticeable.

Use a rolling movement in finishing the B. Drop nearly vertically after finishing the oval part of R. Retrace the first part of these letters at least half the height of the letter. Join the capitals with a free, retracing, and rolling movement, pausing at the finish of each before beginning the next letter.

Benjamin Runyan, Bennington, R.I.

The figures should be practiced in the order given, first in their natural order, and then according to similarity. The little finger need not slip while making figures; neither do the fingers need to act much. The movement comes mainly from the arm but is modulated and controlled by the little finger resting rather than slipping. Form the habit of making figures simple and intensely plain. Omit the commonly used initial or up stroke to the figure T or it may be mistaken for 7.
Learn to make figures in columns by watching the column as well as the figure while making it. This can be acquired so that neatness and plainness will both be objects of comment. Unlike letters, figures have no relationship by context, they therefore need to be unmistakable, and merely recognizable. Make them so plain that even when you make them hurriedly and under adverse circumstances, they will be legible at a glance.

<table>
<thead>
<tr>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
<td>5</td>
<td>1</td>
<td>2</td>
<td>3</td>
<td>4</td>
</tr>
</tbody>
</table>

These letters are relatively difficult to make well—more difficult than any we have thus far had. In joining the $t$, pause at top before starting down in order to insure a retracing. The $d$ is the same as $g$ except that the second part is the same as $t$ without the cross. The $p$ is on the print order, therefore plain. It resembles a $d$ reversed. Cross the $t$ carefully and never loop it. Close the $d$ or it will resemble $c$ or $d$. Close the $p$ or it may resemble $j$'s.

- Use a free, in-and-out action of the arm in making the exercise above. Then make the forms following it and on the same line somewhat more deliberately. Begin $h$ the same as $t$ and finish like $n$. Begin $k$ the same as $b$ and end it like a capital $K$ reduced in size. The looped $h$ and $k$ are not as legible as the ones given, and these are easier and require less finger movement. In fact, simple forms demand less finger movement than intricate forms.

- These letters are comparatively easy. The construction is simple, therefore easily comprehended. Finish the $K$ nearly vertical, begin it the same as $H$ and finish it like $K$. Practice the exercises with a free and easy swinging movement. Watch the spacing between the small letters and do not forget to "stick to the line."
New Name Pleases Mr. Flickinger.

"I congratulate you on the new title for your excellent journal. It's a great improvement over the old, which was too clumsy. I never liked it."

H. W. Flickinger,

We are pleased to say that the many friends of our journal have been practically unanimous in their approval of the new name. Mr. Flickinger's words are similar to those we have received from a large number of others.

Of course, it should be well understood that all the old features which have made the journal popular will be retained and improved as far as is possible, while new ideas will find full swing in our pages from time to time.

It's Daddy Golder Now.

Born, August 26, 1907, to Mr. and Mrs. G. A. Golder, St. Paul, Minn., a bouncing 82-pound girl, named Mary Edna. All are doing well; the father included.

Men's muscles move better when their souls are making music."

"Truth is the highest thing that a man may keep."

"The way of honest fame is this: study to be, what you wish to seem."

Practical Vertical Penmanship Copies.
The new building at the corner of Wabash Avenue and Monroe Street, Chicago, to be occupied by the Metropolitan Business College, was started July 6th, though August 8th the twelve stories of construction work up, and the sing for the first two or three floors had been laid. The building is to be completed by February of the Chicagoans generally. The next time the Federation meets in the image, the public will be in the largest building on Wabash Avenue, north of the famous Auditorium.

We found Brother Gregg away, as an Irishman might say; Mr. Young was on a trip of inspection to Bloomington, a number of his fellow members of the Chicago City Council, observing how people lived in the right and Rural Life in Crawford (Chicago), has a rapid transit problem to some of his friends jokingly say—was just starting for a Prince Henry stay to before school and after school, or a C. W. Kint, the genial shorthand man, was visiting New York. Mr. Fish of the Gregg schools shows very substantial growth at the end of its first year under the principle of expansion.

D. B. Williams, formerly with Orr & Brothers, now with the Department of Education, opened up a school of his own in the uptown district.

J. F. Fish, whom many of our readers have not met, is a convention speaker opening up a school this fall on the North Side. He is in good company with the Metropolitan Business College.

Cleveland is smoky, Pittsburg is smoker, and Boston is second. In the business districts they are each too miserably crowded. After leaving the city, especially on Wentworth Avenue, the sights, sounds and smells combine to make an indescribable sensation without regulation.

Chicago has the "soliciting" disease in the home of a Mr. Newtin. The principal of one of the largest schools said that he felt sure there were some one hundred five or six solicitors in the field there during the first week in August.

Another principal of one of the large Chicago schools said that he of his personal acquaintances, his own daughter, his son and his son-in-law, had been soliciting. He had planned to take a few days off on the street line before last day, just after luncheon, when he had settled himself for an afternoon with one of the latest books, a man called and spent an hour with him laboring to persuade him that — Business College was the best in the city; just as his interest, after this inter-ruption, began to take hold of the store he would visit on the street line the next two. He put in an earnest half-hour with
this misguided father, and then took his departure. Evening was drawing on, and the irritated patient vented his misgivings in malapologies on the business colleges and their salesmen, once more turned to his pillow. He woke up from his sleep before dressing for dinner, but just as he was starting for the dining room bell, the skin of his head began to burn. Turning to the front door, he met a strave gentleman who apprised himself of So-and-So's Business College. The fond father caught himself in a sudden convulsion, and the burn became intense, while, with piteness strictly feared, he looked into his second face, waved it, and blushed and...
The auditor should not spend all of his time, as many do, in looking for the third-class of errors, as this is the kind he is least likely to find. Ninety-ninth of the crookedness in books is perpetrated under cover of the other three kinds of errors. Defalcations are generally committed by persons who thoroughly understand the books of the business, and these defalcations are so cleverly covered up as to tax the skill of the auditor to the utmost. This fact should be kept in mind, and where fraud is suspected he should be more careful in critically examining every transaction in detail; every erasure, alteration, cross entry, and interline should be carefully examined, for every dash, dot, or character may have a meaning.

Qualifications of an Auditor.

It is not an easy matter to state just what the qualification of an auditor should be, but the qualities that go to make a successful auditor may be briefly indicated. Undoubtedly the higher his educational attainments the better, but, in addition to this, a special knowledge of the particular duties and responsibilities is absolutely necessary. He should be a man of reliable character, having good judgment and plenty of "back-bone." He should be a man of uncomprising integrity, acquainted with his duty and willing to do it without fear or favor. He should thoroughly understand financial and business matters, and have a working knowledge of the principles of political economy.

So much depends upon the skill and judgment of an auditor in the infinite variety of circumstances with which we will be confronted, and there are so frequently occasions when he may be called to demonstrate his views, that a special training for such duties will be found invaluable. He should therefore have a thorough knowledge of bookkeeping in all its phases and be a good accountant. As an accountant it is likely to be a good bookkeeper, but the bookkeeper may be far from being an accountant. The bookkeeper may be able to do only routine work such as posting, etc., but may not thoroughly understand the principles of bookkeeping, nor the bearing of one account on another, nor the relation between capital, revenue, etc. Such a man would be of no use as an auditor; he works mechanically and not by principle, and his accounting knowledge extends no further than the requirements of his particular set of books. It is a common thing to see auditors appointed by trading and financial communities, societies, churches, etc., who know absolutely nothing about the science of accounts, nor even the principles of conducting an audit; the main qualification would seem to be that the particular person appointed had a "pull" with the officials or that he had exhibited at times an aptitude for figures. No one will dispute the fact that there is absolutely no substitute for ability, nor for the assistance of the auditor, and that sooner or later the clash will come which will show conclusively the falsity of such appointments. Where two persons conduct an audit it may be sufficient that only one of the two be a professional, while the assistant be a man capable of doing accurate checking, etc., but it must be understood that the audit is under the direction of the professional.

In England it was necessary to serve an apprenticeship of five years under articles with some reputable public accountant before being entitled to the distinctive title of auditor. While that is not required on this continent, it behoves the person who aspires to the position of auditor to secure as much practical training as possible with some good firm, as bookkeeper, and later to engage as assistant to some professional accountant in order that every detail of the work may be mastered.

The next article will be devoted entirely to the details of an audit.

The Education of a Stenographer.

Paper Read by Mrs. N. L. Veenefiek, Principal Alpaca Business College, at the Ninth Annual Convention of Business Education, at the National Education Association, Minneapolis.

As seventy-five per cent. of stenographers are employed in business offices, the opinion of business men and teachers as to the fitness of young women to undertake the equipment of a shorthand secretary or general office annamnestic is of first importance to us in determining the essentials of a stenographer's education. The employing public, while the schools lay down a standard of requirement which is steadily moving upward, and the schools training in this particular branch of practical education fail in their duty if they do not elevate or sustain their standards, as well as test and increase their production in proportion to the advance in the demand. As indicating how high that standard is, I insert a few of the replies I received last month from a number of prominent business and professional men to whom I addressed these questions—

Some Practical Questions.

1. Wherein do stenographers most frequently fail to meet the requirements of business offices?

2. Why do you place the responsibility for these defects?

3. Considering a practical course of stenography, what would you advise as to:
   a. Content of curriculum.
   b. Speed requisite in both shorthand and typewriting.
   c. Tests—in other words, what proficiency would you require for a certificate or diploma?

Some Thoughtful Answers.

The President of a corporation which has made itself felt in trade matters this past year, wrote: "A stenographer should, first of all, be intelligent, quick to catch the language and meaning of the dictator, rugged in spelling, and use of good English, able to punctuate, type, and make short-hand notes, etc., and arrange it pleasingly without being told. She should at least know the elements of bookkeeping, and be able to make ledger book entries, classify and file letters and papers so that she can produce them without delay. The ideal stenographer for any business man's office, must be neat, methodical, and secretive. The stenographer who does not understand that the secrets of the office should never pass beyond the office door, is dangerous. Schools should train particularly on this point. Also, a business stenographer should be good in figures and ready in the correction of errors of all kinds.

Who is to blame for the great number of inefficient stenographers? The schools. They don't require enough special as well as general training, and of time is too short. It should certainly take as long to make a good stenographer as to make a good dentist, civil engineer, etc.

Another wrote: "A good stenographer is one who can spell. The stenographer who is generally well informed. Shorthand without a good English education back of it simply qualifies some young man or woman to be an aggravation—a thorn in the flesh to be endured. It is a hard problem for the 'steno' who, in transcribing a recommendation of our head chemist, made the statement, 'He is a thinker,' read 'He is a thin cur.' Can you teachers weed out such stuff material? It seems to me this is where your duty lies."
A lawyer wrote: "As you know, I lean decidedly to the culture requirements of a stenographer's education. Thorough drill in English, composition, business forms and on-tons, legal papers, and a general knowledge of English literature and history, and familiarity with the elements of the sciences which are such an important factor in the business of today, are as necessary to the stenographer as ability to take dictation, shorthand, and typewriting.

Here is the opinion of a successful teacher of shorthand: "I wish to think of the profession of stenography seriously—as a distinct business venture, rather than as a temporary step in the public schools. Better! A groundwork of English, composition, spelling, and punctuation must be had by every stenographer. In addition to these, for the better class of positions, a considerable knowledge of bookkeeping, familiarity with business papers, and a great deal of information of a general nature, increase a stenographer's usefulness very greatly." And another wrote: "The crucial test of knowledge of English is composition. One who can read good literature intelligently, and can write English with purity, force, and clearness, has a sufficient command of the language to meet the needs of anyone except the professional instructor."

In the light of these replies, and from what we hear and read on all sides, we have a pretty good basis from which to figure out the essentials which should enter into the training of a stenographer.

Native ability, the quality known colloquially as "gumption," scholarship; these are the things required to make stenographic service effective. Not the least important of these requisites is "gumption," used in the sense of ready perception and discrimination, quick discernment, acuteness, common sense. The stenographer who has not "gumption" is a nuisance, and the uncultivated one, an asset on the part of some school.

But what shall we do with the students who lack this sense of the relational things? Don't try to make stenographers of them; that is just to something else, keep them at other work until the quality of "gumption" is acquired. In this day of liberality in school matters, there is seldom any excuse for mistake in the selection of the trade or profession best adapted to any student's particular abilities, acquirements, and the time at his disposal.

No matter what other sins we may have to answer for, let us see to it that turning out poor stenographers isn't one of them. There is no sense in it, no cause for it. Young men and women who haven't gained this respect than the public schools, and the teacher of business subjects who does not feel that his responsibility is first, always, to the profession he represents, falls in that highest attribute of a teacher—its which makes for character in his students.

STENOGRAPHY SHOULD NOT BE OBLIGATORY.

Business education within the scope of secondary schools naturally divides itself along two lines, bookkeeping and stenography. Necessarily, these two courses of study overlap, and there are those who advocate that, especially in the public schools, there shall be only the one commercial course, made up of bookkeeping and correlated branches plus stenography and typewriting; but it is but fairly to the students who wish to prepare for positions as bookkeepers only to make stenography and typewriting obligatory. Ability to do business and record business are the requisites of the bookkeeper or business manager. The successful bookkeeper need not be able to write shorthand nor operate a typewriter, but the successful business stenographer must be footed in bookkeeping and business practice, commercial paper, etc. Hence, it is the stenography course, which, in the secondary schools, should require the longer time and greater preparation.

THE MARK STECNOGRAPHER IN DEMAND.

Especially is this true of male stenographers. Last year the employment department of the prominent typewriter company placed 1635 stenographers in seven of the largest cities of the United States. Of this number less than twenty nine percent, were men, although the number of calls for men stenographers to replace women agencies alone toped up forty per cent, a fair average of the discrepancy between the demand and the supply for this kind of stenographic help throughout the United States.

The Government pays men stenographers $1200 a year at the beginning, which is increased to $1400 in six months if the service is satisfactory; but even at these figures, Uncle Sam cannot secure all the men stenographers he needs; and the demand is equally great from business and professional offices.

This demand for men stenographers does not indicate any desire on the part of the Government or of business or professional offices to supplant women stenographers. Last year's marvelous increase in the number of women stenographers placed in good positions indicates that stenography has opened up to women a source of permanent as well as profitable employment; but there is a class of stenographic work for which men are especially desired, and it will be matter for congratulation if the public schools are more successful than the private schools have so far been in inducing young men to fit themselves for amanuensis work.

By making the course sufficiently thorough on the side of business training, the stenography course should attract both sexes equally.

A SUGGESTIVE SHORTHAND COURSE.

I herewith submit a course in stenography, which, probably, will require two years of high school time, because of the long vacations, short hours, and class-plan of work.

Stenography—Theory of stenography, according to system used. After the textbook part of the work, with daily drill in phonetics, carefully planned dictation exercises leading to accuracy and speed in taking and transcribing business letters, literary, legal, scientific, and historical matter, contracts, specifications, etc.

Time—Throughout the course.

Tests—1. Ability to take new matter easily at a minimum rate of 100 words a minute and read back in the same time.

2. Ability to write from memory from 500 to 750 words of new matter, covering a wide range of business subjects, general information, legal papers, contracts, ordinary correspondence, etc., and to make correct typewriting of the same as given in the typewriter in not more than four hours.

3. Ability to take lectures, sermons, testimony, depositions, etc., and to transcribe same correctly.

Typewriting—Expert or piano method (correct position; proper stroke; location of keys not dependent on sight; use of all the fingers; continuous movement of the carriage, the hands writing as the eyes read.) Word per minute rate of leading machines, plain copying, copying from rough draft, legal and business papers, invoking and tabulating, making carbon copies, duplicating processes, letter press work, indexing and filing, writing from dictation, speed drills, arrangement of subject matter as to..."
Headings, margins, spacing, paragraphs, etc., and adjusting the matter to the size of the paper.

Practice—Practice daily throughout the course to insure muscular endurance, quickness, and accuracy of sight in following copy, and keen development of the sense of location.

Tests—1. Ability to copy plain manuscript or typewriting at the rate of thirty-five words a minute for one hour, the transcript to be well arranged, accurate, free from errors or faulty typing.

2. Ability to write accurately from dictation, a book, or a newspaper, at the rate of a minimum of fifty words a minute.

Bookkeeping—Thorough grounding in the elements of single and double entry bookkeeping, business practice, simple transactions, and the correct handling of ordinary record books, business forms, practice in making deposits and keeping bank account.

English Language—Spelling, pronunciation, word study, composition, punctuation, business grammar, special rules, grammar principles, dictation, synonyms, essay writing, and structure of the paragraph, impromptu writing, proof-reading.

Literature—English and American classics, with particular attention to prose style. Selected reading, as a basis for speed practice in both stenography and typewriting.

Selected plays of Shakespeare.

History and Biography—American, English, general. History, biography, and literature can be handled through dictation, weekly quizzes, and assigned readings.

Arithmetic—Practical problems covering every subject of business arithmetic, daily drills in rapid calculation, speed practice, metrication, money, weights and pay rolls, foreign money, and exchange.

Current Events—Correspondence—Arrangement and style of letters, exercises in correcting, condensing, and summarizing, one letter relating to special subjects, contracts, sales, credit, collections, social letters and forms, telegrams, circulars.

Business Forms and Customs—Commercial invoices, sales and purchase orders, bills of lading and manifests, discounts, securities, collections, filing devices, card index.

Penmanship—A plain rapid business hand. Time, at least one hour a day until proficient.

Commercial Geography—a general survey of the subject with emphasis on the commercial, industrial, and economic geography of the United States.

Commercial Law—Fundamental principles governing the ordinary activities of business; paying particular attention to contracts and negotiable paper, principal and agency, common carriers, bailment, partnership, etc.

Civics—Constitution of the United States; principles of government. Dictation from any good text on Civil Government.

Elective courses—(One course may be chosen; two may be taken if elected in the third year through dictation): natural history, geology, chemistry, physical geography, physics.

Conversation and Impromptu Speaking: One hour a week.  

Electives: To those who have good standing in the principal branches of the courses—algebra, elementary geometry, Latin, Spanish, French or German.

In many schools, this course has been in operation for a little over three years, and has resulted in stenographers of creditable mental development and intellectual power.

The average time for the completion of the course has been fifteen months. We work on the credit plan, and how long it takes any student to get the required number of credits for graduation depends entirely upon himself; his previous preparation, natural ability, application, and the number of hours he works each day. He may, at any time, ask for a transcript showing what subject of the course, and showing the required proficiency, he is given credit.

SHORTHAND COURSES NOW TOO SHORT.

In conclusion, I take the liberty of quoting from a paper by Mr. Charles Victorri before the National Shorthand Teachers' Association last year: "Allow me to suggest a thing which has long been a handicap to school men and educators in stenographic typewriting, and which, in my opinion, should be corrected at the earliest possible moment; namely, that of the too short period of tuition prevailing in the schools throughout the country. Six and eight months is not long enough for a pupil for the work, I believe, the average period now obtaining in the majority of schools. This time is much too short, and especially in this day, now that typewriting has made its way so rapidly it is necessary with stenography, and demanding such careful and thorough instruction."

Training for Business.

Prior to the Civil War, we were an agricultural country. We had as yet scarcely made an impression in the manufacturing world. The industrial system was crude and primitive as compared with today. With the exception of our railroads, we had no great corporations, as we now understand that term, and even then they were not very important, and insignificant accumulations of capital.

The small merchant at the cross-roads was at once producer, manufacturer, and distributor, furnishing the raw material, producing the products, and sending them into the market.

We have in operation two hundred thousand miles of railway, or more than the entire continent of Europe, and our railroads give employment to more than one million men. Of the six billion dollars annually earned in transportation by all nations, we are now earning thirty-four per cent, or nearly double the earnings of England, our nearest competitor. The mind cannot grasp the magnitude of these figures.

Self-satisfaction DANGEROUS to our SUPREMACY.

It may be asked what all this has to do with education—indeed, our unrivaled successes are sometimes urged in evidence of our superior training, and have led to the belief that in education, as in other things, we have little to learn. It is not strange that we have failed to note the need of better preparation for the new problems imposed by our stupendous growth, for that we have indulged in self-satisfaction, attributing our marvelous success in the great struggle which is stirring the nations to our own superior intellect.

We have said to ourselves,—"Surely such results sufficiently vindicate the methods and forces which produced them." We hear much of Yankee ingenuity, and phone ourselves the greatest of inventors, manufacturers and merchandisers. We have come to believe that all this unexampled prosperity is due to the special skill of American workmen, and the superiority of American methods. This comfortable doctrine is lulling us to sleep. No greater fallacy ever threatened the prosperity of a nation or pointed the way more unmistakably to sure defeat; we have persistently ignored other easily discoverable causes of our prosperity. Let us look for a moment at conditions as they actually exist.
Our foreign pupils may surpass their teachers.

It is time that we were disillusioned in these matters. Europe is waking up. England, Germany and France, are putting on modern ways, and adopting machinery and equipments of all the very newest type. They are discovering the secrets of their advancement to the first place in the world's trade. The two elements, namely: raw materials and new equipments, both contributing most largely to our advancement, are already clipped, and we are to be increasingly lettered until, in the not far distant future, the advantages arising from these two sources. When deprived of our advantage in method, equipment, and raw material, we must then stand on an equal footing with our competitors, and be thrown back upon the efficiency of the individual artisan, and our supremacy must be held, if at all, by his superior intelligence and skill.

It is significant how England, France, and Germany have met our menace to their industrial development. Denied the advantages which we have enjoyed in cheap materials and modern equipments, they have addressed themselves to the scientific study of their varied industries, and have established technical schools, bringing to bear upon their industrial system the world's highest scientific knowledge and skill.

Germany offers the most forcible example of what can be accomplished in this way. Fourteen years ago, her young ruler came to the throne. He was met by hostility and the persistent opposition of the powerful conservative element. He was looked upon at home and abroad as an impulsive young man, not to assume the responsibilities of State, yet by his restless intelligence he has overcome every obstacle, and through wise commercial legislation and the fostering of commercial and technical education in his empire, he has forced Germany into the very front rank of industrial nations. This he has accomplished in little more than a decade.

Unless we follow his example, it is questionable if we are to hold our present position in the world's market.

The scientific study of business indispensable to our future welfare.

We hear much about our present industrial system eliminating the need for intelligent operators and reducing the artisan to a position calling for no responsibility or intelligent action. We hear of the operator being "chained to his machine", and "wearied and degraded" - about the great aggregations of wealth denying the individual worker the privilege of rising, etc., etc. No greater fallacy was ever spread abroad and in large measure excused and unconvicted. In no age have we needed greater knowledge, or moral responsibility. There was a time when it could be almost literally said that every man looked after his own affairs, and had the coded right to a large measure executed his own orders and wishes. But with our increasingly complex industrial organization, it is literally true today that the business of the country is too large and intricate for the 

Our industrial conditions demand a higher average of disseminated intelligence than ever before, and conditions which confront us demand that we adopt, and at once, the special educational method which is rescuing England, Germany, and France from threatened commercial extinction, and which are helping them in the front as our powerful and successful rivals.

It cannot be disputed that in view of our recent national expansion, as a result of the Spanish War, our destiny is to be largely determined by our relation to the world's markets. Thirty years ago this would have been heresy, — today it is accepted without argument. Our manufacturing and commerce are to play an ever increasing part in our national prosperity. To neglect or retard either, invites national disaster. To state it in positive rather than negative terms: there is no more imperative duty confronting the American people than to establish conditions which shall not only conserve, but develop to the highest point of efficiency the three great fundamentals of our future prosperity; namely, production, manufacturing, and commerce.

Special education for the males.

Most of our states are now offering complete facilities for the young men who wish to enter the learned professions. The law, medicine and commerce are amongst the most worthy of assistance, and the young men who enter these professions, find the avenues of preparation open to them. In view of new conditions and our rapidly widening national horizon, it is sometimes asked whether the various occupations engaged in gainful occupations in the country, only a little more than one per cent, are in the learned professions (1, S. Census, 1890). The other ninety-nine per cent find their schooling less fixed and less formal in our industrial system. For this ninety-nine per cent, we provide the common schools, and our colleges. It is safe to say that at least ninety-five per cent. never get farther than the frame, and who, paid Alzbeko from a very few technical courses, such as engineering in its various branches, we are doing practically nothing in specialized education for

The United States a storehouse of raw materials.

It must be conceded that during the first century of our national life, we enjoyed simply a healthy normal growth. Our rapid growth, commanding world-wide attention, but the latter part of the 19th century, or from the beginning of that era of invention to which I have referred. The partition of Africa had not yet begun, in fact, that continent was still unexplored, the Dominion of Canada was in a very real sense yet unpeopled; Australia was as yet but a continent of struggling colonies, and the great domain of Russia was still unknown to the outside world. Thus, within, until a comparatively recent date, we have enjoyed the unique distinction of furnishing practically the only source of the world's supply of raw materials. Providence has furnished ready at hand practically, every raw material that enters into our great manufactured products. These are ours. We have over-estimated the ability of the local farmer to cultivate an average forty-four acres, his annual product having a value of nine hundred dollars, and, against thirty acres, for the French farmer, which is worth of one acre than the American produces from three. With the early disappearance of our free lands, and the progressive reduction of the area by the middle, we were gradually losing our capacity for production as at present compared with the continental farmer. In fact, we have already begun to realize the dependence on which we are, to the old and industrial system, as we are in the vast domains of Northern Russia, Western Canada, and Australia. Each year is to drive home upon us the consciousness that we no longer stand as the world's only supplier of agricultural products and other raw materials.

The importance of modern equipment.

A second advantage contributing largely to our unrivaled advancement in manufacture is, our whole industrial system, an outgrowth of recent development, ensuring newest types in equipment and most modern improved methods. Europe, on the other hand, is passing through a transition period, bound by established customs, and to which the newly equipped factory bears to the plant of ten or twenty years ago, which still retains tools of obsolete pattern and capable of but indifferent results.

Much of our success in our world's competition, may be traced to the two causes just enumerated, namely: free raw materials and newest equipments.
this great mass of workers, who are to be the determining factor in our national prosperity.

In every line of business, the ceaseless quest goes on for better help—four men of trained hand and brain, for men of exact knowledge who can deliver the merchant and manufacturer from the slow and wasteful process of education through which his helpers and operatives must pass. Every man in business knows that the problem most difficult of solution, is the procurement of competent help, and that the growth of his business is to be largely determined by his success in solving that problem. What business man has not exclaimed in utter discouragement after some vexing experience with incompetency: "If I want anything done well, do it yourself?"

Every state in the Union should provide for its sons and daughters the highest possible form of instruction adapted to the special industries of that state, and should open to its citizens, without tuition fees, the opportunity for the highest possible attainment in these special lines. This technical and commercial instruction might begin, say in our high-schools, the courses to be elective, and to lead directly to departments of commerce in our great universities, so that the young man who plans to enter the great mercantile institution, or to engage in railroading, commerce, or manufacturing of any kind, may fit himself with all the accurate scientific knowledge obtainable upon the special department of usefulness which he purposes to enter. Divorced from sentimental reasons and placed purely upon economic grounds, no better investment can be made by any state. A single illustration will suffice to emphasize this point.

**Special Education in Minnesota.**

Some years ago the state of Minnesota established a practical school and college of agriculture in connection with her State University. While pursuing the scientific study of all subjects touched upon, the work was of the most practical nature. The young men and women were instructed in such subjects as chemistry of the soil, chemistry of food, care and breeding of stock, dairying, the study of grasses, blacksmithing, carpentering, cooking, sewing, etc. In the one item of dairying, the state has probably been repaid for its total expenditure. Ten years ago Minnesota was not thought of as a dairy state. Today we have 600 creameries, most of them the result of instruction and encouragement from the agricultural college. Minnesota dairy products have, in recent years, taken a larger percentage of prizes than similar products in any other state at fairs and expositions, where, in some cases, nearly every state in the union competed. At the Omaha exposition, she captured more than 50 per cent. of all prizes and against all competitors. Her butter is recognized in Eastern markets and even in London as of the very choicest quality. In one instance, a large New York dealer offered to take the entire output of one of Minnesota's largest creameries and to pay a cent and a half a pound more than the highest market price. The scientific methods resulting in marked improvement of both quality and quantity of the state's agricultural products, is repaying her many times over for the cost of maintenance of this agricultural college.

What Minnesota is doing for its farmers, every state should do for its leading industries. Every distinctive industry should be fostered in the same way and, at public expense, under conditions making these advantages attainable to the humblest and poorest citizen without money and without price.  

**Prosperity Is Based on Intelligence.**

In its last analysis the prosperity of the State must rest upon the intelligence of its citizens. If that intelligence be so fostered by the State as to contribute directly to her capacity for production, she has at once served the best good of her citizens and her own highest interests. The best type of service is that which results from genuine interest. The drudge who follows a daily round of toil having for him no fascination nor absorbing interest, is wearing out an existence but little removed from slavery. The seeds of unrest and anarchy are easily planted in such soil, but the hand that is driven to the commonest labor by an enthusiastic intelligence, is seldom raised to destroy the fruits of that labor. The highest interests of both individual and state demand that our present educational systems be so expanded as to embrace most thorough and comprehensive industrial, commercial, and technical instruction. Our failure to recognize this imperative need must greatly impede our splendid progress toward the world's industrial supremacy, if indeed it does not lose for us the position we have already attained.

**Concerning the Shorthand Program of the Milwaukee Meeting.**

It is the intention of the Executive Committee to so shape the program as to compel the entire shorthand section to take active part in the exercises. The time-honored format does not seem to accomplish this. It is apt to assume ideal environments and conditions in the schoolroom, and thereupon construct an impracticable method. Also, results will be rated by the paltry figures that are discouraged rather than informed and stimulated. It is proposed to treat the association as a class under the leadership of certain selected teachers. Each leader will receive shorthand notes—all the work showing the teacher's markings of errors; also any other practical work that would add to the interest of the exhibit. These exhibits should have the name and location of the school and the name of the teacher conspicuously endorsed upon them. Don't be afraid to send in an honest exhibit If you have troubles, be consoled by the fact that there are others.

It is not intended to dispense with papers entirely; they have their province. Mr. William Whitford, of Chicago, the eminent medical reporter, has promised one. One, however, will have to be written by Mr. Francis E. Turner, of the New Mexico College of Agriculture and Mechanic Arts, on "English-Spanish Stenography," a subject forced upon our attention by the rapidly-growing intimacy of our relations with Spanish-American countries.

The preceding statement is to some extent tentative and subject to revision by the other members of the executive committee—Mr. Jerome B. Howard and Mr. John K. Gregg. However, it will have the effect of stirring up those interested in having a thoroughly instructive meeting at Milwau-keen, and induce them to help the committee with needed suggestions. Who shall lead the class?

The Business Educator

Volume VIII, No. 2
Columbus, Ohio, October, 1892

SUBSCRIPTION PRICE, $1.00 A YEAR. 10c. A COPY.

Change of Address — If you change your address be sure to notify us promptly (in advance, if possible) and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers.

Rates to Agents and Club Raisers

Sent upon application. Whether you are in a position to send a few or many subscriptions, let us know, so that we can favor you with our lowest possible terms and a few sample copies.

Considerating the fact that we issue no partial or cheap editions; that our journal is high grade in every respect; and feature of the cover alone costs hundreds of dollars; that "lessons that teach" a distinctive feature of our magazine; that the art presented is the best ever given in a journal of this nature; and that the department of business education is upon a more comprehensive and truly representative plan than ever before attempted; you will readily see that the Business Educator is not only the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of its Class

The Business Educator being the most popular and widely read journal of its kind, follows that it is also the best advertising medium. It reaches practically all persons interested in commercial education and in penmanship, in both this country and in Canada. It covers the commercial field completely, giving as it does to the heads of Commercial Colleges, Commercial High Schools, Commercial Departments in Parochial Schools, Colleges, etc., as well as to a large number of office workers, public school teachers, etc. The space is sold as for space only — lower than that of any other high class journal published. Wide-awake advertisers will find our column money makers. Write at once for rates.

True Progress.

Progress in writing — in long hand writing like in most things, is the result of slight changes in numerous ways. The use of arm movements makes writing easier in execution. The employment of simple forms makes writing pleasant and swifter. The slighting of slant is the individual makes writing more aesthetic and natural. Allowing one person to write a running style; another person a compact hand; another, a round hand; another, an angular style; and another, a mixture of all, small, heavy, &c., time hand, makes writing individual and human.

To the extent that we encourage individuality in movement and form do we advance the cause of good writing, as there is no way to make a handwriting teacher, for some then, but not for others. Some will continue to use the vertical, while others will use some other standard.

Simplification of form involves one of the true principles of reform.

Movement has been pushed to its utmost. Thousands of the best writers have practically reached all the speed they can be expected to reach, even if there are for many years better trained advocates: one slant advocate; one form for all advocates; one position advocates; each and all are wrong, in that they limit rather than extend the powers of the individual. If these people had had their way, or were to have it, we would have writing by law with injunction lawyers and judges to imprison any one who might decide to write differently.

The true way is to aid the individual to discover which movement, which slant is best for him, and to develop it to the degree of proficiency demanded. The true reformer points in the direction of the individual and not in the direction of his own system. The reformer recognizes that there are many things which enter into and go to make up good teaching and good writing. Not movement alone, not form alone, not position alone, not slant alone, not writing, and the modern teacher recognizes these things.

It is foolish to play on but one string of a violin when there are four for that purpose. A follow of drifting touches upon the various essentials in writing — form, position, speed, etc. Not only does he play upon these elements of writing, but he plays upon this or that element in order, for the time being, to emphasize some essential. Indeed, at times he "harps" upon it to impress it upon the mind of the pupil or to drill it into the muscle.

One slant for all, one movement for all, one way for all are each and all giving way to some one way for each. The individual is being recognized, considered, studied, and developed as never before. Let the good work go on. The Business Educator is not championing but one chiropractic essential (lubricizing it), but all that goes to make up good writing.

Vertical and Simplified Penmanship.

Vertical writing is all right for some persons, but we do not believe in forcing it on all. Some acquire it very easily, while others find it very difficult and incline toward the slant style. We believe in allowing much liberty in this particular and in encouraging individuality. No one slant is best for all, but it seems that there is one slant best for each. Teachers should endeavor to assist each pupil in finding his individuality in this particular. The same is also true of many other things as regards writing.

But the most valuable reforms are not to be found in the problems that concern slant, little slant, or no slant at all. The various slants and the vertical were used long before the vertical question was agitated in the commercial schools. Mr. Beale for some time, but not for others. Some will continue to use the vertical, while others will use some other standard.

Simplification of form involves one of the true principles of reform.

Movement has been pushed to its utmost. Thousands of the best writers have practically reached all the speed they can be expected to reach, even if there is a restriction to the system. And even the efforts of the best and quickest fall far short of the required commercial rate of speed in correspondence, which the typewriter has relieved.

If we wish speedier writing the forms must be simplified.

J. B. Raechtkenricher, of Lafayette, Ind., spoke at the summer session of the Palmer House, Chicago. He did a very good business.

L. E. Dwyer, formerly in charge of the commercial department at Spring- field (Mass.) High School, is this year in charge of that department in the Wayland (Mass.) High School, at a very satisfactory increase in salary.

C. F. Moore, who owns a business school in Marble, Wis., has purchased of E. O. Folsom, the Shelbogian Business College, and is opening a new school in Racine, Wis. Mr. Folsom is connected with the Cream City Business College of Milwaukee.

F. W. Tamblyn, the able penman of Kansas City, spent the summer abroad, returning to this country August 1st. His work while there is good, but his stay will not be long.

L. M. Thorburn, principal of the commercial department of the Paterson (N. J.) High School, spent a part of his vacation in Maine. His many friends will be sorry to learn that he has not been in good health. He is a busy man and his valuable work he is doing will wish him a speedy and complete restoration to good health, with many years of usefulness before him.

N. S. Phelps, president of the Ellis Publishing Co., Battle Creek, Mich., has built a splendid auditorium at Battle Creek, and has recently completed a reorganization of the Malta Vita Pure Food Co., of which he and others have been the principal interest, increasing its capital to $5,000,000. He seems likely to continue in that capacity. Who says business college men cannot succeed in business? Mr. Phelps was for many years the president of the San Francisco Business College, and quit that position to found the Ellis Publishing Co. in Battle Creek.

W. P. Richardson, who has been in charge of the commercial department of The Hedly School for many years, will this year give his entire attention to the Reynolds Law School, which he and Mr. Hedly organized last year.

At the annual convention of the National Shorthand Reporters' Association, which was held in Boston, the late Mr. Beale, of Boston, was elected second vice president. Shorthand training in Boston is very extensive, and the name of Mr. Beale, and those who attended the banquet of the Eastern Commercial Teachers, who were present, will be remembered in the obituary column. Mr. Beale made a very appropriate speech.

Mr. Beale is to be congratulated, as also the Association of which he is an officer.

Jerome B. Howard will be the official editor for the Association this year, and those who take the Phonographic Magazine will seat him, as before, for the articles regarding the workers as well as the teachers in the world of shorthand.

A modest circular comes to us from the St. John's Law School, noting the work of the commercial department of that school. It contains some striking before-and-after demonstrations and several testimonials of some of A. H. Barber's pupils in writing.

We note with pleasure that Col. George Soule, of New Orleans, and his great-great-grandson, Charles Soule, of Toulane University, the Harvard of Dixie. This is the proper spirit of looking contemptuously at the higher institutions of learning,-minded young men who serve a course in these institutions, if it be possible to do so.

The publishing business formerly conducted by B. F. Palmer and Joseph E. McCauley, will hereafter be known as The Commercial Text Book Company, B. F. Palmer, manager. He has been with the Capital City Commercial College for several years, and is well known, as exclusively to the publishing business. We wish the new company the utmost success.
The catalogue of the Cedar Rapids (Iowa) Business College is an attractive one this year, and we are told that the school has the pennant of former students as ordinarily, there are samples of some beautiful work done by students, together with some creditable work done by other teachers and pupils of this well known school.

J. S. Hamilton, of Clyde, Kansas, is now with the Iota, Kansas, Business College.

We learn that Wood's College, Newark, N. J., has the largest summer school in the history of the institution, and that the prospect of breaking attendance for the present term.

A. L. Fischer, formerly of LeRoy, N. Y., is now connecting with the Commercial Institute, Rochester, N. Y. Mr. Fischer is quite a fine penman, and of course, is a supporter of THE BUSINESS EDUCATOR.

Mr. F. B. Courtney, who has been with the Iowa Business College, Des Moines, is now with F. E. Wood's New York Business Schools.

Mr. W. K. Phillips, of the Ohio University, is now employed in the Ohio Valley Business Schools, East Liverpool, O., E. F. Weaver, Pres.

R. J. Bennett, formerly with the Woodstock Business College, New York, is now connected with Peirce School, Philadelphia, in which institution he teaches Commercial Geography, Business Law, Bookkeeping, and Business Methods. Mr. Bennett is a Chartered Accountant and brings to his office a large and valuable addition to the faculty of the Peirce School. As is well known, this institution is recognized as one of the very best commercial schools in the U. S.

Mr. O. T. Johnson, a recent Cincinnati boy, is now associated with the Willow Business College, Fergus-Falls, Minn. Mr. Johnson is a young man of more than ordinary ability, not only in penmanship but in business as well.

We recently learned that Mr. W. G. Ottinger, President, Business College, Woodward, O., is concentrating on himself a life-time ambition to build up and maintain the new alliance the success and happiness due it.

E. W. Van Kirk is a new penman in the Salt City Business College, Hutchison, Kansas. We learn that he is giving splendid satisfaction, and that he is establishing a reputation as a remarkable penman.

Mr. K. A. McDowell, of Newcomerstown, O., is again with the Clergy Business College, Oxford, O. We heard from him as we have from our penman that he is one of our best penmen and that his work as he does a remarkably neat and uniform page.

J. E. Miller, of Swifts, O., is now a teacher in the Business College of Canton, O. Mr. Miller spent his summer at the Zanerian Institute.

On July 31st, 1902, Mr. W. L. Thomas and Miss Lulu Haythorn, both of Wichita, Kansas, were married. We wish them much happiness and prosperity.

Prof. J. E. Bowman has resigned his position as teacher of penmanship at the Actual Business College, Cleveland, O., to accept a similar position in the Edmonston Business College, Cleveland, O.

Miss Nina P. Hudson, of St. Johnsbury, Vt., has charge of the writing and commercial work in Cavanagh's Commercial School, New Britain, Conn. Miss Hudson is one of America's most accomplished lady penmen, as well as a successful commercial teacher.

Appreciative Words From a Subscriber.

"Your journal has been to me a source of gratification and education. Its numbers having been so full of inspiration, intelligence, and help, I feel that a recognition of the earnestness with which the officers of the journal have endeavored to give practical benefit to the profession is due you gentlemen, for your perspicacity, conscientiousness, and thoughtfulness and effort manifested in every number to make it so."

Yours,
H. S. DAN DUNY.
No. 85 Lexington Ave., Brooklyn, N. Y.

The St. Johnsbury Academy issues a very neat envelope-size circular concerning the school. The catalogue indicates that this department is on a par with the best business schools.

"What School" is the title of a splendidly written but rather cheaply printed paper received from School of Business, Big Rapids, Mich.

The Highland Park College Bulletin," Des Moines, is the title of a 32 page circular giving the work of that educational institution.

Those interested in raised letters for sign work will do well to write to W. A. Thompson, Penman, Chicago.

Hesser Business College, Manchester, N. H., favors us with a very neat little brochure giving information concerning that school.

Wood's College, Newark, N. J., is putting out a profusely illustrated catalogue, indicating an unusually large school.

W. L. Staley, Principal of the Capital Business College, for its new location, is issuing some very neat and attractive advertising literature.

The Western Iowa College, Council Bluffs, La., has a new President, W. F. Weaver, Penman, and favors us with an attractive little circular concerning that institution.

Mr. Watt has recently purchased a very neat specimen of a farm and is therefore now sole owner and reports a prosperous year.

Booklets from the Carlisle, Pa., Commercial College indicate that that institution is prospering as usual.

The Smithfield Practical Business College, Richmond, Va., is issuing a 32 page pocket-sized catalogue, containing the merits of that well known institution.

The Northampton, Mass., Commercial College, under Principal, W. F. Weaver, Penman, is putting out a neat and tasteful catalogue concerning that institution.

The Richmond, Ind., Business College, O. E. Fulham, President, W. N. Cassmore, Penman, is issuing an attractive catalogue printed in color, which has a very pleasing effect.

Clark's Commercial Colleges, Covington and Newport, Ky., W. D. Clark, President, and A. E. Hamburger, Secretary, is putting out an effective catalogue, suggesting a high-grade institution.

A "Home Thrust" is the title of a booklet issued by the Nick, for circulars, type specimens, and the like in the interests of McKee's New Standard Shorthand.

A catalogue issued by Linder's Southern Business College, Macon, Ga., gives the impression of a good school. Mr. Herriman, penman of the institution, is well backed as well as a skilled penman. The half-tone illustrated pages of the faculty are poorly engraved and poorly printed.

Huntington's Business and Shortland School of Hartford, Conn., issues a catalogue distinctive for its size, rather than for its content. The size of the book makes it hard to handle the text; high-grade, straightforward, and plain.

One of the best illustrated circulars containing a good variety of penmanship and pen work received at this office came from the Richland, Ind., Business College, A. H. Hinman, Penman, Hinman's Business College, Worces-
College advertising literature has been received from the following:

Elbert Hubbard's "A Message to Garcia" on deckle-edged paper, with an attractive cover, is the high-toned hint that accompanies a circular announcement of the Drake Business Colleges of Jersey City, N. J.; Orange, and Bayonne, N. J. Albert J. Gleason, the president of these schools, is an enterprising business man as well as a successful commercial teacher.

A copy of "Shoemaker & Clark's School News," full of the vigor that characterizes Mr. Shoemaker's work, came to our desk recently. This enterprising school is rapidly forging into the market with a catalogue of 60 pages containing scores of portraits of pupils holding positions, etc., The pronoun "we" seems to be a conspicuous word in its columns.

The Gen. City Business College, Quincy, Ill., D. L. Musselman, Principal, in issuing its 32nd annual catalogue has illustrated a large, prosperous, and flourishing school, the attendance having been larger the past year than ever before with an outlook for still greater success. The printing, paper, and typography of the catalogue we think is inferior to the school it represents or to that employed in the average catalogue received at this office.

The Bay City, Mich., Business College is issuing an "Special Testimonial and Photographic Catalogue," which is thoroughly modern, artistic, and progressive in style.

"Reasons Why" is the title of a little deckle-edge, envelope-size circular issued by Isaac Pitman & Sons, No. 11 Union Square, N. Y. City. Their system has been adopted by the New York High School of Commerce.

The Union Business College, Quincy, Ill., is issuing a thoroughly high-grade, high-tone catalogue of 52 pages, oblong in shape and printed in what appears to be double tone ink. The illustrations are among the best we have ever seen, and the printing is superb, the half-tones appearing very much like actual photographs or photogravures.

Crane & Co., Publishers, Topeka, Kan., are issuing an eight-page illustrated catalogue descriptive of their "Commercial Geography" by Walter II. Olin, J. F. Good, Superintendent of City Schools, Ottawa, Ill., which will do well to address as above.

The Bridgewater, Va., College issues a 68 page gray-covered catalogue, ten pages of which are devoted to advertising the commercial department.

Georgia Normal College, Abbeville, Ga., Messrs. Little & Kuhl, Proprietors, greets its patrons this year with a purple colored catalogue advertising and describing a progressive, practical institution, of which the South may well be proud.

By A. R. Burnette, Bowling Green, Ky.

THE ROYAL ROAD TO BOOKKEEPING.

THE PROGRESSIVE COMMERCIAL SCHOOL WILL USE AND IS USING MODERN ILLUSTRATIVE BOOKKEEPING.

For Particulars Address:
American Book Company
CINCINNATI, OHIO.
The above is one of the many plates found in the New Spencerian Compendium of Penmanship, which is admittedly by far the greatest work on penmanship ever published. This plate is reduced, however, and greatly lacks the charms of grace and delicacy found in the original work. The size of the plates in the work are 7½ inches, and the pages on which they are printed are 9½ inches, heavy plate paper being used. The first cost of this Compendium was upwards of $80.000. It was prepared by Lyman P. Spencer, the finest penman and artist of the five Spencer Brothers, known as the Spencerian Authors, all sons of Platt N. Spencer, father of Spencerian Penmanship. Many regard Lyman P. Spencer as not only the finest pen artist of the Spencerian Authors, but the finest the world has yet seen.

The work is simply a whole-school of penmanship in itself, covering almost every conceivable phase of penmanship. In writing, we could not take the space here to mention the number of styles or attempts to describe the inspiring beauty of each style. Flourishing, lettering, pen drawing, etc., each receives most thorough treatment, giving about each line that has never been excelled, if equalled.

Any one who intends doing anything with penmanship simply cannot afford to be without this work. And, on the other hand, any one who does not intend to do anything with penmanship probably cannot afford to possess it.

The work was published in book form, and also in eight parts, the parts, however, consisting only of the plates, nine plates to each part, and do not contain the instructions, etc., found in the book. A few of the books are still to be had, and all of the parts, excepting part three, can be furnished. It will be but a short time, however, until no more of either the book or parts can be had at any price, as we have in our possession all that remain of both.

Persons desiring to capture a copy of the book, or one each of the seven remaining parts, will find it to their interest to write for further information and terms. Address,

ZANERIAN COLLEGE, COLUMBUS, O.

Merit.

Did you carefully examine the first lesson in Price-Card Marking and Automatic Lettering by W. A. Thompson in our September number? Mr. Thompson is an expert at this business, and his lessons will no doubt be highly appreciated and prove very valuable. Young men and women who closely follow these lessons will find that they can readily turn their skill into cash, as there is continual demand for the best work of this character wherever goods are exhibited in a show window.

This valuable course of lessons was not mentioned in our announcement for the coming year; but then the policy of this journal has always been to give much more than it offered to give.

A New Departure--RAISED LETTERING

For Novelty Signs and Show Cards in any plate color, Gold and Silver Bronzes, Metallides, Flitters, etc. Presents the appearance of fine embossed lettering, but in greater relief and more attractive. In producing this style of work the operator simply manipulates the Air Pencil, as he would an ordinary pen or lead pencil, the raised work or lettering being produced wholly by the pressure of the Air Pencil in the hand of the operator. It is a money-maker from the start. Circulars free to all interested. Headquarters for Show Card Writers' Supplies. Address, W. A. THOMPSON . . . Pontiac, Mich.
Number Eight.

The first stroke of A is an unshaded modification of the capital stem, and can be made either up or down. Start the shaded stroke with a hair line, curve the top slightly to the left, and increase the shade gradually till you reach the base line. Make the oval part last and place the shade high on the oval.

The initial stroke of Y is nearly like the first one of L. Curve the down stroke to the left and swell the shade to the middle. As you near the top with the second hair line curve it to the right, and the last shaded stroke should be curved to correspond with the up stroke.

The oval of Y and U is similar to that of A and O, only some smaller. The shaded compound curve in these letters is alike, except the one in U is much the larger. The capital stem with but little variation finishes Y, while a straight stroke like small t is the final for U.

It would be well to follow the sense of the sentence all through the lesson, for the hand will soon learn to execute that which the mind clearly perceives and dictates.

[When getting this lesson ready for the press, we noticed that the instructions did not agree with the copies. Upon investigation, we found that the copies and instructions in the September issue did not agree, but we will endeavor to make the correction when we run the next plate. Ourselves and not Mr. Stein are responsible for the error. C.P.Z.]

An Immediate Success.

WHEN we predicted that RATIONAL TYPEWRITING would revolutionize the methods of teaching type writing, we were acting on the wise maxim of Hozea Biglow—Never prophesy unless you know.

Although issued so recently—just one week before the opening day—RATIONAL TYPEWRITING has been adopted in many of the best known schools, and orders for it continue to pour in upon us.

WHAT THEY SAY:

"I wired you to send me express sixty copies of Rational Typewriting. It is the most complete publication of the kind I have seen. The arrangement is certainly a great improvement over the old style manuals."—C. E. Howard, San Francisco Business College.

"A great improvement over anything of the kind I have seen. I have always felt that it would be better to begin the fingers already trained than to start with those that are little used."—D. D. Mueller, Bartlett Commercial College, Cincinnati.

"Contains a mine of valuable information and is probably the most complete work on typewriting which has yet come to my attention."—D. D. Mueller, Bartlett Commercial College, Cincinnati.

PRICE ONE DOLLAR. A SAMPLE COPY SENT TO ANY TEACHER OR SCHOOL ON RECEIPT OF FIFTY CENTS.

THE GREGG PUBLISHING COMPANY,
57 Washington Street, Chicago.
"History of Sindbad the Sailor" from the Arabian Knights' Entertainments, printed in the easy reporting style of phonography, in accordance with the "Manual of Phonography," by Benn Pittman and Jerome B. Howard, price 25 cents, published by the Phonographic Institute Co., Cincinnati, O., like all their publications, is printed in the highest style known to the shorthand art.

"The Rogers Compendium of the Graham System of Shorthand," by H. Edison Rogers, published by the Fireside Accounting Publishing Co., Ltd., Battle Creek, Mich., is the title of a text book on shorthand containing upwards of 750 pages. The work impresses us as being first class in every particular. The illustrations are numerous and photo-engraved direct from the pen and ink manuscript. The shorthand characters are sandwiched in with the text, making the book a difficult one to compile and print, as well as expensive. The book is divided in three parts. Part I. deals principally with the presentation of primary reporting style principles. Part II. is devoted to advanced principles, and is intended to be used largely for reference. Part III. illustrates by face-sample notes, with key, the application of all the principles set forth. The same is accompanied by a notebook of review questions to accompany the system.

"The Isaac Pitman Shorthand Instructor" 19th century edition, revised, to 1902 is received, containing 300 pages. It is a compact, high grade, splendidly edited and printed phonographic text book.

Why go to "College" to learn BOOK-KEEPING, when I will make a First-Class Book-Keeper OF YOU AT YOUR OWN HOME

In six weeks for three dollars or RETURN MONEY! I find positions, too, everywhere. FREE.
I have paid at $20 weekly, June 2, one at $25, July 7, another at $30 July 15 and several since. The idea: "My dear Goodwin—My accounting abilities have been tested by you, and I am now earning $30 per week as an auditor for Fred De Fast & Co. Publishers. With a bouquet of thanks for this position which you have obtained for me. I am, with regards, yours sincerely, M. J. Ribbons, 42 Park St., New York June 21st" I place pupils almost daily. Have placed thousands. Perhaps I can place you too! Save this and write,

MUSSELMAN'S BUSINESS LETTER WRITER

A neat, attractive book, fully covering the subject of business correspondence. It is something new. Illustrated with business letters, capitals, headings, etc., written by some of the best penmen in the country.

Single copies sent prepaid, 50c.

Send for sample pages of our Letter Writer, and also price list of our other publications, including PRACTICAL BOOK-KEEPING, HIGH SCHOOL BOOKKEEPING, COMMERCIAL LAW, COMMERCIAL ARITHMETIC, etc.

Lessons in Engrossing Script
NUMBER TWENTY-ONE
By R. W. Hibbs
RICKMANTOWN, BOSTON, MASS.

For third page of an engrossed document. All pages should have the name placed a little above the center of the page when lettering and writing, so that when the balance is taken, a black line of any simple design which was afterwards an end note. Sometimes the paper is divided into several sections, by which the each section may contain a page or two of same sections, may be easily read in a single page. The "Whereas" of each section may be displayed only the first one. For the line shading in upper part of letters in name we use Gillott’s No. 24 pen and for the line ornamental work around name and at end piece, a No. 40.

Modern Penmanship Publications for Penmen and Teachers

In Line of Progress.

MANTEL LAND & BROS.

GENTLEMEN,

We have the pleasure of naming the following line to every one interested in the work of penmanship, which has lately appeared in the line of penmanship. All work intended for the use of penmen and teachers, whether in the line of workmanship or lines of engravings.

Lessons in Ornamental Penmanship written and by illustrated with the work of penmen and teachers.

Companion of Splendid Vertical Penmanship is a work which will be of the most advantage and will greatly assist in the study of penmanship.

Manual of Ornamental Script in which the penman is taught the art of penmanship in detail and the penman is assisted in the study of penmanship.

Land’s Book of Penmanship—a work compiled, containing an entire series of penman’s, of the penman’s element of penmanship, and the penman is taught the art of penmanship in detail and the penman is assisted in the study of penmanship.

Land’s Book of Penmanship—a work compiled, containing an entire series of penman’s, of the penman’s element of penmanship, and the penman is taught the art of penmanship in detail and the penman is assisted in the study of penmanship.

LANELL & BROS., PUBLISHERS, LONDONDERRY, IRE.
Lessons in Show-Card Marking and Automatic Lettering

By W. A. Thompson, Pontiac, Michigan

Number Two.

In this number we will present a full alphabet which will be found very interesting and of practical value to the calligrapher. In beginning, a plain letter well made, is far superior to a fancy letter poorly done. If you have practiced faithfully on the exercises given in Number One, you will now be able to master this alphabet very readily.

Be careful to maintain an even width of stroke in curves, straight lines, etc. This will be found good practice and the foundation for success in all styles of Brush lettering. Use one color till you can do fairly good lettering. Some experimenting may be done and more easily and rapidly executed, but they are more easily read by the general public than ornate letters. When experimenting, begin with the simplest stroke, and take the time to make each stroke in an orderly manner, before learning the letters of any desired size.

Take B of D as a gauge by which to determine the general width of most letters. Take attention to a few general rules, as follows: The first strokes of E and F are precisely the same. Make the top of F as long as top of E. Always place the middle stem of E and F a little above the center. The first stroke of G exactly like C a little wider, so as to allow for short perpendicular stroke and horizontal curve finish. Make H almost the same width as D. The bottom of K should be wider than top; let the second stroke strike the perpendicular stroke a little below the center and have the bottom shunt stroke strike the upper slant as shown in illustration. The rest are all easy when you have mastered this alphabet so far. Note the small figures, these show the order of how the different parts go together to make up a complete letter.

The lower case or small letters given in the illustration will be found interesting, as a few simple strokes make up the set. If the letters are followed faithfully, the learner, in a short time, will be able to form letters free hand without a ruler, compass or any other guide, except the eye. Spacing should be determined by the form of the letters. As a general rule make the spacing between open or curved letters narrower than between full letters. If the letters are full at the bottom, the space at the bottom governs.

Our next will embrace a variety of figures, strong and prominent for general display card and ticket work.

If "the greatest study of mankind is man," then the study of his character is most important, since a man is what his character makes him.

What am I and what are my inclinations? What peculiar traits have my friends? Who are good, and who are bad, and why? Why do the people of a certain type like to do certain things? Who are generally adapted to do certain lines of work? As preachers, teachers, lawyers, authors, lecturers, laborers, and out-door workers? Why are some men hogs, temperate, thieves, criminals.

The book "Character" answers all this and more. It is so comprehensive that the ordinary person can not help but understand its meaning.

"Character" contains more sensible, serious, sound sense than most $1.25 and $2.00 books, but our price for the present is only 25 cents, post-paid.

If you find it isn't all we claim and more, return the book and your money will be cheerfully refunded. Address, ZANER & BLOSER, Columbus, Ohio.

Lettering and Designing
Number Fifteen

BY E. L. BROWN, ROCKLAND, MAINE

Department Headings. "Banking." This style of shading is very soft and pleasing in effect, and is easily acquired. Short vertical lines should be used, and half-shadings avoided. Thicken the lines where the shading occurs. Use a very coarse pen for the darkest shadows. The originals of these headings were made nine inches in length. Study the style and character of the letters in the different headings, then try your hand on other words along the same style of lettering and decoration. Aim for uniform spacing and accurate forms. Trace your pencil drawing in ink by hand.

The Question of Supervisors
Number Six

Politics creep into the supervisor question at times and need to be dealt with tactfully. Such should not be the case, but unfortunately it is in many localities. Where this is the case, it is well to be on the side of the majority, or be "numm." It is indeed a narrow board of education who does not recognize merit, and as a rule the man who attains strictly to his own business wins in the long run. But one of the best ways to keep in the graces of a board of education is to keep acquainted with its members and endeavor thereby to learn of their wishes.

The supervisor, like the superintendent, needs to be a tactful person. By tactful we do not necessarily mean two-faced and rubber backed. By it we mean that he should be quick and keen enough to avoid serious friction and discord. There is a quiet, reserved, cool-headed way of dealing with people which wins where presumption and out-spokenness fail. The supervisor comes in contact with pupil, teacher, principal, parent, superintendent, and member of the school board; and needs therefore to know how to treat these several classes of people advantageously.

The supervisor is needed to enthusiasm the regular teacher. Inspiration can be generated by superior work. Without a supervisor the work in the so-called special branches is apt to be unrelected and dry. By correct supervision the work is carried on uniformly from the first year to the last. The regular teacher will work more interestingly when he has someone to plan the work, and when he knows that her efforts are being watched by a trained eye.

The pupils, too, will work with a purpose when they expect their work will be seen and criticized or complimented by an expert.

If pupils are to be inspired, they must have a teacher who loves that which he is teaching—"one who has that particular branch in the brain." This specialist has. They know one thing well, and are expert in it. By so doing they possess that which inspires others, and that which in spires lends on to something better.
Lessons in Off-Hand Flourishing.

By

M. E. Atkins

Brooklyn, N.Y., 357 Fulton St.

Number Two.

Herewith are given a few exercises for developing control of hand in flourishing. Until a good command of the pen is secured not much can be accomplished in the way of a design. It should be the aim of the learner to make strokes large and small, heavy and light, in all positions, then he can begin to form something that his imagination dictates.

EXERCISE TO SECURE BOLDNESS AND FREEDOM.

Movements.

As a rule, in flourishing, nearly every stroke is made from left to right, though sometimes strokes are made by holding the pen as in writing and using the same movements employed in forming capital letters. The learner should not be guided too much by cast iron rules, but depend more on his own judgment. No two artists work exactly alike, so in penwork no two penmen always work the same. As soon as one finds out the best way for him to do a certain thing, he should follow it up that way. Generally, flourishing is done with the whole-arm movement, but not always; there are many strokes which can be done more accurately with the forearm movement, especially if one has it well under control. In many of the ornaments, such as sprigs, etc., the forearm movement can be used to great advantage, and sometimes the finger movement. So it appears that all movements are necessary. But still the tendency in flourishing is to develop the whole-arm movement more than any other, because this is the movement generally used, and without it not much can be done.

Therefore, in learning this branch of decorative art, keep in mind that skill is only to be acquired by a great deal of practice on graceful curves and movements; then see what you can form by putting them together. Designs elaborate will be given in future lessons.
FINE ART PENMANSHIP BY C. C. CANAN, DUKE CENTER, PA.

**Computation Made Easy.**
Figures don't lie, neither does the Ideal Arithmetic; therefore, it should be the aim of every business man's desk to have a penmanship book of the highest order. It introduces the student to the use of the pen in its various forms of writing, and shows him how to write with ease and speed. It is a valuable possession for every business man's desk, as it creates an inspiration for the solution of problems that come up in every day life. Price by mail $1.00.

ILLUSTRAATING
Taught by Mail
Home lessons by well-known Illustrators. Highly profitable; takes space hours only; practical instruction in Newspaper, Magazine, Book, Br"
Is a work devoted exclusively to the fascinating art of flourishing. It starts at the beginning, showing the student how to make the simplest strokes and exercises, and finishes with a great variety of designs, displaying the highest degree of skill yet attained in this art. Three editions of this popular work have already been sold. The constant demand for an instructor of the very highest order in this branch has necessitated our publishing the fourth edition. This edition is a great improvement over former ones, containing all that appeared in previous editions with much additional matter added. While all of the instructions and the greater number of the designs, are from the pen of Zaner, who has long been recognized as the prince of flourishers, in order to illustrate the treatment of different masters of this art, designs are presented from the pens of the following recognized leaders in this work: W. E. Dennis, E. L. Brown, F. B. Courtenay, M. B. Moore, H. P. Behrensmeier, H. W. Fleckinger, and C. C. Canan.

It is unquestionably the best work on flourishing ever published.

Flourishing, like music, is an accomplishment, and any penmanship lover who has before him this book, paper, pen and ink, will find his hours going by altogether too rapidly.

Price, post paid, 30 cents.

Reforms and Reformers in Writing
Part Two - The Universality of Writing

About the time Columbus discovered America the scribes were evolving a more expedient, and in some particulars, a more beautiful style of writing. Previous to this time nearly all writing was done in the form of printing the letters were of the Roman, Italic, or Text character.

The invention of printing, the first half of the fifteenth century, and the spread of commerce did more than all other forces to transform the detached letters into connective, round hand, script-like characters. For previous to this time and to these events, writing was truly the "art preservative," used as it was, principally for the purpose of creating books that were to outlive centuries. But with these new conditions writing was to be used as a means of communication (principally of a commercial nature) between nations, and for the purpose of creating manuscripts for the printer. Thus it was that a speedier hand was demanded; durability was no more the essential element of writing as printing came to perform that part of thought service.

During the fifteenth, sixteenth, seventeenth, and eighteenth centuries, round-hand evolved from the disconnected, print-like character to a connective, free-hand, graceful, fine art style, perhaps never to be excelled, surely unequalled today. And it is not likely that we shall ever again witness such elaborateness, boldness, beauty, and intricacy as was displayed in script characters during the seventeenth and eighteenth centuries. Writing in print form reached its height in the fifteenth century (for the books that were produced by hand in those days were costly, beautiful, elaborate, and intricate), and writing in script form reached its height from a fine art standpoint, in the eighteenth century.

Previous to and including the fifteenth century but few people could write even their names, or read, not even kings, the scribes, monks, and a few philosophers were the ones who did nearly all such work. Following the invention of printing, the discovery of the new world, and the extension of commerce, people in general began to read and write, and writing then became a serviceable rather than a fine art. As writing began to be employed by people in general, a more simple, expedient style was needed. The intricate, elaborate, off-hand letters gradually merged into the more plain, simple, and speedy; such as were employed by the signers of the Declaration of Independence.

Noted Expert Dead

On August 30th, 1902, Wm. E. Hagan, one of the most noted experts in handwriting, died at his home in Troy, N. Y.

The Onward March of Commercial Education.

Once more the doors of the commercial schools of our country have been opened, and again reports indicate an unprecedented enrollment. Even old and well established schools are figuring an increase in attendance of from 25 per cent to 40 per cent over that of last year. This is encouraging news for the thousands of loyal men and women engaged in the work. It also means much for the cause of practical education. The future of this phase of education never before seen so bright. School proprietors are making money, and, as a rule, teachers are receiving good salaries. This is right. Both should be well paid. The proprietor has capital invested, runs risks, and has on his shoulders no small responsibility. And what shall we say of the teacher? Surely his hands are full, and let it be sincerely hoped that his remuneration will never be so low that it will drive the brainiest and most enterprising into other walks of life.

While the money side is by no means all that should be considered, still it cannot be denied that human nature is greatly influenced, encouraged or depressed, according to financial conditions.

No proprietor makes a mistake in securing the best teachers at good salaries. The teachers make the real difference between schools. One school is better than another, simply because one has better teachers than the other. All things have a bearing, but the teacher has by far the most to do in shaping the finished product of the institution. His influence is the lasting one.

Undoubtedly, a good portion of the future mighty men and women are now in the commercial schools. Great merchants, bankers, financiers, statesmen, presidents, Who knows? Truly the material is worthy of our highest efforts.

Let us rejoice, keep cool heads, work hard in the interests of those entrusted to our care, be cheerful, friendly, helpful, even though our work be heavy and our hours long; improve the school and ourselves all we possibly can, and while the attendance may not continue to increase as rapidly as it has during the past few years, commercial education will have advanced another step, and be capable of bestowing upon humanity still greater benefits.

Commercial School Advertising.

Of course, not a little of this rush to the commercial schools is due to the unusually liberal amount of advertising employed by school managers generally. Never before have their advertising campaigns been so carefully planned, skillfully managed, and so much money spent for this purpose. Many schools in the larger cities have occupied full pages in the newspapers, while the half and quarter page advertisements have increased.

Catalogues, school journals, posters, and novelties have also been used in greater numbers than heretofore, and it is gratifying to note that whatever the shape used the advertisements generally were written on a higher plane than formerly prevailed. In fact, it is now the exception to find in all of this class of advertising matter unfriendly reference to a competitor, while some years ago the opposite was the rule.

While practically all schools used the local papers, a few of the largest entered the advertising columns of journals of the widest circulation. For instance, we find Peirce School of Philadelphia occupying a whole column of the Saturday Evening Post, while the Packard School of New York City uses good space in Success.

Surely business education is now advertised, the like of which has never before been known, except, perhaps, in an individual case and that was in the days of Eastman.

This THE BUSINESS EDUCATOR is glad to note. It indicates a healthy growth of a great cause, which shall never be allowed to revert to an unfavorable position in the educational world.

Any one who gives serious consideration to the matter must conclude that the National Commercial Teachers' Federation Meetings are not as permanently and completely reported as they should be. No one can turn to any one source and receive anything like a full report of its proceedings, because none exist. A number of professional journals now print what are purport to be "complete reports," but which in reality are but abbreviated and garbled reports of the various sections of that important assembly of business educators.

The BUSINESS EDUCATOR's reports of these meetings are certainly up to the average of those published in the other journals, but we are free to confess they do not do the Federation and cause justice. Certain it is that the time is here for the Federation to take this matter into its own hands and publish a full and authoritative report of its yearly proceedings. This can be done profitably to itself, to practical education, and to the profession.

Not only this, it can be done expeditiously by securing copies in advance of all papers to be presented at the meetings. Then all that is necessary will be to write up the proceedings from stenographic notes. This should, of course, lie in the hands of the officials of the Federation as well as in the hands of a committee specially created for this purpose.

This we offer, brethren, and act upon it in time at our next meeting to get such report out after the holidays. Let us put out such a report that educators in general and business men in high positions will recognize that in practical education lies the hope of modern progress. An Official Report is what we are coming to soon or late. Why not be "on time" rather than late in this matter?

The Two Month Term Plan

From a recent letter from Mr. Geo. A. Goldor, of the Globe Business College, S. Paul, Minn., we clip the following:

"Prospects are good and the school is larger than at any previous opening. We have re-arranged our school year, and will hereafter have the year divided into six terms of eight weeks each, giving four weeks vacation, one during the holidays and three weeks during August and September. Thus far this is the only school which is doing this in the Northwest. All other business colleges have a continuous session."

Appreciation Backed by Cash

Mr. C. C. Gaines, President of the famous Eastman College, Poughkeepsie, N. Y., recently renewed his subscription to THE BUSINESS EDUCATOR in a way that does an editor's soul good, and also shows the largeness of his heart. Incidentally, we might say, too, that it shows something regarding his estimate of the value of THE BUSINESS EDUCATOR.

Among other things in his letter we curl the following: "You are publishing a very excellent paper. No copy of it ever comes to my desk which does not interest me sufficiently to receive some attention.

"I hope you are making the enterprise a decided success, to which end I inclose you herewith $3 to pay my subscription for five years."

Best Paper on the Subjects

Mr. V. R. Boyett, Montgomery, La., a subscriber to THE BUSINESS EDUCATOR writes: "THE BUSINESS EDUCATOR is the best paper on the subjects it discusses. Please let me know in due time when my subscription expires, as I do not want to miss a single copy."
Lessons in Practical Business Writing

BY

LAWRENCE, MASS.

N. O. Keesling. CANNON'S BUSINESS COLLEGE.

Number Three.

Lesson 15

The first part of capital K is similar to capital H. Start last part with a curve and finish with a curve. Join it to the first part about half way down. Small s should be made pointed at the top and kept full and round. Figure 9 is made similar to small a with the addition of a straight slanting downward stroke. Figures 7 and 9 are made through the line.

Lesson 16

We make the first part of capital Z a capital stem, retrace slightly in making the loop. Try small t. Exercise retracing as far as you can without using the fingers, then cross them, keeping cross stroke parallel with base line. Close figure 9 at top and watch the width. Devote about two pages to the words in each lesson, making them in columns and keeping work neat and clean.

 Participants in the forum are currently discussing a variety of topics, including...
Lesson 17

The capital U exercises are valuable movement drills, and I would suggest that when beginning each lesson that you devote some time to the practice of the exercises in that lesson. Make small r round at bottom and finish with a curve similar to that seen in the mouth of a pitcher. Bring last downward stroke of small d down to the line, and make it with a firm stroke. Now review the figures, making them small and neat.

Lesson 18

Capital U is made round at the bottom and the last part sharp at top. Keep downward strokes parallel. Small p is made without lifting the pen and the last part closed on base line. The exercises will aid in development.

Lesson 19

The last downward stroke in capital Y is a straight slanting stroke. Small j requires exactly the same form as the last part of capital Y, but it is made smaller.
Lessons in Business Penmanship

BY A. K. BURNETTE, ASHLAND, ILL.

Number Six.

Lesson No. 28.

The first stroke of the capital K may begin with either the loop or small straight lines. Second part of letter is two compound curves joined together by a very small loop. Finish K above or below base line. In practicing the words and sentences see that your hand is gliding smoothly over the paper.

Lesson No. 29.

Begin lesson with curve line exercise, with a count of 1-2-1-2, making a short pause at the top and bottom of exercise. Begin second exercise with up stroke of small I, finishing with indirect oval at the top. Exercise 2 begins the same as No. 2. Here we have the direct and indirect ovals combined, together forming the upper and lower part of the G. Finish letter with sharp angle and horizontal curve. Second style of G is finished with downward straight line, stopping on base.

Lesson No. 30.

Begin lesson 30 with the figure eight exercise. From this exercise we develop the down stroke of the capital S. Curve up stroke of letter well. Down stroke should be a compound curve connected with a horizontal curve forming the lower part of the letter. Finish the S with a sharp angle or dot. Try to get your work the same size as copies.

Lesson No. 31.

We will begin this lesson with the same exercise as given in preceding lesson. First part of the F and T is formed like the second part of the capital S. Finish the two capitals with a small loop and compound curve thrown over first stroke. Begin second style of letter like top of figure seven. Spend at least one hour on the word copies.
Lesson No. 32.

Spend from five to ten minutes on the indirect oval before beginning on the capital P. Begin the capital with a compound curve, finishing with a small indirect retraced oval, forming the finishing stroke. Second style of P begins with the up stroke of the capital S. Care should be taken not to get the capital P too wide through the center.

Lesson No. 33.

We will begin lesson 33 with the same exercise as preceding lesson. The capital R is the P finished with a small loop and compound curve; the small loop connecting the two parts of the capital should point upward. Try to write the words and sentence with as much freedom as possible.

Lesson No. 34.

Begin first style of B with a right curve and downward straight line. Care should be taken not to get the loop too large in second part of the capital. Finish the R with a sharp angle or small dot. Second style of B begins like second style of P and R.

We recently received specimens of writing done by the pupils of Mr. J. L. Wallace, of the business department of the Portland, Oregon, Business College which show an unusual degree of proficiency not only on the part of the pupils but on the part of the teacher as well.

Some very creditable specimens of writing have been received from W. E. McLoughlin, of the Fresno, (Calif.) Business College. If we mistake not, Mr. McLoughlin will some day be one of America's finest penmen.

One of the best letters in a professional business hand received at this office during the past month came from the pen of Miss Nina P. Hudson, teacher of penmanship and the commercial branches in Cavanagh's Commercial College, New Britain, Conn.

Mr. O. H. McLendon, President of the McLendon Business College, McHenry, Miss., states that he is highly pleased with the BUSINESS EDUCATOR. He also states that he thinks every aspirant to a high mark of calligraphic ability should read the BUSINESS EDUCATOR. Some specimens of Mr. McLendon's work in the way of flourishing, ornamental writing, lettering, etc., which he recently sent us, show that he possesses much more than ordinary ability for handling the pen.

G. A. Henry, penman in the Central Commercial College, Kansas City, Mo., sends a number of very well written cards, ornamental style. If we mistake not, some day Mr. Henry will be known as one of the finest in the country. The cards do him much credit, indeed.

Mr. W. H. Bergherm, formerly Principal of the Forman, North Dakota, High School, now has charge of the shorthand, typewriting and penmanship in Aker's Business College, Fargo, North Dakota.

A large variety of well written cards is at hand from the pen of Mr. G. E. Weaver of Mt. Morris, Ill., the chalk talk lecturer, penman, artist, etc. Accompanying the same was a letter written with white ink on blue paper, which is the finest thing we have ever seen from Mr. Weaver's pen. When Mr. Weaver entered the chalk talk business we were afraid his penmanship would not hold up, but this specimen would indicate that he is improving.
Lessons in Real Rapid Writing

by C.P. Frazier

Ease

Next to legibility and speed comes ease of execution. If one cannot write with ease and comfort, much writing is inclined to become burdensome and distasteful. The secret of ease in writing is the employment of the larger muscles of the arm. This at first is rather difficult, because the muscles being large and used to performing large and strong acts, they are not skilled sufficiently to perform such small motions as are necessary in such a small and skillful art as writing. By practice and repetition they can, however, be trained to assist the fingers, so that writing becomes what is known as “easy” in execution, meaning by that term that it is not so tiring as finger movement writing.

You will, therefore, do well to cultivate as much arm movement as possible, and it is possible to learn to write with almost pure arm movement. At least learn to use enough arm movement to relieve the fingers of excessive action. This can be easily done by causing the little finger to slip toward the right between letters. Therefore, do not let the little finger rest in one place, but see that it slips freely toward the right.

Now is the time to improve in writing

Make the diminishing N exercise at the top of the above plate with a rapid, easy, semi-rolling, arm movement. Make it at a rate of from two to three hundred down strokes to the minute, and learn to make it orderly and round at the top and angular at the base. Study the form of the N and then make it much the same as the exercise. Study turn and angle, and spacing between words in practicing upon the sentence. Be careful how you finish the w in the first word. Be careful how you finish each word.

Use a rapid, up and down, arm movement in the compact, straight-line exercise given. Then the form following it, avoiding a loop and retracing as far as possible. Study the j, r, and g, as all are quite similar. See that each r has two turns and that the g is closed at the top. Then they will never be mistaken one for the other. Letters should be alike as well as unlike; alike in general qualities, but unlike in some important detail.

Mind your muscle and you'll win.
Aug 28, 1902.

Messrs. Zanes & Blose, Columbus, O.

Gentlemen:

Enclosed find One Dollar for the Business Educator for the coming year. I could not afford to do without it for twice the price. We are very busy here now and the indications are that the attendance will be very large.

Shall try to get you a good club soon.

Yours very truly,

W.N. Currier.

In this plate we have the looped j, r, and g, instead of the retrace forms as formerly given. Practice them. Then use the ones you can make best and like best. In this way you can learn to like writing and learn to write so that others will like your writing. Endeavor to do all work freely. The loops need not be long or large. In fact, they should not be, as they then interfere with the writing beneath.
Philada., Sept 17, 1905.

BY S. M. H. E.
BROKEN ROW, N. H.
BUSINESS COLLEGE.
Impressions by the Way.

While on our annual vacation trip among the schools, during the past summer, we went from Chicago to Muskegon, Michigan, by boat, arriving in the pleasant harbors soon after sunrise. As the air was cool and invigorating, we set out for a pedestrian tour of the city, after a good breakfast at the Wellington Hotel. Having located the domicile of E. G. Bisson, the view and practical head of the commercial department of the Muskegon High School, and swallowed our disappointment at finding him, like ourselves, away from home on a vacation trip, we walked out through the principal residence and business streets, finding the city one of the most attractive small places we have seen. The High School occupies a particularly pleasing building set in the midst of spacious grounds, well kept and shady. Mr. Bowerman, who has an enviable reputation for getting good results in his commercial teaching, is to be congratulated, because of the almost ideal conditions under which he is permitted to do his work.

About nine o'clock we dropped into the office of the Muskegon Business College, where we were courteously received by E. G. Bisson, the proprietor. Mr. Bisson has very pleasant rooms in a modern business block, in the heart of the city. His equipment is up-to-date in every respect and he seems to be conducting a short vacation trip to the summer cottage in northern Michigan; Mr. Parsons’ son, however, showed us about the convenient and roomy building which Mr. Parsons owns and which is used exclusively for school purposes. This school is a type of the more prosperous schools of the Lake and Mississippi Valley states. It gets a good class of students whose age averages probably nearly eighteen years; students who come largely from the country and the smaller towns, having received a fair fundamental training in the public schools and having had to do enough manual labor at home to have developed a considerable degree of “stick-to-ittiveness,” common sense, and ambition to excel. This is the class of young people that invariably receives a welcome by the shrewd business men of our large cities. The country boy who thinks that there is no place for such a him in the city should dismiss his fears in a hurry, for the country boy with healthy body, alert mind, and good habits is just the material that astute business men are eagerly looking for. Here is a school that enrolls from two hundred to two hundred fifty young people of this kind every year, and it is but one of scores of its kind. Is it not an outrage that its printed matter may not have in the mails the same rights that are accorded to that sent out by more pretentious but oftentimes less practically effective institutions? Is not this question now rivalry with mail rates a matter of direct interest to the business man who obtains the product of the business schools, and is it presuming too far to ask for his support in bringing about, in the next session of Congress, action that shall secure just treatment of the commercial schools at the hands of government officials?

Our experiences in Battle Creek were varied and interesting. We “put up” at the Post Tavern, an elegantly furnished hotel, in which the Post Company or its service by any but the most expensive caravansaries of the largest cities. Of course we knew that we should have Grape Nuts and Postum Cereal for breakfast and we were offered Post checks to send to our friends as souvenirs, for this institution is one of many monuments to the industry and business success of C. W. Post, the great apostle of cereal foods and the matchless exponent of the success of intelligent advertising. Besides the “White City,” where the various proprietary articles of food controlled by Mr. Post are manufactured, there are in Battle Creek, to be mentioned, a new, attractive and successful American, a Post Theater, the Post Building, Post Tavern, and Post Street.

But there is another man whose impress has been made and is being made on this home of the Seven-Bay, Adventists. This man is N. S. Phelps, president of the Ellis Publishing Company, of the Phelps Sanitarium, and of the Malta Vita Pure Food Company, whose product is now rivaling those of the Post Company in every market. The magnificent Sanitarium, built at a cost of about $100,000, is capitalized at $150,000; the Malta Vita Pure Food Company is capitalized at $50,000, and at the foundation of all this glittering structure of business activity and prospective wealth lies the business of the Ellis Publishing Company. The plant of this Company is in an unsatisfactory part of the city, in a most uninviting building, but it is the scene of remarkable activity, and the harvest it reaped in the days of its greatest popularity made possible all the business expansion that its promoters have since enjoyed. Besides the publications of the Company which seemed to occupy somewhat a minor place in the interest of the workers, the speedy presses were printing tens of thousands of Malta Vita car.
The Business Educator

Pictorial Pointers

Several months ago we de
cided to introduce this year, as a feature of this journal, a series of views of public and private commercial schools, including buildings, class-
rooms, offices, and equipment. The space for this department being limited, how-
ever, and our report of the Minneapolis con-
vention with our selection of the papers read there, being rather extensive, we have been prevented from carrying out our pur-
pose until this issue. Nevertheless we have been accumulating good material, as the hand-some illustrations in this num-
ter indicate. Subsequent numbers will contain, in pictorial form, other valuable suggestions to alert school men. We have other helpful and interesting features in process of development, but, in accordance with our policy of promising little and doing
much, we shall let the appearance of these special features be their own an-
ouncement.

Legitimate Soliciting

Mr. Editor:

You have requested me to give your readers my opinion of "soliciting" as a means of promoting the welfare of commercial schools. As everybody knows, or should know, the idea of canvassing for pupils did not origi-
nate with commercial schools, nor is the abuse of that method chargeable to com-
mercial schools alone. I was solicited to attend a denominational seminary by a clergyman, who was a member of the faculty of that institution, about forty-five years ago, and he told me a story about the advantages the school afforded and the quality of accommodations those pupils enjoyed who "bearded in," which, as I look back upon it now, seems as strong as the circumstances justified.

Drawing the Line

There is no objection that I can see to a representative of a school of any kind call-
ing on suitable young people and honestly laying before them the advantages pos-
sessed by that school. Indeed, it seems to me a perfectly legitimate and proper
method of advertising a school. There is, on the other hand, every objection to solicit- ing everybody who has the price without reference to age, ability, or attai-
ments. As I see it, no school can afford—to put it on no higher ground—to receive a candidate as a pupil whose mental and educational equipment are not such as to assure his success in mastering the course of study—certainly cannot afford to urge his attendance. One ill-prepared, thick-headed pupil, going out and attempt-
ing to use the knowledge provided by the very best commercial school, will do the school more harm than a dozen bright, successful ones will do good. Everybody with whom the dullard comes in contact is certain to know what school he attended, while the bright one will do his work well,
The Business Educator

as will be expected of him, and no questions will be asked or statements made.

PAY SALARIES, NOT COMMISSIONS

When canvassers or solicitors are employed by a school, there are no bound instructions as to what to say and what not to say, and they should be paid salaries, never commissions. The latter places so strongly before the solicitor the temptation to say the untruthful things that it strains the honesty of a rather right-minded man.

Canvassers, working on commissions, have done irreparable harm to all the schools in cities where they have operated. The injury is to secure teachers from schools which employ them, but that method of advertising, and its inevitably attendant evils, casts a stigma on the business which honest methods practiced by other schools cannot.

The sooner every commercial school proprietor learns that the public hates sham, buncombe, and unwarranted statements, and that it wants good schools at just about their real value, the better it will be for themselves, the rising generation, and the cause of commercial education.

L. L. Williams.

Rochester, N. Y., Sept. 15, 1902.

The Advantages and Disadvantages of Soliciting Students

Mr. Editor:

This subject, I understand, has been argued by college men, and now that you invite me to discuss the question, I presume you want the opinion of a business man, or the business view of it combined with that of the school man.

Soliciting, if done properly, is perfectly legitimate, and is necessary in all lines, but the main objection to solicitors in general is that they are not strictly honest, and for this they are perhaps more to be pitied than blamed. This class of solicitors are shiftless; they work here and there on the surface of the earth, and have no regular call, no office in which they can be seen, no good talkers, and smooth; but they lack permanency, uprightness, and truthfulness, and when engaged in this class of business, calling upon the laboring man, they take advantage of his ignorance, and, in unscrupulous way, represent things to him which the school manager knows nothing about.

UNPLEASANT EXPERIENCE

It is true, I have had considerable experience with solicitors in general, not only in this business but in other lines. If business college men would act fairly toward one another, and not hire those men and take them away from each other, and if the college principal, before engaging another man employed in the city in the same line of business, would have the business courtesy to ask his competitor as to the standing and reputation of this man, if his accounts are satisfactorily closed, and if collection is made in the manner, if he would use his good judgment and decline his services, the unsavory solicitor would soon look to some other source.

We find, however, that college men even endeavor to secure a business name by stealing names of schools, and thereby rob the children of the kind of training they have been accustomed to, and seriously interfere with the progress of such students. There are other solicitors who go from school to school, carrying information from one school to another, and work upon the sympathies of the proprietor and endeavor to secure a situation by gaining his confidence and condemning his competitors and praising the school and the president with which he is connected, and offer to affiliate himself. Such men, who flatter should be carefully watched, as they usually practice deception also.

I know from experience, men who will work for a certain salary under the pretext that they will work faithfully, and at the same time work for some other firm. There are others who pretend they are working, hand in their written reports and such agents, then offer to the college which they claim as the school they have been sent. Such men, as a rule, when discovered, will turn around and endeavor to secure employment with another college in the same locality and then to cover up their track, go about condemning their former employers.

How can such a condition of affairs be avoided? The school that has a good standing and reputation, the man who is honest and has a good character, is run down to the level of a common politician. If the colleges would combine, and keep their word, and not engage men of this class, perhaps better conditions could be secured, but as a rule, in every locality, there are some who make rules and laws with a view of breaking them. It is known that some even resort to such methods to break the contracts of their competitors and instruct their agents to do so, and write articles to be printed in irresponsible papers condemning their competitors, and use such articles against their competitors in competition.

Then again, there are colleges that pretend to teach their pupils how to make contracts and respect them, and then, in their circulars and pamphlets, announce in large headlines, "Do not sign any written agreements when making arrangements to join a school." There are college men, and principals at that, who even endeavor to entice students from another school after they are once seated, contracted, and tuition paid for.

SIGNING CONTRACTS

The last two arguments lead me to write about the matter of signing contracts. Business generally is conducted upon contracts, and personal work is not left to a void any misunderstanding. I find that more misunderstandings arise on account of verbal agreements, than in any other way. A man would say: "I am certain that this is denied. A year ago the agreement was made, and the memory now fails. Unless both parties are reasonable, the misunderstanding sometimes resolves itself into a lawsuit. The memoranda have been kept, and when engaged in the business, with, on the part of the agents, was the promise or guarantee of situations and the offering of books free, etc. We think it well to insert a clause in the contract so that when there is an misunderstanding, and the party who signs the contract will then have no right to complain. Of course, other colleges again offer books free, and personal and are that it is a general rule of all schools. There are many other abuses which can be traced to the agents. I pity the unfortunate fellow who is dishonest, and does not know it, and who is only a boy. I think that business college principals could organize an association, sign agreements, and place their grievances in the hands of a committee so elected to adjust this is undoubtedly which may arise through the solicitors or representatives. If men are bound by an association of this kind, it will not be necessary to draw up legal contracts to protect one's business when attacked by unprincipled solicitors.

The Public Not Altogether Innocent.

The general public is also somewhat to blame. People will twist the least thing said by a solicitor or representative who offers a little assurance in the way of employment, and misrepresent the meaning as a direct promise and guarantee for furnishing employment with the education, and school managers who will allow the business to come to such a level cannot exist very comfortably in a community and place their students upon their own resources, so that those who are really worthy and ambitious should be favored while those who do not deserve a recommendation should be left to look out for their own interests. Such promises also interfere with the discipline of the school, and if a boy feels that the college must furnish him a position when his time is up, he takes things easy, becomes lazy, and is apt to waste more or less of his time, and not work for promotion and advancement.

Another reason why contracts should be entered into, is, that they give experience for the office clerk. They can be employed upon the books and classified as to day or night school business, what course is to be pursued, books sold or loaned, the terms of payments, what day, month, how much, length of time, and what kind of courses.

SUGGESTED REGULATIONS FOR SOLICITORS.

If college men cannot combine and form an association, they should instruct their solicitors to observe some rules like the following:

Do not go to your competitor's place of business and hand out your cards and circulars.

Do not represent yourself as a teacher in the school when you are not employed as such.

Do not fail to hand in the money that you have collected, even though you think that you have something coming to you.

Do not offer books free when the college is not prepared to sign a contract to send books.

Do not guarantee positions to all your patrons. Allow them to try to obtain a place for themselves, and encourage them to do so;

Do not fail, faithfully for your employer, and endeavor to learn his policy and principles of doing business.

If you are employed on a commission, do not misrepresent the business in order to get your commission.

If you are employed on a salary, work just as hard and faithfully as if you were employed on a commission.

Make your employer's interests your own interests.

Do not promise big inducements, short courses, etc., but sell a course for the length of time required to complete the same.

Do not break contracts or discourage people after they have once made arrangements to enter another school.

Do not visit other colleges and endeavor to secure a situation in case you lose the one you are now holding.

In case you leave your employer and work for another party, do not run him down or condemn him. Remember, he has paid you a salary in the past and helped you to earn a living.
Do not make people sign contracts, and as an inducement, tell them that if they do not want to go and do not like it, they can stop at the end of the first month.

Do not be afraid to make a straight sale; represent your business properly.

Try to be honest, sincere and truthful.

Will you?

O. A. Hoffman.

Milwaukee, Sept. 4, 1892.

Business Tips.

George Horace Lorimer.

[Extracts from "Letters from a Self-Made Merchant to His Son," an instructive and altogether delightful series of articles by George Horace Lorimer, that for some months have been appearing in The Saturday Evening Post, and that are soon to be published in book form by Small, Maynard & Co., Cambridge, Mass, to whose courtesy we are indebted for permission to make extracts. —THE EDITOR.]

TO A STUDENT FINISHING SCHOOL.

The sooner you adjust your spending to what your earning capacity will be, the easier they will find it to live together.

There is plenty of room at the top, but there is no elevator in the building.

If you gave some fellows a talent wrapped in a napkin to start with in business, they would swap the talent for gold brick and burn the napkin; and there are others that you could start out with just a napkin who would set up with it in the dry-goods business in a small way and then coax the other fellow's talent into it.

Pay day is always a month off for the spendthrift, and he is never able to realize more than sixty cents on any dollar that comes to him. But a dollar is worth one hundred and six cents to a good business man, and he never spends the dollar. It is the man who keeps saving up and expenses down that buys an interest in the concern.

When a lot of young men get off by themselves some of them think that recklessness with money will brand them as good fellows, and carefulness is meanness. That is the one end of a college education that is pure cussedness; and that is the one thing that makes nine business men out of ten hesitate to send their boys off to school.

The meanest man alive is the one who is generous with money that he has not had to sweat for, and the boy who is a good fellow at some one else's expense would not work up into first-class fertilizer. That same ambition to be known as a good fellow has crowded my office with second-rate clerks, and they will always be second-rate clerks.

The fellow who has to break open the baby's bank for car-fare toward the end of the week isn't going to be any Russell Sage when it comes to trading with the old man's money.

The boy who does anything just because the other fellows do it is apt to scratch a poor man's back all his life. He's the chap that's buying wheat at ninety-seven cents the day before the market breaks. They call him "the country" in the market reports, but the city's full of him. It's the fellow who has the spunk to think and act for himself, and sells short when prices hit the high C and the house is standing on its hind legs yelping for more, that sits in the directors' meetings when he gets on toward forty.

Use a little common sense, caution, and conscience. You can stock a store with those three commodities, when you get enough of them. But you've got to begin getting them young. They ain't catching after you toughen up a bit.

ON COLLEGE TRAINING AND BUSINESS.

Some men learn all they know from books; others from life; both kinds are narrow. The first are all theory; the second are all practice. It's the fellow who knows enough about practice to test his theories for blow-holes that gives the world a shove ahead, and finds a fair margin of profit in shoving it.

I think you'll find it safe to go short on the frills of education; if you want them bad enough, you'll find a way to pick them up later, after business hours. The main thing is to get a start along right lines, and that is what I sent you to college for. I wanted you to learn good mental habits, just as I want you to have clean, straight physical ones. I haven't any sympathy with a lot of these old fellows who go around bragging of their ignorance and saying that boys don't need to know anything except addition and the "best policy" brand of honesty. We started in a mighty different world, and we were all ignorant together. The Lord let us in on the ground floor, gave us corner lots, and then started in to improve the adjacent property. We didn't have to know fractions to figure out our profits. Now a merchant needs astronomy to see them, and when he locates them they are out somewhere near the fifth decimal place.

There's just as many chances for a fellow as ever, but they're a little gun shy, and you can't catch them by any such coarse method as putting salt on their tails.
I’ve always made it a rule to buy brains, and I’ve learned now the better trained they are, the faster they find reasons for getting their salaries raised. The fellow who hasn’t had the training may be just as smart, but he’s apt to paw the air when he’s reaching for ideas.

TO A YOUNG MAN JUST OUT OF SCHOOL.

It’s not what a man does during working hours, but after them that breaks down his health.

A fellow and his business should be bosom friends in the office and sworn enemies out of it.

A clerk in the city is one that is swept clean of business at six o’clock every night and isn’t opened up for it again until after the shutters are taken down next morning.

Some fellows leave the office at night and start out to whoop it up with the boys, and some go home to sit up with their troubles—they’re both in bad company. They’re the men who are always needing vacations, and never getting any good out of them.

You will always find it a safe rule to take a thing just as quick as it is offered—especially a job. When I was a young fellow and out of a place I always made it a rule to take the first job that offered, and to use it for bait. You can catch a minnow with a worm, and a bass will take your minnow. A good fat bass will tempt an otter, and then you’ve got something worth skinning.

Putting off an easy thing makes it hard, and putting off a hard one makes it impossible.

There is one excuse for every mistake a man can make, but only one. When a fellow makes the same mistake twice, he’s got to throw up both hands and own up to carelessness or cussedness.

Seeing the world is like charity—it covers a multitude of sins, and, like charity, it ought to begin at home.

TO A YOUNG MAN ENTERING AN OFFICE.

A business man’s conversation should be regulated by fewer and simpler rules than any other function of the human animal. They are:

Have something to say.

Say it.

Stop talking.

Beginning before you know what you want to say and keeping on after you have said it, lands a merchant in a lawsuit or the pothouse, and one’s a shortcut to the other.

Remember, too, that it’s easier to look wise than to talk wisdom. Say less than the other fellow and listen more than you talk; for when a man’s listening he isn’t telling on himself and he’s flattering the fellow who is.

There’s no such thing as love at first sight in business. A man’s got to keep company a long time and see some early and stay late and sit close, before he can get a girl or a job worth having.

Whenever anyone offers to let you in on the ground floor it’s a pretty safe rule to take the elevator to the roof garden.

TO A NOVICE IN THE OFFICE.

I haven’t any special objection to your writing to girls and telling them that they are the real sugar-cured article, for, after all, if you wouldn’t always be around when customers were — Very few men are worth wasting time on beyond a certain point, and that point is soon reached with a fellow who doesn’t show any signs of wanting to help.

It isn’t the little extra money that you may make for the house by learning the fundamental business virtues that counts so much, as it is the effect that it has on your character and that of those about you, and especially on the judgment of the old man, when he’s casting around for the fellow to fill the vacancy just ahead of you. He’s pretty apt to pick some one who keeps separate ledger accounts for work and fun, who gives the house sixteen ounces to the pound, and, on general principles, to pass by the one who is late at the end where he ought to be early, and early at the end where he ought to be late.

Auditing.

R. J. BENNETT, CHARTERED ACCOUNTANT,
PHILA. SCHOOL, PHILADELPHIA.

The auditor of a partnership or company must certify to the accuracy of the Revenue (Profit and Loss) Statement, Balance Sheet, and Statement of Receipts and Payments before they are presented to the parties interested. To do this it becomes necessary for him to determine the present value of the assets, see that all liabilities are included, verify the details of the several books of the business, and the accuracy of all accounts. The above statements are known as the financial statements, and are usually prepared by the bookkeeper, but they are by no means complete unless certified by the auditor. Should the auditor find it necessary to accept the figures of the bookkeeper, or some other person immediately connected with the business, or should there come to his notice during the investigation any item that the bookkeeper cannot explain to his entire satisfaction, it is his duty to incorporate such information in his final report. And in case he accepts the valuation put upon an asset, such as stock in trade, by some one else, he should satisfy himself that such valuation is a conservative one, but the circumstances should also be given prominence in the report. He should satisfy himself conclusively on all points before reporting, as he is responsible according to the impressions conveyed therein; but in order to make a thorough investigation, the work must not be curtailed nor neglected. When serving for a fixed fee there is a tendency at times to become neglectful and slight much of the work that is especially important. The young auditor will do well to guard himself against encouraging such a habit, as he is professionally capable if he fails to detect an error or fraud by taking anything for granted, providing it comes within the scope of his investigation.

The main object of any business is to yield a return to the parties interested, and as these parties are unable to examine into the accuracy of details, it becomes necessary to engage the services of an auditor, whose duty it is to see that his clients are thoroughly informed on all matters pertaining to the business. He must see that the concern is properly and economically managed, and ascertain whether all regulations of a financial kind have been properly complied with as laid down in the articles of co-partnership, articles of association, resolutions, agreements, the law, etc.

PARTIAL AUDITS.

Sometimes an auditor is instructed to make a partial audit of accounts, and it may be left to his own judgment as to what should be done. While a partial audit is not advisable in all cases, it becomes necessary at times to comply with such a request. In this case the addition of all booklets of original entry should be verified, all exceptional journal entries carefully scrutinized, and the posting to all nominal, representative, and special accounts, both as to aggregate amounts and separate items, should be checked. An audit, to be at all effectual, should include the checking of all cash payments and the verification of the final cash balance. The cash receipts should also be verified if possible, and all securities examined, whether they be on hand or lodged with the bank as collateral.

(Continued in December Number.)
The Federation.

From Mr. E. W. Spencer, of Milwaukee, Wis., Chairman of the Executive Committee of the National Commercial Teachers' Federation, which meets in Milwaukee, December 29, 30, and 31, 1902, at the Spencerian Business College, we learn that the general program is about ready for publication but is withheld at this time because a few changes may yet occur.

On Tuesday evening the banquet will be held, at which time speakers and chairman, J. A. Bruce, editor of the American School Board Journal, and Hon. Geo. W. Peck, Ex-Gov. of Wisconsin, will appear. Those who were in Milwaukee in 1887 at the old Business Educators' Association will remember with relish the Governor's humorous account of his book-keeping methods and experience in his early days as a country editor and job printer.

On Wednesday afternoon from 2:30 to 6 o'clock there will be a joint meeting of the Federation and the Milwaukee Teachers' Association.

From Mr. J. A. Lyons, president of the Federation, we learn that Wednesday afternoon, December 29th, will be devoted to Federation matters. Monday afternoon, will be devoted to sectional meetings. Sectional meetings will be held Tuesday forenoon and the Federation business in the afternoon. Tuesday evening the banquet will be held and Wednesday forenoon the sectional sessions will be in session.

Present indications point to the most successful meeting yet held. The time we think is just right, as it will allow everybody to spend Christmas at home, and as the meeting will close Wednesday evening at 6 o'clock, it will allow nearly everybody to spend New Year's at home also.

On to Milwaukee!

Special Session
Business Managers' Association

In view of the fact that the time for holding the next session of the Commercial Teachers' Federation at the City of Milwaukee will be limited to three days, thus giving the Business Managers very little time to transact the very important business that will come up at the meeting, I have deemed it advisable to call a special all-day session of the Business Managers' Association to be held at the rooms of the Spencerian College, Milwaukee, Saturday, December 27th, at 9 o'clock a.m.

I trust that every Private Business College will be represented at this meeting. Matters of great importance will be considered. It will be to the interest of every school to take part in the proceedings of this meeting. If we desire our business to take on an important and properly conducts schools, subjects that will receive attention in addition to the subject of organization. Some rather original and perhaps startling suggestions will be offered. I repeat every wide-awake business college proprietors should be present as he will certainly learn things to his interest.

Sincerely,
H. N. Rowe,
Chairman Executive Committee,
Baltimore, October 2, 1902.

The Program of the National Penmanship Teachers' Association

WHICH MEETS IN MILWAUKEE DEC. 29-30-31 IS ABOUT COMPLETE.

The indications are very favorable for a full, complete, varied, and interesting program. Such men as the Spencer's, Madsen, E.L.S., Hinman, Courtney, etc., are expected to be there and to be on the program. As an intellectual feast, it is going to be worth going to hear and to see.

Better lay your plans early to be there as the meeting is not going to be merely intellectual. The meeting is going to be a distinctly social one and entertainances will be numerous and interesting. A social good time is assured. Heart as well as head is to be administered.

The entire Spencer family is expected there. Who is there who does not want to meet them? And this is the one opportunity to do so. Come now and treat yourself to a pleasure and honor never before offered. Don't let money squeeze the dollar, or someone else whom you can see any time.

Be a part of this great gathering of the Knights of the Quill.

G. F. ZANER, Chairman Ex. Com.

National Shorthand Teachers' Association

THE BUSINESS EDUCATOR

GENTLEMEN:—There is every indication that our Milwaukee convention will surpass any meeting that we have yet held. First, the unique methods employed by the executive committee of the National Teachers' Association will certainly appeal to teachers whose ambitions to stand in the front ranks. Second, the Shorthand teachers have carried the attendance banner heretofore and they have no secret plans for doing so again. Third, the Shorthand teachers are becoming educated to recognize the N. S. T. A. as the power which indicates the progress in stenographic pedagogical methods. Fourth, the central and easily accessible point, at which the convention is to be held, makes it possible for almost any one to be present.

The active Shorthand teachers of the country are members of the association, and from the East, West, North and South a lot of loyal as well as royal penstewers will gather to profit by what the other fellow knows. The Shorthand teachers are fillets of the "giving" fellow sufferers"—the benefit of their special and their practical knowledge they have acquired.

Yours truly,
M. A. ARNOLD,
DENVER COLO., October 10, 1902.

Central Bus. College.

National Commercial Teachers' Federation

DANVILLE, Ill., October 8, 1902.

ZANER & BLASER,
COLUMBUS, OHIO.

GENTLEMEN:—Please say in your next issue of the BUSINESS EDUCATOR, that we are planning for the Commercial Section of the National Commercial Teachers' Federation, and believe that we can promise a program that should secure the attendance of every progressive commercial teacher. The program will be completed in the near future and the fact that some of the leading commercial educators of the country will be on the program, including Ferger, Hinman, Courtwys, and many others of equal note, will be a sufficient guarantee of the excellence of the future.

Every effort is being made to condense the greatest possible amount of thought-producing discussion that can be crowded into the three days of our meeting.

Yours truly,
W. C. WALLACE,
Chairman Ex. Com. Business Section.
A History of Penmen, Early Business Education and Educators in America.

I believe from good sources of information that there were schools in the year 1800. Duff's College of Pittsburgh, Comer's College of Boston, and Bartlett's College of Cincinnati.

At that time our country was commercial -ly speaking. We were along the water ways, the coast of the Atlantic, the Ohio and Mississippi rivers, also a few towns were located upon the shores of the Great Lakes. The country back of without experience and settled, there being no railroads, most of the travel and shipping was by water routes.

Boston, New York, Philadelphia and Baltimore were the leading northern cities; while Savannah, Charleston, St. Augustine, Mobile, New Orleans and Galveston, were the southern coast towns of the country.

Pittsburg, at the head of navigation of the Ohio river, also Cincinnati and St. Louis were villages.

Most of the merchants in those days kept their accounts by single entry, or by cutting notches on tally sticks, while others who could not write would draw pictures of goods sold, as a hawker or saw a circle with a hole in it was a grindstone and without the hole it was a cheese.

The science of double entry bookkeeping, as known is not yet taught, was not known in 1800. An earnest young man then living in Philadelphia wishing to learn bookkeeping, applied to many merchants but none would teach him or accept him as a bookkeeper, except in the capacity of an errand boy. He went to New York and found no one there to employ him or teach him bookkeeping, as each merchant had his own way of keeping accounts.

Young men who wished to get in business without experience and who had no means of apprenticeship, under merchants who generally charged parents for employing their sons, teaching them business and their ways of keeping accounts. This method was continued for many years after business colleges were started, and is still practiced in England, and other foreign countries.

About 1835 the first business school in New York City was started by Henry Edmonds, a native of England, and the instruction given was in penmanship and bookkeeping. He published a book of bookkeeping, and was a gentleman of good address and ability. His school was up Broadway, from the Astor House. Mr. James Gordon Bennett, founder of the New York Herald, and a native of Scotland, soon after his arrival in America, opened a bookkeeping school in New York.

Oliver B. Goldsmith conducted in New York for many years a school of penmanship, a work on which he published. The school was opened about 1835. He was an accomplished penman in the English style. His flourishing and ornamental style were artistic, his manners were graceful and he dressed with considerable elegance. His school was handsomely furnished, and the walls were adorned with elaborate specimens with himself. We were the earliest schools in New York.

I will now give an outline of one of the first if not the first, then called Mercantile Colleges, established in 1840 by Peter Duff.

Peter Duff, the founder of "Duff's Mercantile College of Pennsylvania," was born in New Brunswick in the year 1802. His parents had that year emigrated from Scotland, and settled to the clearing of land, cultivation of a large farm in the Province.

Drawn by his tastes toward the city, and filled with a desire for the knowledge of a busy life, Peter Duff, while a young man, left his father's farm and went, with the permission of his parents, to add to and finish his education at Edinburgh, Scotland. Having remained there for some time, with some inclination toward the study of medicine, his future calling was fixed as that of merchant, and not doctor, by what would seem a lucky circumstance.

With what means he could command he took up for himself, and, Scotland, a load of goods for the purpose of sale in the Province. Wrecked on the way home, he recovered the amount of his insurance, and, returning, invested in other goods.

With these, as it happened, he arrived at St. John at most opportune season. The market for his goods proved ready. The prices he obtained added large profits to his investment, and thus encouraged, he made a large number of sales, and profited thereby, almost before he was aware, embarking in life as a merchant and an importer.

From this time forward until the year 1853, Mr. Duff carried on business of exceptional success. He became a leading citizen of St. John and one of its wealthiest merchants.

Large warehouses at home and ships on the high seas called him their owner. His qualities of mind and his traits of character were such as to make him esteemed and honored among men, as well as to insure for him success in any enterprise in which he had his heart.

He was a man of great tenacity of purpose, persistence of all simplicity of life and habit. He was a man of most sincere and unpretentious piety. He was honesty itself. During his long career, first as a merchant and afterwards as an educator, in prosperity and amid the trials of adversity, this latter trait made him marked and distinguished.

He was a consistent man, the same at all times, single and diligent of purpose, and pure of heart.

In the year 1853 a disastrous fire in St. John made shipwreck of many fortunes, and among them that of Peter Duff.

St. John's was a city of no mean order at that time. The place promised to be a great port of entry for all the northern shore of the Atlantic. When this fire swept the town, the underwriters, being chiefly individuals, were unable to meet the losses; therefore the owners of property and merchandise lost everything. Mr. Duff with a proud, sensitive heart, decided to leave his connections and circle of friends, living himself away to the "states." He had a friend in the cotton business in New Orleans, making a success of merchandising there. This friend moved him to go to New Orleans and join him in his business enterprises. To make this journey he crossed the Alleghenies, arriving in Pittsburgh in the early Summer of 1850, intending to take boats to New Orleans, and save his money, and while waiting some six weeks for water his pockets dropped correspondingly low. He was forced to take up something to meet his expenses, and in doing so he took charge of a cotton mill, and started his first teaching by giving lessons in the evening. After lingering beyond the time for his departure he grew into the school work by degrees and became a fixture.

He commenced, in 1850, in the midst of much difficulty and despair under many difficulties and the pinching of poverty, that school which was subsequently incorporated by the Legislature of the State of New Jersey, as "Duff's Mercantile College of Pennsylvania." At the time of its foundation no similar institution existed. Its design was the education of young men for business. Without capital other than his experiences — "a telegram and money." Mr. Duff conceived the idea of turning this experience to his own account, as well as to that of the many who desired to enter business life, but who dreaded the drudgery of an apprenticeship, and who lacked the knowledge necessary to gain them position.

From that time forward the history of the College is the history of its founder.

Bookkeeping was not then as it is now, a system of bookkeeping, had not yet found its way. Arithmetic was learned as an extra subject at school. Bookkeeping was considered a trade, and was not taught, save under the eye of business men themselves, each of whom pursued some method peculiar to himself, the result of his own thought and necessities. Hence the system of one man, in one kind of business, might, even when learned, prove of little benefit to another in a different sphere. Two demands then were pressing. First, well-digested system of bookkeeping, having explanatory rules, and capable of adaptation to the wants of business men in general; and secondly, a place where such system might be successfully taught to such as chose to avail themselves of the opportunities so offered. To supply these demands was the aim and success of Mr. Duff's life.

To meet the first demand, he published "Duff's Bookkeeping," a work intended to provide instructors with the means of imparting practical instruction in bookkeeping; to introduce improvements having for their object the abbreviating of the process, and giving security against error, and to supply all classes of merchants, mechanics and others, with a complete book of reference.

To meet the second demand he founded Duff's Mercantile College, and became himself its Principal.

The appreciation by the public of these efforts was, and has continued to be, marked to an extraordinary degree. "Duff's Bookkeeping" has passed through over twenty editions, and from the College an army of students has been graduated.

The success of the book is to be attributed to its perfect adaption to the wants of all persons and merchants desires of learning bookkeeping as a system.

The success of the school may be attributed to the following and other causes: it has always had, and has now, a full
The Business Educator

The corps of educated instructors, thoroughly acquainted with all the details necessary to be learned by those desirous of becoming bookkeepers. It has always closely pursued the policy of teaching in the colleges only that which pertains to the thorough education of a business man, without wasting the time of the student in the branches which do not belong to a Commercial College, and with the probable connection with the duties of a bookkeeper. In this the College differs from many others professedly of the same character.

No sooner had the success of this institution proved the feasibility of educating men for the counting house than they sprang up all over the country schools with a similar design. Few, if any, of these were under the proper system, hence their inability to compete with such an institution as this, whose teachers had been instructed in the school of the real business.

In 1844 Mr. Duff was getting measured for a suit in the tailor shop of one of his pupils named Lee. While being measured the tailor reached for a yard stick and struck a boy across the shoulders, in turn explaining that the young rascal was using up all the chalk he could get on, marking the walls and the floors. While smarting under the blow, Mr. Duff good naturally invited the lad to come to his school, where the pupil's personal paper would be furnished gratuitously, together with some hints upon writing. The boy accepted the invitation. That boy was John D. Williams. Mr. Duff wrote a very good, a very attractive letter of introduction. After the youngster had evinced a talent for this kind of work he also displayed aptness in other lines, encouraging Mr. Duff to prepare him for an assistant. In doing so, he secured the co-operation of M. Rice, a graduate of P. K. Spencer, was spreading himself on the specialties of penmanship. Returning from Buffalo, Williams became a full-fledged instructor of penmanship at Duff's College, where he remained for some 12 or 14 years. John D. Williams was gifted. He also had vanity, showing much extravagance in dress and style of living. At this time there were only a few customers over the country, and Williams in a short time overtopped his contemporaries; and from all sections he received constant adulation, which had a tendency to turn his head; so much so, that his, instead of directing him in his labors. After some four or five years of success he broke with his benefactor, leaving the College and taking a first clerkship on a very notable steamboat plying between Cincinnati and Pittsburg, known as the Messenger. That boat was looked upon as a gorgeous production of the age, and was a leading steamer of a large number plying between these two cities. Her cabins were done in white and gold, with her machinery built for speed and comfort. A position on such a noted steamer was more than that of an ordinary kind. But after holding this position and made application (and supplication) for a return to his place as teacher of penmanship. The return lasted for a number of years. He assumed that John D. Williams' name made Duff's College, and that unless he was a part owner he would no longer continue as an employee; and as that was not a probability he severed his connection for all time, going to New York. In New York he engaged with Packard & Webster, who gave his entire time to making eagles and flags for the entire chain of Bryant and Stratton Colleges, besides furnishing other designs for diplomas, show cards, etc. During these times he (Williams) got up the famous Williams and Packards "Gems." This work was done under Mr. Duff's direction, and was to be engraved and published by him, when the engagement was broken off and all such work was declared off. Once he left New York, returning to the field of his successes, he formed large classes in a number of the very large towns in Western Pennsylvania and Eastern Ohio. In doing this he would have a lecture on the Chirographic Art and John D. was a very persuasive, impressive talker. During the interim of some two years, while Williams was doing the steamboat clerking, a man named John Tracy entered his name at Duff's College. Few of our people today have heard of this man. He was like a meteor flashing through the starry firmament, Mr. Duff picked him up upon his arrival in New York City from the north of Ireland. He wrote the most accurate round hand I ever saw — and I have seen much of this kind of work. His pen drawing was done by fine cross hatching, using no brush or washing whatever. His lettering, his pen drawing, and his smoothly shaded round hand were par excellence. Williams upon returning to the College took up this particular style of line work in pen drawing, and soon acquired it to a high degree, and nothing like his master Tracy. Mr. Alexander Cowley, who was then a phenomenal writer, took this kind of work, and executed beautiful drawings and lettering. Tracy's writing was too slow and labored to suit the requirements of the students at the College, and as he could not get into Williams' style, the place became vacant, and Williams returned to take charge of the penmanship. Tracy then associated himself with Victor M. Rice, P. K. Spencer, James W. Lusk, who were a coterie of writers to advertise certain Colleges by exhibits at the State Fairs, which were great things at that time. Tracy did much of the work. Even when the writing was to go upon these fine ornamental specimens, Tracy would do the script. Some of these productions can, no doubt, be found in Buffalo or in Cleveland. To those who could appreciate such exquisite work, the specimens were very attractive. This very worthy penman and instructor, Tracy, died of consumption, in miserable circumstances in New York City, some ten years after landing in this country.

One of Williams' brightest and most devoted pupils, Mr. William H. Duff, son of Peter Duff, took charge of the penmanship of Duff's College in 1890 and has been giving his efforts to that part of the work up to the present time, with the exception of two years when he left the College to engage in the real estate business. His associate teacher for many years was Charles A. Cochran, now at the head of his own College in Chicago. Mr. Cowley for twenty years with the Iron City Business College of Pittsburg was in his time one of the most skilful and famous penman of the country. He is now a successful stock broker in Philadelphia. William Allen Miller, father of Charles Miller of New York, was a penman in Pittsburg about the close of the war. He came from a school in Cincinnati. He later went to Packard's College, New York. After a number of years with Packard, ill health caused him to go to California, where he died. P. R. Spencer, Jr. and James W. Lusk were connected with the Iron City College, Pittsburg, for a long time while they were touring and teaching in the South.

WANTED

A good solicitor for a well known school in the East. Please give the experience you have had, and where; also state the amount of salary expected. A permanent place for a good man.

American Book Company,

CINCINNATI, OHIO.
The Business Educator

Entered at the Post Office at Columbus, Ohio, as Second Class Matter. September 1, 1892.

Edited and Published Monthly (Except July and August), by ZANER & BLOSER, 18 N. High Street, Columbus, Ohio.

Vol. VIII. No. 4. Whole No. 48

COLUMBUS, OHIO, NOVEMBER, 1902

Subscription Price, $1.00 a Year. 10c a Copy.

Change of Address—If you change your address be sure to notify us promptly in advance, if possible and be certain to give us the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers.

Rates to Agents and Club Raisers

Suit upon application. Whether you are in a position to send a few or many subscriptions, let us know, so that we can favor you with our lowest possible terms and a few sample copies.

The Business Educator is the most popular and widely read journal of its kind, it follows each and every movement in education.

It reaches practically all persons interested in commercial education and in penmanship, in both this country and in Canada. It covers the commercial school field completely, going as it does to the hands of Commercial Colleges, Commercial High Schools, Commercial Departments in Public High Schools, Colleges, etc., as well as to a large number of office workers, public school teachers, home students, etc. Then it is prepared in such a way that it is more comprehensive and truly representative plan than ever before attempted: you will readily see that the latest and greatest steps in the art is not only the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of Its Class

The Business Educator being the most popular and widely read journal of its kind, it follows each and every movement in education.

Invention-Writing.

Script writing, off-hand writing, free, rapid writing as we know it today, has been evolved since Columbus discovered America. Writing previous to that time was what we would now call "printing," and the manner of execution we would call "drawing." Writing in that form, and indeed as we have it today, has been the product of slow evolution through centuries.

The first great step in the progress of writing was the invention of printing, to which, during the fifteenth century. It soon monopolized the business of making books by printing them by presses and machinery, instead of by pen and hand. The mammoth quantity of books, magazines, and newspapers issued daily, tell of the progress made in this mode of expressing thought.

The second considerable step in the progress of writing was the invention of shorthand. By it the speed of the pen was multiplied five fold. The regret is that it did not replace the script characters except perhaps for ornamental purposes. This is a mistake that we have made.

Certain it is that its introduction into our high schools will do much to popularize it and bring it into more universal service. Following shorthand came the invention of telegraphy, a truly modern way of expressing, recording, and transmitting thought by wire and cable, and telegraphic instruments undreamed of a century ago. Then came the telephone, a modification of telegraphy, and farther removed from the art of writing, but still a department of expressing and transmitting thought.

The more recent and closely connected invention in the way of writing was the typewriter. By and through this, writing was made more legible, easier, and two or three times as fast. Typewriting is now in its infancy. It is relieving daily the pen of much writing that has become through the stress of commerce mere drudgery and mere scribbling.

The latest and most wonderful of all inventions to express, record, and transmit thought is the phonograph. The future is pregnant with promise in this line. Let us hope the postal envelopes and cylindrical letters may take the place of many of the present ones.

These are the things invention has done for writing in less than five hundred years. But we will not use the pen as did the ancients. In spite of the phonograph and invention, more writing is being done today with pen and pencil than ever before. Therefore, you need not become alarmed at the decrease in the demand for the art. Instead of this being the case, there are more fine penmen today than ever before, and there is a greater demand for fine penmen and teachers of penmanship than ever before.

Invention has therefore with all its strides and remarkable achievements not kept pace with the world's output of writing. The progress of events has been greater than the output of invention. In consequence, more pens are manufactured by far, and more writing by hand is being done today than ever before.

A Good Suggestion.

BY ZANER & BLOSER.

I feel that my pupils are making splendid progress in Writing, and at times am tempted to send you samples of their work. The forty-five minutes a day, devoted to writing, is usually divided in about these proportions: phonetic, movement exercises, including capital letters used as exercises; second fifteen minutes, a study of special letters with regard to form, best movement, and combinations with phonetic. A systematic outline of letters and words is given, and there is a specimen line of my own writing, after which the pupils write about ten lines of a new copy from the board for the day's specimen letter.

I sometimes wonder that some of the leading penmanship teachers do not say more about the order of their daily teaching and favorite methods to interest their classes, and the above outline is given more as a query along these lines than with any other intention. Why could not a symposium be arranged for one issue of your paper, giving the views of leading teachers along these lines? Now if one has already been given or something similar, and I have not seen it, you will please pardon the suggestion. Of course there is no fixed rule for conducting classes and ought not to be, yet all teachers have their favorite methods and I am after new ideas.

Enclosed find a card for subscriptions to "THE BUSINESS EDUCATOR," beginning with October, to be sent to the following pupils all of Waynesburg. Will try and send more in a few days.

Very sincerely,

H. E. BARNES,
Principal Waynesburg Business College.

The above remarks and suggestions are "put to the purpose of the writer, and will follow suit and submit their methods with out delay. Let us hear from you now; don't wait till it is too late. An exchange of views is not only beneficial, but it is most refreshing to hear from new sources the benefit of your experience. We will furnish the medium of exchange if you will furnish the ideas. [EDITORS.]

In the Harness For Twenty-three Years

Mr. L. C. Mulkins, supervisor of penmanship in the public schools of St. Joseph, Mo, has been in the harness as a supervisor of penmanship for twenty-three years. This is a long time to be active in the work, but there are many others in the work, who have been engaged in it longer than this, but Mr. Mulkins is the only one who has remained to the bitter end. The BUSINESS EDUCATOR should be grateful to Mr. Mulkins for a good many of its suggestions, and we would thank our friends for information in this particular, Mr. Mulkins writes a remarkably clever hand.

Miss Emie Titus, also a graduate of the Boston Bryant & Stratton School, has been elected to take charge of the commercial department of the Hyde Park, Mass., High School.

M. D. Fulton, the vigorous Treasurer of the Worcester (Mass.) Association, not only maintains a high-class commercial department in the Auburn (N. Y.) High School, but maintains the reputation of a popular typing machine "on the side," and has formed a list of instructors in the evening classes of the Providence Y. M. C. A., as the teacher of business college.

At the September meeting of the Boston Association of Bookkeepers and Accountants, last year, Mr. R. M. Barber, New York, was elected an honorary member of the Association but now proprietor of a commercial school in Warren, Pa., was elected an honorary member of the Association. A letter from Mr. McNish was read acknowledging the receipt of a handsomely engraved set of resolutions adopted on the occasion of Mr. McNish's resignation.

B. M. Barlow, New York, has been advertising his Evening High School work; offering courses in Higher Accountancy, and bookkeeping, in the use of logarithms in calculations connected with bonds, sinking funds, annuities, etc., and as a result his first week found him with about sixty students in each of two classes, four classes, having for an evening class in Bookkeeping.

An attractive catalogue comes to us from the Worcester (Mass.) High School, and is one of which C. B. Post is the proprietor. This catalogue has a unique cover in imitation of the old silk cap.

Providence, R. I., has abolished vertical writing, and has adopted the semicircular. Soon there will be none so poor as to do reverence to a system of writing that, in its day, excited an amount of partisan feeling on the part of theorists worthy of a better method. In the English High School of the City of New York, the practice of writing, Messrs. F. H. Read, F. E. Lakey,
and A. T. Swift, each of whom subscribes for THE BUSINESS EDUCATOR and uses it in his classes. About 250 in this high school are taking the course, which is taught by A. C. Bell, director of the Commercial Department, St. Johnsbury, Vt.

A. F. Kegel, an old Zanerian student who is now a student of the Business Department, Business College, writes that they enroll 150 students last year, and that they are confident of having the number that have already entered. He also states that they are unable to supply the demand for trained help. The BUSINESS EDUCATOR is much pleased to learn of his success.

Mr. W. V. Kellogg, who is now conducting a course of lessons in business writing in this journal, is a pupil of the Business College, and has a very fine reputation for his work. He is a very capable, enthusiastic penman, and is doing very well in his work.

Mr. H. H. Funk, a recent Zanerian, is assisting Mr. Kellogg in the writing course. He has made rapid progress and is doing well in his work.

Mr. W. V. Kellogg, who has been writing for the BUSINESS EDUCATOR one year, and states that he has made good progress in his work, has been promoted to the position of head of the Business Department, Business College, St. Johnsbury, Vt.

Mr. J. T. Henderson, President of the Oshkosh Business College, Wisconsin, reports that he has been writing for the BUSINESS EDUCATOR one year, and states that he has made good progress in his work.

Mr. F. J. Hinkley, former pupil of the Oshkosh Business College, Wisconsin, is now teaching in the Business Department, Business College, St. Johnsbury, Vt.

Mr. W. V. Kellogg, who has been writing for the BUSINESS EDUCATOR one year, and states that he has made good progress in his work, has been promoted to the position of head of the Business Department, Business College, St. Johnsbury, Vt.

Mr. J. T. Henderson, President of the Oshkosh Business College, Wisconsin, reports that he has been writing for the BUSINESS EDUCATOR one year, and states that he has made good progress in his work.

Mr. W. V. Kellogg, who has been writing for the BUSINESS EDUCATOR one year, and states that he has made good progress in his work, has been promoted to the position of head of the Business Department, Business College, St. Johnsbury, Vt.

Mr. J. T. Henderson, President of the Oshkosh Business College, Wisconsin, reports that he has been writing for the BUSINESS EDUCATOR one year, and states that he has made good progress in his work.
Number Nine

The capital stem is the foundation for all the letters of this lesson and is nearly the same in all, being a little shorter in T and F than in the others. This is a compound curve. The shade swells gently to the middle and then as gradually diminishes. Keep the bottom well rounded and finish it with a dot.

Slant the oval part of T and F a little more than the main slant. A delicate shade may be added at the beginning and ending of this part. Study the forms of P, B and R. Follow the copy closely. Do not make loops in the middle of the second parts of P and R only-never slanting.

Do not become discouraged because your progress is slow, but remember, “that keeping everlastingly at it finally brings success.”

A correction.

[Instructions which should accompany the copy in the September number. Ye editor got things mixed.]

The first exercise, the compound curve, which is known as the line of beauty, is the main feature of all these letters. Practice it well. Make this a gentle compound curve, with the highest part of the shade in the middle. The up strokes are more slanting than the down ones.

The first stroke of T, the curved part, may be made either up or down. The bottom of it is similar to the bottom of F. The top may be curved slightly to the right. The slanted stroke is more nearly vertical than in the other parts of the letter. To make the slanting stroke to the right and finish with a dot.

The first part of C, H and Z is difficult. Study it well. Keep the turns well rounded and make it the very essence of grace and beauty. The slanted strokes of I and Y are more slanting than that of X. Finish them with a compound curve, make it upward, and carry the top well to the right.

Make the top of Z similar to the first part of H. The lower part is the same as that of small z. These letters are hard and require much practice, but they are also the most beautiful of the capitals. Practice the words separately. Study closely the shades and turns, the slant and spacing, and aim to make them beautiful and attractive.

The Kansas Federation

**The Business Educator, Columbus, O. G**

GENTLEMEN: The convention of the State Teachers’ Federation of the State of Kansas, will meet in Salina, Kans., on Friday and Saturday, Nov. 20 and 21. We are going to have the strongest and most profitable program yet given. The following addresses and special invited to be present:

Yours fraternally,
S. B. FAHNESTOCK.

The Kansas Special Teacher’s Federation

**Friday**

**MORNING SESSION—10:00 A. M.**

**AFTERNOON SESSION—1:30 P. M.**

**EVENING SESSION—8:30 P. M.**

**MORNING SESSION—9:00 A. M.**

**AFTERNOON SESSION—1:30 P. M.**

**ADJOURNMENT**

Struck the Keynote

Mr. J. W. Smith, of the Mountain State Business College, Cumberland, Md., writes:

“I have decided to give you your share of clubbing this year. Your excellent paper deserves the support of every teacher of penmanship.”

Short Cuts.

A little book, pocket size, showing how to do with half the figures and in half the time all of those little calculations which we must figure on every day. Everything from Addition to Interest and Discount. Its worth is attested by the fact that its author is now and has been for years the specialist in this branch at the Eastman Business College. Price, 50c, remitted to.

GEO. A. DEEL, Davenport, Iowa.
Mr. E. E. Bush,
The Hustling, Capable, Genial Supervisor of Writing and Drawing in the Public Schools of Sandusky, Ohio.

Mr. Patrick J. Sweeney,
The Wide-Awake Editor of "Chat" published by the Manhattan Reporting Co., 90 Nassau St., New York.

Mr. D. S. Hill,
The Progressive Teacher of Writing and Commercial Branches in Lockyear's Business College, Evansville, Ind.

The Globe Business College, Messrs. W. C. Stephens, and Geo. A. Goldsby, proprietors, of St. Paul, Minn., is issuing a 30-page purple-covered catalogue of good quality. The half-tone illustrations disclose the fact that this school is thoroughly modern in equipment, and we know its proprietors to be progressive and thorough in ability.

A neat little circular is at hand from the Wisconsin Business College, Madison, Wisconsin. Messrs. Buck and Whitmore, proprietors, indicating a special amount of push and practical brains, as well as one of the largest schools in Pennsylvania.

Quite a large grey-backed catalogue is at hand from the Wheeling, W. Va., Business College, with a branch at Belaire, O.

"Prospectus" of the Spencerian Business College, Milwaukee, Wis., is a 32-page warm-gray-covered well-printed, splendidly written piece of advertising literature.

"A Message to Garcia," by Elbert Hubbard, is at hand from the American Business College, O. C. Dorney, Principal, Allentown, Pa. This is considered a splendid piece of advertising literature.

The Ohio Business Institute, H. C. Rowland, Principal, Columbus, O., is issuing a 30-page catalogue, indicating a practical school and a progressive management.

The Scho, Ohio, College Bulletin is a newspaper-size, four page circular, filled almost to overflowing with portraits of students, indicating push of the kind that pays. Mr. W. J. McCarty, who was a pupil in the Zanesville College, now many years ago, has been engineering this school.

"What Has Been Done" is the title of a royal blue-backed compendium, displaying specimens of penmanship as taught in Sadler, Bryant and Stratton's Business College, Baltimore, Md. It also gives a great many before and after specimens in penmanship, showing improvement made in this art under the instruction of that master penman, Mr. C. C. Lister. The evidence is very convincing. We doubt whether we have ever seen evidence of a higher order. You will do well to secure a copy.

An Immediate Success.

When we predicted that RATIONAL TYPEWRITING would revolutionize the methods of teaching type writing, we were acting on the wise maxim of Hozea Bigelow—Never prophesy unless you know.

Although issued so recently—just one week before the opening day—RATIONAL TYPEWRITING has been adopted in many of the best known schools, and orders for it continue to pour in upon us.

What They Say:

"I wired you to send by express sixty copies of Rational Typewriting. It is the most complete publication of the kind I have seen. The arrangement is certainly a great improvement over the old style manuals."—C. O. Besley, Rock Island, Ill.

"A great improvement over anything of the kind I have seen. I have always felt that it would be better to begin the fingers already trained than to start with those that are little used."—C. E. Howard, San Francisco Business College.

"This work on typewriting is a valuable addition to our library and is probably the most complete work on typewriting which has yet come to my attention."—D. D. McMillen, Bartlett Commercial College, Cincinnati.

Price one dollar. A sample copy sent to any teacher or school on receipt of fifty cents.

The Gregg Publishing Company, 57 Washington Street, Chicago.
CHARACTER—
HOW TO READ IT—

BY C. P. ZANER

CHARACTER contains cute, catchy, characteristic caricature cuts of critical, conditional and circumstantial classes.
CHARACTER tells who are mentally and mechanically inclined. It tells who think to live rather than live to think. It tells who live to work rather than work to live. It tells who can be coaxed but never driven.
CHARACTER appeals to teachers, students, lecturers, authors, preachers, doctors, lawyers, merchants; in fact, everybody, because it is human nature revealed.
CHARACTER depicts, describes and defines the outward manifestations of the inward man as revealed by the size, shape and expression of his head.
CHARACTER is yours for but 25 cents, post paid, and your money back if you don't think it's worth it.

A FREE EDUCATION

The Directors of the Correspondence Institute of America have decided to award a limited number of Free Tuition Contracts to the best young men for home study
Illustrating, Caricaturing, Ornamented Writing, Journalism, Proofreading, Stenography, Bookkeeping, Practical Electricity, and Electrical Engineering including Interior Wiring and Lighting; Electric Railways and Telephone and Telegraph Engineering.
A million Free will be printed until our Institution has educated you and secured you a position. Write for Your Tuition Contract and master the course which interests you.
CORRESPONDENCE INSTITUTE OF AMERICA, Box 853, Scranton, Pa.
Resolved,

That in the removal of Mr. Hutchinson the Massachusetts Benevolent Association loses a most valuable member, one who was wise in counsel, energetic and prudent in action, ever faithful to the interests of the organization, and cautious in all business transactions. We shall miss the cheering and inspiring influence of his presence and it will be very difficult to fill his place.

Lessons in Engrossing—Number Twenty-two—By H. W. Kibbe, 181 Tremont Street, Boston, Mass.

For fourth page of engrossed booklet. As in the preambles the resolutions may occupy each a page, two or more on a page if very short or may be divided into two or more pages if very long. The individual's name, on whose account action has been taken, may be made prominent each time it is mentioned or only once. The price must influence the engrosser in regard to display. These pages we are showing could be spread out more with good effect. We are making them compact to economize in cost of engraving.

Reforms and Reformers in Writing

Part Three — The Decline of Round-hand

From eighteen hundred to eighteen hundred and fifty was the transition period from the round hand to the light-line character of today. Some wrote an unshaded, semi-round, or semi-angular hand previous to this, but the round hand was well nigh universal as regards use. But the change from round, shaded forms to light-line, semi-angular ones, was just as complete as during the fifteenth century when the change was from the disconnected, print-like forms to the connective, script-like, round-hand.

During the first half of the nineteenth century there was a tendency on the part of many to write an angular hand. Indeed, for a third of a century, previous to 1850 the two contending hands or systems were the round and angular. The former was the more legible of the two, but the latter was the more speedy. The quill was the chief instrument used in writing; the steel pen did not come into general use until about 1850. And, as near as we can learn, the methods of teaching writing during this period of change from the intensely legible to the speedy in form, were not very scientific or practical, but the same may be said about teaching "readin'" and "arithmetick." The new world demanded more writing and faster writing, and necessity came to the assistance of art, and speedier writing followed.

It is a fact, not to the credit of specialists, that while penmen taught the large, slow, round-hand up until 1850, the people, as a rule, developed a semi-angular, light-line, speedy style for their individual writing.

This is plainly evident by comparison of the writing of the people in general (see Declaration of Independence) and that found in books on penmanship. Teachers of writing were forced to abandon their old, round ideals, instead of anticipating demand and supplying it with timely forms. But a new era was near at hand. Young blood and new ideals were about to enter into the profession and art of writing. Slavery was nearing its end. Events moved faster than people realized. Old ideas were being discarded and new forces were forging to the front. The war came. The slaves were freed. The art of writing was about to be made more free and universal, also. Men were fighting for freedom in writing while others were fighting to free the negro. The one freed the body, the other was developing an art by which to free the mind.

CONTINENTAL TEACHERS' AGENCY,
BOWLING GREEN, KY.

BOOKKEEPING Shorthand, Penmanship, etc., successfully taught by mail (or no charge) by Draughon's Bus. Colleges, Nashville, St. Louis, Atlanta, Montgomery, Ft. Worth, Galveston, Little Rock, Shreveport. May deposit money in bank till position is secured. 10,000 students. For Booklet on "Home Study" or College Catalog, address Dept. 34, Draughon's Bus. College, Nashville, Tenn.

In our October Number this superscription was credited to Mr. F. S. Heath, Concord, N. H., instead of to Mr. Francis B. Courtney, New York City, who was its real author.
Modern Pennmanship Publications for Penmen and Teachers

Our publications are universally recognized as the finest along their lines. The prices are very low, considering the quality and character of the work. All books mentioned below are sent by mail, postpaid.

Zanerian Theory of Penmanship—A thought provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should have this book. It is a bound body of 256 pages, cloth binding.

Lessons in Ornamental Penmanship—A work in slip form embodying the $100 manuscript, formerly given by us, with some extra plates. A thorough and complete work for home learners. 75c.

Compendium of Simplified Vertical Penmanship—In book form, and by far the most thorough and complete instructor in vertical writing yet published.

Manual of Simplified Script—A work containing a thoroughly graded course of photo-engraved copies from the pen of that master penman and artist, C. F. Zaner, all in the simplified style. For rapid business purposes many pennmen believe this style of writing unequalled.

Zaner’s Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins by the beginning, showing the student how to make the simplest strokes and excises and finishes with a very large variety of designs, showing the highest degree of skill yet attained in this art. Two editions of this popular work have already been sold. It is unquestionably the best work on flourishing ever published.

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks.

Address, ZANER & BLOSER, Columbus, Ohio

The Business Educator

Through the kindness of Mr. H. K. Henderson, of Leeds, England, we have received samples of the copy books used there. Mr. Henderson is right when he says: They are neat and legible, but do not admit of improvement in handwriting as your writing. Where you excel most, however, is in the method of teaching the subject, and the few schools in this country teach the use of the forearms muscles in writing. The proceedings of the country, far too often, are unknown here.

The copies found in the books above mentioned are of the semi-round character, intensely legible and strong, but more or less lacking in neatness and legibility. Nearly all down strokes are shaded, and the simplest forms have hardly any degrees in the various publications. One thing, however, which might be said in favor of these books is, that the learner would be apt to get at least a legible handwriting. A man of average talents would also lack in scrawliness, a thing of which much of our movement writing cannot be said.

Revised Edition, seems to mean that the book is revised. It is to be hoped that this will not be at the expense of a larger extent re-written. Gregg shorthand, as originally designed, is both practical and extensively used new system of shorthand in America. Not only, however, is the system itself good, but the methods of presentation are also new. The shorthand characters in the literature and the publication were written offhand and photographed, and the result is so scientifically correct. They represent the actual writing and not slowly drawn mechanically correct. They clearly demonstrate that the author is a shorthand penman of unusual skill. The book is printed in large type, thus making it easy to read and study. Some of the characteristics of the system are first introduced and the use of the writing is presented; that words and sentences may be written in shorthand without word signs are presented with each lesson, that the shorthand characters are inter-mixed with the actual form of the original writing is introduced from the beginning.

"Rational Typewriting" by Ida McLenan Cubber and Robert P. Schach, published by the Gregg Publishing Co., Chicago, Ill., is a new book embodying "a new idea in secretarial education," but one of the writing is presented; that words and sentences may be written in shorthand without word signs are presented with each lesson, that the shorthand characters are inter-mixed with the original writing is introduced from the beginning.

STUDENTS ARE YOU?

Interested in penmanship? Don’t you want a handy holder that will greatly help your progress?

The well-known penman, E. H. Spohn, of the H. N. Business College, Madison, Wis., makes a handsome holder which is strictly pronounced as having no equal. It sells hundreds of them at 39c each, postpaid, worth many times the price to anyone who writes for personal or business use.

Lettering and Designing
Number Sixteen
BY E. L. BROWN, ROCKLAND, MAINE

The popularity of the shaded script for various purposes is on the increase, and it is especially adapted to newspaper advertising, as it attracts attention where type matter will not.

Suggestions: Pencil out each letter with care, observing that the spacing and slope are regular. Strive to imitate the strength and dash in the curves. Trace the pencil copy with India ink, using a Gillott No. 17 pen. The form and shading of the scroll work in the BUSINESS EDUCATOR design will afford considerable study. This must be carefully outlined in pencil, with all the principal shading suggested, before the ink is applied.

Carrollton, Ga. Sept 4, 1902

J. B. Closser
Columbus Ohio.

Gentlemen, In this you have a fair specimen of my business writing. Hoping it may please you.

Yours truly,

J. Thornton

Laird's Syllabic Shorthand.

A modernized Pitmanic system, so adapted to syllabic structure, that words are chiefly analyzed, written and read swiftly by syllables as pronounced—stroke for syllable—rather than slowly by single letters. A high-grade system in one brief style on time-tried principles; combining extreme brevity, legibility, cursiveness and adequacy. Complete Manual $2.50 postpaid; sent to schools for examination. Mail instruction. Booklet free.

A. D. Taylor's Work
SIMPLY WONDERFUL are those Capitals by this lamented PRODIGY. Three sets, his last and finest work, all different, 25 cents. Address, C. S. JACKSON, 90 W. 2nd Ave., COLUMBUS, OHIO.
The swan used to be considered by old-timers one of the most difficult things to flourish, and no doubt it does require about as much practice as any small design.

It is necessary to have great freedom of movement in order to make it look graceful. Here is a fine opportunity for a free swing of the arm and graceful movements. Nothing seems to possess more real ease and grace than the beautiful pose of the swan, whether in nature or in art. Study the graceful movements of a real swan—a live one, swimming on the lake, and there you have a whole kaleidoscope of easy and graceful motions, all different, yet beautiful.

Now, in flourishing this beautiful bird, strive to get some life and expression in it.

Flourishing that is mechanical has not much beauty. It can be done in such a way as to appear as if arranged with a pair of dividers, but it is too suggestive of music that goes by machinery; the one great charm, expression, is missing. Therefore, in this little art of flourishing do not aim so much for rigidly exact curves as ease, grace and naturalness. Everything should appear to have been done without effort.

Rapidity in working is one of the things necessary to produce this effect.

The time spent in making the one given herewith was probably not over five minutes, yet it took years of practice to learn to make it.

The starting point is under the bill, then follow continuous lines and curves without raising the pen, all with the whole-arm movement. Then in a slowed and more careful manner the head, bill and eye are drawn.

Don't be discouraged if you make a hundred and then fail to get it to suit, for nobody ever learned to make it well without trying probably thousands of times. But then the skill acquired in all this practice will stand by you in making other designs, so it is not labor lost or devoted to acquiring proficiency in just one thing.

Unless you are left handed, the swan looking to the right must be made with the paper reversed. Some parts of it in this position are far more difficult than when made in the regular way, but it affords excellent practice for the whole arm movement, and the student who is trying to master flourishing will find it an advantage to practice the swan both ways. The regular way first, however, as it is much easier.
Lessons in
Show-Card Marking
and Painting, and
Automatic Lettering

BY
W. A. THOMPSON,
FONTOIC, MICHIGAN

Number Three.

Making good figures is no more a gift than is good reading, grammar or any other attainment leading to business. It is and can be acquired, viz.: by patient and studied effort.

Rapid lettering, figures, etc., is just as much a subjective for study and thought as any other branch of education. Study must, however, be united with practice. The correct form and construction of general lettering and figures must be learned by study, while practice must give the manual dexterity for its easy and graceful execution. Many persons fail in this line of work because they do not properly unite study and practice. Careful study with too little practice will give work comparatively accurate in its form and manner of construction, but laborious, stiff and awkward in its execution, while upon the other hand, much practice with little study imparts a more easy and flowing movement, but with less accuracy as regards to form and general proportion which will commonly have a loose and hasty appearance.

To make these figures easy, the first requisite is a knowledge of form. The next most important essential is skill with the lettering pencil, which only comes by proper effort, repeated. In beginning, first take up the component parts of each as learned in small figures in illustration. Practice on these until you can make each one any time of the day without preliminary practice. Review instruction given in former numbers. Pay close attention to a few general rules while at work: that the brush or lettering pencil, bows and practice paper are in proper position, also freedom of stroke and steadiness or control of motion by the grip of brush upon the surface when lettering. This is quite evident when paint in good working order. Show Card Points of the right consistency will always work free and make a solid and even stroke. Be careful not to go any faster than the work can be done well. Practice patiently and earnestly until a poor figure is an exception, not the rule.

The slanting figures given in illustration can be used to good advantage in all styles of Card and ticket work, and when mastered, becomes a general favorite. In our next two numbers we will take up Marking and Shading pen lettering for general Card sign work, after which Brush lettering will follow again and continue every other month. For instance February, brush lettering; March, Pen lettering, and so on.

Practice all your spare time—make note of anything that may not seem clear. We have some fine work ahead.

Colored Cards.
The Kind that Bring the Dimes.

Something new and they catch the eye, tickle the fancy and loosen the purse strings of your customers. Come in six colors. Great for advertising purposes. Schools use them, Penns are given them. Everybody wants them. You write a dozen and each person who gets one out of the dozen will want a dozen. They are just the thing you have been looking for.

Doubt it? Write for free samples and price list.

Lessons in Practical Writing

By C.P. Zaner

Is the title of a compendium of 90 pages, 4 1/4 x 6 1/2 inches, comprising a complete and carefully graded course of copies in practical writing, with pointed and explicit instructions. In the preparation of this work the author has brought to bear years of study and experience, together with skill of a purely practical nature. All the illustrations were photo-engraved facsimile from the pen-written copies and are the embodiment of practicality.

This compendium is intended for students who are ambitious to improve their penmanship, whether at home or in school. Used in connection with a live, up-to-date, practical teacher the results are surprising.

The forms given are such as the business world today is demanding. They are simple, intensely legible, and capable of being written at a high rate of speed. Form and movement are carried along together by unique and practical schemes of exercises. Large letters are given for form study, and speed tests for developing rapidity. The pupil is told and shown how to criticise and correct his own mistakes, and thus he will become teacher as well as penman. The whole plan of the work is modern. The forms are easy and rapid in character; the method of presenting them is pedagogical and progressive; and the movements used and advocated are natural and free.

The work begins with exercises, elements, principles and letters, and ends with pages, business papers, forms of accounts, etc.

Writing is gradually undergoing a change, and the author of this work is one of the most careful students of progress in this particular field of practical education. This work is an instructor in that style of writing which, according to his interpretation of the signs of the times, the present needs, and the future will demand.

Marching Against Ignorance

Like "an army with banners," is a host of noble teachers, fighting for the future welfare—physical, mental, and moral—of tens of thousands of promising young lives. "Not to the strong is the battle," but "to the true and the faithful, the wise and the patient." The conflict between the forces of construction and the forces of destruction is very real. No body of troops is the strain greater than on the rank and file of the educational regulars and volunteers. It is imperative, therefore, that they be

Armed with Good Weapons

And that is our point of contact. We are headquarters for educational Toledo Blades, Krag-Jorgensons, and even for thirteen-inch Krupp's, if anything so ponderous is required.

Our artillery is declared to be effective, both at long and at short range. The commanders of some of the largest divisions in the Army of the Atlantic Slope, the Army of the Mississippi Valley, and the Army of the Pacific Slope are speaking in especially favorable terms just now of our new rifle, for use among the bushwhackers who are giving our soldiers a vast amount of trouble over in the states of Barbarism, Solecism, Vulgarism, Colloquialism, Slang, and Impropriety. This rifle is not heavy; it is smokeless; it makes but little noise; there is no recoil, and it almost always reaches a vital spot. We call this weapon Plain English (we ship it to army officers or to high privates, charges prepaid, for 50 cents, the introductory price), and we furnish with it, for 20 cents, a well-filled ammunition chest.—Plain English in Practical Exercises.

Urge your Chief of Ordnance to fill your requisitions from the following well-known educational-military supplies: Complete Practical Bookkeeping, Mercantile Practical Bookkeeping, Progressive Bookkeeping, Practical Arithmetic, Hill's Commercial Law, Loomis' Letter Writing, Practical Spelling, Twenty-five Graded Lessons in Letter Writing, Practical Shorthand (Graham Pitmanic), Loomis' Typewriting Instructor, Twentieth Century Business Practice, and Everybody's Dictionary. Our catalogue is sent for the asking.

Address, ZANER & BLOSER, Columbus, O.
A Complete Outfit of the Voucher System

Consisting of Text Book, Blank Books and Printed Stationery, complete, is just the thing to prepare your students for practical work.

THE GENERAL LEDGER CONTAINS ONLY TOTALS.

TAKING A TRIAL BALANCE THE WORK OF ONLY AN HOUR PER MONTH.

The most Scientific and Labor-saving System of Accounts ever devised.

Owing to the extensive demands made upon us from schools and teachers desiring to impart a thorough drill in the most practical of all the later systems of bookkeeping, we have had this set taken from Business and Bookkeeping Practice, bound separately, and the outfit will be furnished at a small price. The following are the special features of the set:

1. ORGANIZATION OF A CORPORATION, with explanation and illustration of corporation accounts, books, etc., with duties of officers fully explained.
3. ILLUSTRATION AND USE OF SPECIAL COLUMNS in books of original entry, with a series of propositions illustrating the arrangement of books with special columns, suitable for different lines of business.
4. EXPLANATION, ILLUSTRATION AND USE OF DEPARTMENT STORE ACCOUNTS, COST AND MATERIAL ACCOUNTS, LABOR ACCOUNTS. A bookkeeper's education is deficient if he does not understand the VOUCHER SYSTEM.

Commercial and Industrial Bookkeeping, and Business Bookkeeping and Practice are kindred systems, yet they are distinct publications, each supplying introductory and complete courses of study. Full information will be sent upon inquiry.

Sadler's Commercial Arithmetic (No. 86) and Essentials of Arithmetic (No. 88) are carefully revised and kept up to date in every edition. They are standard books. A large edition of each just from press.

WYCKOFF, SEAMANS & BENEDICT, 327 BROADWAY, NEW YORK. (Remington Typewriter Company)
NO HIGHER ENDORSEMENT.

Isaac Pitman's Shorthand
Exclusively Adopted by the
New York High School of Commerce,
and Girls' Technical High School.

(UNDER CONTROL OF BOARD OF EDUCATION.)

"Destined to be the two leading commercial educational institutions in the United States."—N. Y. Commercial Advertiser.

Contains over 10,000 engraved shorthand cuts. Exclusively adopted by the New York High Schools. Cloth, gilt lettered 276 pages. $1.50.

Twentieth Century Business Dictation and Legal Forms.
(In Ordinary Type.)

A complete Manual of Dictation for all schools regardless of system taught, containing nearly 500 letters, covering FIFTY separate lines of business, forty pages of Legal Forms, and chapters on Spelling, Punctuation, etc., and matter counted for speed practice. THE MOST COMPLETE DICTATION COURSE EVER PUBLISHED, AND SHOULD BE IN THE HANDS OF EVERY STUDENT.
252 pages, stiff boards and cloth back, 50c.; cloth, $1.00. Specimen pages on request.

"The book is certainly a splendid one and I am using it every day in the college work. It covers in such a satisfactory way the different lines of business the stenographer may be called upon to pursue. The advice given to students, the splendid articles for general dictation, such as the Monroe Doctrine, cover a field of dictation in a very thorough manner."—B. K. Thomas, South Bend Business College, South Bend, Ind.

"Reasons Why," sent on request.

Isaac Pitman & Sons, Publishers, 33 Union Square, N. Y.

Taylor's
Natural Method of Shorthand

GRAHAM-PITMAN

THOROUGH—PROGRESSIVE—PRACTICAL—SIMPLE

COMPLETE IN ONE VOLUME, COMBINING MANUAL, REPORTING
STYLE AND PHRASING

The Word Method — direct, speedy and legible.

1. Furnishes from the first, in sentences, exhaustive practice upon the common words and phrases under each principle of shorthand.

2. Saves time and lessens the mental labor of the student by supplying from the beginning the forms which are employed by the finished stenographer.

Each lesson has a review exercise, repeating all of its own abbreviations and some from the preceding lessons. In the preparation of this edition (third revised) the requirements of commercial schools have been particularly in mind. Sample sheets upon application. Complete copy sent to any teacher prepaid for 50 cents.

Spencer's Elements of Commercial Law
for January Classes

THE BOWEN-MERRILL COMPANY INDIANAPOLIS, IND., U. S. A.
The Federation.

As near as we can determine from the characters of the programs presented and the information received from other sources, the Milwaukee meeting is destined to be a success. Possibly the best meeting of the kind ever held. This is as it should be. Nothing else should be expected. Since commercial education is occupying a more important position today than ever before in the history of the world, it is quite natural that the National Commercial Teachers' Association should be larger than ever before.

As a member of our profession, you ought to consider seriously the advisability of being at Milwaukee during the holidays. You can get a perspective there of the work of the profession that cannot be secured any other way. Here it is that you come in contact with your fellows and estimate yourself and are estimated by others. Here it is that you learn to know your strong and your weak points, especially your weak ones. For, after all, we are not unlike the chain, the strongest link is as strong as its weakest. Socially and professionally the meeting is a promising one. We urge you to be there.

Self-education is one of the modern studies, and a trip to Milwaukee as well as to other various cities where these meetings are held, is an additional lesson in that subject, and is one that cannot be gotten from books. So much is developed in the true sense when you associate with co-workers. Personal contact means much. Without it our skill and knowledge are but little more than dry bones. For professional growth, no one at these meetings need come here. Be on hand and partake of the intellectual, social and other feasts in store for all who go.

Why This Commercial Revival?

Upon all hands we hear of unprecedented attendance at business schools. Everybody seems to be having more students than ever before. This seems to be true alike in book-keeping and shorthand. But why?

If we look about us we find a general prosperity, perhaps never before equalled. Certain it is that times are good and everybody busy. Why even tramps are hard to find. Then why should business schools not be prosperous?

The inference would naturally be that good times alone were the cause of the increased attendance of business schools. It must be admitted that prosperity is a primary cause in this increased attendance, but not necessarily the primary or sole cause.

A better, more fundamental reason is that practical education is in the ascendency, while theoretic or classical education is in the decline. This is due to two or three causes. Practical education is in demand in the commercial world. Expansion has been so sudden and extended, that the demand for young men and young women who could do something has far exceeded the supply.

Another reason is that theoretic, classical, or abstract learning has to a large degree been found to be uneducational even for the professions. Educators have been and are abandoning the old systems and methods of education until today our colleges as a rule are vastly different than they were a decade or ago.

Still another reason classical or college education is being replaced by practical education is that in these days of phenomenal progress young men and women cannot spend five to seven years in learning that which will not aid directly in the battle of life. They therefore turn to the business college, where in from six to twelve months they may be able to earn a fair salary from the start, and put them into line for promotion even years before they come in contact, if ever, with their classical fellows.

Classical or liberal education, if it of the modern sort, is all right for the few, and the fact that our business schools are so prosperous indicates that the many are now conscious of this fact.

Business schools are prosperous because practical education is popular, and not merely because times are good.

Something Worth Considering.

Some years ago we had a Western Penman's Association. From it was evolved the Commercial Teachers' Federation. In order that it might grow and prosper the word National was prefixed. It prospered. It drew from the central states and the eastern West. It drew also from the seaboard and cultured East. It held forth in Chicago for our eastern patrons; if the Federation could get it to come eastward, in recognition of the patronage from the East. But the movement was met by the arguments that it was a western association, deriving its patronage from the western states; that it was national only in name; that the easterners had an association of their own; that if it were allowed to come as far as Cleveland, Buffalo, Pittsburgh, Wheeling, or Washington, the eastern boys would steal it, and keep it, etc., etc.

The answers were: it is no farther to New York for our western brothers and sisters, than to Chicago for our eastern patrons; if the Federation is truly national, it is worth passing around; by holding meetings in different places new members are secured, many of whom will ever after attend; change of location means educational and opportunities in the way of observation and study of cities, country, institutions, customs, and people not otherwise possible; if it is national, let us have our share of it, and in return we shall make it better and bigger than it could hope to be as a local institution; etc., etc.

No patronage comes from west of Nebraska, but considerable does come from as far east as Massachusetts. It would seem reasonable to suppose that if the Federation is to be truly national, and to continue to receive eastern support, should recognize the justice of meeting at least midway, if not occasionally in the western East. Either that or drop the word national.

The eastern Commercial Teachers' Association has not been and is not in any sense a rival association, holding, as it does, its meetings at a time when they cannot conflict in the least with the "western" association. But what would happen if our eastern brethren were to become tired coming west continually? Or if they were to become self-satisfied with their own association? We never want such to be the case.

We have hereby but echoed aloud the sentiments we have heard. We hope to see the National Commercial Teacher's Federation become truly and unmistakably national; and to become such it must consider seriously the interests of its various members.

Commercial education has a big future—bigger than any locality. Does the Federation recognize this? In the interests of harmony; of oneness of purpose; of "in union there is strength?" of the highest possible success and usefulness of the National Commercial Teachers' Federation, the Business Educator hereby counsels serious consideration and unselfish motives in shaping the destinies of this modern, mighty factor in commercial education.

The Strength of the Business School

By Prof. A. D. Wilt, Dayton, Ohio, is the first of a series of papers from men whose opinions are worth something. Mr. Wilt has long been recognized as one of our most substantial business educators, and one that has ever stood for the best in practical education.

Finest Ever Presented.

We have on hand several lessons of C. C. Lister's work in business writing. We want to say that we have a surprise in store for our readers. The penmanship is certainly among the finest ever presented in a penman's paper, or anywhere else so far as that is concerned. Mr. Lister is certainly outstanding himself. Teachers of penmanship will do well to keep an eye open for these lessons, and students of penmanship will do well to get in training for them.

Hungry As a Wolf for the Business Educator.

Mr. F. J. Brandt, Philadelphia, Pa., an enthusiastic supporter of the Business Educator, writes: "I wait like a hungry wolf for your journal, which I consider the finest penmanship journal published."
Lessons in Practical Business Writing

BY

N. O. Keesling

CANNON'S BUSINESS COLLEGE.

Number Four.

Lesson 20

The round style of capital P is made the same width at top as at the bottom, and the pen is traveling upward when you finish. The first part of small p is made round at the top and the last turn pointed.

Lesson No. 21.

I prefer the first style of capital R. Retrace downward stroke almost to the top and make top full and round. Hook the little circle around the downward stroke. Small z is a combination of small n and loop. Watch slant. We now take up a few characters that are used in business. The % mark rests on the blue line.
Lesson No. 22.

Capital C is made similar to capital K. Do not join loop to downward stroke. Try to keep both parts about the same size. Small g is made similar to figure 9, and you may use either the cut off stroke or loop.

Lesson No. 23.

Watch curves in capital T. See compound curve in top as shown by copy No. 2, this plate. Small q is made like small g but it turns the opposite way at the bottom. Be sure to get a visible loop at the bottom.

Lesson No. 24.

Capital F, as shown in copy No. 5, this plate, is made with a very small curve at top, a sharp angle at the right, and a curved cross stroke. Watch the space between the downward stroke and the loop at top. Small l, the simplest of the loop letters, must always be made with a visible loop. The downward stroke should continue straight almost to the line, and if you have any difficulty in making it so let your fingers assist you.
Lesson No. 25.
Stand capital S up pretty straight as the loop and not the downward stroke gives it its slant. Make the last part similar to capital F. Small h, a combination of small I and the last part of small n, should be made with last part round at top and downward strokes parallel.

Make loop at top of capital G long, watch carefully the sharp turn at top of last downward stroke. Stop at the angle and consider what you are doing. Small k, the bugbear of most students, is made with a little hook and straight downward stroke. Do not make the last part too large.

Lesson No. 27.
Start capital I just below the base line and sit the last part on the line. Do not double it up as if it had the colic. Remember it is all above the line excepting the start and that the loop shows the slant. Small b is made round at the bottom and is finished with a little retrace stroke. Keep downward stroke and upward stroke parallel.
Lesson No. 35.
The top part of the J is developed from the indirect retraced oval. Finish the oval with the last part of the J. Beginning stroke of the J should begin on or a little below base line. Learn to finish the J both ways. A great deal depends upon the way in which you practice the words and sentences to get the best results.

Lesson No. 36.
We will begin lesson 36 by combining two indirect retraced ovals together, forming the two parts of the J. Make oval above base line first. Let oblique exercise extend above and below base line about the same distance. Fill several lines of the oval finished with the down stroke and lower loop of the J. The top part of the J should be made quite a little larger than the part below base line. Down stroke of the J should be made straight. Try combining three of the capitals without lifting the pen. Study carefully the connecting stroke of the capitals X and Y in sentence given.

Lesson No. 37.
In beginning this lesson spend several minutes on the figure eight exercise. We should by this time be able to make this exercise quite well. The capital L is formed on the same principle as the N, down stroke being the same in both letters. The L is finished like the capital Q. Begin second style of L with a small straight line at the top, down stroke being the same as in first letter. The D is much the same as L.

Lesson No. 38.
In this lesson we will take a short review of some of the large oval exercises. After you make a line of the ovals place a capital letter in the center of each just as given in copy. Retrace each oval about ten times.

Lesson No. 39.
We have in Nos. 14 to 16 a series of capital exercises which may be practiced with much benefit. See that the movement comes from the arm and not from the fingers, and that it is quite free and rapid. Think clearly concerning the joinings before starting. Then do your best to control the movement.

Lesson No. 40.
In this lesson we will take a general review of the capital letters. Spend at least ten minutes of careful study and practice on each letter. Fill several pages of this lesson.

Lesson No. 41.
Great care should be taken in practicing lesson No. 41. Practice each sentence separately, filling several pages of each. This lesson will test your skill in sentence writing. Watch the height of the small letters, and be sure to get equal spacing between each letter. Don't hurry over this work.
Mr. Thos. E. Cupper, of Thomasville, Ga., submits some cards indicating splendid natural ability in penmanship. Some day Mr. Cupper ought to be one of our leading penmen.

Some specimens in ornamental penmanship just received from the pen of A. H. Burke, penman in the Western Iowa College. Council Bluffs, la., indicate that he swings a pen of more than ordinary artistic excellence. In fact, some of the letters in these specimens are among the finest we have ever seen.

We have received from Mr. D. S. Hill, of Lockyear's Business College, Evansville, Ind., photos of blackboard work that he has been doing along the line of the Hinman style. We must say that the work is of a high order, and of a nature that we were not aware Mr. Hill was capable of producing. We congratulate him.

F. A. Curtis, penman in Shoemaker & Clark's School, Fall River, Mass., favored the BUSINESS EDUCATOR with a handsome club of subscriptions, and also inclosed some handsomely written cards, ornamental style, which are truly professional.

Mr. J. C. Fowlie, an advertiser in the BUSINESS EDUCATOR, favored us with a lot of colored cards written in white ink indicating that he is putting out a good grade of writing.

G. S. Herrick, penman in the Marion, Ind., Normal College and Business University Club, the BUSINESS EDUCATOR, and also sent a magnificent written letter, ornamental style. Mr. Herrick's small letters are unusually fine, being very accurate, delicate in line, and dainty in touch.

Mr. Herrick is an enthusiastic supporter of the BUSINESS EDUCATOR.

J. A. Elston, Canton, Mo., favored us with some pen and ink sketches, indicating considerable ability in that line.

Mr. J. G. Christ of Lock Haven, Pa., recently favored us with a liberal and handsome supply of specimens of penmanship, varying from simplified to ornamental, in an envelope decorated with colors. Mr. Christ is one of our most versatile penmen, and we are sorry he is not following the work professionally, as he has qualities becoming one of America's best.

Mr. J. C. Webb, the colored card writer and penman of Pittsburg, Pa., is organizing classes in writing in that community, and reports a flourishing business. Mr. Webb swings the pen with more than ordinary dash.

Mr. M. W. Norton, a seventeen-year-old young man who is a pupil of Mr. B. M. Winkelman, an old Zanarian graduate and teacher in Huntstinger's Business College, Hartford, Conn., recently sent some specimens which demonstrate the fact that Mr. Winkelman is a successful teacher of penmanship, and that Mr. Norton is one of the finest penmen of his age in the country. If we mistake not, he has the necessary natural ability to become one of America's most finished penmen.

Mr. C. R. Tate, penman and commercial teacher in Bartlett's Commercial College, Cincinnati, O., recently favored us with some written cards together with a subscription, which indicate that his penmanship is on the improve, which means that he is getting pretty fine, as Mr. Tate has for some time been recognized as quite a skillful penman.

P. K. Fitcher, Kidwifay, Pa., inclosed some cards indicating more than ordinary skill.

Some cards and specimens have been received from E. L. Stacy of Kingstown, W. V., which indicate that he is following closely the instruction he received from Mr. L. Madarasz. Mr. Stacy is a penman of no mean ability.
Aspiring Penman Wanted.

I want a young penman, a worker, who wishes to be pushed to the top in all-round skill, like F. B. Courtney and other of my famous graduates. He to exchange services for tuition and bear his own expenses. A fine position guaranteed when ripe.

Impressions by the Way

When, during our summer tour among the business schools of the lake region, we left Battle Creek, Mich., we went to the capital. We found H. J. Beck, the proprietor of the Lansing Business University, enjoying the closing days of a pleasant summer vacation. He has large, commodious rooms, well lighted and nicely furnished. Lansing is a pretty residence city, but it does not impress the passing visitor as an especially lively business city, and its Capitol will hardly bear comparison with the Capitol of Albany, St. Paul, Des Moines, or Hartford.

We were warned by friendly acquaintances along the way not to plan to spend the night in Jackson, Mich., if we were depending on a hotel for sleeping quarters, as we were not disappointed when we found difficulty in obtaining even a fair lunch. But we forgot about something like this little inconvenience in honor of business activity that seemed to pervade the whole city. We had in the person of Cyrus W. Field—the young—began to think that we had visited one of the pleasantest cities on the journey. Mr. Field had an unusually bright business class at work, and we were convinced, before we left the city, that he and his associates are doing excellent work.

Our stay in Toledo was a short one, but it was long enough to give us an idea of what it is to live in a thriving lake port. Hunting up the location of the Davis Business College, we found that Mr. Davis had removed from the business center of the city to a business block on the edge of the residence district. We found few schools during our trip, that would equal the Davis school for the outer qualities of a first-class institution. That the school is giving thorough instruction to the young people of Toledo is evident by the size of the school, the esteem in which the proprietor is held by the business, educational, and church young people of the city, and by the fact that this kind of endorsement, coupled with good judgment, has brought to Mr. Davis a competency that is certainly a very practical indication of his business ability.

The Metropolitan Business College is one of the newer schools of Toledo, but Messrs. Browne & Kies, the energetic young men who are at the helm, are making it one of the best known among the schools of northwestern Ohio. Some of their rooms are not as well lighted as might be desired, but they have spared no expense in furnishing them. Mr. Kies was formerly a student under E. K. Isaacs, when that skillful teacher was at the Northern Indiana Normal School, and he has done credit to the instruction obtained there. It would not be difficult to count the school proprietors who can equal him in dashing, ornamental writing.

Our schedule did not give us time to visit the third school in Toledo; in fact, to avoid riding to the lake shore in passing out of the way, we had to telegraph back to have our baggage forwarded, having come so near missing our train, under the pleasing influence of conversation with Mr. Davis, that we did not have time to re-check our baggage.

When we finally reached Pittsburgh, we were much surprised to step out of the sleeper into an imposing new station that had been erected since we had last visited "The Smoky City." Pittsburgh is certainly one of the most promising business cities east of the Mississippi river. Boston cannot compare with it for towering business blocks; and new ones are continually being erected. Our inspection of construction that will be twenty-two stories in height when completed, and there are several that run from ten to nineteen stories high.

It was not especially surprising, then, to find that the Iron City Business College had overflowed into an adjoining building, that H. L. Andrews had what he believes to be the largest short-hand school in the world (with a finely equipped commercial department being established this fall), that E. T. Overend, of the Pittsburg Academy, found his commercial department growing so that he had to engage an extra assistant that William H. Duff was looking forward to an enlarged attendance, and that S. D. Everhart was in charge of one of the best commercial departments to be found in the high schools of the country. Our flying visit to Pittsburgh was inspiring.

After a night run through Pennsylvania at a rate that made us sure, several times during the trip, that our time had come, we pulled into the splendid De Hoy Business College station in Philadelphia. The Quaker City revived a variety of emotions. We had seen them before, it will be remembered, but the conditions were somewhat different. However, we boldly ventured forth, and called at the office of the well-known Banks Business College. To our disappointment we found that the energetic principal of that thriving school had just started for an over-Sunday trip to the seashore, and that the teachers were either absent on their vacations or were out hunting for business. Indeed, the impression was received in Philadelphia in August was, that if a man should attempt to do business there now without soliciting for it, it would be necessary to start in with several million dollars of endowment. Getting school business in Philadelphia seems to be almost purely a commercial affair.

At Peirce School we were pleased to run across W. J. Ames in a breathing spell between trips after prospective students; and we renewed a warm acquaintance formed with members of the office force during the spring meeting. We are informed that the school is "full to the doors.

At Temple College we were fortunate in finding A. D. Skeels, who is now the principal commercial teacher there, just in from some calls that he had been making, and just about to go out to make other calls. There, as elsewhere, renovators were at work putting on the finishing touches preparatory to opening school. Mr. Skeels felt sure that they would have an enlarged attendance this fall.

Beautiful old Girard College grounds were in their most attractive apparel when we walked into Vice President Sheldon's office. Here, too, the whitewashers were at work, demonstrating anew that in Philadelphia the "spring house-cleaning," for the schools, at any rate, is a summer diversion. It is a treat to those who admire classic architecture, and to those who love flowers, which thrive in cleanliness and quiet, to visit this splendid monument to the wisdom and the philanthropy of an eccentric "merchant and mariner," as he loved to be called. If you have never seen it, do not pass through Philadelphia without visiting Girard College.

Cutting short our stay in Philadelphia, we went to Trenton, where we found the ubiquitous carpenters again, although the Rider-More and Stewart schools were practically ready for the business which would not begin for several days. A great change has been effected in the Stewart building since the masterful J. H. More took hold of it. The old rooms have been refitted, the stoves have gone to the junk heap, steam heating apparatus has been installed, new rooms have been added, and a general air of enterprise pervades the atmosphere of the place. The main bookkeeping room of this school is now one of the most attractive in the country, having been newly furnished with the best obtainable desks—desks made for work, not chiefly for show. It is simply remarkable that two such excellent schools as the Rider and the Stewart schools were always known to be, could not only exist but could also, in that comparatively small city, surround with the fittest possible compe-
tition, yield profits that made their owners financially independent; but that is what they did, and the present management is going their elders one better.

* * *

Rapid Calculation on the part of prospective office help, for bookkeeping, a good hand in accounting and rapidity in handling figures, and a knowledge of the elements of account-keeping. In our perambulations about this broad land, we have met a few superior teachers of rapid calculation, and we have been persistently after them to induce them to present to our readers methods of handling this important subject, but they were all "too busy." We began this work in the first number with which this department was added to the paper, but the teacher who began the work became, soon after agree-

It is commonly conceded that business men require chiefly,

suggestions or criticisms. It would help this department and therefore our readers, for whom we are working.

Under this caption, we shall publish, during the remainder of the year, discussions of topics of especial interest to those who are managing business schools. Yet, these articles will be interesting and helpful to all who are engaged in any way in training young people for business life. The article above, by Mr. A. D. Wilt, is the first of this series. * * *

All Aboard for Milwaukee! commercial teachers to attend the annual conventions of the National Commercial Teachers' Federation that argument in favor of such action seems superfluous. Therefore, we pause only long enough to remind our readers that we meet this year, under particularly happy circumstances. The Grand Old Man of the profession is to be the host; furthermore, the occasion will be a sort of Spenerian family reunion, another great deal to aspiring teachers who remember all that the name "Spencerian" stands for, in relation to commercial education. Who would not travel many miles to shake hands with Robert C. Spencer and his notables? Let us meet and greet and break bread with one another at the banquet board in "The Cream City."

The Strength of the Business School

In Competition With the Business Department of the High School

A. D. Wilt, Principal of the Miami Commercial College, Dayton, Ohio

To say that the business school is in competition with the business department of the high school, is assuming that the work of the one school and that of the other is identical, and that therefore the competition is the same as exists between two manufacturing establishments, producing the same products, under the same conditions; a situation which would warrant a highly different and more intense struggle than could ever possibly exist between Business Educators and the high school. Yet these articles are likely to be read by students of business ethics involved, but on account of the manifest impropriety of such competition.

That there has been some ground for wide-spread misapprehension is quite certain, and it is to the advantage of either high school or business college, to say nothing of the broad and general interests involved in educational work, that such a misapprehension should exist.

The work of a well-regulated modern
business school is of an entirely different character from that which can be done in the best-equipped business department of a high school. This is because the students of such a business school are much older and better able to understand the curriculum such a school must provide if it does proper work. Bookkeeping and the collateral subjects which belong to it, is so broad that the average high school student of 11 to 16 years of age cannot grasp it properly.

Modern business has assumed such great proportions and such complexity, and must be conducted with such system, in its offices and in its other departments, that the bookkeeper and office manager of today must know much more than ever before.

Those who assume that the course of study in the high school can be made adequate to the demands of the business public, do not understand the great development of modern business and its requirements. The business school occupies a field of its own, and always wrongs the youth of fifteen or sixteen years of age, who is induced to give up a good high school course for the business course he is not equipped for taking, and this lessens its own effectiveness, and should not have the recognition of superintendents of schools, or high school principals.

In saying all of this, I do not wish to be understood to be under-rating the value of what may be properly taught in the business department of a high school, if its course extends through three or four years. The wisest educators of Germany have settled quite definitely the limitations of high school work of this character, and include altogether much more of commercial geography, elementary technology and physics, than they do of higher bookkeeping, leaving that to be taught in the university courses.

In this country the gulf between the high school business course, and the business course of the university, which mature men of twenty years of age or thereabouts only can take, is recognized; and the university course of business training being provided in Wisconsin, Amherst, and other universities and colleges, includes Political Economy, History of Commerce, Economics, Commercial Law, etc., in courses extending through three or four years.

The class of students who can take university and college courses will always be, comparatively, a very small number, because of the great expense of time and money. The great mass of young men and young women of eighteen years and upwards must therefore come from the business school, and statistics from schools in all parts of this country show very conclusively that the number of such trained in the business school, who are in business, is vastly larger than the number of pupils from the high schools.

Having a field distinctively its own, when all the elements of the question are considered, the business school is really not a competitor of the high school in any respect. The business school principal should encourage the youth about him to complete the high school course as a necessary, or at least highly favorable, preparation for the business school.

When public school officials, and principals of business schools can agree to this presentation of the situation, commercial education will be very largely advanced in this country, and all friction between high school authorities and the business school authorities will be effectively removed.
Rapid Calculation.

L. C. HORTON, WINSTED, CONN.

At the request of the Staff Editor I undertook a short series of articles on Rapid Addition and the Rapid Reckoning of Interest, work that is of very importance in the modern counting-room.

In the majority of schools rapid addition exists only in the catalogue or other literature of the school. In many others no systematic course is pursued with the teaching addition, to produce good results. Some teachers run through a series of "nuts to crack," and tackle the students with puzzlers, and these students are invariably found to be slow additionists.

In the briefest manner possible, I want to say something about teaching students

**Correct Addition.**

**Rapid Addition.**

**Interest Reckoning.**

and I wish to say something about Figure Writing, Timing Results in Addition by the aid of a stop watch, and Rapid Addition Examinations.

Starting a Class.

Upon the blackboard a number of propositions are placed, and the students are shown how it is possible to add by groups. This matter of groups is essential to quick adding. Its possibilities are many. A little time spent every day will be productive of good results. Teachers are sometimes found where the group idea makes it possible to add at an unusually high rate of speed. A class must not think it should not add unless it can find groups. The student must be instructed to make full use of the group when it occurs in any proposition. Any audible expressions when adding must be fought against. A student must not be allowed to repeat the numbers—not even in his mind. For sake of the student, if nothing else, the statement that he should add figures with the same readiness that he would read a word, or a series of words, must not be made. Such adding cannot be done except by those who have practiced.

To begin with, an example of two figures wide and six figures deep may be used. Answers are quickly obtained from so small a proposition; it gives a chance for frequent illustrations.

In my classes, each student uses a mechanical device which produces all the propositions for adding. These propositions are from one figure wide to five figures wide, and from five figures deep to one hundred figures deep. The device eliminates writing the figures, and favors the class with a greater amount of time for addition. My classes are given a very great amount of work to do, and I will not put up with a student who will not get right down to business, and keep there. One example follows another in rapid succession. I depend entirely upon my book for correct answers. They have rarely failed me, perhaps once in a thousand times. I teach them early in the work how to prove results. I believe in the students, and I want them to learn to depend upon themselves. If I had answers to all the propositions, they might depend upon me for the answers.

From an example of twelve figures, we go to one hundred twenty, (four figures wide by five figures deep), and from this, to examples in the following order of size:

<table>
<thead>
<tr>
<th>WIDTH</th>
<th>LENGTH</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>5</td>
</tr>
<tr>
<td>3</td>
<td>8</td>
</tr>
<tr>
<td>1</td>
<td>12</td>
</tr>
<tr>
<td>1</td>
<td>20</td>
</tr>
<tr>
<td>5</td>
<td>20</td>
</tr>
<tr>
<td>1</td>
<td>24</td>
</tr>
<tr>
<td>5</td>
<td>10</td>
</tr>
<tr>
<td>1</td>
<td>25</td>
</tr>
<tr>
<td>2</td>
<td>25</td>
</tr>
<tr>
<td>3</td>
<td>25</td>
</tr>
<tr>
<td>4</td>
<td>25</td>
</tr>
<tr>
<td>1</td>
<td>50</td>
</tr>
<tr>
<td>1</td>
<td>75</td>
</tr>
<tr>
<td>1</td>
<td>100</td>
</tr>
</tbody>
</table>

The last three sizes are given to advanced students, and are added—their length requiring a large carrying number. More students will stumble on a single column of fifty figures, than on a proposition of five columns of ten figures each.

The carrying number does its job.

A stop watch is invaluable in rapid addition work. The speed of the students can be taken and recorded each day. To constantly refer to these records, puts a class on its toes. Students vie with each other for the highest records. Very frequently some whose records are low will quietly do extra work and catch up with the leaders.

The Business Educator

**Auditing**

(Continued from November Number.)

M. O. BENNETT, CHARTERED ACCOUNTANT.

Peirce School, Philadelphia.

It will be noticed that the checking of postings to individual accounts of customers and creditors is omitted; however, it is advisable to check occasional items throughout the year in order to test their accuracy, and in like manner to examine invoices of purchases and check their extensions as a partial test of their accuracy. The auditor should be in touch with the bookkeeper's time; then the staff will be uncertain as to what portion of the work will come under his close examination, thus producing the same moral effect as a complete audit. Where self-balancing ledgers are used, the aggregates of each should be compared with its corresponding abstract in the general ledger.

**Beginning the Audit.**

It is absolutely necessary that the auditor before beginning the investigation should thoroughly acquaint himself with the general system upon which the books have been kept. He should make a complete list of all the books and note their relation to each other, the particulars of the period covered by the entries therein, and the name of the clerk or clerks in charge of each. It is advisable to stamp or initial each book as inventoried to preclude the possibility of its being replaced at any time during the auditor's absence; this is also advisable when the audit of any book is complete, as it will prevent its being withheld without being missed. The auditor should also initial or stamp all vouchers, securities, contracts, or other important papers that are produced.

In auditing the accounts of a partnership the auditor should obtain the partnership deed and make an exact copy for his own use in future. He should then prepare short notes on the contract for his own guidance, showing in brief the financial relations that are subject to audit, and all to which the books are to be balanced, the stipulation as to salaries, duration and dissolution, etc. Any deviation from the requirements must be sanctioned by the parties concerned.

**Corporations.**

In a company audit it is the duty of the auditor to examine the books and By-Laws, the allotment of stock, the several books of record, the minutes of both shareholders' and directors' meetings, in order to determine whether all acts of the company are in accordance with the charter, the law, resolutions of shareholders, and to see that all obligations are fulfilled and not
over-stepped. All accounts and financial transactions should be in conformity with the charter or By-Laws, or the minutes of meetings. All transactions in connection with the issue, sale and transfer of stock should be carefully checked into the proper books and counterfoils (stubs) of stock certificates examined, that an over-issue of stock may not occur. There are great many defaults in connection with corporation audits that need not be enumerated.

CAH BOOK.

This is the principal book and should be exhaustively examined. Probably more fraud and trickery is perpetrated in connection with this book than with any other.

The cash receipts should be checked with care and compared with the counterfoils of the receipt books, collectors' books, counter cash book, sale slips, etc. Counterfoils should be numbered consecutively and every one accounted for, and if any is missing or lost blank, a satisfactory explanation must be demanded. A canceled or spoiled receipt should remain attached to its counterfoil. Cash sales require careful scrutiny and can be properly guarded only by a systematic internal check. Care must be taken that cash discounts are not entered up when the customer is required to pay in full—this being a common source of embezzlement—and should be watched by tracing all checks and other cash items into the bank or through the petty cash book. It is well to have duplicates, or copies of deposit slips kept.

Cash Payments. It is advisable as far as possible to deposit all cash in the bank and to make all payments by check; the canceled check then becomes the best form of voucher. All payments should be carefully checked with their corresponding vouchers; and yet neither canceled checks nor other vouchers are sufficient evidence without the proper authority which is granted by the resolutions of the directors. Petty cash payments are usually made without any vote of the directors and, therefore, require careful attention. The auditor should satisfy himself that expenditures have been charged to the proper accounts and that "errors of principle" do not creep in. When several columns are used in the cash book, great care must be exercised to see that amounts are not placed in the wrong columns.

The balance as shown by the cash book should equal the cash on hand, plus the balance in bank. If they do not agree it is because of checks that are outstanding and that have not yet been presented for payment. A reconciliation statement should be engrossed on the cash book at the end of each month, similar to the example following:

<table>
<thead>
<tr>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Balance in bank</td>
</tr>
<tr>
<td>o/s check No. 145</td>
</tr>
<tr>
<td>o/s &quot; No. 109</td>
</tr>
<tr>
<td>o/s &quot; No. 102</td>
</tr>
<tr>
<td>o/s &quot; No. 171</td>
</tr>
<tr>
<td>o/s &quot; No. 172</td>
</tr>
</tbody>
</table>

The several items in this statement should be carefully examined by the auditor and the actual balance ascertained by an independent statement from the bank.

BILL AND ACCOUNTS.

Bills Receivable. The list of bills and notes should be carefully gone through, to determine whether they are on hand or have been discounted or lodged with the bank as collateral security. All bills matured should be traced into the cash book, and if dishonored, back to the debit of the customer.

Care must be taken that notes overdue have not been paid and no credit given, and that some of the bills on hand are worthless.

Book Debts. A list of all those indebted to the company at the date the books were closed should be prepared and verified with the ledger accounts. A certain amount should be written off the aggregate to provide for possible losses which experience has shown is inevitable. Unless the auditor is qualified to pass on the financial standing of each debtor, it will be necessary to have the manager of the business determine which are good, doubtful, and bad. Any that are worthless should be closed into Profit and Loss, but the doubtful ones should be listed as such in the balance sheet at a reduction of, possibly, one-half.

A good plan is to open a Reserve for Bad Debts account to which is credited annually, out of profits, a sum which bears the ratio to the total sales for the current year that the ascertained loss for the previous few years bears to the total sales for that period. As losses occur in future they are charged against this reserve and profits, for the following years are not burdened with losses upon business transactions of previous years.

Accounts and Bills Payable will present but little difficulty, yet they should be critically examined to see that they have all been credited, and that the company owes all that are shown by the books. The returned note or draft, of course, is suffic-
SUBSIDIARY BOOKS.

The several books of purchases, sales, etc., should be compared and verified, and the ledger entries should be carefully checked with the books from which they are brought. Care must be taken that all invoices received are O. K., and that the amount of such liability is posted to the correct account in the ledger and finally represented on the balance sheet.

GOODS AND PROPERTIES.

Goods on hand should be inventoried at cost and not at the market value, as there can be no profits until goods are sold. While profits should not be anticipated because of a rise in the market, on the other hand a good practice is to lower the valuation of goods that are out of fashion and for which the demand is lessening. The inventory book should be signed by the party who made it, and it is the duty of the auditor to go over the extensions before accepting it as final.

Machinery and Plant. A certain per cent. should be written off each year for depreciation. It is difficult to say what amount of depreciation should be allowed each year, as the life of machinery is uncertain unless the builder is careful, and machinery may become obsolete through later inventions. Boilers, for instance, wear out rapidly, and should have from 10 to 15 per cent. written off yearly, while on other machinery from 5 to 10 per cent. is sufficient. All repairs should be charged to revenue. Perhaps a reserve should be set aside for depreciation, and such a method is commendable.

Furniture and Fixtures. Deduct say 7 per cent. on the reducing balances. Horses and wagons and loose tools should be revalued each year, as no percentage rate of depreciation can be safely determined.

Stocks and Bonds. These should be personally inspected by the auditor and the actual market value determined from the published quotations. They are not subject to depreciation as they fluctuate in value. Care should be taken to see that they are not over-valued.

FICTITIOUS ASSETS.

Such assets as good will, patents, copyright, franchise, etc., while desirable, should be carefully checked. Good will does not depreciate, but may be shattered at any time, or it may gradually increase. If the company is prosperous, however, it need not be written down. A public company's franchise may be closed off during their legal existence.

Such items as bonus, stock discount, organization expenses, etc., should be written off in three or four years.

CONTINGENT LIABILITIES.

These are very important and should not be overlooked. There are generally a possibility of having to pay them. They include notes and drafts under discount or that have been transferred to others, accretions, obligations, disputed claims, cumulative debentures, etc. Contingent liabilities do not form part of the balance sheet, they should by all means be listed at the bottom for the information and benefit of the stockholders.

THE BALANCE SHEET.

This is the most important statement laid before the stockholders, as it shows the exact financial condition of the business. On one side are placed liabilities, not only to creditors but to the stockholders themselves, while on the other side are enumerated the assets and the property of the company.

Before giving his certificate of correctness the auditor must examine in detail each item on both sides, and satisfy himself that the liabilities have not been understated, nor the assets overstated, or vice versa.

The liabilities as shown in a company's balance sheet may be classed under two heads:

1. Liabilities to the Shareholders.
2. Liabilities to the Public.

The former consists of the share capital, surplus, undivided profits, etc. The details and calculations should be clearly stated, and when it is divided into more than one class this should be shown. The balance sheet should also show the authorized capital, the amount subscribed, the calls unpaid, etc.

THE CERTIFICATE.

As stated above, the certificate should be a clear and fearless statement of the facts as they exist at the time of making the examination. If a partial audit is made, such should be stated in the report, but any item of interest to the stockholders should by all means be brought to their notice.

There is no definite form of certificate, as in other business it has been found that the form to be adopted by the auditor. Any clear statement of the affairs will suffice and need not be of great length. Such a statement as: I have examined the above Balance Sheet and believe it correct, would be sufficient; or on the Balance Sheet may be written, 'Examined and found correct,' to which would be appended the name of the auditor. There are often two auditors engaged on an audit and in that case both should sign. Such a report as 'Examined and found to agree with the books,' would not be satisfactory, as the books may not be correct.

The following auditor's report may prove suggestive:

PHILADELPHIA, Sept. 30, 1902.
TO THE STOCKHOLDERS OF THE CITY TRADING COMPANY.

GENTLEMEN: Having examined the books and accounts of the City Trading Company in a bag I submit the following report:

We find the appended Balance Sheet, Profit and Loss Statement, and statement of Bank Balances have all been correct and in accordance with the books.

We find the books to be carefully and systematically kept, and everything in connection therewith in proper order. We find the financial statements received at the hands of the Manager and his able staff of assistants.

Respectfully submitted,

SAMUEL BROWN, Auditors.
J. W. GREEN,
There's no easier way to cure foolishness than to give a man leave to be foolish. And the only way to show a fellow that he's chosen the wrong business is to let him try it. If it really is the wrong thing, you won't have to argue with him to quit, and if it isn't, you haven't any right to.

The easiest way in the world to make enemies is to hire friends.

ON MARRIAGE
I knew right off that I had made a mistake when I opened the inclosed and saw that it was a bill for "fifty-two dollars for roses sent, per order, to Miss Mabel Dashkam." Of course you're in no position yet to think of being engaged even, and that's why I'm a little afraid that you may be planning to get married. But a twelve-dollar clerk who owes fifty-two dollars for roses needs a keeper more than a wife. I want to say right here that there comes a time to a fellow who blows fifty-two dollars at a lick on roses when he thinks how many staple groceries he could have bought with the money.

Marriages may be made in Heaven, but most engagements are made in the back parlor with the gas turned so low that a fellow doesn't really get a square look at what he's taking.

While a man doesn't see much of a girl's family when he's courting, he's apt to see a good deal of it when he's housekeeping; and while he doesn't marry his wife's father, there's nothing in the marriage vow to prevent the old man from hawking money away.

To marry for money or to marry without money is a crime. There's no real objection to marrying a woman with a fortune, but there is to marrying a fortune with a woman.

TO A SALESMAN
Repatter makes reading lively, but business dull.

Half the people in the world take a joke seriously from the start, and the other half if you repeat it often enough.

He laughs best who doesn't laugh at all when he's dealing with the public. There's such a thing as carrying a joke too far, and the fellow who keeps on pretending to believe that he's paying for pork and getting dog is pretty apt to get dog in the end.

A real salesman is one part talk and nine parts judgment; and he uses the nine parts of judgment to tell when to use the one part of talk.

Of course you want to be nice and mellow with the trade, but always remember that mellowness carried too far becomes rottenness.

Real buyers ain't interested in much besides your goods and your prices. Never run down your competitors' brand to them, and never let them run down yours. Don't get on your knees for business, but don't hold your nose so high in the air that an order can travel under it without your seeing it. You'll meet a good many people on the road that you won't like, but the house needs their business.

RAINFALL.

Department of Commercial Law.
Conducted by J. E. Barber, Bryant-Stratton Business College. Providence, R. I.

INTRODUCTORY LESSON FOR BEGINNERS.

"An ounce of prevention is worth a pound of cure." It is a significant fact that a very large majority of the law-suits involving business interests, arise because of a misunderstanding as to the terms of a so-called commercial agreement made, each business transaction is the result of an agreement such as the law recognizes. An agreement is supposed to involve the meeting of the minds of the parties to the agreement. However, the courts cannot get at the minds of the parties but must judge by outward appearances, such as language and conduct. It frequently happens that a person consents to something the scope of which he does not fully comprehend. Such an agreement is almost certain to furnish disagreeable work for the courts and the lawyers. For all this the losing party must pay and pay well. For, as one has said, "talk is cheap except when the lawyers talk."

LEARN TO KNOW WHEN TO CONSULT A LAWYER.

Some will say, "No one but a practicing lawyer is competent to carry through an important deal in these days of modern complexity." But how is one to know what is "important"? It is too often true that he who does not know, does not know that he does not know. If he did, he would not make his fatal blunder.—A loaned B $2,500 on his note. B was known to be "poor pay," and A would not make the loan unless C would indorse the note. C did indorse and, of course, was liable to pay the note if B did not. When the note fell due, A was kind enough to give B an extension of ten days, without consulting C in the matter. When the ten days had ended, C was asked to settle and he refused. A went to an attorney who advised him that by extending the time for payment without the consent of the indorser (C), he had released the guarantee. Had A known that he did not know the effect of extending the time, he would have consulted his attorney sooner and would have been $2,500 better off. Hence the necessity of working up knowledge of the principles of the law of bills and notes, he would have known better anyway.

The object of the study of commercial law is not to make a lawyer of the layman but to teach him when he needs a lawyer. Not every man can be his own lawyer, and it is but sheer nonsense for him to think of trying it. But it is not the person well equipped with the principles of business law who makes this mistake. He knows what he knows, and he knows that beyond certain limits there is danger. He knows that the law of real property is too intricate for any one to expect to be an expert in the field. If he has a real estate deal on hand, he pays his attorney a few dollars to keep the deal straight rather than pay him many dollars to get it straight after he has muddled it.

HOW TO STUDY COMMERCIAL LAW.
Commercial law cannot be memorized any more than commercial arithmetic. Of course, certain principles can and must be mastered; but, like the principles of arithmetic, they are not mastered until they can be applied. A man may own a fine set of surgical instruments and be anything but a skillful surgeon, unless he possesses the skill to use them. The principles of law and the law itself are not to be got out of them, they must be used. In this connection it is well to remember that "reason is the soul of the law." Once in possession of the principles, and given a set of facts, it becomes for the student to reason out the answer.

But one who reads the text-book for principles must read between the lines. Nothing that is read should be so construed that it will falsify the whole meaning of the law. To illustrate, when one reads "the agreement of the parties makes the law of the contract," he should keep in mind that an illegal contract is void; i.e., after reading the agreement of the parties makes the law of the contract," he should read between the lines, "so long as the agreement is lawful."

ON THE USE OF ILLUSTRATIONS.
Every principle should be fixed in the mind by means of an apt illustration. For example, it is easier to see the force of the principle, "every simple contract must be performed," when it is shown up by at least two sets of facts, one where there is no consideration and consequently no contract, and another where there is a valid consideration and a binding contract; thus, A promises to pay B $100 and B promises to receive no compensation. B cannot hold A to this agreement because he (B) did nothing in return for A's promise. Again, suppose X promises to write an article for Y, and Y promises to pay X $100. In this case X has done something he was not already bound to do. He has promised to pay X $100. Y's promise is a consideration that will bind X to his promise. Then, so far as the consideration is concerned, this is a valid contract.

The learner should select his illustrations under the guidance of a careful teacher. Great harm may easily come from trying to evolve rules of law from cases. Take, for example, the last case given above. It could be written to be a libel, the contract would be void. The learner, overlooking the rule, "an illegal agreement is void," and seeing that the court had declared the agreement void, might be led to think that it was because the consideration was not valid. Great care should be exercised in this particular, because it is easy to get a wrong idea, and wrong ideas, like a mustard seed, are hard to kill when once they are rooted. Only the simplest cases should be taken for illustration, and every detail of each case should be studied, not simply gone over.

THE MORAL AND DISCIPLINARY VALUE OF WORK IN COMMERCIAL LAW.
Aside from the direct value of a knowledge of business law, there is another and most important benefit to be derived from the study of it. Despite the detailed notes of the crook, law consists in right principles rightly applied. Can a person engage the mind in a more wholesome occupation than in looking for, searching after, strengthening, and, if possible, extending the broad lines of business? Probably there is nothing in a commercial course, if there is in any course, which will broaden, deepen, and strengthen (develop and discipline) the mind more than the well-directed study of business law.

We are living on a moving planet and in a moving age. We cannot stop if we would. Unless we make a faithful continuous effort to go ahead, we must slip back. Every day, new work will arise that we must face new problems, problems which we alone can solve. Will the ability to reason help us? It is the only thing that will help us. Every day new opportunities are presented and we are better or worse accordingly as we treat these opportunities. Forces are at work which have already reduced business to a science.

Have the time has passed when a sundering of knowledge and a great deal of bluster and bluff will place a man in the front rank anywhere except in the courtroom as defendant to a suit, or more often in the law-suit as plaintiff. It is almost impossible to become a great law-suit as plaintiff. It is almost impossible to become a great business man without a thorough knowledge of the rules of business than did the average lawyer of yesterday. "Let us, then, be up and doing."
A History of Penmen, Early Business Education and Educators in America.

George Newhall Comer, the pioneer of Commercial College work in America, was born in Liverpool, England, in 1811. His early business training was had in the large banking house of Baring Bros., London, and when still a young man he came to America. For a short time he was engaged in the coal business in Boston, Mass., working as an expert accountant at such times as he could spare from his regular occupation. Mr. Comer had been in Boston but a short time before he realized the need of a school, where young people could be taught bookkeeping, writing and other business studies, and in 1839, he disposed of his coal business and opened a business school under the name of Comer's Initatory Counting room, which name he later changed to Comer's Commercial College.

From its inception Comer's College was very popular and successful. The good people of Boston and New England, recognizing the value of such a school for encouraging young men and women, accorded it their hearty support and strong financial encouragement. From an old circular, bearing the date of 1840, we copy the following:

Comer's Initatory Counting Room

is open day and evening for the purpose, as its name implies, of preparing students of all ages for the practical duties of merchants' clerks, and the other active pursuits of life, upon the following terms:

A course in Mercantile Writing, Bookkeeping, and Commercial Calculations, including stationery...........$11.00
A course in Writing, Arithmetic, consisting of one lesson each day or evening for three months..............$8.00

Having frequent applications, Mr. Comer can usually procure employment for such of his students as may require it.

As an expert accountant, Mr. Comer occupied a somewhat unique position, coming to Massachusetts as he did, at a time when, compared to the present, little business was transacted and the methods of bookkeeping in vogue were of the crudest and simplest kind. Scarcely anybody, except merchants employed in foreign trade, then kept their books by double entry, and it was Mr. Comer's mission to introduce in Boston and throughout New England the Italian or double entry system. Mr. Comer was so qualified as a practical accountant, and his work gave such universal satisfaction, that he was then acknowledged to be the leading authority on all matters pertaining to accounts, and his services were sought after, not only in his home city, but elsewhere in New England and in New York City and state. Through his practical ingenuity many labor-saving devices and methods were devised and introduced in office work, and he was the first accountant to introduce direct posting to the ledger from books of original entry, without the intermediary of the old-fashioned columnar journal, which was at that time in universal use.

Mr. Comer was a writer of acknowledged ability on all subjects pertaining to his chosen profession, and there are in existence many magazine articles, pamphlets and circulars from his pen, all bearing the impress of deep thought, and a close acquaintance with, and a thorough knowledge of the needs and methods adapted to the commercial conditions of his time. He was the author of several standard works on Bookkeeping, Penmanship, Navigation and Commercial Computations, all exhibiting a mastery of the subjects treated and great care in their preparation. Mr. Comer was a fine muscular movement penman and teacher of penmanship at a time when muscular movement writing was generally unknown. He advocated a combined movement of the hand and fingers, with the elbow below the edge of the desk, the wrist clear from it, the fingers being used to form the letters, and the hand and arm sliding along to give fluency to the writing. Mr. Comer's own work showed an ease, speed and strength of execution possessed by few of his contemporaries.

Personally, G. N. Comer was a striking figure—short of stature, with immense depth of chest and breadth of shoulders, upon which was mounted a finely shaped head. His features were large, pleasant and forceful, and showed the ruggedness and independence of thought and action, which was characteristic of the man. He was extremely neat about his dress and person, one of his favorite expressions being that "An eye for dirt was better than an ear for music," and everything under his control had to be kept scrupulously clean.

Mr. Comer's character was many sided,
with, perhaps, strength of purpose, independence of thought and action, and love of truth that is characteristic of a man of large heart and generous nature, which won him the strong affection of his students and the warm esteem of a large circle of friends. He had a great hatred of sham and pretense, and never hesitated to use both voice and pen in condemnation of such as came to his notice. Although making much money from his school and expert fees, he never accumulated a fortune, being too generous to his family and friends to admit of it. Another of his favorite sayings was, "The best is none too good for those I love." Mr. Comer was a practical man, an educated man, a kind, yet forceful man, and bringing these characteristics to bear in his teaching, he won and kept for his school an invaluable name and high standing personally among the merchants of Boston and New England.

During Mr. Comer's life his school was uniformly successful, and at his death in 1876, his son, Mr. C. E. Comer, took charge of the business, and being a gentleman of marked ability and an able teacher has maintained its high standing up to the present.

Thus, for over sixty years, under the management of father and son, this pioneer business school of America has continued and prospered, and stands today in the front rank with the strongest and best class of commercial schools of the country, a monument to the foresight, ability, and industry of its founder, George Newhall Comer.

Business Educators and Penmen Send Himman Your Aid.

DEAR FRIENDS ZANER AND BLOSER:

My plan is to present the first three founders of Business Schools: Duff, Comer and Bartlett, and then others in their order of starting and growth. I shall take up other schools in Boston, Pittsburg and Cincinnati, after I have dwelt upon the earliest pioneers and the primitive condition of our country without railroads and with only three million people west and north of the Ohio river in 1840, when the three first business schools were started in the midst of ignorance of anything but the crudest methods of keeping accounts. I don't believe the readers of your paper will charge you or it with what I may write or may not write, but it means work to get the craft to give me facts and pointers, but after I get the matter going in a few numbers, I think there are many who will wish to be in it. I want to show that our baby country, 60 years ago, has bounded ahead of all the old nations of the world and that its marvellous commercial prosperity and unparalleled commercial leadership is due to the commercial training of millions of young men and women of our country since 1840. I do want the business educators and penmen of the country to realize that I cannot know without their aid what to say of them, or how to say what will please them or do them justice,—so I shall be delighted to get from every source as much interesting matter as possible. I realize that some schools will give me a chance to write of them, and others who do not aid me with facts may feel that I have slighted them, when the cause has been that they slighted themselves by withholding material that I would gladly use could I but get it. My history is in its infancy now and will be for several numbers, because I am starting it with men who opened schools before I was born. However, this whole thing is a matter of love and not of profit, and if I cannot reach the modern workers while writing of the pioneers between 1840 and 1870 the later ones will be reached in their order of coming into the work, dominating all and elevating to a whole profession is unbounded, and it will be a matter of the head and not the heart if I fail to do what is in all respects pleasing and creditable to myself, and all worthy members of my craft. I am in the midst of a very busy school and other work, and cannot give the time or thought to write to all the members of the profession soliciting their aid, but I shall be delighted to receive matter from every worthy worker who feels that he has been an earnest instrument in the cause of penmanship and commercial education.

Sincerely your friend,

W. H. HINMAN

Worchester, Oct. 10, 1902.

Rapid Addition.

Those interested in the teaching of rapid addition would do well to lend a listening ear to Mr. L. C. Horton, inventor, manufacturer and publisher of the Numerograph, a device intended to facilitate the teaching and the learning of mathematics as applied to the hustle and bustle of business. Some of our best schools are using the Numerograph, and some of our most progressive teachers are recommending it. You will do well, therefore, to give it attention.

Expert W. J. Kinsley, Raises Something Else Besides Forged Checks and Chickens.

THE STORK

Annoements the arrival of
GERTRUDE ELYRA KINSLEY,
October the Fourteenth, nineteen hundred and two, at
Four-thirty o'clock in the morning,
Weight ten and a quarter pounds,
At Home,
after October the twenty-eighth.

Simplified is Winning.

H. G. Phelps, principal of the Business Department, Montana State College, Bozeman, Montana, like many other progressive business educators, uses the Zanerian Manual of Simplified Script in his writing classes. In a recent letter he states: "Simplified script is gaining in favor every year we use it." His experience, we are pleased to say, is the same as that of all others who have given this style of writing a fair trial.
The Business Educator

Entered at the Post Office at Columbus, Ohio, as Second Class Matter—September 3, 1882.

Edited and Published Monthly (Except July and December) by R. E. BLOWER, 118 N. High Street, Columbus, Ohio.

Vol. VIII. No. 4.

COLUMBUS, OHIO, DECEMBER, 1882

SUBSCRIPTION PRICE, $1.00 A YEAR. 10c. A COPY.

Change of Address—If you change your address be sure to notify us promptly (in advance, if possible) and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers.

Rates to Agents and Club Raisers

Sent upon application when you are in a position to sell a few or many subscriptions, let us know, so that we can favor you with our lowest possible terms and a large sample copy.

Considering the fact that we issue no partial or cheap editions; that the editorial judgment in every particular; that the color feature of the cover alone costs hundreds of dollars; that "leaves," taken from several schools for and our magazine; that the art presented is the best ever given in a journal of this nature; and that the department of business education is upon a more comprehensive and truly representative plan than ever before attempted, the BUSINESS EDUCATOR is not only the best but the expert, because the best is always the cheapest.

The Best Advertising Medium of Its Class

The BUSINESS EDUCATOR being the most popular and widely read journal of its kind, it follows that it is also the best advertising medium. It reaches practically all persons interested in commercial schools, in business colleges, in commercial high schools, Commercial Departments in public schools, stenographers—both large and small, because the BUSINESS EDUCATOR is not only the best but the expert, advertising to the educated mind, the trained eye, the practical mind, and the business man.

Public and Private.

The National Commercial Teachers' Federation is attended and supported by teachers from business colleges, public schools, colleges, universities, etc. The largest number of course comes from business colleges which are private institutions. But of recent years teachers from commercial departments of high schools and from commercial high schools have been multiplying until their numbers are quite noticeable. This growth is but a beginning. They have been active workers in the association and have been cordially received generally. We hope that the number will grow and then upon the part of a small minority of business college men, principally proprietors, to "turn down" for office or otherwise, per some misgivings, thereby being in opposition with the public schools. Some doubtless deserve to be turned down as do a small number of persons in all lines, but there was is spirit back of the act we did not like. The question is, shall we foster this spirit, or put our feet upon it as we would upon a selfish, poisonous serpent?

Let us learn to lift ourselves above petty and imaginary differences in our beloved Federation, and out of it. Let us recognize that commercial education is bigger than a business college, a business school, or a university; that it is bigger than all combined; and that its future cannot be measured by the past.

The commercial high school is drawing itself into the main stream of the college profession because of sureness and size of salaries paid, opportunities for growth and advancement, and of vacation periods for recreation and improvement. As we watch the commercial education and commercial college profession receiving such an influx of ability that the time is near at hand when the graduate of these schools will be something other than a nonentity.

One of the chief merits of the BUSINESS EDUCATOR is that it is a watchword to all the business workers, and that the person is business college teacher or proprietor, high school or university teacher, or principal.

As publishers of the BUSINESS EDUCATOR we only desire to serve one and all alike—to receive support from business as well as high school teachers. We believe both are deserving. We believe the Federation needs both and to that end we encourage recognition on the part of the public school man, as well as on the part of the private school man, letting merit determine the position he shall occupy.

The word division of interest or feelings, unity, is the watchword for commercial teachers with which to sweep the educational sky of commercial education.

Come Again.

"The Business Educator," of Columbus, Ohio, contains an article that is especially interesting to stenographers—"The Education of a Stenographer." By Mrs. M. L. Veenker. For we recognize the same, whether the person is business college teacher or proprietor, high school or university teacher or principal.

As publishers of the BUSINESS EDUCATOR we only desire to serve one and all alike—to receive support from business as well as high school teachers. We believe both are deserving. We believe the Federation needs both and to that end we encourage recognition on the part of the public school man, as well as on the part of the private school man, letting merit determine the position he shall occupy.

The word division of interest or feelings, unity, is the watchword for commercial teachers with which to sweep the educational sky of commercial education.

Sincerely yours,

M. D. FULTON.

New System.

A new system of penmanship by the Hoffmann Metropolitan Publishing Co., 43 Metropolitan Block, Milwaukee, Wis., is a new claimant for public attention on the part of penmanship. Judging from the advance information we have received, the work is well worth investigation. We shall take pleasure in reviewing the publication when it arrives. An advertisement appears elsewhere in these columns.

A Penmanship Revival.

From a number of quarters of the country we learn of persons who are organizing classes in penmanship with good success. Mr. P. E. Matzen, of Battle Creek, Ina, a staunch supporter of the BUSINESS EDUCATOR, organizing classes in his section of the country, and reports the outlook good. From what we can learn, Mr. Matzen possesses the necessary qualifications in the way of skill and energy to give his patrons the worth of their money and more.

A Correction.

On page 26, of the November BUSINESS EDUCATOR, we credited Mr. T. Courtney with a verse in ornamental script, which should have been credited to Mr. J. G. Christ, Lock Haven, Pa.
Mr. J. F. Caskey, recently of Buffalo, is again located in Wheeling, W. Va., with the Elliott Commercial Schools. Mr. Caskey has some very good words to say for his employers. This is confirmed, when he declares to be "the most conscientious business college man" he has ever met.

W. E. Brown, a student of the Zanerian, recently landed a $800 job of engraving. Simply another illustration of what ability finds the way to an opportunity.

Through Mr. H. O. Keesling, who is conducting a series of lessons in business writing in the Business Educator, and who is connected with Cannon's Commercial College, Lawrence, Mass., we learn that they have the largest school Lawrence has ever had.

Mr. C. K. Tate, penman in the Bartlett Commercial College, Cincinnati, O., recently favored the Business Educator with some subscriptions, and closed his letter in the following words: "You are giving the profession a good paper, and I should like to see your efforts receive the appreciation they merit. Each number is worth a dollar to any one.

W. B. Greider, a former Zanerian boy, is now supervisor of penmanship and drawing in the Public Schools of Greensburg, Pa. Mr. Greider is an earnest, honest, enthusiastic gentleman, and we doubt not that he will make a splendid success of the work.

Mr. F. F. Murash, supervisor of penmanship in the Public Schools of Lakewood, O., renewed his subscription to the Business Educator in the following words: "With this you will find a silver certificate for $100. Extend my subscription one year. The Business Educator is a high grade periodical replete with information along all lines of commercial education."

Mr. Murash also states that his work is progressing nicely, and that he has been complimented with an increase of salary each year since entering upon the work there.

Mr. S. B. Fahnestock, Secretary of the McPherson, Kansas, College, reports that they have begun this year's work with the hundred students more than last year, and that they have students from sixteen different states. This is interesting.

Mr. A. E. Kibbe, a former pupil of the Zanerian, is now teaching penmanship in the Metropolitan Select School, Buffalo, N. Y. Mr. Kibbe not only has qualifications along the penmanship line, but has talent in the field of preparation and is pursuing a course of study and practice in that line while teaching penmanship.

W. F. Ovens, formerly Principal of the Wisconsin Business College, opened, on Sept. 1st, an institution of his own at Sheboygan, Wis., known as the State Business College. He reports that business is excellent.

On October 1st, Mr. Herbert S. DeSollar sold his entire interest in the Central Business College of Denver, Colo., to Mr. L. A. Arnold, of Chicago. We wish Mr. Arnold the success his progressive, energetic, worthy efforts deserve.

McPherson, Kansas, College occupied an entire page advertising this worthy institution in the McPherson Weekly Republican, Friday, October 17, 1899.

We have an attractive circular from L. I. Hanum, of Riverside, Cal., advertising a correspondence in penmanship.

The Twin City Gregg Shorthand Association gave its first program at Curtis Business College, Minneapolis, Oct. 16. Ira V. Richardson of St. Paul, is the president, and W. C. Stephens, of St. Paul, is the vice president of this promising new shorthand organization. Verily it is well for brethren to dwell together in unity.

We are pleased to learn that W. G. Laird, well known to most of our readers, has been appointed to a position on the faculty of the New York High School of Commerce, a position much coveted by scores of commercial teachers in the East.

E. S. Colton, Jr., the capable director of the Commercial Department of the Lowell (Mass.) High School, is in charge of a building attended by 100 pupils, who are taught by ten teachers. Besides his duties as principal, Mr. Colton teaches five classes in the day school, and puts in four evenings each week in the evening school work. This is fairly out Roosevelt- ing the President.

The Commercial Text Book Company of Boston, is issuing some very attractive monthly advertisements to its large mailing list. The manager, F. K. F., is showing one commendable enterprise in pushing this new line of commercial text books, although we ought not to speak of them as new, for some of them have been in use for several years and are familiar to many teachers.

D. Appleton & Co., are issuing an attractive series of books which they are calling "The Nineteenth Century Series." We are sure that the hundreds of teachers among our readers, as well as hundreds who are not teachers, will be especially interested in such books as "The Wreck of Wall Street," "The Story of a Grain of Wheat," and "History of Commerce and Industries," all of which are soon to come from the press.

Mr. W. C. Stephens and G. A. Golder, proprietors of the Globe Business College, St. Paul Minn., are advertising extensively and profitably this year a specially good write up in the A. U. W. Guide, backed up by a large display advertisement. If energy and hard and conscientious work will build up a good school, the Globe is destined to be at the front of the procession one of these days.

We have a catchy little advertisement book from the Louisville Spencerian, entitled "Rate Book to Success."

Gideon Bixler, formerly well known in Ohio, where he had a school at Wooster, is now located in pleasant quarters on Oglen Ave., Chicago. He sends out a little folder in the shape of an index card of a closed ledger. In it he names some of his former successful graduates, among them a special messenger to President McKinley, and a private secretary to Mayor Tom L. Johnson, of Chicago.

The September number of The School Review contained a very thoughtful paper read some time ago before the Massachusetts High School Master's Club, on the subject, "The Place of Commercial Studies in the High School Curriculum," by Mr. E. P. Fordham. The present accommodations for space are so crowded that we cannot reprint this excellent paper in full.

Mr. A. K. Burnette, of Ashland, Ill., has been elected to the position of special teacher of penmanship and the commercial branches in Vincennes, Ind., Public Schools.

Mr. Burnette is a fine young man, and there is no doubt but that he will give satisfaction.

Mr. N. A. Conner, formerly Principal of the Commercial Department and Secretary of McPherson College, Pa., Michigan, is in charge of a department in the Detroit Business University, Detroit, Mich.

B. B. Baker, penman in the Sidney, Ohio, Commercial College, recently favored the Business Educator, with a club of twenty-three subscriptions, accompanied with the following words: "Please accept this small club as a token of respect for the good your magazine has done me. May it inspire these students as it has me."
Federation Announcements.

As Christmas comes on Thurs-
day this year, it was thought best to postpone the meeting until Monday. This arrangement permits a session of only three days, but you will not be obliged to leave home on Christmas day to reach Milwaukee in time for the opening session.

There are to be three days of strenuous work, each one filled with much that will be interesting to any commercial teacher.

The session closes with a joint meeting with the Wisconsin Teachers' Association.

The shorthand section has introduced a new feature in its program. The Round Table. It is believed that this will prove to be truly a teacher's program.

Opportunity will be given those Exhibits who have advertised in this program to make the customary exhibit of their wares. Owing to the limited room available for this purpose no other exhibits can be provided for. Advertisers are advised that for information concerning space, etc., they should write Prof. E. W. Spencer, Milwaukee.

Special arrangements will be made for exhibitions of school work.

There are many good hotels in Milwaukee. Our headquarters will be at the St. Charles. This is on the American plan, and it is here that the banquet will be served on Tuesday evening.

Programme National Commercial Teachers' Association.

BANQUET AT ST. CHARLES HOTEL.

Toastsmaster, Geo. W. Brown, Jacksonville, Ill.

Music by Rachis Solo Sextette.

WEDNESDAY AFTERNOON, DEC. 31ST, AT 2:30 O'CLOCK.
DAVIDSON THEATRE.
Joint Session of the National Commercial Teachers' Federation and the Wisconsin State Teachers' Association.

SYMPOSIUM.
2. The High School as a Factor of Commercial Training, Chas. E. McLennag, Prin, West Division High School, Milwaukee.

NOTE.—On Sunday morning, December 30, at 9 o'clock, Assembly Room, Spencerian Business College, the Private Commercial School Managers will meet, None of the other bodies meet until Monday, December 29.

Commercial and Shorthand Combine.

It has been virtually decided by the officers of the Commercial Teachers' Association and those of the Shorthand Teachers' Association to hold a joint session of both bodies on Monday evening, December 29, leaving the other sessions to make such arrangements as they see fit. The work of the joint session will relate to English and its importance in the different departments of commercial work. This should be one of the most profitable and interesting sessions of the entire meeting.
E. W. SPENCER.

Program National Business Teachers' Association.

MILWAUKEE, WIS., DEC. 29-31, 1902.

MONDAY, DECEMBER 29
9:10, Registration of Members. General Meeting of Federation.

NOON
1:00-1:30, Report of Executive Committee.

9:00-10:00, "Ideal Course in Business Practice," J. H. Craford, Quincy, Ill.; J. C. Walker, Danville, Ill. (One to be selected.) Discussion. Scotch arrangements.
11:30-12:00, Election of Officers.

WEDNESDAY, DECEMBER 31
9:30-10:00, "The Use and the Abuse of the Tongue in the School Room," J. W. Ward, Moline, Ill. Discussion.
10:00-11:00, "The Value of Card Systems," N. B. Parsons, Library Bureu, Chicago, Ill.

Program Shorthand Section.

National Commercial Teachers' Federation.

MILWAUKEE, WIS., DEC. 29-31, 1902.

MONDAY
The importance of Writing Names in Shorthand, instead of Longhand. William Whitford, Medical Reporter.
How I Prepare Amnueses. Led by J. Clifford Kennedy and Horace G. Healey, followed by volunteers up to time limit.

TUESDAY
The Opportunities of the Amnueses. Fred Ireland, Reporter of Debates, House of Representatives.
How I Prepare Amnueses. Led by Selby A. Norton and J. G. Gill, followed by volunteers up to time limit.

WEDNESDAY
The Work of and Demand for, English-speaking Stenographers. Frances E. Lester, College of Agriculture and Mechanic Arts, Mesilla Park, N. M.
How I Teach Typewriting. Rupert P. So-Relle, followed by volunteers up to time limit.

Messes Kennedy, Healey, Moran, etc., will lead the class work; but every member of the shorthand section should understand that he is on the program, and must come prepared to take an active part. In other words, the session will be a grand experience meeting.

As to exhibits, each school should send one. Take a page from a beginner's short-hand exercise book, showing how he is started and how his shorthand tests are corrected. Also add exhibit of dictation—pupil's work—including shorthand notes and typewritten transcript; the transcript showing all necessary corrections, made in the teachers' style. Likewise, samples of manifolding and mimeographing may be sent.

Exhibits should be marked with name of school and teacher, and forwarded, if possible, a week or so in advance of meeting, in order to allow time for their classification and arrangement. Direct them care of E. W. Spencer, Spencerian Business College, Milwaukee, Wis., or outside of wrapper, "Shorthand Exhibit."

Some interesting exhibits will be made of the work of noted reporters of the United States.

CHAS. T. PLATT, TERENCE R. HOWARD, etc., Exc. Com. JOHN K. GREGG.

Program of the National Penmanship Teacher's Association.

Spencerian Business College.

MILWAUKEE, Wis., Dec. 30, 31, 1902.

MONDAY, P. M.

1 o'clock. Registration. General Handshake, etc.

1:30 o'clock. President's Address, Horace G. Healey, Editor Penneman's Art Journal, N. Y. City.

3 o'clock. Speed Contest; Palmer, Healey, Zaner, Gieseman, Crandle, Madison, The Courthans, Eliel Hill, Schuh, etc., etc. A Free-For-All Contest to see who can write best and fastest. Specimens to be published.

4 o'clock. General Discussion Concerning Speed Writing—How Fast Classes Can Write—How Fast Individuals Can Write, etc.

MONDAY EVENING.

7:30 o'clock. Penneman I Have Known. Prof. H. W. Ellsworth, Veteran Penmanship Author and Publisher, N. Y. City.

8:30 o'clock. Five Minute Speeches From All Over Fifty Years of Age, Concerning Penneman They Have Known.

TUESDAY, A. M.

CONTINENTAL TEACHERS' AGENCY, BOWLING GREEN, KY.

OBITUARY.

On Wednesday, November 5th, Mr. D. Darlington, of Darling's Business College, Ferguson Falls, Minn., passed to the great beyond. Heart failure was the immediate cause. Thus in the prime of life, and apparently in the prime of health, another business educator has gone.

Mr. Darling was a man of imposing appearance, and so far as we have learned, of splendid character and qualifications. We hope the good school that he founded may go on and prosper.

Through the press we learn of the death of Mrs. E. L. Wiley, on October 18th, 1802, wife of Prof. and Mrs. Wiley, of the Young Business College, Chattanooga, Tenn.

Mr. Wiley has the sympathy of the profession in his bereavement.

ZANER & BLOSER, Columbus, Ohio.
"Uncle Robert's" Greetings to
the Business Educators of
America.

The flourishing city of Milwaukee, with its
three hundred thousand inhabitants,
charmingly situated on the western shore
of Lake Michigan, eighty-five miles north
of Chicago, opens wide her hospitable gates
to the noble profession of Business Educators
for their annual meeting December 29, 30,
and 31, 1902, at the Spencerian Business Col-
lege, where the glad hand will be given by
their "Uncle Robert," who anticipates their
coming with fatherly pride and affection.
The gathering will be historic, marking an
epoch in the business and educational
progress of our common country as affected
and influenced by the earnest and devoted
men and women, whose labors are doing
much to develop the social economic inter-
ests and life of America as a leading factor
in human advancement throughout the
world.

Viewed in this light I esteem it a high
honor to be privileged to extend cordial
 greetings to each and all who are in any
manner identified with or interested in
Business Education and Commercial Train-
ing.

The rich programs and the grand inspira-
tions of the meeting in its several depart-
ments and general sessions cannot be over-
estimated or too fully utilized and enjoyed.
The responsibilities assumed by and
resting upon business educators and com-
mercial schools are vital to the communities
which they represent to the nation and to
the civilization and progress of the age.
Impressed as we should be with these facts,
we cannot be indifferent to, or neglectful of,
our personal and professional obligations
and interests represented by the Milwaukee
meeting of the National Federation of Com-
mercial Teachers and similar gatherings.

As one of the pioneers and founders of
American Business Colleges and Commercial
Education, with my mind and heart
full of the memories and associations of
more than a century of growth, progress
and change, and looking confidently with
the eye of faith to more splendid achieve-
ments, I extend my fatherly and fraternal
 greetings and cordial invitation to all con-
cerned to pull my latch string in Milwaukee,
December 29, 30, and 31, 1902, and share my
hospitalities at the approaching meeting of
American Business Educators. Hoping
that each and all will kindly consider, and
if possible accept, my personal and pro-
fessional invitation, from the heart of a
veteran in the cause, who wishes to welcome
you, grasp your hands and look into your
faces, I shall await your coming with antic-
ipation of pleasure and profit in the approach-
ing meeting.

TO THE OLD GUARD.
To the surviving pioneers, founders and
veteran business educators with whom I
have stood shoulder to shoulder and heart
to heart in the long years of toil, struggle,
discouragements and triumphs, I send the
greetings of Auld Lang Syne with the
ardent desire and hope that they may favor
me and honor the occasion by their presence,
giving to the younger generation merited
recognition and encouragement in the great
work of business education and commercial
training.

I have pride in announcing that we shall
have the pleasure of entertaining the meet-
ing in new and modern quarters. A large
part of the college building has been entirely
rebuilt since the fire of May 31, and the rest
of the building has been remodeled and mod-
erized, resulting in a plant for a commer-
cial school, which probably has no equal in
the Northwest, at least outside of Chicago.

Faithfully and fraternally,
ROBERT C. SPENCER,
Milwaukee, Wis., Nov. 15, 1902.

ROUND'S SPACING T SQUARE

A Great Aid to the Pen-Artist and Draftsman.

This cut shows the head section of 24-inch blade and a few specimens of shading, photo-engraved from work done by aid of this square with a common ruling pen, the lines being separated at perfect intervals and made as rapidly as by free hand. Space between lines may be varied, by turning thumb screw from zero to one inch; lines are made horizontally or upon any desired angle.

Used and recommended by Draftsmen and Pen-Artists everywhere.

CHICAGO, Nov 1, 1902.

The T Square I recently bought of you works “like a charm.” I am fully satisfied with it and believe it would sell for a larger amount of money if you would ask it. It is certainly worth more than $4.00.

R. E. HURST.

Price $4.00, shipped securely packed, by express, on receipt of money order.

H. A. ROUNDS,

513 Carroll Ave., Chicago.

AMERICAN BOOK CO.

NEW YORK. CINCINNATI. CHICAGO.
Lessons in Engrossing Script
"Ell. Sim.

Number One

The first half of H and K is nearly alike. The initial stroke of these letters is like the one of 1, only smaller. The tops of the three parts of these letters should make an ascending series, the first one being the lowest.

The last half of H should make a good C. Make the loop downward and lift the pen across the shades to prevent dragging the ink.

Start the second half of K well to the right, and make a graceful, compound curve. Do not make a loop in the middle of this part. Finish with another compound curve and an oval like the H.

S and L are very much alike, only the ending. S ends with a dot at 1, with a loop. Make the heavy down strokes first with plenty of twist. Make the loop and initial stroke downward, shade the first stroke slightly and the loop at the turn the same as L.

Care must be taken that the heavy down strokes are regularly spaced, that they may contain the element of repetition and beauty which characterizes all fine arts.

Study the qualities expressed in the sentence more and you will need to practice less.

Lafray's Syllabic Shorthand.

A modernized Romanic system of simplified orthography. Words are carefully analyzed, written and read entirely by syllables as pronounced—stroke for syllable—rather than slowly by single letters. A high grade work in one hand style, on time-saving principles, combining extreme brevity, legibility, ease of spelling, and durability. Complete Manual 50 cents postpaid, sent to schools for examination. Visit instruction. Booklet free.

Lafray's Shorthand Institute,
112 E. 63rd and Green Sts.,
CHICAGO, ILL.

Short Cuts. A little book, pocket size, showing how to do with half the figures and in half the time all of those little calculations which we must figure out every day. Everything from Addition to Interest and Discount. Its worth is attested by the fact that its author is now and has been for years the specialist in this branch at the Eastman Business College. Price, cloth, 50c. Address,
GEO. A. DEEL, Doughtepole, N. Y.

An Immediate Success.

When we predicted that RATIONAL TYPEWRITING would revolutionize the methods of teaching typewriting, we were acting on the wise maxim of Hozea Bigelow—"Never prophesy unless you know."

Although issued so recently—just one week before the opening day—RATIONAL TYPEWRITING has been adopted in many of the best known schools, and orders for it continue to pour in upon us.

WHAT THEY SAY:

"I wired you to send me sixty copies of Rational Typewriting. It is the most complete publication of the kind I have seen. The arrangement is certainly a great improvement over the old style manuals."—O. R. BENTLEY, Rock Island, IL.

"A great improvement over anything of the kind I have seen. I have always felt that it would be better to begin the fingers already trained than to start with those that are little used."—G. E. HOWARD, San Francisco Business College.

"Contains a mine of valuable information and is probably the most complete work on typewriting which has yet come to my attention."—D. D. MULLEN, Baird's Commercial College, Cincinnati.

C. E. DONER, 203 Broadway, New York.

The Martin Shorthand and Commercial School, Pittsburg, Pa., dropped into our hands one of the best received catalogues received during the past month. It is printed on the finest kind of coated paper, and bound in cream linen flexible cover. This catalogue, like the proverbial Lincoln rat hole, is worth looking into.

The Owasso, Mich., Business College, is issuing a catalogue of considerable worth. To one familiar with the lucubrations of the script in this publication has been poorly done.

The Beloit, Wis., Business College, greets us with a profusely illustrated college paper, which is more effectively gotten up than the average of such journals.

We know nothing of the Lowell Commercial College, other than the information gleaned from the catalogue recently received. We presume it is a good school, but its catalogue is too poorly printed to do it justice. So far as the printing is concerned, it is about the poorest one received at this office for many a day.

The Buckeye Business College, Sidney, O., is putting out a profusely and attractively illustrated catalogue, indicating that prosperity is with them.

Fitzgerald's Shorthand and Business School, Schenectady, N. Y., issued a 28 page brown covered catalogue of good quality.

Mr. J. C. Fowlie, who is advertising in our journal, captured the first price for his penmanship exhibit at the Portland, Oregon, Fair.

A well gotten up, effective four page college circular entitled "The Elliott Bulletin," reaches us from the Elliott Commercial Schools of W. Va.

College advertising literature has been received from the following: Mansfield Business College, Mansfield, O.; Peirce School, Philadelphia, Pa.; Danville Business College, Danville, Ill.; Sacred Heart College, Watertown, Wis.; Head's Business College, San Francisco, Cal.; Jackson Business University, Jackson, Mich.; Darling's Business College, Fergus Falls, Minn.; W. W. King College, Huntington, Ind.; Northwestern Business College, Madison Wis.; Commercial and Shorthand Department, Marysville Seminary, Marysville, Mo.; McComb Business College, McHenry, Miss.; New Britain Commercial College, New Britain, Conn.; Mt. Union College, Alliance, O.; York Business College, York, Neb.; Hamblet Business College, Akron, O.; Williamson Business College, Willimantic, Conn.; Marion Business College, Marion, Ind.

The Green Business College, Braddock, Pa., is issuing a neat little catalogue of 8 pages bound in gray blue and printed in brown.

Certainly one of the best written and most effective school advertising sheets received comes from Lincoln, Neb., entitled "The Business College" and published by the Lincoln Business College.

"The Remington Typewriter" by Wycoff, Snaps & Benedict, is a very artistic catalogue. The illustrations are by the half tone method, and are printed on tint blocks, giving it a very artistic and handsome appearance.

The Michigan Business and Normal College of Battle Creek, C. J. Knight, Prin., sent us a "A yard of evidence" and other leaflets containing some up-to-date points in printing.

"The Commercialist!" is the title of a very well gotten up journal, published in the interests of Business Correspondence Schools, Scranton, Pa.

Hill's Business College of Sedalia, Mo., John T. Hill, president, and C. W. Ranson, penman, gives its prospectus in a well written, well printed catalogue, containing a well illustrated, splendidly printed, green covered catalogue with embossed title, giving one the impression of a wide-awake practical school. Miss Pearson, one of their students, wrote an article for the National Gregg Shorthand Convention at Peoria, Ill., for which one of the fastest shorthand writers who had entered school since September, 1900.

Bartlett Commercial College, Hamilton, O., C. A. Bolin, Prin., and Givesome, very flattering advertising notices in the Daily Press. A large circular, giving information Wednesday, October 1st, by one of the pupils, Miss Elizabeth Ayres, who wrote shorthand blindfolded. These public exhibitions were given at the State Fair and aroused no little interest and comment.

Greenville, Ill., College Register is a 36 page catalogue, in which we find the name of Walter Armstrong Orr, A. M. LL. D., the president of the college. He is the principal of the commercial department.

These schools of business in connection with literary institutions are getting to be the rule rather than the exception, and this is as it should be.

The San Francisco, Cal., Business College, issues a very attractive covered catalogue, covered in dark green with embossed gold title, with a large advertisement typewriter furnished at home to every shorthand student free. This is a step in advance of any eastern school of which we have knowledge.

The Reno Shorthand and Penmanship School, Pittsburg, Pa., greets us with the prettiest catalogue received at this office for many a day. Mr. H. G. Burtner, an old Zanerian student, takes charge of the penmanship. The catalogue is gotten up in such shape as to impress us favorably.

The Bartlett Commercial College, Cincinnati, O., issues a very telling circular of 16 pages and cover respecting that well known institution. Upon the cover we find the following: "Organized 1851: Chartered 1851, and Incorporated 1858." In the center of the circular is presented a two page diagram of the new rooms of this institution. Those interested in school room construction, etc., will do well to get a copy of the catalogue.
CERAMIC ART
As Applied to
Colored Models for Drawing and Art in Schools.

Ceramic Art, older than history, is ever finding new avenues of expression and new services to perform. One of the latest of these is the manufacture of vases, bowls, teapots, mugs, and other forms as models to be used for the double service of teaching drawing and color, and decorating the school room.

The white, geometric, monotonous, uninteresting, drawing models have seen their day; the bright, cheery, artistic, modern, scientific art pottery, has taken their place. This new application of fine art to the teaching of art in schools is in the hands of Mr. C. E. Towne, supervisor of penmanship in the Zanesville, Ohio, public schools, who some years ago attended the Zanerian, and through drawing became interested in art and things beautiful.

Having located in the city famed for its clay art industries, he became interested therein, and gradually grasped the idea of utilizing this product of nature and skill in the service of education. The result is a series of "Modern Fine Art Colored Ceramic Model Forms for Schools."

A few schools, realizing the need of color as well as form in models for drawing, introduced Japanese vases, etc., chiefly because there was no home product. The chief objections to such wares were the high prices and the inability to duplicate forms and colors. These have now been overcome by the School Model and Supply Company of Zanesville, who are manufacturing a set of forty model forms, comprising twelve standard colors, from red to green, and yellow to blue, at a price within reach of the average individual and school board. These forms are duplicated in shape, size, and color, making them something other than "a pig in a poke," as similar products have too frequently been.

The accompanying illustration gives but a faint idea of the beauty, variety, and charm of the real ceramic products, because the most attractive part, color, has been omitted in photographing.

Those desirous of further information concerning this new art, will do well to correspond with Mr. Towne. Should there be sufficient interest manifested among our readers, we shall be pleased to give a description of the process or art of manufacturing these art products, as ye editor recently visited the factory and had his "eyes opened" to many of the difficulties, beauties and principles involved in this branch of ceramic art.

Paris Exposition, 1900.
This is the Highest Prize ever Awarded to Pens.
The Business Educator

PUBLICATIONS RECEIVED

"The Legend of Sleepy Hollow," by Washington Irving, graphic Institute, New York, is a thirty-two-page flexible back booklet written in the living style of Shorthand. Price twenty-five cents.

"Part One of Isaac Pitman's Shorthand Dictionary" has been issued by Isaac Pitman & Sons, 33 Union Square, N. Y. City, is at hand, and is a very concise and important work. This contains 542 pages, twenty weekly parts of sixteen pages each. The price is $1.00, per copy. Students, teachers, and writers of Isaac Pitman Shorthand, will doubtless hail with delight the advent of this valuable addition to their shorthand library.

"William's New English Grammar," "A New English Grammar," "The English Grammar," in which the grammar of the English language is taught, is published by The Commercial Text Book Co., Des Moines, la., is the title of a well bound, well printed book of 22 pages. From the preface we take pleasure in quoting the following: "This book is designed to present the essential facts of English grammar in a manner consistent with pedagogical principles."

"I have not been the purpose to offer anything new in the teaching of English, but rather so to arrange, classify, and illustrate the subject-matter as to produce a teachable treatise.

"The student that dislikes the formal grammar should find in this book a happy union of the theoretical and the practical."

We take pleasure in endorsing this publication, and believe in this subject—and who should not be interested?—Would do well to secure the information or to send for a copy. Price—

"Isaac Pitman's Shorthand Manual" (being Part I of Pitman's Shorthand Instructor) published by Isaac Pitman & Sons, 33 Union Square, N. Y. City, price—$, is the title of a 12 page, flexible-back, compact book presenting this well known, widely used system. Typographically and otherwise the book is directed to the compactness of the manual makes it a very convenient one for the beginner of any age. With the help of the four inches wide and six and one-half inches long. This of course, is the 29th century edition, being a refined and perfect product after over sixty years of use.

"The Essentials of Business Law," Francis St. Burdick, Columbia University Law School, D. Appleton & Co. This excellent text-book is one of the latest of this company's valuable series of text-books, having been published last August. It has been written for boys and girls taking commercial courses in our secondary schools. Its most prominent distinguishing characteristic is its simple, non-technical, diagnosis.

The treatment of the Principal Law, The Law Merchant, and Common Law is much more satisfactory than in any other high school text-book we have seen.

Of its 270 pages of text, 61 pages are given to the law of Contracts, 62 pages to Negotiable Paper, and 21 pages in the Sales of Personal Property. The matter is carefully presented than in any other text-book of this character now in use, 43 pages being devoted to the subject. Ample space is given also to, Agency, Bankruptcy and Insolvency, Insurance, Banks, Joint-Stock Companies, and Corporations.

The style of type used for side-heads, and the essential elements of the principles, together with the numerous simple, illustrative facts and questions combine to make this new work on Commercial Law very attractive for class use.

A pamphlet containing four questions, to which is sent with the book, is especially valuable. We understand that the text-price is $1.10.

"Lessons in Shorthand"—W. S. Rogers, Author and Publisher, This is a clear, concise presentation of Shorthand by a teacher of fifteen years' experience, two of which were spent as principal of Andrew J. Graham New York School of Shorthand. Mr. Rogers arranges on one page the consonant alphabet, with names of characters pronounced, and illustrative words. His grouping is commendable. His treatment of the vowels, with illustrations showing how they are used besides strokes made in different directions, is very good.

The book excels in the happy middle ground chosen regarding the volume of reading and writing exercises to be given to the student. The methods of representing "har" in line with the best practice, and all rules are commendably explicit.

The engraving is good, but there is an apparent disparity in the size of shorthand characters in different plates. This is a book that every Graham writer and teacher will want to see.

The pages are 12 inches long and about 3 inches wide, affording an especially good opportunity to represent in facsimile 21 uniform pages that are highly characteristic. Explanations and court decisions are placed on the back of these forms to facilitate reference. There are 96 pages of text, besides 1 pages of suggestive questions. The engraving, the press-work, the paper, and the binding are of the best. This book is so that absolutely different from any other book that we have seen, on this subject, and so authoritative, that we feel like urging our readers to send the examination price for a copy of it. Teachers of Commercial Law in schools should rush for copies.

From An Old Subscriber.

Lessons in Show-Card Marking and Painting, and Automatic Lettering

BY W. A. THOMPSON,
PONTIAC, MICHIGAN

Number Four.
With this number we take up Marking Pen Work. These pens throw a solid line or stroke full strength of color, 1/8 to 1/2 inch wide. The use of these pens enables the learner to acquire a neat and compact style of lettering. With strict attention to the instruction and exercises that accompany each number, the student in a short time will be able to do very creditable work, and later on have a good control of general show-card work and off-hand lettering with either pen or brush.

Inks. A good ink is very important for neat work. Common writing fluid is too thin to produce a deep color or brilliant letter. You need ink strong in color, with enough gum Arabic in it to be about the thickness of common syrup or varnish. This will keep it from flowing too freely. Should the ink become too thick and make broken work in your lettering, add a few drops of water and mix. Marking and Shading Inks on the market are made of good material and of the proper consistency will flow freely, cut clean in lettering and dry hard with glass.

Practice Paper. Any paper of a smooth and firm surface will answer. Wrapping paper of this quality will give good results. Don't use paper of a glazed surface. "Butcher's Manilla" generally used in retail stores for wrapping paper is good for either pen or brush practice. Marking ink or water color paints set up nicely on this paper and will give justice to every stroke you make.

Care of Pens. Before you commence place a glass upon your table containing about a half inch of water, then place pens in this as in glass on table in Figure 1. This will keep them in good order for doing nice work. When a method of this kind is not used the pens are liable to get clogged, which is very vexing, as rough and broken lettering is the result.

Using Ink. Never dip marking pen in ink. Figure 2 shows a neat and quick method of inserting the ink in pen. Shank should be at an angle of about 45 degrees from the base line, and preserve this position in all marking and shading pen lettering. When you have caught the idea you have already learned one of the first essentials for rapid and ornamental lettering with an easy movement.

How to Hold the Pen. Observe Figure 3 closely, take the pen in your hand and hold it in an easy and natural way as suggested in this illustration. See that the nib is at an angle of about 45 degrees from the base line, and preserve this position in all marking and shading pen lettering. When you have caught the idea you have already learned one of the first essentials for rapid and ornamental lettering with an easy movement.

How to Letter. Practice a few minutes with a dry pen, following the strokes or principles given in this lesson, then write copies of some on your practice paper. Before commencing to letter see that your pen throws a full and clear stroke. Have a small slip of paper on hand to make test strokes before beginning on any particular work. If you use manilla or plain white paper rule it with a lead pencil, so that you may have your work neat and even. If you are careful a base line will be all that is necessary to preserve the proper position. Go slow,

study the position and movement of the different characters. In lettering always use downward pressure and only sufficient to make the ink flow. The pen should never be moved upward unless running edge-ways. Fine lines are made by sliding the pen in this way, either up or down.

To those who wish to begin practice in this line of work, I will sell Outfit of Marking Pens, etc., postpaid for $1.00.

Our next will contain a full alphabet and figures.

---

Colored Cards

The Kind That Bring the Dimes.

Something new and they catch the eye, tickle the fancy and loosen the purse strings of your customers. Come in six colors. Great for advertising purposes. Schools use them. Penmen use them. Everybody wants them. You write a dozen and each person who gets one out of the dozen will want a dozen. They are just the thing you have been looking for.

Doubt it? Write for free samples and price list.

H. O. KEESLING,
Care Cannon Business College,

LAWRENCE, MASS.
The first object sought in the preparation of this cover design was to make it suggestive of winter and the holiday season, and with that in view we have adopted a decorative head of Santa Claus, the center, a symbol of prayer, the holy, mistletoe, lighted tapers, etc., emblems of festivity, and the old pine with its snow covered branches, a reminder of winter weather. A rough sketch was first made the exact size of the desired cut, and special attention was given to the several values, style of the letters and the general arrangement of the design. This done, the sketch was enlarged about one-third, on a sheet of card board. The size of original drawing measured (7 x 12) inches outside, border one-half inch deep. The oval must be in the center of the design, and about 9 inches in diameter. The drawing of the various objects should receive careful attention, and all parts of the design must be in perfect harmony with each other, and the whole shade should be studied with critical care. The light is supposed to come from the upper left hand corner, and of course all shadows must appear opposite to this point. Make the sky darker around the winter educator, and the snow covered limbs, and use spots of solid black and coarse lines to represent the darkest shadows on the trunk of the tree and its branches. The script in the oval was first carefully drawn, and then outlined. Care should be exercised not to lose the written, dashy appearance in inking around the script. The latter being the "Business Educator" were outlined with a No. 5 Sennecott, and then, drawn in pencil. Lastly we will say: strive to obtain desired effects with few lines as possible, and cross-hatch all of your lines as near right angles as convenient.

**Advertising Results Satisfactory.**

The Berkshire Card Co., of North Adams, Mass., who have been running an advertisement in our journal writes: "The results from our advertisement so far have been very satisfactory and prove to us the value of the Business Educator as an advertising medium, we having received inquiries from about every state in the union. The truth of the matter is, as advertisers are beginning to find out, the Business Educator leads in securing results in this particular as well as in others.

"The Way to Wealth,"

Said Franklin, "is as plain as the way to market." Not less plain are our books to the earnest students who, over all this broad land, are now scanning them for useful, practical knowledge. Not less plain is it that the hundreds of teachers who are using these books are relieved of an almost incalculable amount of drudgery in the preparation of daily work for class use, while the use of several of these texts means to the student, also, a great saving of time and physical energy, which may be transmuted into intellectual gain.

It is equally plain to those who are familiar with the text-book business that our books are popular everywhere among commercial teachers. There is a reason for it. These books live up to their name: they are PRACTICAL.

We publish Book keeping (in three editions), Shorthand (Graham-Pitmanic), Typewriting, Commercial Arithmetic, Business Correspondence, Commercial Law, Spelling, Commercial English—our famous plain English—and Business Practice. Our 20th Century Business Practice can be used with any text-book, and once used is always used. It is clear, concise, convenient, interesting, intensely practical, and inexpensive.

Our catalogue is sent free. Our wholesale, introduction, and exchange rates are admittedly very reasonable.

**The Practical Text Book Company,**

475 Euclid Ave., Cleveland, Ohio.
LEARN DESIGNING! THERE'S MONEY IN IT.

Mr. Pound, who executed the effective hat design, and who generously sent it with his compliments to his alma mater, is one of the many successful graduates of the Zanerian College. He recently captured a $100 prize for producing the best original design for advertising a well-known piano. He is now employed at a good salary as foreman of the art department of one of the large engraving establishments of Chicago, in which city a number of other Zanerian boys are winning success as artists, designers, illustrators, engravers, penmen, teachers, etc.

Mr. Pound is free to state that he knows of no other place where he could have received so good a start in the work in so short a time as he got at the Zanerian College. What he has done you can do if you will.

Our instruction is based on modern requirements—that is to say, is practical—and we delight in preparing ambitious young persons for good positions and a successful future.

The work is pleasant—yes, intensely fascinating—and there is no limit to the heights that can be attained in either the work or in income, except one's own mental and physical resources.

If you wish to get a start in a profession, the future of which seems unusually promising, write today for our illustrated catalogue entitled, "Zanerian," and carefully look it over.

ZANERIAN COLLEGE, COLUMBUS, OHIO.
Increase Your Skill
in using the pen. That often means a raise in salary. You can do this by practicing from MILL'S LESSONS BY MAIL.

Spare time only required. If you are looking for the best in instruction and experienced criticism, markings you should write at once. Full information for a stamp.

What is a Good Advertisement?
Is this a Good Advertisement?

IF IT ATTRACTS THE ATTENTION OF COMMERCIAL TEACHERS and leaves in their minds the impression of the true value of the Sadler-Rowe publications, it is a good ad; otherwise, it is not.

LIKE EVERY OTHER BUSINESS CONCERN, we try to make our ads remunerative; that is, we like to get inquiries and business from them.

OF COURSE, OUR ADS DON'T PAY AS WELL as they used to, because, we now have a large majority of all the commercial schools, public and private in the country as customers, still there are doubtless those who would like to know more about what we have to sell, and we are glad to give them information in detail if they will write to us.

WE HAVE GREAT FAITH in our commercial publications—a faith that is based upon the esteem in which they are held by commercial teachers. After all, they are the ones who decide the real merits of a book.

DON'T THINK THAT ALL COMMERCIAL TEACHERS think that our books are the best, and this is no discredit either to the teacher or to the book. The important fact is that about seven teachers out of ten believe the Sadler-Rowe publications to be the best obtainable, both in subject matter and in method.

THE SADLER-ROWE COMPANY has never issued a book that was not in many respects an innovation. Many good teachers thought the Budget System for instance, while all right in theory, would not work out in the school room. It was hard to break away from the old idea. Teachers could not conceive that pupils could take up business practice work from the very start, using all the business papers, and still do their work accurately and without increasing teachers' work, and yet these teachers now wonder why the illustrated method of teaching was not adopted long before.

WHEN PROOF SHEETS OF THE INDUCTIVE SET of Commercial and Industrial Bookkeeping were submitted to a few teachers, they almost without exception, thought that the introduction of the cash-book from the start was not practical, that it was too difficult, that students would not understand their work, and so on. Today, many of the leading cities of the United States have adopted this set for their grammar schools, and the pupils have a better understanding of the cash account than they ever could have had from the old method, and so it goes. Old ideas must give way to the progress which comes from experience and intelligent advancement.

THERE ARE THREE GOOD REASONS why any school should change text books: one is, to put in a book that will give better mental discipline to the student, that will train him to think logically, accurately and independently of the teacher. This is the highest aim of education—to train the mind; another is, to give the student a better practical training than he is now getting, because, that is the important reason why we have commercial schools; the third is, to introduce something that will lessen the labor of the teacher without lessening the value of his instruction. This means that one teacher can look after more pupils, and of course the expense of salaries is reduced.

THESE QUALITIES will be found pre-eminent in the Sadler-Rowe Commercial Publications. Full particulars regarding them can be had by addressing the publishers, but state your wants fully and don't forget to let us know who you are. We don't care to do business with any but teachers, school proprietors and officers.

20TH CENTURY COVER DESIGNS

Tenth Century Cover Designs is a volume for the artist penman who wishes a text book on the most lucrative branch of his art. It is the only book devoted exclusively to cover designing, and is prepared in a most elaborate manner, containing hundreds of reproductions of notable cover designs, thirty-five of which are full-page color plates. The book contains a reproduction of the design which won the $500 prize for Jessie Wilcox Smith, the recent $500 Chickering design drawn by Bradley, together with the work of Parrish, Pyle, Leyendecker, and in fact all leading American decorative designers. The following subjects are treated by different artists, critics, binders and printers: Viennese Inlaying, Book Covers and Cover Designing, The Art of Cover Designing, The Cover in Advertising, Concerning Cover Papers, Booklovers' Bindings, Pyrography as a Fine Art, The Cover Page, The Use of Colors on Covers. The price of the book is five dollars, net. Send ten cents to the publishers for a portfolio prospectus, containing a selection of color plates, 9 x 12 in size, and other attractive printing.
A higher standard of efficiency in the same length of time

**Gregg Shorthand**

Founded on natural principles, Gregg Shorthand has been adopted by progressive business schools everywhere, and is to-day

**The Leading Shorthand of America**

All the schools using it have largely increased their attendance through the results accomplished—which, after all, is the "secret" of its phenomenal success.

**Rational Typewriting**

By Rupert P. SoRelle and Ida McLenan Cutler

This remarkable book meets with the immediate approval of every experienced teacher. Although issued late in the season, it has been adopted by a large number of schools, and we confidently predict that it will soon be the most popular typewriting manual on the market. In addition to the instruction, it contains "a mine of information" on typewriting and correspondence. Ask for sample pages.

Send for booklet, "ABOUT GREGG SHORTHAND." It is free. If you are a teacher, ask for "SPECIAL OFFER TO TEACHERS."

INDIANAPOLIS, U.S.A.

As a rule we do not care to say much concerning the contributions appearing in The Business Educator, but we have been so highly pleased and sincerely impressed with the nature of the History of Early Business Educators and Penmen by Mr. Hinman that we must congratulate ourselves and the profession upon the character of the same. It is intensely interesting, and what is still better, it is highly instructive, and of great value to business educators and penmen generally.

Interesting as the Historical is to the older members, it is none the less interesting, and doubly valuable to the younger ones, as it gives them an authentic account of the business and commercial dispensations a generation ago, and before. We know of nothing that has ever been presented in our professional journals so opportune as the contributions under consideration. Now that the leaders of the past generation are stepping one by one into eternity, it is the time to place upon record the deeds of the pioneers of the new, but now popular, practical education. And Mr. Hinman is allowing no stone to go unturned in his search for facts and items of interest and value.

The new generation of commercial educators and penmen can now see how great has been the progress of business education, and how it has been the butt of ridicule and attack on the part of our "classical" brethren all along the line these many years. The wars that these early business educators won have not been without price, even though they have been bloodless. They have been won on the battlefields of skill and common sense as applied to education. These pioneers of practical education blazed the way from mere knowing to doing.

Mr. Hinman, here's to your unselfish, timely, thorough, valuable endeavors. And here's to the profession for the many, many good things in store for it, the goodness of which has but barely begun.

Regarding Postal Rates

When postal rates and methods were first established the present magnitude of the business of news carrying was unforeseen. Therefore the past could not justly provide for the present. Reform has been necessary from time to time as evils and abuses become manifest.

At the present time the rates are as follows: First class (authentic and comprehensive matter), two cents for each ounce or fraction, or at the rate of thirty-two cents a pound; second class (newspapers, journals, magazines, etc.), one cent a pound; third class (printed matter with circulars, catalogs, books, etc.), one cent for each two ounces, or at the rate of eight cents a pound; fourth class (manufactured articles, blank paper, pads, and all merchandise), one cent for each ounce or at the rate of sixteen cents a pound.

Upon first class matter the government makes a handsome profit—possibly two or three hundred per cent. Upon second class matter the government loses not a little. Between the two there is too great a difference—thirty-two to one is too much of a good thing in favor of publishers. Letters should go for one cent each. No one should be allowed to use the mails for less than cost except our Uncle Sam.

In order to overcome the defect which annually confronts the department, Third Assistant Postmaster-General Madden, in his annual report recently submitted, recommends a new rate for monthly, bimonthly, and quarterly publications. Should his recommendation become a law, such publications would have to pay four cents a pound instead of one cent a pound as at present. This rate of four cents a pound he would also extend to books and merchandise.

Why newspapers and weeklies should go for one-fourth the amount that monthly journals pay, we cannot imagine. The former as a rule are political, while the latter as a rule are educational. Of the two, the magazine or journal should be favored if favoritism is necessary, which we know is not. It looks as though politics have crept into the recommendations for a purpose.

The proposed reduction of the rate on printed matter, books, and merchandise is, we believe, in accord with present progress and needs.

As many of our readers are aware, the department of the present year of forty years from the mails as second-class matter, business college journals, etc., because "They were not regularly incorporated institutions of learning," admitting, however, such publications from old, established, and in many respects, antiquated institutions of learning. Learning is learning, and if any kind is to be favored, let it be the new and needy, the kind that business colleges teach. But favoritism is not necessary. It is not so much the province of the department to determine the relative merits of business and literary education, as it is to determine what are and what are not educational institutions. And if Business Colleges are not "educational institutions" in the full and true meaning of the term, we certainly should like to know it.

All we want is justice. Business schools are being unfairly discriminated against. Should the proposed recommendations become a law which we do not believe they will further injustice would be the result, and greater discrimination, without assurance that the deficit would be lessened.

The way to reduce the deficit is to reduce the exorbitant rate paid the railroads by the government for carrying the mails. The express companies get a much lower rate than the government—a most ridiculous condition indeed.

We hope school managers, commercial school teachers, and all interested in fair play and practical education, will do what they can to correct the rulings made by the department through Congressional influence, affiliating with the School Manager's Association, etc.

Scarcity of Penmen, Commercial Teachers and Artists.

For some years there has been an increasing demand for teachers of penmanship and commercial teachers until at the present time persons qualified in penmanship, bookkeeping, and shorthand have not trouble whatever in finding employment. This, of course, is especially gratifying to schools preparing this class of persons, and to those thus-prepared and preparing. And what is still more hopeful for the cause of commercial education, is the fact that there is an increasing demand for high grade ability. And it is due to a scarcity of well trained ability that there continues such a demand for medium ability, and for the inexperienced. All this but emphasizes the substantial growth of practical education and the advisability of young men and women of ambition and ability to prepare in and for business education.

Incidentally we might also remark that there is a like demand for artists as engravers, designers, illustrators, etc. Practical education and art education are each drawing talent that formerly drifted into general teaching, and the professions. Many persons with inclinations toward law now find an output for such talent in the teaching of it in our commercial schools. Persons with art and political aspirations find the cartoon the most effective mode of winning votes and issues. All of which but emphasizes the demand for and persons qualified in, penmanship, commercial subjects, and pictorial art.

What They all Say

I enclose $1.00 to renew my subscription to The Business Educator. I am very much pleased with your journal, and believe it is far in the lead of any other journal of the kind published.

E. S. GAT'S E. Penman,
State Normal School, Emporia, Kansas.
A good business writer is one who writes legibly, easily and rapidly. Legibility, or that feature of writing which makes it easy to read, is the result of careful and systematic study of good standard models of the various letters, and an unlimited amount of practice on them. They should be practiced until a definite way of making each letter has become a habit. Habit is defined by the Standard Dictionary as being a tendency or condition, which by repetition has become easy, spontaneous, or even unconscious. This is why it is necessary that there be a great deal of practice on each copy. Much practice on a few copies is far better than a little practice on many different copies. Of course, it is not essential that each letter be perfect in form to constitute good, practical writing; but it must be well enough formed to make it readily recognized and the nearer it comes to the model, the better the writing will be.

In order that one may write easily, trained to move while writing. In business writing is to train the different and get them under good

Teaching which does not involve connection, but that of the mind is to have an abundance of proof of this practice which a better student in the lower graduated. Then train the hand to make the copies well while the hand

One of the stumbling blocks in writing, is carelessness in position and to make some kind of writing student's important points. And if prudently, almost if not entirely, an

The position at the table should be one being the front position, dinner table, with both arms resting right arm just off the edge of the table, and the right fore arm is directly

Now, as to all important penholder. The illustrations given show different views of the hand in an easy, natural position. Notice the position of the first finger over the penholder. Notice how the thumb is placed against the penholder. Study closely the position of the little finger and the one next to it. Also observe that the wrist is not touching the paper. The only place the hand touches the paper is on the little finger from the nail to the first joint. The holder should rest in the little fold in the hand just back of the large knuckle. The end of the first finger should be about one inch from the point of the pen. The arm should rest naturally and easily on the large muscular cushion between the elbow and wrist. Correct position can not be fixed in a day. It will necessitate frequent comparisons of the hand, arm, pen, and paper with the illustrations and instructions.

It is advisable at first to spend a great deal of time on exercises in which there is little variation of movement in order to form correct habits in penholding and position, and to learn to move the hand over the paper easily. The copies for this month are designed to lay the foundation for muscular movement writing.

Plate No. 1 contains a good variety of movement exercises for developing the muscles of the arm. The student should at least learn how to make these exercises before attempting the copies in which letters are introduced. This is especially true of Nos. 1, 2 and 3. This plate (No. 1) is a regular magazine of movement power. And these exercises are not like postage stamps to be used only once, but are to be used faithfully and frequently by all through this series of lessons. They should be mastered, not for their value as a product of the pen, but for the training the arm gets while making them.
The copies in plate No. 2 are to introduce some of the more simple letters in the way of movement exercises, and to begin training the hand to move while writing. In writing, the hand should move easily and freely from left to right. Since this is true, all the copies must be such as will influence this movement.

Take Copy No. 1. Turn the paper so as to write across the lines. Count off ten lines and make a check mark. Then let the hand and pen glide lightly and quickly forward and backward. Make a lot of it. Then practice Nos. 2, 3, 4 and 5 as indicated. Place the paper so the hand will move straight across the lines. Be sure to make loops in the e's and angles in the i's.
The letters in plates 3 and 4 should all be practiced across the lines as indicated in plates 2 and 5 before practicing the way the line runs. This kind of practice is more certain to develop movement, and it is excellent practice to train the hand in accurate spacing of letters—an important feature in good writing.

The letters introduced are i, n, w, c, m, a, t, and x. The i's and n's should be angular at the top and rounded at the bottom. The e's should always contain a loop. The u is just like the u except the dot or period which should be made distinct before turning to the next letter. This dot is what distinguishes the u from the n.
Copies 1, 2 and 3 in plate No. 4 are good exercises to develop the movements in the m's and n's. Be sure to make turns at the top of m's and n's. Great care should be given the last part of these letters. Make a good dot at the top of the r. This is made without lifting the pen. Every movement in it is the same as that of the r. In the a you drop to the base line before turning to the next letter instead of turning from the top as in the r. It is a little difficult at first, but with a little practice it becomes a very convenient way to make it. Learn to write smoothly and accurately. Be sure to make all these copies with a light, free movement. Do not be satisfied with anything else. It is the foundation for all good writing.

Value received, without interest.

Summer F. Dillon
Lessons in Practical Business Writing

BY

LAWRENCE, MASS.,

N. B. Keesling.

CANNON'S BUSINESS COLLEGE.

Number Five.

Lesson No. 28.

Capital $ starts the same as capital $ but it is made much larger at the top. The downward stroke should be made straight, and in order to make it straight you must throw the top over to the right. The top is made twice as wide as the bottom part. The small $ is made just like small $ with the exception that it runs through the line. The cut off style is used a great deal. Review the figures.

Lesson No. 29.

This lesson is given as a review on small letters, and is a model form for their practice.

Lesson No. 30.

I would suggest that you take the small letters and give them a great deal of extra practice, following the style shown in the previous lesson.
Lesson No. 31.

The plate of figures are given to show how you should practice figures. Try to keep them in columns so that if necessary you could add them. Try making three, four, five and six groups on a line.

\[ 1234567890-1234567890-1234567890-1234567890-1234567890-1234567890-1234567890-1234567890-1234567890-1234567890 \]
Lessons in Business Penmanship

BY A. K. BURNETTE, VINCENNES, ILL.

Number Eight.

Lesson No. 41.

Great care should be taken in practicing lesson No. 41. Practice each sentence separately, filling several pages of each. This lesson will test your skill in sentence writing. Watch the height of the small letters, and be sure to get equal spacing between each letter. Don't hurry over this work.

Lesson No. 42.

We have for lesson No. 42 business forms which contain a great deal of valuable work for practice. This is a very important lesson and should have quite a good deal of hard study and practice. Write and rewrite each form very carefully until you can see quite a little improvement. Notice carefully the arrangements of these business forms.

This lesson will end the short series of lessons which has been a pleasure for me to conduct. Hopes that those who have been following this course of lessons, may have been benefited in some way along the penmanship line.

Wishing you abundant success.

Yours respectfully,

A. K. BURNETTE.

Mr. D. L. Callison, of El Reno, Okla., submitted specimens of ornamental penmanship, disclosing the fact that he is a penman above the average in skill.

The Courier-Journal of Louisville, Ky., on Sunday morning, October 12, 1891, presented a large half-tone engraving of a set of resolutions, handsomely engrossed by Mr. H. C. Walker, of the city of Louisville, but now of St. Louis. Mr. Walker is forging to the front as a practical engraver.

Mr. E. M. Finkles, of Burnt Corn, Ala., sends some written cards indicating considerable skill in the way of writing.

Mr. E. D. Pennell, Principal of the Commercial School of Alma, Mich., College, included some slips containing specimens of ornamental penmanship, disclosing the fact that Mr. Pennell writes a quill with considerable dash and accuracy.

Mr. R. R. Baker, penman and commercial teacher in the Buckeye Business College, Sidney, O., sends specimens of students' work in business penmanship showing more than usual improvement.

Some splendidly written signatures, executed with white ink on large-doled cards, came from T. B. Bridges, of the San Francisco, Calif., Business College. Mr. Bridges writes a very fine, graceful and graceful pen, and if he continues it will not be long until he will be numbered with the very few.

Mr. G. S. Herrick, of Marion, Ind., submits specimens of ornamental penmanship, which are not a little above the average. In fact, the work is quite artistic. Mr. Her-

rick was a pupil of ye editors several years ago, and possesses good qualities other than his penmanship.

"Before and After" specimens from students of the New Britain, Conn., Commercial College, Miss Nina P. Hudson, Teacher, indicate unusual improvement for the length of time given to the subject. The ink and paper used were of too poor a character to engage successfully of we should have given our readers the opportunity of seeing the work. The improvement was such that it is possible only where simplified is taught.

Mr. J. S. Clay, Melane, N. C., penman and commercial teacher in the Bingham School, placed in our hands some specimens of students' writing which show first-class instruction in this practical art. Considerable individuality is shown in the writing, indicating that Mr. Clay is something more than his name implies. Or, in another sense, what it implies, as he is successful in moulding into good commercial forms the plastic qualities of writing at the hands of young men under his charge. Among those who are doing especially creditable work we mention Messrs. Hep. McGhee, Stovall, Don Humphrey and John Leigh Hunt.
Mr. E. F. Whitmore, of Easton, Pa., submits specimens of ornamental penmanship, which indicate ability above the average. We hope to see more of his work and to hear more of him in the future than we have in the past.

Specimens of business, ornamental and roundhand penmanship have been received from Mr. H. H. Funk, No. 302 Nevada Street, Philadelphia, which disclose the fact that he is getting to be one of America's promising penmen. His roundhand work is getting to be unusually dainty and fine, indicating the fact that he is an availing himself of Mr. Charlton A. Howe's instruction, the proper thing, of course, to do.

A number of exquisitely written cards, ornamental style, have been received from Mr. J. E. Leamy, of the Troy, N. Y., Business College.

Mr. Leamy is pushing his work up by the side of that of the best. It is quite professional, being delicate in touch, smooth, dashy and forceful.

Mr. Henry Walker, Manor, Wash., who has been practising from Mr. Stein's lessons, is getting to be quite proficient in roundhand, as evidenced by samples of work he has been submitting.

Mr. A. J. Karlen, of Villas, South Dakota, favored us with a proof of a very creditable set of ornamental capitals.

E. E. Kent, with the Rider- Moore & Stewart Schools of Business, Trenton, N. J., favored us with a photo of a set of resolutions, which he recently engrossed, which indicate more than usual artistic merit. The original was illuminated in many colors and was reduced so much in photographing that much of the original beauty was lost. For that reason we have not endeavored to secure a plate of the same. Mr. Kent is to be congratulated upon the excellence of his work.

Good Words From Mr. Cast

"I am at present with Mr. Blair at the Blair Business College, Spokane, Wash., in charge of the English Department. THE BUSINESS EDUCATOR brings to me each month something more than the feeling of pleasure. When such gentlemen as Gaylord, Denison, Kibbe and others give us the result of their years of study, the pleasure passes upward into the realm of inestimable benefit. To such contributions one feels drawn closer at every examination, interest increases, and continued study yields rich results.

To my mind your paper will prove of value to all true lovers of penmanship in the degree that the mental predominates over the physical in the preparation of the articles presented for study. The work of such gentlemen as mentioned above is practically all original thought, and not the result of mere physical training directed to the copying of models that aroused admiration nearly a generation ago."

E. A. CAST,

Blair Business College, Spokane, Wash.

InCREASES INTEREST

Mr. K. Gillespie, of the Bay City, (Mich.) Business College, writes: "Your paper is giving our students entire satisfaction, and is increasing their interest in the work."

We are pleased to state that similar expressions are coming from many sources, making it evident that wherever THE BUSINESS EDUCATOR is given a fair chance it is unequaled as an arouser of interest and as a class assistant for the teacher.

Considered Best in Canada, Also

We are delighted with THE BUSINESS EDUCATOR, and think it the best in the market.

J. B. BEVERIDGE,

Brandon College, Brandon, Manitoba.

BY W. W. FIKE, MILLEDGEVILLE, N.Y.
The letter Q looks like the figure 2. Keep the small loop at the base line rather small and horizontal. The sentence, "Quickness and sureness are commendable," is a good one to practice. Watch the letters as you write them and think of spacing as you execute the letters, so as to form the habit of correct spacing. "Quickness and sureness in writing are two commercial qualities much in demand," you and your writing will be in demand if you acquire these qualities.

\[
\begin{align*}
\text{Quickness and sureness are commendable.}
\end{align*}
\]

The z begins the same as a and finishes with a loop below the line. The q begins the same as a, but finishes with a loop below the line made the reverse of the one in z. Two f's are given. The first is rapidly replacing the second. It is much easier in execution and about as legible. All loops should be about the same size and slant or they will not look good as a page of writing. Endeavor, therefore, to make loops uniform. As a rule, make them open and short. Tall, slender loops are in the way and are difficult to make well.

Two styles of f are given. Try both and then take your choice. Both are good if made well. It is simply a matter of individual preference. Excellence in anything is admired. Writing is not an exception. Good writing impresses everyone favorably. Do you wish to create good impressions? Then learn to write well—legibly, neatly at least.

\[
\begin{align*}
\text{X is a letter not very often used. X X X X.}
\end{align*}
\]
At Random.

By the time this number shall have reached our readers, those who have left their pleasant homes to attend the Federation convention. We trust that it may be the greatest meeting of the kind that has been held. Commercial education, assuming a remarkable place in the school life of this nation, and both the scope and the methods in vogue will be changed to keep pace with changing conditions. To be in the van, it is necessary to study the professional papers and attend professional gatherings.

We hope that the proceedings of the Milwaukee meeting may be in keeping with the dignity and importance of the cause; that falsehood may not prevail in anything, and that earnestness, enterprise, and a catholicity of spirit may characterize the attitude of all who as commercial teachers take part in the work.

An official report of the proceedings should be published by the Federation. The cause has become important enough that to delay longer in taking this logical action will be to expose the organization to its critics. Let those who read this paragraph before the Business Meeting shall have been held, write to their friends at the convention to vote for an official report.

From the Seats of the Mighty

Business education and preparation to business life have been receiving attention recently from men high in civil and educational affairs. At the banquet given November 20 by the Chamber of Commerce, following the ceremonies incident to the dedication of the splendid marble palace that is to be the home of this great organization, former President Cleveland, in the course of a speech, commended the Chamber of Commerce for its "expression of the cause of business education among our people," adding that "it has gone a great deal farther than practical."

President William J. Tucker of Dartmouth College, at the annual dinner of the Boston Commercial Club, November 20, quoted some statistics which he had compiled with reference to Dartmouth. He said:

"Twenty-three percent of the students registered are the sons of professional men; 41 percent are the sons of business men; 12 percent are the sons of farmers, and 21 percent are the sons of wage earners. Professional men have sent their sons to college. The farming element in New England has in a degree raised its heads. But the business element has increased, and the wage earners constitute an entirely new element in collegiate life."

This new constituency has come in because new outlets of thought have come in. In the old days men were usually trained for the ministry, because the ministry was the power. Ministers came not to serve but to rule. And it has always been characteristic of collegiate education that it has followed the line of power, and a power has followed the line of collegiate education. In college, education has come to occupy a place in the organized education of law, of medicine, and latterly of engineering. And it has now come to the point where it is organizing commercial education.

In attempting to organize education based upon the principles and methods of the business world he said that colleges would undoubtedly make many blunders, but, he added, you have forced the conditions upon us. If we bind you will tell us about it, if we succeed, we shall simply do what you have made it possible for us to do, and made necessary.

Little Lessons on Economy

Teach your pupils that waste is wickedness; that it is the glory of the product of someone's hard work; that its worst effect is the deterioration that it brings about in their own character. Try to make them see that employers count it a merit in their help to be seen shutting off the gas when it is not needed; using odd pieces of clean paper from the wastebasket near the desk for temporary memoranda, instead of lithographed letter heads; the uselessness for the purpose is provided; showing a recognition of the loss occasioned by errors in transcripts or in directing envelopes; dumping unremittable canceled stamps from spoiled envelopes; looking up mail and express rates to see which is the less expensive when sending a package; taking advantage of excursion or holiday rates or buying a scalper's ticket when about to make a journey; using the mails instead of the telephone when it can be done as well and when it will result in a saving of expense; using plain instead of lithographed or embossed sheets for all but the first sheet of a long letter; in brief, to be economical of everything. This will lead to economy in the use of time, and the concentration that avoids errors, two economies that more than pay all and financial fortunes for those who practice them sedulously.

The work done in most schoolrooms would be infinitely more sympathetic and thus more whole-some and successful, if the teacher would take the time and make the effort to become acquainted to some extent, at least, with the conditions of life that surround his various pupils, and with the aims and personal habits of these young people. Dr. Henry K. Sanford has well said:

"Too many teachersthere are who can estimate percentages and keep their school 'marking time,' but who never study the personal dispositions, habits or environment of their pupils; they know nothing of the peculiar difficulties against which many try to work, or why they are falling in their daily work."

Business education is the work of teachers, and teachers must be trained to do it.

There is a great deal in our practical teaching which our arithmetic, our books on Commercial Law, our Bookkeeping text-books, and our works on English that is impractical; found in the schoolroom only. The commercial schools have set the public schools an excellent example in lopping off much that is impractical in school work, but there is yet much to be done even among the commercial schools. As examples of the nonsensical problems that children in the public schools are still asked to waste precious time in solving, we use the following, clipped from a recent educational journal:

Six men bought a grinding stone, 6 inches in diameter, each paying one-sixth part of the expense. They agree to grind down their respective shares in succession. If the axe renders a space in the center, 3 inches in diameter, useless, find the diameter of the grinding stone when each of the men, standing in the ground hole is shaved. School Arithmetic, page 211, problem 200.

Find the first time after 5 o'clock that the hands of a watch are exactly distant from each other. Algebra, page 69, new edition, exercise 281, problem 10.

But, fortunately, many of the leaders in the ranks of the public school workers recognize the waste represented by teaching that which will not be met in real life. Dr. T. B. hose, Principal of the State Normal School, California, Pa., pungently expresses himself thus:

What concerns the child outside of the school and the employment of the school do not reflect the real life of the home, the office, the store, the place of amusement. All is unreal, uninteresting, unprofitable. Every hour of school work should have some direct and intrinsic interest to the pupil. No honest teachers should try to justify dull methods and useless information by the plea of discipline and subsequent value. School is not a preparation for life, but a part of it. Life is unity throughout. It is all one piece. Nothing pays in school that does not pay afterward. The habit should be formed of doing what is most worth doing, and of doing it well. No contrary habit should be formed.

The Gregg Writer

We read each month, with interest, the spicy little magazine that is published by the owner of the Gregg system of shorthand. Some recent changes have been made in the staff, among them being the addition of K. P. So Relle as editor of the Department of Commercial Training. Mr. So Relle takes up his work vigorously and with originality. We wish him and The Gregg Writer unlimited success.
From the Business Manager's Desk

Athletics as an Element in Advertising.

ARCHIBALD TSE, PRINCIPAL OF BANKS BUSINESS COLLEGE, PHILADELPHIA.

A consideration of "Athletics as an element in advertising" must involve an understanding of general publicity, referring to the reaching of a mass of people, a certain percentage only interested in a business education; and a special class, all of whom are more or less eligible to become students of a business college. Athletics in business deals with this peculiar phase of the situation, which is to a very large extent responsible for the results to be derived from an athletic department. Our large universities and public and private schools throughout the country have openly set the seal of approval upon a uniform training of the body in connection with the cultivation of the mind.

The Commercial School Should Continue What the Preparatory School Has Begun.

Business colleges receive support from young men and women, who have not only become grounded in the preparatory education necessary to fit them for taking up a business course, but who have also been interested in athletics as developed in these primary institutions. With an appetite whetted by a little knowledge of the subject, there is a natural desire to become identified with an institution which encourages a subject proved to be of abiding interest. This argument in itself should be sufficient to convince business college proprietors of the benefit afforded by an athletic department, and the advantage immediately becomes manifest when there is competition with a rival institution which does not believe in business athletics.

To these primary principles may be added a dozen different branches, which render athletics a most valuable advertising medium. It should be the purpose of a business college having an athletic department to enlist the support and approval of the athletic departments of public and private schools from which the business college may draw its patronage. It is certain that every school is aware of games to be played, that it has an interest in the success or defeat of its colors, and sends a delegation of routers to help along the contestants. Not only does athletics thus reach the student body of a school, but it also interests a certain number of unattached young men and young women, who love sport for sport's sake. In this manner the name and purpose of an institution becomes thoroughly ground into the minds of a most desirable class, and the influence extends to their friends who may appeal to them for recommendation of a school.

Teams Must Be Composed of Amateurs.

It is perhaps needless to say that the greatest value in athletics must come from the fact that these schools, public and private, from which a business college draws its patronage, shall be competitors in different games or sports with the business college. A free lance schedule will prove a losing one, inasmuch as independent teams are made up from young men holding positions who were formerly athletes in different schools. It is a difficult task, especially in the larger cities, to secure games with public and private preparatory schools. Amateurs in every sense of the word represent these schools in athletics, and, as the difference between an amateur and a professional is most clearly drawn by the Amateur Athletic Union, or any association in control of athletics, it is necessary that the business college limit its sports to amateurs in good standing, not only with the controlling body, but also with the school. The practice of paying a school team in order to insure its success is most pernicious. It is impossible to conceal the fact from the sport-loving public, and a reputation for playing "ringers" is damaging in the extreme to the securing of games with desirable schools. This policy is also apt to cause a lack of interest among the student body of the school itself. If an institution will descend to the practice of giving free scholarships to well-known athletes, or of playing any athlete not in good standing in the school, this act bars from active participation a thoroughly eligible student, who is perhaps not so skilled in the playing of a particular game, and the student soon recognizes the fact that athletics are not conducted for students, but for the immediate gain of the institution itself.

Free Advertising in Press Reports.

The next point to be handled delicately is the matter of free advertising through the press. I have stated the foregoing factors first, because I assume that the average school proprietor is apt to believe that the sole value in athletic advertising is gratuitous notice in the papers, and believe that is really of secondary importance. An order to insure recognition from the press it is necessary that sports should be conducted, ostensibly, at least, as a matter of public interest. The securing of games with public institutions is a prime factor in this recognition. Keeping sport clean as outlined above is also another element which meets with the favor of sporting writers. Manliness and fair tactics are bound to meet with approval, and to secure the largest and best notice it must be proved to the paper that athletics are of sufficient interest to the student body to warrant the

Pictorial Pointers. The Penn Mutual Life Insurance Building, Philadelphia, home of Banks Business College. This is one of the most imposing office buildings in Philadelphia, or in this country. The school occupies the second, third, and fourth floors of this building, which is on the street car lines, near the Reading and the Pennsylvania stations, and not far from the Delaware ferries, almost an ideal place for a great school.
purchase of a paper in which a notice is given. It must be remembered that an unfavorable or derogatory squib is most injurious in moulding schoolboy opinion against the athletics of any institution, so that great care should be exercised to make them above criticism. It is also a mistake to believe that newspapers are obliged to give free reading notices because of advertising done during the season with those papers. While I have no doubt that the advertising department is often responsible for some athletic recognition, it would be an unwise policy to make this the sole cause of favorable mention. I am not sure that this would be true in a small town, where the press is dependent upon its advertising patronize, but a large city paper can find other news items, and is absolutely independent.

GUARD AGAINST PHYSICAL INJURIES.

A losing team is a poor advertisement at best, and in order to have a winning team it is necessary to have a coach who is able not only to instruct in the fine points of the game, but also to take charge of the proper training required to undergo the severe strain of competition. It is imperative that there should be no serious physical injury to a student. The relating and widespread publication of an accident will do more harm to a business college than a whole season of prosperity and success in athletics can benefit a school. No boy should be permitted to represent a school team who is not physically capable of standing hard knocks without danger. The sole cause for uneasiness in conducting athletics lies in the possibility of a serious set-back because of accident, and every safeguard should be employed to prevent this. There should also be an effort to make athletics interesting to the athletes of a school by giving each one an equal chance to compete.

THE SCHOOL SHOULD PROVIDE UNIFORMS.

I believe that the supplying of all uniforms is necessary. A boy taking a business course is seldom able to spend the money needed to furnish himself with the proper equipment, and a liberal policy in this respect will benefit the subject of athletics. The impression of the students that their equipment will be uniform and have the colors and individuality of the school. If a school has a good name in athletics and its teams are successful, the graduates will show a disposition to further identify themselves with sport after leaving the school, and an athletic association will be easy to form and keep in existence, because the best graduate talent will be represented.

ATHLETICS HOLD THE INTEREST OF ALUMNI.

Athletics help as much to make a school journal interesting as any other item of news, and the boy will read the sporting department of such a paper with eagerness. I know from experience that former athletes of any institution are always interested in school teams and will go out of their way to get news.

DIPLOMACY IN MEETING PRACTICAL PROBLEMS IN ATHLETICS.

The running up of high scores with weaker antagonists should be avoided, because school boys do not like to be humiliated, and are apt to refuse to schedule games after a crushing defeat. Substitutes should be given a chance in less important games. It is generally found advisable to have the coach write up his own account of games for publication, and an account ready to print is more apt to be noticed than if the sporting editor of a paper is compelled to go to the trouble of writing it himself. Have photographs taken of different athletes, as well as group pictures of teams, and papers will be glad to insert them on their sporting pages. For indoor games a gymnasium is indispensable, and every effort should be made to arouse the interest of the student body to attend these games. It will also be found advisable to have inter-department and inter-class competition. This will hold students' interest to a greater extent than games with outside teams, and an interesting account can be written up after each game and forwarded to the press. A physical instructor is necessary for general gymnasium exercises, although in small institutions the coach may act as a double capacity. If gymnasium classes are held regularly, the fact becomes known to the public at large, and not infrequently requests are made by students when entering to be allowed the use of the gymnasium. This feature may also receive gratuitous notice through the press.

In closing I would speak a word of warning to business college proprietors concerning the excessive advertising of athletics in school catalogues or circulars, or paid advertisements in the press. It is not wise to allow the public to get the idea that athletics is a means to an end. Let the athletic department advertise itself in a great extent. Do not make a special point of it, or there is bound to be an objection to it on the part of the parent. A student does not enter a business college for the purpose of becoming stronger physically. Education should be the chief aim, and athletics will become a valuable and pleasing adjunct to the school work, and the popularity of the institution advocating athletics will be found a valuable and pleasing adjunct to the school work, and the popularity of the institution advocating athletics will become established on a permanent basis.

Department of Commercial Law.

Conducted by J. C. Barber, Bryant-Stratton Business College, Providence, R. I.

PREPARATORY TO THE STUDY OF CONTRACTS.

THE NECESSITY FOR A SOLID FOUNDATION.

A thorough knowledge of English is necessary to any successful study. In this work, some knowledge of the elements of general law and of the more common words and phrases peculiar to the subject, is indispensable.

THE ORIGIN AND BASIS OF LAW.

To get a working idea of law, it is necessary to begin with the foundation: viz., "The Rights of Man." However enshrined in the conscious state, once there, he had from his very nature, certain absolute rights. From this point on, the evolution of society resulting in our present state of civilization is a gradual process. As there can be no civilization without the recognition and protection of rights, this process has from the first, been accompanied by rules for human conduct, based on the three natural or absolute rights: viz. The right to security of person; i.e., the right to be free from bodily harm at the hands of another; The right to liberty of person; i.e., the right not to be detained or imprisoned in any place; and the right to own private property.

These rights were recognized and respected by custom before there was any written law. Later on, when courts were established, they sanctioned those customs brought under their notice, if they were firmly established, and had been universally followed by the people of a certain district or of a certain class, each custom must have been reasonable, and in harmony with all laws in force, and must have been practiced for a time so long that "The memory of man runneth not to the contrary." Such is the origin of the common or unwritten law.

THE GROWTH OF LAW.

Our law is the result of a gradual growth. New laws arise only as they are needed for the protection of rights under new conditions. In the savage state, where there was a constant war among all, no "Business Law" was required.

THE NECESSITY FOR GOVERNMENT.

One important step, in the evolution which differed to differentiate man from the lower animals, was the act of uniting together for mutual aid and protection. Single-handed, man could hardly have withstood the hardships of climate and the ravages of wild beasts. Even so, there would have been nothing to stimulate him to progressive action. Honor and self-sacrifice (without much more fear of the beast) would forever have remained unknown to him. Thinking to make his own existence more secure, every man would have sought the life of every other man. This alone would have brought the extermination of the race. Man, is by necessity a social being. His hopes and destiny hang on this question of Society-Civil Government. Law seeks to promote "the general good and the ends that were had in the beginning." This can be done only by making civil government supreme. Therefore, the individual must always yield his rights to the highest government demand it. Knowing this, how can a same person he disloyal to the flag?

SOURCES OF LAW.

The basis of our law came mostly from three sources outside our own country: viz., From the Roman law: from the customs of traders, called the "Law Merchant"; and from the common law of England. There is no general common law in the United States, but it is modified in the different states, being based on the common law of England as it was just before the Revolutionary War. Louisiana is an exception.

DIVISIONS OF LAW.

Written law, that law enacted by persons in authority and published in set form, comprises constitutions, treaties, and statutes.

The Constitution of the United States.

The United States Constitution is the supreme law of the nation in all matters of which it treats. It contains the principles upon which the general government must be conducted. Any law which conflicts with the Constitution is "unconstitutional," and cannot be enforced.

Even law-makers sometimes disagree as to the meaning of what they have laid down. It is, therefore, necessary that some one should be clothed with authority to interpret the laws. This is done by the United States Supreme Court.

A few years since, Congress passed a law, taxing people on their income, a certain man refused to follow it, and a suit followed. When the matter came before the court, the law was found to be "unconstitutional." Note that courts do not decide questions unless such questions are brought before them in accordance with law, such a case as the above is called a "test case," because it is brought to test the validity of some law.

STATE CONSTITUTIONS, STATUTES, ETC.

Each state constitution is to that state, what the United States Constitution is to the nation, and is the supreme law of the state above all other laws by the national government. The State Supreme Court is the highest authority of the state as regards the interpreting of state laws.

But mark the following: The U. S. Constitution created Congress, and defined its power to create hereafter, Congress can make any laws which the Constitution does not authorize, while a state legislature may make any laws which the state constitution does not expressly prohibit. Of course, state laws must not conflict with national laws.

The Common or Unwritten Law.

The great body of our common law is contained in the decisions of our courts. These decisions, known as "court reports," are printed and preserved in book form, and may be found in the law library of any state.

Is a court decision common law? Many of the decisions give expression to common law, but there are also many cases where the court is concerned in interpreting and applying statutes.

The Ownership of property.

The right to private ownership of property is the basis of commercial law. Ownership gives the owner the right of control as against all others except the government. One may acquire ownership of almost any thing except light, air, and navigable waters.

CLASSES OF PROPERTY.

Personal Property consists of movable things, things of a personal nature.

Real Property includes what is fixed in a certain place; as land, houses, etc.

The laws of real property differ widely from those of personal property. Many of the laws of personal property are derived from the "law merchant," while the laws of real property are quite an extent the product of the "feudal system."

How Property May be Acquired.

By Occupancy. He who first appropriates anything in nature is the rightful owner; also, the first to take possession of what another has abandoned or cast away, is the rightful owner; and he who finds what another has lost, gains it against everyone but the true owner.

By Creation. Whatever a person produces or makes, belongs to him until he voluntarily parts with it. To write a book, I alone have title to it. But if I publish it, without first securing copyright, I lose my title.

By Gift. One may acquire as good title by gift in any other way, unless there are circumstances attending it such that creditors would be defrauded. Of course, an incompetent (insane or weak-minded) person could not give good title, nor could one under age. When property is given by one in immediate expectation of death, if he should recover, he could reclaim the property.

By Will. If a person of sound mind makes a will in compliance with law, at his death the property in question will vest in the person or persons named in the instrument.

By Legal Succession. If the owner of property dies without a will, his relatives succeed to the ownership, subject, of course, to the provisions of the law. If he has no relatives living, the property will go to the state.

By Purchase. Purchase includes contracts, where one passes his title to another in return for something which he is to receive in payment; sales, to satisfy judgment, and other kindred features.

How Ownership is Qualified.

Every owner of property holds it subject to certain qualifications and restrictions. Emulous Domain: The kind of soil in England under the "feudal system," the king owned all the land in the realm, so with us the title to all land is supposed to proceed from the government. The government reserved the right to take a "banded property" for public or quasi-public, use, under the following conditions: Emanuets of Emulous Domain: It must be for public or quasi-public use, it must be in the "continuous" by proper proceedings.
It must be appraised by persons duly appointed, and
must be paid for.

Taxation Laws. Private property must be taxed to defray government expenses. If the
taxes are not paid, the property may, after due notice, be sold and the amount de-
ducted from the proceeds.

Police Regulations. These are laws intended for the good of the general public.
Such as regulating the quality of materials, the height of buildings; the quality and
workmanship of plumbing: the sale of liquors, etc.

Circumstances of Extreme Necessity. A
good example of this is where property is
destroyed to prevent the spread of disease.
Pledges, Mortgages, etc. These will be
explained hereafter.

No person has a right to use his prop-
erty as to infringe on the rights of others.

RIGHTS—WRONGS.

Rights are claims of human beings upon
another. Wrongs are violations of the
rights of others. (Lack of space forbids ex-
plaining the different classes of rights here.)

Wrong are of two classes: civil and criminal.

A civil wrong is either a tort or a breach of
contract. When one fails to carry out his
part of a contract to which he has bound
himself, he is said to have committed a
“breach of contract.” He has broken his
contract and is liable for damages. All
other civil wrongs, such as slander, libel,
negligence, deceit, malicious prosecution,
false imprisonment, and the like, come under
the head of torts.

When a right is violated, the injured
party must set the law in motion to secure
justice, unless he can come to an agreement
with the offender peaceably.

AN ACTION AT LAW.

The law is set in motion by bringing an
action. The person who brings the action
is the plaintiff, the one against whom it is
brought, is the defendant.

STEPS IN A CIVIL ACTION.

The Writ. This is a written summons
calling the defendant before the court.
It must be properly filled out, signed by the
clerk of the court, and served by the proper
official.

The Pleadings. First the plaintiff,
through his attorney, makes written state-
ment of his charge against the defendant.
Then the defendant likewise sets forth his
ground of defense. The plaintiff's paper,
called a declaration, and the defendant's
paper, called an answer, must be filed with the
clerk of the court a certain number of days
before trial.

The Trial or Hearing. When the case
comes up before the court, the attorneys can
argue only those questions indicated in the
pleadings.

Many are apt to speak inaccurately of
the argument of an attorney as “pleadings.”

The Judgment. This is the decision by
which the court seeks to render justice to
both parties.

HOW JUDGMENT IS ENFORCED.

When judgment is given in favor of the
plaintiff, it is generally to the effect that the
defendant shall pay to the plaintiff a cer-
tain sum of money and also the costs of
court. If the defendant does not comply at
once, the court issues orders to the sheriff
to seize and sell the property of the defen-
dant and to pay the costs of court and satisfy the
judgment. If the defendant has no property
or only what is exempt from execution, then
the judgment may fail. But the judgment
remains in force for a time ranging from
five years in some states to twenty years in
others, and should the defendant acquire
any property within that time, it is liable
to seizure.

ATTACHMENT.

In many cases the property of the defen-
dant debtor is seized before the case is tried.
This is done by means of a writ of attach-
ment served on the debtor. This process
ties up the property attached until after the
case is tried, and if the plaintiff proves his
case, it may be sold to satisfy judgment and
pay costs.

Garnishment. It is not only possible to
attach property which the defendant has in
possession, but if he is known to have
property in the hands of another person,
that property may be attached. For ex-
ample, X sues Y for debt, Y has no prop-
erty in his possession, but Z owes Y a cer-
tain sum of money on book account. X can
attach the money due Y, after which Z can-
not pay it to Y, but must hold it subject to
the order of the court. In some states these
two processes are allowed only in certain
cases.

NOTE. It is impossible here to do more
than hint at a few of the more important
points with which the learner should equip
himself before plunging into the study of
“contract law.” It is well to read some
work on elementary law. There is no great
danger of laying too strong a foundation.

Business Tips.

GEORGE HURACE LORIMER

(Extracts from "Letters from a Self-Made Merchant to His Son," an instructive and interesting book recently published by George Horace Lorimer, that for some months has appeared as Bill of the Day in the Evening Post, and that are soon to be published in book form by Small, Maynard & Co., Cambridge. Mass. We are indebted for permission to make these extracts.—The Editor.)

(Continued from December.)

TO A SALESMAN.

We aren't specially interested in orders that the other fellow gets, or in knowing how it happens after it has happened. If you like life on the road, you simply won't let it happen. So just send us your address every day and your orders. They will tell us all thing we want to know about "the situation."

Of course, you are bright enough to be a half-way man, and to hold a half-way place on a half-way train by half the work you are capable of, but you've got to add dynamite and ginger and jounce to your equipment if you want to get the other half that's coming to you.

You've got to believe in yourself and make your buyers take stock in you at par and accredited interest. You've got to have the scent of a bloodhound for an order, and the grip of a bulldog on a customer. You've got to feel the same personal solicitude over a bill of goods that strays off to a competitor as a parson over a backsider, and hold special services to bring it back into the fold.

You've got to get up every morning with determination if you're going to bed with satisfaction. You've got to eat hog, think hog, dream hog—in short, go the whole hog if you're going to win out in the pork-packing business.

Nothing earns better interest than judicious questions, and the man who invests in more knowledge of the business than he has to have in order to hold his job has capital with which to buy a mortgage on a better one.

I ain't one of those who believe that a half knowledge of a subject is useless, but it has been my experience that when a fellow has the half, he's better than the other half which would really come in handy.

What you know is a club for you, and what you don't know is a metax for the other fellow.

I want to see you come up smiling; I want to feel you in the business, not only on payday, but every other day. I want to know that you are running yourself full time and overtime, stocking up your brain, so that when the demand comes you will have the goods to offer.

When a fellow brags that he has a pull, he's a liar or his employer's a fool. And when a fellow derives that he's being held down, the truth is, as a general thing, that his boss can't hold hi up.

When a fellow knows his business he doesn't have to explain to people that he does.

Education will broaden your horizons, but there's no known cure for a big head.

Tact is the knack of keeping quiet at the right time; of being so agreeable yourself that no one can be disagreeable to you; of making inferiority feel like equality.

A tacful man can pull the stinger from a bee without getting stung.

Some men deal in facts, and call Bill Jones a liar. They get knocked down. But your tacful man says that since Baron Muchasen no one has ever been so cloak and daggered at Odd Town, and when that comes back to Bill he is half tickled to death, because he doesn't know that the higher criticism has hurt the Baron's reputation.

A mistake sprouts a lie when you cover it up. And one lie breeds enough distrust to choke out the prettiest crop of confidence that a fellow ever cultivated. It's easy to have to make a half-hearted confession of the buyer, but you've got to have both. The house pays you your salary, and the buyer helps you earn it. If you skin the buyer, you will lose you trade; and if you play tag with the house, you will lose your job.

Some salesmen think that selling is like eating—to satisfy an existing appetite; but a good salesman is like a good cook—he can create an appetite when the buyer isn't hungry.

ON APPEARANCES.

Of course, clothes don't make the man, but they make all of him except his hands and face during business hours, and that is a pretty considerable area of the human animal.

A dirty shirt may hide a pure heart, but it seldom covers a clean skin.

If you look as if you had slept in your clothes, most men will jump to the conclusion that you are too lazy to try to look well and will never get to know them well enough to explain that your head is so full of noble thoughts that you haven't time to bother with the dandruff on your shoulders.

I have seen a recent slave and a five-cent shine get a thousand-dollar job, and a cigarette and a pint of champagne knock the bottom out of a million-dollar pork corner.

It isn't enough to be all right in this world: you've got to look all right as well, because two-thirds of success is making people think you are all right.

Pot has six eyes, and you will have four make eight, and the young man and the small bottle make a damned fool so often that they are hard to convince that the combination can work out any other way.

A man can't do what he pleases in this world, because the higher he climbs the plainer people can see him.

When a fellow gets to the point where he is something in particular, he doesn't have to care because he doesn't look like anything special; but while a young fellow isn't anything in particular, it is a mighty valuable asset if he looks like something special.

Just here I want to say that while it's all right to blow one's horn, don't do it by appearances, it's all wrong for you to go on them. Back up good looks by good character yourself, and make sure that the other fellow does the same.

ON SPECULATION.

Trading on margin is a good deal like paddling around the edge of a trading hole—it seems safe and easy at first, but before a fellow knows it, he has stepped off the edge into deep water.

The wheat pit is only thirty feet across, but to me it is a hall. And trading on margin means trading on the ragged edge of nothing. When a man buys, he's buying something that the other fellow hasn't got. And it's been my experience that the net profit on nothing is nit.

You have been in the parking business long enough now to know that it is a bull only thirty seconds to lose his hide; and if you'll believe me when I tell you that they can skin a bear just as quick on "change, you won't have a Board of Trade license for a rug during the long winter months.

If a clerk sells pork, and the market goes down, he's mighty apt to get a lot of ideas with holes in them and bad habits as the result. If he's just a kind of fellow that the market goes up, he's likely to go short his self-respect to win back his money.

The only safe road to follow in speculation leads away from the Board of Trade, on the dead run.

When you become a packer you may go on "change as a trader; until then you can go there only as a sucker.

TO THE BUSINESS MANAGER.

Enthusiasm is the best shortening for any job; it makes heavy work light.

There's no alarm clock for the sleepy man like an early-rising manager; and there's no thing breeds work in an office like a busy boss.

Consider carefully before you say a hard word to a man, but never let a chance to say a good one go by. Praise judiciously instead of scolding.

The phonographic records of a fellow's character are lined in his face, and a man's days tell the secrets of his nights.

Be slow to hire and quick to fire. Your secret weapon is that if you have a threat is a promise to pay that it isn't always convenient to meet; but if you don't make it good it hurts your credit. Save a threat till you're ready to act, and then you won't need it.

Keep close to your men. When a fellow's sitting on top of a mountain he's in a mighty dignified and exalted position, but he's missing a heap of interesting and important doings in the valley.

Never lose your dignity, of course, but tie it up in all the red tape you can find around the office, and tuck it away in the safe. A fellow bossing an office is the funniest thing without having to draw an imaginary line between them, because they will see the real one if it exists.

(Concluded in March Number.)

The Sterngicators Protest.

Doubtless many who have read the numerous letters from stenographers, which have appeared recently in the Sun, have been led to believe, among other things, that members of the shorthand fraternity are the least appreciated, the poorest paid, the most unspectacular, the most dissatisfied and disinterested in the universe. They explain that they work hard and long to acquire skill in their profession; that they wait weeks and months to secure a situation; that they are unemployed, they are forced to perform duties inconsistent with the dignity of their occupation, and, furthermore, that their salaries are altogether too small, their competitive boss can most amusingly without having to draw an imaginary line between them, because they will see the real one if it exists.

(Continued on Page 41.)
A History of Penmen, Early Business Education and Educators in America.

R. M. Bartlett.

R. M. Bartlett, one of the earliest commercial school pioneers, was born in Washington County, New York, in 1801, of English parentage, and died in 1891 at his son's home near Cincinnati. At the age of ten he also moved with his parents from New York overland to Sandstone, near Pittsburg. Here they made barges and placing them on the Pittsburgh, worldly goods, floated down the Ohio River to a point now known as Augusta, Ky. His boyhood days were spent on a farm, hewing timber and raising marketable grains, which he and his father loaded upon light barges and floated down the Ohio and Mississippi rivers, many hundreds of miles, to market in New Orleans.

After converting their produce into cash, they pulled their barges back home, first his father, then himself pulling the two poles, while the other used the pole to guide the boat. They usually loaded the craft at New Orleans with actual necessities of life, for which they found a ready sale in their sparsely settled neighborhood.

Bartlett and his family then returned east, making trips they experienced some trying ordeals, as the Indians along the Mississippi were hostile and they were obliged to travel by night and rest by day. The old Bartlett homestead in Kentucky had on it a tree glazed by Daniel Boone, who frequently visited the Bartlett family on his hunting trips through the wilds of Kentucky.

From his earliest schooling was in a little log cabin which the teacher, to give it standing, named it "The Beaver Creek High School." Between the years 1828 and 1831, Mr. Bartlett was employed in a woolen mill at Ripley, Ohio, and patented an attachment for weaving, which was sold for $500. In 1830, the company which bought the patent realized a profit of $3,250,000. At Ripley, Mr. Bartlett's expertness of figures made him famous. He mastered every arithmetic within reach, also originated mathematical problems, which bewildered and astonished the natives. He also studied one term at Ripley College.

Visiting Philadelphia in 1831, to gain a knowledge of commercial work, he sought an office position and invariably the question was asked, "Are you familiar with bookkeeping?" to which he was obliged to answer, "No, I am not." When asked where such knowledge could be gained he learned that it could only be obtained in accounting offices. After finally securing a position, where he gained a knowledge of accounts, he determined to carry out a resolution, that if he could ever become familiar with accounts, he would give the opportunity to gain such valuable information. He opened a school in Philadelphia, which he conducted until 1838, when he moved to Cincinnati and opened Bartlett's Commercial College, where for half a century he taught the science of accounts, mathematics and rules for financial management. The establishment of this new kind of school was a very difficult matter. Finally, becoming desperate, he visited a number of the leading merchants of Cincinnati, and securing the sons of twenty-five of these gentlemen, gave them a course of instruction. After completing the work, he secured a hall, and, inviting the merchants and bookkeepers of the city, gave an exhibition of the skill of his students in accounting, tabulating, etc. This was the turning point to his future career of success.

He ever afterwards commanded the respect of the citizens of the city, and, in 1867, the Legislature of Ohio issued a charter to the Bartlett school. In 1869, after ten years of preparation, aided by three employed mathematical experts, he published what was soon widely and famously known as "The Bartlett Commercial and Banking Tables." It embraced Time, Simple Interest, Unexpired Time and Interest, Interest, Account-current, Time and Average, Compound Interest, Scientific Discount, both Simple and Compound, Annual Income and Annuity Tables, equally adopted to the currencies of all commercial nations. The true or intrinsic value of the Gold and Silver Coins, and the Standard Weights and Measures of all Commercial Countries; also American, English, French and German Exchange, together with the Exchange of Brazil and the Importation of Rio Coffee. This was planned for the purpose of harmonizing the accounts and exchanges of the world and has accomplished more than any other work in that direction. These tables have been copied in many later works and the work itself was recognized by all of the leading Commercial Boards of the United States and foreign countries.

Since the retirement from school work and the death of Mr. Bartlett, the institution is still being ably conducted by his son, who, under the tutorship of his father, became an enterprising and successful teacher and manager. The College today is grandly equipped.

Mr. Bartlett has leased the tenth floor of a large, modern building, covering a floor space of more than 14,000 square feet. He has expended ten thousand dollars in dividing this floor into convenient rooms with panel, glass, and rolling shut partitions, and equipping the whole with the latest improvements in furniture, typewriting machines, interior telephones, electric program clocks, card cases, filing systems, etc.

The rooms are delightfully large and light, very airy, and well heated and ventilated. In order to prevent all unnecessary noise, the seating is done upon noiseless, stationary and revolving chairs, and the doors of the various rooms have been hung so as to close noiselessly and to prevent slamming. It has been his purpose to make disorder difficult by making everything about his rooms quiet, pleasant, and comfortable.
Richard Nelson

Among the most highly esteemed business teachers and commercial text-book authors of the past was Richard Nelson, of Nelson's Business College, Cincinnati. He was born in Castletroy, Ireland, in 1822, and died near Cincinnati in April, 1895. He was educated in the Parish of Ballycluiter and at the English and classical Academy at Strafford, and educated for the ministry under Dr. T. Campbell, of Belfast. He came to America in 1840, and taught in the Wheeling Public Schools. In 1841 he moved to Cincinnati, and, mingling among business men, discovered that the commercial books were making theoretical book keepers, and that business men wanted practical clerks. He then established Nelson's Business College, which he conducted upon the plan of training students for actual business practice through transcribing and recording real transactions, also the making of all the business papers connected therewith. He was an earnest, conscientious, strictly practical man and aimed in all his work and methods to prepare students, as exactly as possible, to meet the requirements of business men. Finding no text books arranged to meet his ideas, he prepared them, and in 1856 published "Nelson's Practical Arithmetic." In 1857, a work on "Bookkeeping," and in 1858, "Nelson's New Bookkeeping;" in 1861, "Accounts on Business;" and in 1865, "Banking and Business Calculations." As an earnest and original worker and publisher, and as a man of strong character, he did much to promote the cause of business education in Cincinnati, also, through his valuable textbooks, his influence was felt in many schools throughout the country.

George W. Eastman

PIONEER BUSINESS EDUCATOR AND INVENTOR OF COMMERCIAL TRAINING.

George Washington Eastman was born in Marshall, Oneida County, N. Y., Sept. 9, 1827, and died in Rochester, N. Y., April 25, 1882. After leaving the district school as a boy and young man of 17 and 18, he showed great aptitude with the pen and began teaching penmanship in Waterville and surrounding towns. He also taught in Hamilton Academy while in attendance there, and in Aenea Seminary while attending there one winter. It was during a later period of itinerant teaching that he saw and recognized the necessity for a permanent school, wherein could be taught in combination penmanship and the science of bookkeeping. His ambition culminated in the opening of the Rochester Mercantile College in 1851. The venture proved a success. In 1858 he published a work on single and double entry bookkeeping, which was recognized for many years as a standard work. Mr. Eastman was a man of bright intellect and possesses a practical turn of mind. He saw the need of instruction more tangible and applied it. He prepared text books and manuscripts, to prepare young men as thorough and safe accountants. While working to perfect his course of study and training for young men, he conceived the idea of introducing actual business transactions, and putting into daily practice that which had heretofore been only theoretical. Thus, in 1858 there was introduced into the Rochester Mercantile College, the National department of banking, forwarding and commission insurance, brokerage and jobbing, and wholesale houses, thus giving the student in a few months, practical knowledge that in the ordinary routine would take years to gain. Thus, to Mr. Eastman belongs the honor of founding the first school, conducted upon the plan of training students for business as merchants and accountants, through a practical system of actual business practice.

As a further description of the methods of Mr. Eastman, the following is from one of his graduates, Mr. C. G. Burnst, a practical accountant in Rochester for the past forty years:

"The writer commenced taking lessons in penmanship and bookkeeping of the late Prof. Geo. W. Eastman in the year of 1852. Mr. Eastman continued his school during the winter months until the autumn of 1858, when he opened "Eastman's Mercantile College" in this city—introducing actual business transactions, dealing in merchandise (by samples), real estate and stocks, having offices for insurance, express, railroads, steamboats, commission and money brokers. "Eastman's College Bank," bills of which were always at par. Capital Stock $8,000 of Bills of the College Bank. Canada and Michigan Banks that had been in circulation. The students (about 90) traded with each other, buying on time, giving notes and paying cash; their books were kept in the most approved business manner; all students kept an account with Eastman's College Bank, deposits and checks made as at any business bank. Notes given by customers were discounted, and, not paid, were "Protested" and renewed, etc. At that time Canada, Western and Southern money was at a discount. The College Bank, or other banks, did not receive it for deposits. Students, like other business men, were obliged to dispose of same at brokers, at a loss for the discount, so as to make proper entries. Students were required to keep their books posted and accounts well collected—a few failures were allowed. A balance sheet was made at stated times (also inventory) which was examined by some of the faculty, errors, if any, pointed out, etc. Each student on entering business was given a capital stock in merchandise, real estate and cash of $2,000 to $4,000. Partnerships were formed. All accounts used in large businesses were kept; the books in the College bank were kept in the most approved style.

"Mr. Eastman's rules for journalizing, Law and Order in Balancing accounts, Opening and Closing Ledger, have been pronounced by experienced accountants the best extant.

RICHARD NELSON.
—and during my fifty years experience as a practical bookkeeper, I have never seen anything better.

(Signed) C. G. HUSTON.

It will be interesting to many business teachers and penmen of today, to know that Mr. George W. Eastman's son, George Eastman, of Rochester, was the pioneer in the invention and manufacture of the famous dry plate process of photography, and is also president of the widely known Eastman Kodak Co. In 190, the French government conferred upon him the decoration of Chevalier of the Legion of Honor. As an officer in many of the leading banks of Rochester, and as an active member of various Art and Social clubs, Mr. Eastman ranks, as did his father before him, among the most worthy, influential and highly esteemed men of Rochester.

To be Continued.

FINEST SUPPLIES

For Penmen and Artists

CARDS INK PAPER ETC.

On goods listed below we pay postage on those that go by mail and purchaser pays carriage charges on those that go by express or freight. Of course the cheapest way is to order in fair sized quantities and have them go by freight.

Blank Cards—White bristol will finest surface for fine penmanship.

- 100 by mail postpaid. ... $20
- 500 by express. ... $1.25
- 1000 by express. ... $1.50

Black Cards—Best made for white ink:

- 100 by mail postpaid. ... $20
- 500 by express. ... $1.25
- 1000 by express. ... $1.50

Send stamp for samples of paper.

Envelopes—100 fine blue by mail, postpaid. ... 15
- 100 fine white by mail, postpaid. ... 15
- 1000 either kind by express. ... 1.50

Address, ZANER & BLOSER, Columbus, O.
The Business Educator

Entered at the post office at Columbus, Ohio, as Second Class Matter, September 1, 1892.

Published Monthly (Except July and December) by The Business Educator, Inc., 16 N. High Street, Columbus, Ohio.

VOL. VIII. NO. 5

WHOLE NO. 30

COLUMBUS, OHIO, JANUARY, 1893.

SUBSCRIPTION PRICE, $1.00 A YEAR. 10c. A COPY.

Change of Address: If you change your address, be sure to notify us promptly in advance, if possible, and be careful to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers.

Rates to Agents and Club Raisers

Sent upon application. Whether you are in a position to subscribe for a few or many subscriptions, let us know, so that we can favor you with the best possible terms and a few sample copies.

Considering the fact that there is no similar or cheap edition; that our journal is high grade in every particular; that the color feature of the cover alone costs hundreds of dollars; that "lessons that teach" are a distinctive feature of our magazine; that the art presented is the best given in a journal of this nature; and that the department of business education is super-comprehensive and truly representative plan than ever before attempted; you will readily see that the Business Educator is not only the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of Its Class

The Business Educator being the most popular medium of its kind, it follows that it is also the best advertising medium. We recognize practically all persons interested in commercial education and in penmanship, in both this country and in Canada. It covers the commercial school field completely, going so as to do the heads of Commercial Colleges, Commercial Teachers' Institutes, Business Department in Parochial Schools, Colleges, etc., as well as to a large number of office workers, public school teachers, home study, etc. Then it is preserved but few journals are, many subscribers having found in book form. Our rates for space are extremely low—lower than those of any other high class journal published. Wide-awake advertisers will find our columns money makers. Write at once for rates.

Held up.

Some of our advertisers being late in sending in their copy, compelled us to hold up our forms for our December number a short time after our usual time for closing. We take this opportunity of kindly requesting all advertisers to get their copy here before the first of the month as is possible. By doing so we will greatly oblige, and in no way delay the progress of the journal.

Under date of November 12th the Commercial Text Book Co., Des Moines, Ia., writes: "We have been a little dilatory in this number only because we have been kept so busy filling orders that have come as a result of our advertisement in the November BUSINESS EDUCATOR."

This is of course a good reason. The BUSINESS EDUCATOR certainly bringing results for advertisers.

We hope, however, that copy can be sent earlier, nevertheless, which will give us a chance to bring results quicker and cause still more business. We are busy ourselves and we delight in helping to keep our friends busy.

Our New Year's Say

This seems an opportune time to extend cordial and sincere thanks to our many staunch friends who have assisted in making 1892 a successful year for the Business Educator. The number of subscriptions received this year indicate that our supporters appreciate the efforts we have made to publish the best journal of its kind. And the more you have to offer to the department of Business Education, and the more we can do. Good as THE EDUCATOR has been, we intend to make it much better. We are by no means satisfied with it. Business education has a big future, and it must therefore have a truly representative journal.

A glance through our advertising columns will disclose the fact that publishers are beginning to recognize the value of THE EDUCATOR as an advertising medium. This is due to three main causes: First, our circulation is among the most intelligent and progressive teachers, publishers, and students, as well as in the profession. Second, we issue no cheap edition. Third, we publish the most artistic journal of its kind. We not only preach good art but we practice it in our printing and cover design. This is substantiated by the FEDUCATOR's success with advertisers. The cover alone costs nearly as much as a student's edition would with a common cover and title.

Therefore, shall we have larger type and a larger edition? We think not. Whether this art is something more than a reprint of addresses; it contains articles from eminent men prepared expressly for it month by month—matter that cannot be obtained elsewhere. And advertisers, in business penmanship are from the pen and brains of leaders; the series just begun by Mr. Lister is perhaps the best ever given in point of subject matter, skill of execution, typography, and extent of text and illustrations.

The lessons by Dennis, Brown, Thompson, Keasling, Burnett, Kibbe, Stein, and others, have been of the most practical, but they all are in order, and so they shall continue to be.

The History of Penmen, Early Business Education and Educators in America. By Mr. Homer, is already awakened more interest, attraction, and excitement, and elicited more words of appreciation and encouragement than anything ever printed in our profession. And it has but barely begun. No one who is interested in our beloved profession will want to miss a number containing it.

Again thanking you, one and all, for substantial support in the past, and soliciting a continuance of the same as long as we deserve it, we enter the new year with a pulsing, earnest desire to publish a journal of the kind of practical education which will make us.

Art in Advertising

If there is such a thing as a truly new art and industry, surely art in advertising is it. The art of advertising is old, but there is also a new art of advertising as witnessed by the many concerns, schools, etc., giving their time and energies to that phase of modern commercialism. The writer, artist, and Smith, etc., is here to stay. The art of advertising is today a wonderfully modern and timely science and art, for it is surely both of these, and the art that is advertising is the soul of the art of advertising. Without art (pictures) advertising would be a far more difficult and far less effective thing. Pictures to attract, pictures to appeal, pictures to instruct, pictures to tell, pictures to show, pictures to make appear real, are the new language, for all kinds, all styles, all manner of things, there is no limit. But all must be good to pay. And that is what they are made for.

This art in advertising has drawn, is drawing, and will continue to draw to it talent from the more conservative and less remunerating field of painting. Men of ability and talent are engaging in art in advertising quite as seriously as others engaged in the ministry, and with as much hope of heaven. For there is need and he who supplies a real need in anything is a beneficent to his time, and to all time.

What we wish to emphasize is that art in advertising is just as good as art in any other thing, if it is good art. And that is what much of the art we see in advertising is—good. Art in advertising means the training of advertising to an art; and not the lowest grade of prescription. Why not decorate your advertisement, your circular, your catalogue, your poster, your sign boards, as well as your home, your barns, your hut, etc.? If the function of fine art is to state a true thing or adorn a serviceable one, then art in advertising is as high and holy as in anything else, if done well.

A man is not being done better today than ever before, and what is still better, it promises to be done better tomorrow than today.

The Great Cartoonist

Thomas Nast died of yellow fever at Guayaquil, Ecuador, December 7th. He was, without doubt, the most famous caricaturist and cartoonist of his day. His most effective work was done during the Civil War, and later his trenchant and brilliant cartoons were directed toward the corrupt Tweed ring of N. Y. City, his work appearing in Harper's Weekly.

Route to Milwaukee

Those going to Milwaukee should purchase tickets via Chicago, Milwaukee and St. Paul Ry., from Chicago to Milwaukee, and request the ticket agent to give a certificate receipt, as it is only by the presentation of this certificate receipt at Milwaukee that you are able to secure a return ticket at one-third fare. Passengers arriving in Chicago on the C. B. & Q., Panhandle, Chicago & Alton, or Pa. Rys., do not have to make transfer here to the train at the Chicago Union Station. Trains leave Chicago from the Union Station, Canal and Adams Sts., at 7:40 to 9:50 and 11:30 A.M., and 3:00, 5:00, 6:00, 6:30 and 10:30 P.M. The 11:30 A. M. train does not run on Sunday.

C. E. Donner, of The Penman's Art Journal, 205 Broadway, New York, in a recent letter to THE BUSINESS EDUCATOR, says: "I received your letter: I'm glad you've got the picture at page 29 in your December number has brought a great many responses from all over the United States and Canada. I am still able to fill more orders, and would advise all your readers to take advantage of the four magnificent offers I make."
Brown's Peoria, Ill., Business College recently purchased a handsome residence in that city, into which she has moved her school. This is doubtless a good move, and one which is not a foolish expenditure. It will enable us to do a better business. We have always thought it a mistake to spend money on rent, but doing so we think, as a whole, they are making no mistake.

Mr. Bert Gernan, of Fremont, O., Secretary and General Superintendent of the C. S. Cutlery Co., is about to organize a new school under the name of "Practical Experience Business College," in which he expects to teach the art of the business of business, subjects, also the normal branches. He expects to take his advanced pupils into the offices of the business company and give them actual experience.

Mr. W. C. Faust, teacher of penmanship and drawing in the Mt. Vernon, O., Public School, has attacked the hitherto usual line of chalk talks and lectures before institutes. Mr. Faust has a pleasing, magnetic personality, as well as the accessibility, both natural and acquired, to make a success of the platform work.

The Newark, N. J., Sunday News, Novem ber 30th, with a lead-line illustration of a page to illustrations of expert W. J. Kin- sky, his home and examples of handwriting, along with an interview with him upon the question of handwriting, and the possi bility of teaching it.

Mr. Kinisky must be in demand, his serv ices having become quite valuable and popular, not without deserved reason.

T. M. Nilan, of Abbeville, Miss., has purchased a one-half interest in the Southwestern Business University, Oklahoma City, Okla.

We recently learned that Mr. Keeling, whose excellent lessons in business writing have been running in the BUSINESS EDUCATOR, secured his start in penmanship under the instruction of that enthusiastic teacher of writing, Mr. M. D. Fulton, of Austin, Tex. We hope that Mr. Fulton's when he was teaching in Indiana some years ago.

Mr. C. G. Gilbert, formerly principal of a La Casa Grande School, and a graduate of the Milwaukee Normal School, has been appointed principal of Holland's Metropolitan Business College of Milwaukee.

On Thursday evening, December 1, 1902, Mr. Guy Logan Casley, of Cleveland, Ohio, took a song and a half better in the home of his sister, Mrs. Miss Lydia Anna Schott, of that city. Congratulations and best wishes.

The Twin City Gregg shorthand Association is keeping things hot in St. Paul and Minneapolis, and their pleasing entertainment was given by this organization at the rooms of the Globe business college, St. Paul, November 7th.

X. C. Brewer, formerly in the public schools of Elmina, X. Y., is conducting a very successful business school at Penn Yan, New York. His readers will remember the absence of the principal and the work with the automatic pen.

The many friends of Frank Vera, Jr., formerly principal of the New Bedford Business College, recently a student of the law schools of Chicago and Princeton, and a junior in the law school of Boston, will be pleased to know that he has been appointed clerk of the third district court of Bristol County, Massachusetts.

The Cedar Rapids Business College sends out an attractive and handsomely made envelope and booklet of its former student and present special student, Mr. L. M. Beekman. This is a highly commendable plan of holding the interest and influence of the alumni, and the latest advertising force in any good school.

We gratefully acknowledge an invitation to attend the opening reception given at the new residence of Mr. Charles H. Peoria, III., November 23. We gladly extend congratulations.

More than 100 students enrolled in Brown's Business College, Sioux City, Iowa, last year. "Lost We Forget," is an excellent adaptation of the refrain in Kipling's "The English Grenadiers," but is printed on the face of a similar inside in side of which are several blank leaves for pocket memorandum.

Shoemaker & Clark's Fall River School of Business has been sold to Frank S. Stone, of Fall River, Mass., Elmer, Cleveland, and W. S. Rogers, of the San lynn, Ohio, overhand, Ohio. Mr. Stone assumed active management of the school December 1st, and Mr. Rogers will assume his duties at the school about February 1st, when he will go to the southern schools.

Mr. Stone has been with the Cleveland Spencerian for fifteen years, as assistant secretary in the Chicago office, and was very successful business getter, and a careful and skilled instructor. His previous professional training was obtained under D. T. Ames, and so he goes to his new field well prepared.

The Fall River school has already earned under the leadership of Mr. Rogers a reputation for training a splendid class of business men.

Mr. Rogers is a shorthand specialist who stands in the very front of the leaders in the profession. He took his course under the personal instruction of A. J. Graham, and has honorably completed the course, Chicago school. Mr. Rogers was at the head of the shorthand school in the Cleveland office for five years, and in the same school in which he had a financial interest. He is a man of good education, and has had a library which is a source of practical stationery and reporter, teacher and author; and has the excellent reputation that the Fall River school has made in training successful amanuenses.

Mr. Stone and Mr. Rogers make a splendid team, one of the title of a well written booklet, the other to manage the business.

Mr. H. J. Shoemaker, the former proprietor of the school, will remain with the new management for the present.

The Capital City Commercial College, Des moines, Iowa, has been Hillaried in fine exercises in the Y. M. C. A. Music Hall on Friday evening, December 16th, 1902.

Prince School of Philadelphia, Pa., held its high school exercises on Friday evening, December 6th, 1902.

Among the richest specimens of typo graphy we have seen in many months are the elegantly printed by the Business Departments of Pittsburg Academy, Pittsburg, Pa., and the Pittsburgh Academy Business School, New York, which is found in the school. In typography appearance there is much to be said in favor of the work, and an ordinary business college paper there is between John Wannamaker's New York weekly and store in some country village. Send for a copy and convince yourself.

Some Suggestions about a Business Education, written by a business man setting forth the advantages of Alma College and the Summer School, Alma, Mich., E. D. Pennell, the wide awake principal, is a pen man and teacher of exceptional ability.

Lockyear's Business College, Evansville, Indiana, is the most splendidly equipped with seal, ribbon and quill, there is. But there is more than the cover. The lies the inside, and the best with the best being a well-equipped progressive institution.

"A Few of the Many Who Have and Why" is the title of a splendidly printed, illustrated and bound catalogue of Mr. McKee Publishing Co., Elliott Square, Buffalo, N. Y.

Wood's Commercial School, Washington, D.C., Prof. Court F. Wood, Principal, issues a catalogue splendidly bound in cloth in gold side-stamp. The same indicates that it is a well equipped and progressive school.

The Pathfinder is the suggestive title of a catalogue of the Peoria Western Business College, Madison, Wisconsin, R. G. Hammer, president, and G. E. Smith, principal.

Kasumussen Practical Business School, St. Paul, Minn., Messrs. Walter and Julian Kasumussen, Proprietor, just issued a splendidly printed, well bound and illustrated catalogue of the school, which has visited the Southland as well as elsewhere.

The school at Nashville, Tenn., has recently moved into the Cole Place, one of the finest residences in Nashville.

Professor Drangham has just bought a splendidly printed, well bound and illustrated catalogue of his school, which has visited the Southland as well as elsewhere.

The school at Nashville, Tenn., has recently moved into the Cole Place, one of the finest residences in Nashville.

Professor Drangham must have his hands full, with so many schools under his direction. If he keeps on he will be the G. W. Brown of the South.

Adverting literature has been received from N. E. R. Cooperative, Peoria Business College, Middletown, Conn., Wisconsin Commercial University, La Crosse, Wis.; American Book Company, Buffalo; and Southern State Commercial College, Texarkana, Texas.

One of the best catalogues recently received by us is from the Meredith Business College, Zanesville, O. It is beautifully illustrated, splendidly printed, tastefully cover ed, revealing a splendidly equipped school for a city like the size of Zanesville, and so far that is concerned, a credit to a city of the size and character of Zanesville.

"A Stepping Stone to Success," is the title of a forty page booklet printed by and with the co-operation of the A. L. M. Tepe writer Co. The booklet contains a section which includes such men as Edward Bok, Hon. Gen. B. Gratz, Hon. Gen. J. T. Horace, Hon. John Thompson, and many other eminent men have been well represented as a stepping stone to their success. The booklet will be of great value to business college people insomuch as they will be able to secure from the information which will encourage their shorthand pupils and patrons.

Attractively illustrated circulars have been received from the chalk talker, G. E. Weaver, Mt. Morris, Ill.

The Central Business College, Denver, Colo., L. A. Arnold, Principal, placed in our hands a four page catalogue printed on pink paper, covered with yellow embossed leather, with embossed title in brown, showing the work of the college in the various lines of business. Mr. Arnold evidently intended to build up a substantial, prosperous institution in the West. We believe he has the right qualifications for such an enterprise. We there fore wish him the good fortune that he merits.

(Continued on Page 35.)
Mr. A. P. Root

Whose likeness appears herewith, after much perseverance to favor our readers with a brief review of his life's work as a penman. His unexcelled modesty has hindered him from comprehending and telling the truth truly concerning his work and with. Mr. Root is a man when he discloses his brilliancy is of the most delicate and nervous type. His health from boyhood has been the opposite of the robust, but by temperate, intelligent, right living he has achieved, enjoys, and expertly to more than fits the lot of many. At the age of sixty, he writes a hand that for delicacy, accuracy, grace and beauty is equal to but few of any age, and what is still more phenomenal, not following penmanship as a profession.

He is an expert jeweler, conducting a business of this character (and you may depend upon it) conducting it as but few can. At his house in King'sville, O.,

While in Philadelphia he created what is known as "Peine College Writing Slips," one of the most complete compendiums of its kind ever published.

But we have said enough, though we have barely begun. We will let him tell the rest in his own way, though he doubtless expected us to edit his friendly communication.

KING'SVILLE, O., Nov. 28, 1892.

DEAR FRIENDS: I was born in Gustavus, Trimble Co., O., July 28, 1822, and lived there until I was 18 years old. We had a large farm of 26 acres, and, like country boys, I had to do for all kinds of farm work.

When about 14 years old we employed a man by the name of Brackett who had but a short time before completed a course in writing at the old E. G. Folsom College in Cleveland. He was a man of great natural ability in an artistic way, but an entire failure from a business standpoint. We all thought him a marvel as a penman, and so he was for the time. When he announced his intention of getting up a writing class, myself and a dozen other young people were prompt in our enrollment. The course was for twelve lessons.

I equipped myself with a lot of goose and turkey quills, a pint of Maynard and Xoyes' ink, and began business. From the first I took great interest in the work and made very rapid gain, so much indeed that I was soon asked to supply for other persons. This was the beginning and end of my personal instruction in the art. I never had the mid-year offered to aspiring young men or women to push me onward, but had to try to get what I could from various sources. I gave Spencerian large credit for inspiring me, for like our good friend Flickinger, I aimed at the most perfect form, many times working many hours at one sitting. I gave the Spencerian system of work in the office, as well as in the school, and to my practice I made it an inflexible rule never to draw the forms with a very slow motion, but to produce them easily if not rapidly.

In the meantime whilePersistence explained itself to King & Bros. jewelers in Warren, Ohio, where I remained three or four years in all. Near the close of the war I enlisted in the 171st Ohio Volunteers, under Capt. Wilbur Root, at Johnstown, Ohio, for the whole period. Had not been there three days before I was detailed for work at headquarters, and there I remained till mustered out, having plenty of work to do in the offices at headquarters and spent it in practice. Of course I had no copies, but some what, I thought good ideas, and worked away.

From the army service I went direct to the jewelry business again, never dreaming of being a professional career. I was there but six months when one day I had a call from Mr. Jno. Drake, teacher of bookkeeping in the B. & S. School. His mission was to inquire if I desired to take up writing in a professional way. To say I was hit hard is putting it very mildly. He said, "Think it over, and if you like, come up to our office and have a chat with the principal." I went, and in less than two hours I was launched upon the sea of a professional life, engaged for the first year at a salary of $900.

At that time C. E. Wilbar was in charge of the writing department. He had been there some time, and class-cumulation had brought him to a position he did not long out as soon as I could break in. After working there three or four months he announced his intention of leaving at once, so that I had to buckle in for all there was in me. The school was very large and you may imagine I had my hands full for an inexperienced penman. I managed, however, to keep at least a neck ahead of any of my students, and I think I gave fair satisfaction. At least no fault was found. I was of letters affect a hand. I always have held and taught that slant in writing was not vital at all, except as to a uniform pitch of letters. I never desired anyone to be fixed for a week or more. My health has always been very poor from a little boy, and I've had to learn fully how to conserve nerve force. When teaching, my mental machine was schooled and trained to run as if in oil, hence little friction. What I've been and what was accomplished, be it more or less, was mainly the result of my own thought. As I've said, I never had but the twelve lessons mentioned. I've always felt that some one could do better than I. My ideals have been so far above my reach that I never could see the merit in my work that others have so generously accorded me. I recognize one fact, however, that I received the highest salary for some years of any living penman, for the kind of work I did, and I can't believe it would have been paid me unless my services were at least felt to be worthy of it, and yet I have never been able to see myself as others seem to have done. What more can I say? Starting at zero I worked my way up and hope I've been of some benefit in a small way. If there is any feeling of pride respecting my work, it is in the fact of its being a product very largely of my own unaided effort.

I've been urged time and again to speak out and give the younger members of our profession the benefit of my experience, but somehow I've never gotten to it. I will give you the credit of calling out more than I've ever said to any one else. If you see fit to let it commend or even condemn, it will not hurt me either way. Use it not just as interest (your own) may suggest. Not how much, but how well, has always been my aim.

Wishing you abundant success, and with a most friendly feeling I remain

Fraternally,

A. P. Root.

MR. A. P. ROOF.

full of snap and good nature, which very likely helped me out. I remained in charge of the writing department for two years, when I resigned and accepted a position in the public schools of Cleveland, Ohio. Supt. of Writing, Etno Davis, resigned, I remained in the school continuously till the Fall of 1890, when my health failed. Mr. A. J. Kickoff, then superintendent, held the place open to me for the school year, since he did not desire to change the course I was pursuing unless absolutely needful.

I taught one year for Bryant of Chicago, and the last eight years for the Peine School of Business, Philadelphia.

In all my experience, from first to last, I never gave practically any attention to the ornamental side of writing, but was content to devote my energies toward what is termed practical writing, and, while I always adhered strictly to a systematic style in my teaching, I freely permitted great departure from it in the student's work. If natural to write a fine hand back, vertical hand, or a hand on any degree of slope as it was uniform, I encouraged them to do so. The result was that students could be found in my classes writing all sorts of styles so far as the pitch or slant

One dozen colored cards, white ink, name, for both.

One dozen white cards, plain or ornamental style. Letter, showing style of business writing.

Twelve lessons in business writing.

Work will please you.

Order and be convinced.

Miss Nina P. Hudson

Whose portrait, signature and letter appear herewith, was born in Providence, R.I., in 1861. She received her education in her native city, St. Johnsbury, Vt., and South Framingham, Mass. At the age of seventeen she graduated with honors from the latter named institution. The following year was spent in traveling through the west and California, and upon her return she entered the commercial department of St. Johnsbury Academy under the direction of Mr. A. H. Barbour, for whom she has a high estimate, both as a man and as an instructor. Completing the work in much less than the usual time, she then took Gregg shorthand. In 1801 she had charge of the Commercial Department, of Craftsburry Academy, N. H. In 1802 she attended the Zanerian, and while there accepted her present position with the New Britain Conn. Commercial College.

Miss Hudson is a young lady whose education is well rounded, having completed work in English, business, shorthand, penmanship and art. She is therefore a young lady of many talents. She is one of the most skilled lady penmen in the country. In fact, she has demonstrated that women can learn to write quite as practically as men.

Accomplished as she is professionally, she is no less accomplished socially, being a young lady whose social and moral qualities are far above the average.

The readers of the Business Educator, especially students of writing, will be pleased to learn that Miss Hudson is preparing a series of lessons in "Practical Business Writing," which will appear ere long in our columns. This will be the first extensive series of lessons ever given by a lady, in a penny's worth paper. We believe we have a pleasant surprise in store for the profession, Miss Hudson is doing the subject justice, and is bringing to us some new thoughts out of the beaten path.

"Life and Labors of Sir Isaac Pitman," as told and illustrated by Benn Pitman, published by Benn Pitman, Photographic Institute, was extra select, containing 96x18 inches, 390 pages, leather binding, green cloth. The book above mentioned is not only a credit to Sir Isaac Pitman, the inventor of Pitman's shorthand, but it is a credit to the author, and to the bookmakers' art. Benn Pitman is not only a shorthand artist, but an artist as well, and a man not without poetic impulse. The book is one of the most instructive and interesting publications of the kind we have ever read. Sir Isaac Pitman was a man of strong convictions, and followed them with a tenacity of purpose seldom equaled.

Persons interested in the history of shorthand, phonetic spelling, etc., etc., have in this book a rare treat. "Gregg Shorthand Dictionary," by John Robert Gregg, published by the Gregg Publishing Co., Chicago, III., price $0.75, is one of the newest, most convenient and artistic spelling dictionaries, and we have seen one copy at a day. It is vest pocket size, 3x6 inches, covered with flexible leather, printed on tough linen paper, containing 18 pages. The short-hand words were photo-engraved from writing done by Miss Pearl A. Power under the direction of the author.

"Rip Van Winkle," printed in the easy reporting style of photography by Benn Pitman and Jerome B. Howard, published by the Photographic Institute, Cincinatti, Ohio, price twenty-five cents, containing twenty-two pages. This and similar books are intended for shorthand pupils who are not accustomed to taking as long naps as old Rip had been given credit for, they are for wide awake people.

The Natural System of Pennmanship, Dedicated to the Public Schools and the Youth of America. By O. A. Hoffman. Published by Hoffman Metropolitan Publishing Co., Metropolitan Block, Milwaukee, Wis.

A new system of Pennmanship is placed before the American people. This is a work of about 90 pages, size 5x8, printed on heavy enamel paper. The script cuts are products of the skill of the most accurate and finest business penne. The title page consists of a most elegant half tone, showing the statue of Liberty to the left, and the statue of Light to the right; the lettering is of a very superior order and consists of the following words: "The Natural System of Pennmanship, Dedicated to the Public Schools and the Youth of America." Within this enclosure is an eagle design upholding a banner on which appears the word "Hoffman."

"One of the features of the system is the fact that the principles contain little or no shading. The capital stem is finished with a period pointing downward, and the reversed stem ends with a blunt shade. This is the outgrowth of experience in business college work, and is in the college course, settled after many years of research for the best methods of obtaining results, and has become a fixed course after having reached perfection in the school-room. There are many new ideas introduced in this system which are not to be found in the comendiums issued by the present-day pens. It varies distinctly from all other systems or methods of penmanship that have thus far been put upon the market as far as systematic arrangement is concerned. The criticism which can be almost universal on this book is that they are a mere conglomeration of exercises, which seem to follow no special system or plan.

One of the features of the book, which makes it valuable to business college men, is a chapter on Correspondence, containing a series of Model Letters for dictation or study, and can be used in the school-room in teaching the art of social and business correspondence.

"It is announced that a copy-book edition for public schools is in press, the work will be ready about the first of the year."

From an inspection of this advance proof sheets the work demands to what it is claimed--something new and out of the beaten path. The illustrations of position are numerous and first-class. Some excellent methods of taking the names of the alphabet, and Character and individuality, Price, $2.00.

Funds and their Uses, by C. CLEVELAND, Wharton School of Finance. Published by H. Appleton & Co. L.

The author groups his exceedingly interesting material around these three central ideas: (1) What Are Funds? (2) How Funds Are Obtained. (3) The Institutions and the Agencies Employed in Funding and operations, to each of which several chapters are given.

Under the first general heading, are three chapters, covering Money Funds, Credit Funds, and Instruments Used in Transferring Credit Funds. As an example of the very general scope of the treatment of the subject, How Funds Are Obtained, we may give here a few of the side heads of the chapter on Sales of Long-Time Paper, in which the various kinds of mortgages, corporate bonds, certificates, etc., are clearly explained and profusely illustrated. Real Estate Bonds and Municipal Bonds, Consolidated Mortgage Bonds, Divisional Bonds, Collateral Trust Bonds, Car Trust Bonds, Debenture Bonds of Financial Companies, Railroad Debenture Bonds, Income Bonds, etc. Thousands of people read these terms on the financial pages of their dailies, but have no idea of their meaning. We fear, too, that not a few teachers of Commercial
The Business Educator

In short, this is a book that should be read and studied by every commercial teacher, all advanced commercial students, and general readers.

"Twentieth Century Cover Designs," published by Bridge Bros., Plymouth, Mass., price $5 net, is a book of unusual work and merit. It is of value alike to the printer, publisher, advertiser and illustrator. No artist who is interested in commercial art can well afford to be without this timely publication. It contains examples from the finest artists in the world, as well as critical and instructive articles from leading authorities upon the subjects treated. A collection of cover designs from various publications covering such a range of subjects, and of such a widely different character that the attractiveness and value cannot be well measured in dollars and cents.

"The Pedagogy of Commercial Branches," an address delivered by J. A. Lyons, at Peoria, Ill., July 7th, and published and distributed with the compliments of Powers and Lyons, Chicago. This little book is thirty-two pages is check full of the information that the average commercial teacher is in need of. We know not who to compliment most, the author or the cause of commercial education, as the book is a credit to both.

Those desiring positions to teach Commercial English to their interest to correspond with the Central Teachers' Agency of this city. The managers of Messrs. Adams & Rogers, are practical Business College men, prompt and reliable in all their dealings, and have been very successful in placing Commercial teachers in good positions.

LAIRD'S SYLLABIC SHORTHAND
A prognostically adapted Pitmanic System. Articulation, analysis, and interpretation of syllables, all contained by pronunciative methods, words being analyzed, written and read swiftly by syllables as spoken, rather than slowly by letters. A high-grade system in one brief style, on time-tried principles. Extensively used, legible, and flowing.

Can you hold a better position?
If so, register with us to-day. Qualified teachers secured for schools; positions sham for qualified teachers. TEACHERS and SCHOOLS carefully assisted co-operatively by becoming members of this Bureau. School properties bought, sold and exchanged.

In Memoriam.

Professor William J. White, of Duff's Commercial College of Pittsburg, Pa., one of the best known business educators, died at his residence in that city, on Nov. 6, 1902.

Graduating at the College in 1859, he soon thereafter became assistant teacher of Bookkeeping and Penmanship therein, and subsequently became its Secretary and Business Manager. He was well known among the business men of Pittsburg, many of whom had been graduated under his instructions. Prof. White was born at Williamsburg, Nov. 19, 1834; but while in youth was taken by his parents to Columbiana County, Ohio. In Oct., 1852, he was married to Jennie E. Gamble, who, with two sons, George and Robert, and one daughter, Gladys, survive him. He was a member of Trinity Protestant Episcopal church, and at one time a vestryman in St. James Protestant Episcopal church. He was a member of Pittsburg Lodge No. 81, F. & A. M. Professor White was a man above reproach in all walks of life. Of Scotch-Irish ancestry, he possessed in a marked degree the characteristics of his race. He was singularly loyal to his convictions and to his friends. He was honest in all things, beyond question; devoted to his profession, to his home, to his family, and to everything that was clean and inspiring in social life. He was industrious and ambitious, and a growing man in his chosen profession. He was a man of real and unpretentious piety, and a constant reader of his Bible. He loved his fellow men and had charity—the charity of an open hand, as many who mourn his loss will testify.

His attainments as a teacher were of a superior order and covered a wide field. He was an excellent penman, and in certain lines unequalled. His skill as a rapid calculator and his knowledge of accounts were such as would accune to a man of ability by twenty-three years experience. Aside from his accomplishments as a teacher, he had executive ability of high order. Altogether, his life was a useful one, and his death a subject of regret.

W. H. DUFF.

Advertise

Mr. W. McRee, of Allegheny, Pa., who has been advertising in our columns for some time past, under date of November 8th, writes: "Inclosed find remittance for another insertion of my advertisement. The ad. has paid me more than I expected."

We are glad to be able to state that our advertisers generally are finding THE BUSINESS EDUCATOR a most profitable medium. We feel confident that if all advertisers knew the value of our columns we should soon be compelled to enlarge our journal many pages to accommodate them.

Remarkable Improvement

Enclosed herewith we hand you $1.00 for renewal of our subscription to THE BUSINESS EDUCATOR. You are to be commended for the good business journal you are giving the public, and we would not think of getting along without it. You have made some remarkable improvements during the past two years. Wishing you continuous success, we are,

Yours very truly,

W. O. DAVIS, Principal.
Davis St'd and Bus. School, Erie, Pa.

Lettering and Designing
Number Eighteen
BY E. L. BROWN, ROCKLAND, MAINE

Make a careful pencil sketch of the heading, "Catalogues and Circulars," giving especial attention to the light and shade values. Observe the pleasing effect between the solid black and half-tone effects in the treatment of the cut and foliage. The lettering is modern, artistic, and well adapted to similar purposes. In applying the ink use a coarse pen for the line shading, and a Soennecken pen for laying on the solid black. The desired effect must be obtained with few lines.

ORNATE FOOT PIECE-A very useful bit for decorating circulars, booklets, etc. In copying this design follow the same general plan as previously outlined. Special care, however, should be given to the arrangement of the lines to produce the light and shade effects.

FOR SALE
It is worth your while to make inquiry about one-half interest in a well advertised and highly reputable Business College. Facts will be given to show that the investment will be a paying one from the start. Address, "REPUTABLE," Business Educator.

WANTED
A well educated male teacher of the Gregg system of shorthand, who can assist in the typewriting department.
Address.
BRYANT & STRATTON COLLEGE,
ST. LOUIS, MO.

The Practical Age, which is very surely taking its place with the standard magazines of the country, offers the following great values for the following small sum of money:

Frank Leslie's Popular
Monthly, Frank Leslie's Art Calendar for 1903, and the Practical Age, one year, for $1.30.

The Practical Age is a magazine for people who think and act. The editorial discretion exercised in the selection of manuscripts appearing in the Practical Age, is experienced and fair, ranking for the best interests both of magazine and readers. Besides the several departments already appearing in the magazine, new, interesting, and valuable departments will be added, from time to time.

ROUND'S SPACING T SQUARE

A Great Aid to the Pen-Artist and Draftsman.

This cut shows the head section of 21-inch blade and a few specimens of shading, photo-engraved from work done by aid of this square with a common ruling pen, the lines being separated at perfect intervals and made as rapidly as by free hand. Space between lines may be varied, by turning thumb screw from zero to one inch; lines are made horizontally or upon any desired angle.

Used and recommended by Draftsmen and Pen-Artists everywhere.

CHICAGO, Nov 1, 1902.

The T-Square I recently bought of you works 'like a charm.' I am fully satisfied with it and believe it would sell for a larger amount of money if you would ask it. It is certainly worth more than $1.00.

E. F. Hemen.

Price $4.00, shipped securely packed, by express, on receipt of money order.

H. A. ROUND,
513 Carroll Ave., Chicago.

ORNATE FOOT PIECE ACCOMpanyING MR. BROWN'S LESSON.
Lessons in
Script

Number Eleven.

I. Make the left side of the loop of G first, similar to the heavy stroke of C. The lower shaded stroke is a compound curve finished with a dot. Make the loop and introductory stroke the same as S.

The heavy stroke of D is the capital stem. Extend the loop well to the left and make the hair line graceful and smooth. Slant the oval more than the main slant and shade the down stroke of it.

Is another capital stem letter. Make the stem first. Finish it with a dot. Make the light line downward with a delicate shade. The stem of Y needs a good bit of compound curve. Swell the shade to the middle. Make the hair lines downward.

Care and perseverance are two qualities you need to possess. They are the keys that unlock the difficult places of script writing as well as all other things in life.

Removal Notice.

Isaac Pitman & Sons, the well-known Shorthand and Educational Publishers, 33 Union Square, New York, being compelled to seek more extended quarters owing to their greatly increased business during the last few years, will remove on or about February 1st, to the newly erected Bank of the Metropolis Building, 33 Union Square, Northwest Corner of 8th Street. Their new premises will be very pleasantly located, and will afford about three times the space previously occupied.

Why go to "College" to learn book-keeping when I will make a First-Class Book-Keeper of you at your own home in six weeks for an outlay of $20.00? Investigations have shown that the method of book-keeping taught at leading colleges is not equal to that taught by the Pitman System. By practically all business men, the Pitman System is considered the best method of book-keeping. The Pitman system is the only system that can be taught by correspondence. It is not possible to teach you the Pitman System in six weeks unless you can get the books at home and study the rules and exercises in the Pitman System, and make the books in your own home. The Pitman System is the only system that can be taught by correspondence.

Banks Business College, Philadelphia, is sending out a handsome catalogue, with half-tones in a soft brown tint. They advertise 1,000 pupils last year, with accommodations for 1,200 at a single session, and 1,000 worth of typewriters. We are reproducing some views on other pages.

Probably the most readable folder received recently came from the four Cs, Des Moines. It is called "Iowa at Washington," and besides that it shows the promising young people who occupy the seats of the mighty in the Nation's capital, it is an interesting synopsis of an address given to the students of the four Cs a short time ago, by Senator H. F. Burton, who gives "Success in Life." This splendid young school has a daily attendance of more than 400 of Iowa's best young people.

DESIGNING ENGRAVING
PEN AND INK, FOUNDATIONS, LETTERING
THEO. HUMMEL
225 DEARBORN STREET
CHICAGO, ILL.
The design given this time is to represent a "Bird in a nest." It may be necessary to name it, as I have seen many who did not know what it was meant for. Some would take the whole thing for a bird, and others for a floral design, while after careful study another would see what it was.

Now in flourishing, it is best supposed to get very close to nature, but we can express grace, harmony, proportion, symmetry and other artistic qualities. If one will study some of the antique styles of ornament, the acanthus leaf in particular, he will perceive the same ideas that should be carried out in flourishing; that design and arrangement are the basis. All the forms in the acanthus scrolls are of course conventionalised, and are what is known as the natural leaf, which suggested them, as some of the finished designs are unlike the natural objects from which they were taken. But the same principles apply in both; the first and most important perhaps, is design, for no matter how skilful and clever your execution may be, nothing can be very pleasing in general effect unless there is a design for a foundation. When you get a good conception of a design, see what skill and artistic finish you can give it. The one here is an excellent one for practice in harmony of curves. That it is extremely difficult no one will deny who has tried it many times. So many separate strokes are necessary that one is apt to make a miss before it is finished. The most difficult part seems to be the nest. In this, great freedom and precision of movement are necessary. To make all the strokes round, full and graceful, blending together in a harmonious manner, certainly requires a great deal of practice. After striking out the bird, make the main stroke of the nest as a general outline, then the inside strokes are made, the same for the upper part of the nest, which forms a complete oval. Now comes the most difficult part— to swing off the bold outside curves and have them free, easy and shapely. After this, the minor strokes and ornamenting are looked after, but be careful not to do too much. Nothing is easier than to overdose. It is not the number of intricate shades and hair lines, but arrangement that tells. It is always better to do too little than too much. A good rule to follow in flourishing, as in any artistic work, is not to put on any extra touches unless you feel sure they will be an improvement.
The most interesting and complete work ever published on this subject. Send for circular. Questioned writing examined and testimony given based on an experience of 1200 litigated cases, of which over fifty are explained and illustrated, including the Fair and Davis will contests and the Botkin and Molineux murder trials.

Lessons in
Show-Card Marking
and Painting, and
Automatic Lettering

BY
W. A. THOMPSON,
FONTIAC, MICHIGAN

Number Five
Study and practice on the construction of letters given in the first line of above illustration, and review work on Number Four before commencing on alphabet.

For a quick mastery of any style of lettering it is necessary to get familiar with the component parts and the order in which they make up a complete letter. Practice carefully on / stroke and oval of 0. Always hold pen so that the blades will retain the same slant. Study proportion, spacing and freedom of movement. When lettering lift the pen after stopping—not while in motion.

It is not all study, nor all practice that wins in show card lettering, but a combination of both.

Be sure you understand the proper method for best results.

That the pen, arms and paper or card-board are in proper position.

That the pen contains enough ink not too much.

That the entire point of pen rests full width upon practice paper.

That the pressure of pen is just enough to secure a full and even stroke.

WANTED A teacher of penmanship who can assist in the commercial depart- ment. Address,
BRYANT & STRATTON COLLEGE,
ST. LOUIS, MO.

S. R. FAHNSTOCK, PRESIDENT, KANSAS
STATE FEDERATION OF COMMERCIAL
TEACHERS, 1902.

The Salina Convention.

At the Second Annual Session of the State Federation of Commercial Teachers at Salina, Kansas, Nov. 28-29, 1902, much enthusiasm was manifested and a number of excellent papers read.

Ideas were introduced which caused much comment, and many interesting arguments followed. Among the important subjects treated was that of State Supervision. Upon this point there was some diversity of opinion, whether it was best to help the individual by giving him a business training and building, as it were, a house upon a trestle, or to require the applicant to lay a foundation by acquiring a good English Education before allowing him to enter the business career. The argument was largely in favor of the latter. That is, to grade our schools, grade our teachers and know that they are prepared to teach business as it should be taught, and then grade our scholars by requiring them to take a Preparatory Commercial Course, or to prove themselves eligible by passing a prescribed examination in the ordinary English Branches. Another important question was, how to best prepare our shorthand students for their important duties. It was agreed that the applicant aspiring to high ideals in this profession should in his early work treat the subject of shorthand as secondary, keeping it in the background, as it were, until the other more important things are mastered, such as spelling, punctuation, composition, commercial law, commercial geography, political economy, civil government, etc. It was also unanimously argued and agreed that each individual should become very proficient with the pen, using a strictly muscular movement, and that he should be required to join the regular class in business writing and practice daily.

The Typewriter Subject was handled very skillfully by the representative for the Remington Typewriter Company, Mr. Reppert. It was argued and unanimously decided that more typewriters should be placed in our shorthand schools, and a competent instructor be put in charge and much more attention given to this important subject, touch typewriting being the only practical method. In both shorthand and typewriting, speed was not kept in the background, and accuracy predominated in all cases.

The election of officers resulted as follows:

The association adjourned to meet November, 1903, in the rooms of the Wichita Commercial College, Wichita, Kansas.

J. C. OLSON,
Chairman Press Com.
The Stenographers Protest

(Continued from Page 24.)

looked in vain for a place that would pay $25 a week; and he is about ready to conclude that there are no such places. Another writes that he has been obliged to render "unprofessional" service, such as sweeping the office, in addition to taking dictation, in order to obtain $18 a week. And so runs the tale, drifting from bad to worse, until one who signs himself "An Old Timer" says flatly that "learning stenography and typewriting is simply a waste of time," that salaries of $25 and $30 per week for amanuenses do not exist, and that people who say otherwise "lie and they know it."

A GULF BETWEEN AMANUENSES AND REPORTERS.

How are our friends who pursue the "winged art" to be reconciled, assuming that reconciliation is possible? First, let it be understood that this cry of distress comes from office stenographers—those whose duties are usually confined to taking letters from dictation and transcribing them on a typewriter—as distinguished from general stenographers; that is, verbatim reporters who are capable of reporting a speech or a case in court. The gulf between the two classes is wide and deep. The average office amanuensis could no more record the ipse dixit words of our stenographer in an impassioned ille al a pater noster, or that of DEFEE when telling a funny story, than he could swim across the Atlantic Ocean; and if he attempted to report them, he would be apt to fail as woefully as did a young and enterprising scribe some years ago who sought to keep pace with a member of Congress in whose speech appeared this quotation: "Audiens Plato, amicus Socrates, sed magis atque veritas." His report read: "I may cuss Plato, but I may cuss Socrates!" said Major Veritas.

STILL ROOM AT THE TOP.

Is it true that the field for good office stenographers—incompetents are not worth considering here—is overcrowded, and that, in consequence, those who hold places are underpaid? According to the statements of many whose business it is to find such clerks for employers in New York, it is not true. These intermediaries inform us that a stenographer's pay is usually commensurate with his skill; that if he is worth $25 a week, he will get it; and that if he is worth more and doesn't receive more where he is, he can get it elsewhere. Of course, a great deal of perseverance on his part is often-times needed. It is undoubtedly a fact, nevertheless, that some employers, owing to their lack of experience with amanuenses of both sorts, the good and bad, frequently undervalue the services of the good. But sooner or later they discover their error.

Do employers demand too much of stenographers? We have never heard of any uniform rule whereby the duties of an office stenographer were fixed or determined. We should hate to think that any conscientious employer would ask his shorthand assistant to do, in addition to his note-taking, what the late BILL Nye claimed to have done for his boss, namely, "wash the windows, mop the floor and rejuvenate the cuspidors." And it is improbable that any such duties are exacted.

MACHINE-LIKE STENOGRAPHERS.

We fear it is the same old story of a lack of energy or of adaptability on the part of the kickers themselves. As one correspondent has put it, a great many of the complaining wordcatchers render a purely automatic service; in other words, they are "machine" stenographers, who seem to think that all depends upon their ability to make "pot hooks" while somebody else talks. They lose sight of the fact that the only thing that their employer values is the finished product. He cares nothing whatever for the queer-looking hooks and quirks in the stenographer's notebook. The evidence that there is "room at the top" for really able office stenographers is overwhelming.

We advise our stenographic friends who have been good enough to favor us with their view of the situation to persevere and be patient. As to their professional skill we can't say, but no stenographers were ever found to be too expert. Those having the swift art at their finger tips, together with a good knowledge of the English language, need not worry about poor pay as the result of an over-production of alleged stenographers from short-term schools.

[Editorial in The New York Sun.]

J. S. LILLY, PENMAN, LILE, W. VA.
New Book on Penmanship
By C. P. ZANER.

Unquestionably the greatest penmanship publication of modern days.
Representing the author's marvelous dexterity and versatility, as well as the highest skill of the other master-penmen of our time. A gem of the book-maker's art.

This new work entitled "Zanerian Script Alphabets," is the largest, most beautiful, valuable and instructive book on penmanship that has been issued for many years, and is an epoch-making publication. It contains the greatest variety of styles of script ever presented in a publication, upwards of thirty distinct styles being given, with instructive, critical text accompanying each. The styles range from the simplest and plainest, to the most elaborate and intricate ever executed. The plan of the book is to present on one page an entire alphabet including small letters, figures and capitals, with instructive, to-the-point text on the opposite page. Following a large number of such plates are numerous forms, such as paragraphs, notes and full-page letters, showing the application of each particular style, or the appropriate use of it. In other words, it first presents the style, with complete and explicit instruction how to acquire it, and then gives the application of the style in actual uses in letter-writing, accounting, signature and specimen work.

Most of the work in this book is from the pen of Zaner. The other masters who have also contributed to this valuable publication are:

Lyman P. Spencer,
H. W. Flickinger,
A. P. Root,
L. Madaras,
F. B. Courtney,
A. D. Taylor,
E. C. Mills,
C. E. Doner,
C. C. Canan,
E. W. Bloser,
and others.

A letter written by A. D. Taylor a short time before he died, is presented facsimile, and is alone worth more than the price of the book, as it is one of the finest, if not the finest, ever written by mortal hand. It is an inspiration and a treasure to all lovers of the beautiful in penmanship.

A set of Mr. Taylor's finest ornamental capitals are also presented, and like his letter, appear in a penmanship publication for the first time.

For skillfulness in execution, originality, modernness, variety, and conciseness of each style, this work stands alone —

A VERITABLE ENCYCLOPEDIA OF PENMANSHIP
—to be turned to for instruction by the learner, for inspiration by the amateur, and for resourcefulness by the professional.

The book contains 116 pages, 9 x 12 inches, is luxuriously bound in art linen and printed on the finest plate paper. The printing was done by a new kind of ink, giving the writing the closest possible appearance of actual pen and ink work, and some of the plates were engraved by a new process as applied to script. Nothing has been too good or too expensive for this book. Less expensive and far less valuable books have usually sold at $5.00, but this one sells at one-half price, $2.50, prepaid.

Fine script, like that shown above in our
new poster, is attractive, admired, and ap-
preciated. Good script is mighty scarce,
but this came from the best source—a
script specialist—C. P. ZANER.
First school in any city ordering a large
number will be given the exclusive right
to use this attractive and effective adver-
tiser. This new poster has been out but a
short time, and already many of the most
progressive school men have placed their
orders. They know that beautiful script
charms all classes; that especially young
men and women will stop—read it—think
it over—when they would not give the or-
dinary poster a second glance.
Many of the leading business educators of
to-day were attracted to the business col-
lege through beautiful script.
You should have the benefit of this busi-
ness-bringing, inexpensive advertising.
Size 22 x 28 inches. Write for prices,
enclosing three 2-cent stamps for sample.
ZANER & BLOSER, Columbus, Ohio.
PRACTICAL BOOKKEEPING CAN BE TAUGHT

But it is difficult to find text books that illustrate bookkeeping AS IT IS PRACTICED.

The great majority of text books and "systems" are written either by teachers who have had little practical experience, or by practical bookkeepers who have had little teaching experience. The result in either case is unsatisfactory. Either the book does not reflect the practices of the business world or it is not adaptable to school room instruction. It is impractical or uneducational.

IN THE BUDGET SYSTEMS OF BOOKKEEPING

is found the rare combination, in authorship, of extended practical experience covering almost every phase of practical accounting, with an extended teaching experience and eminent educational attainments, with the result that these systems represent the latest practical methods of accounting and systems of bookkeeping, so presented and arranged that the best possible results can be secured from them as a means of instruction in the school room.

Embodying, as they do in their make-up, a distinguishing educational method.

THEY ARE IN GREATEST FAVOR WITH THE MORE HIGHLY EDUCATED TEACHERS.

They are the standard of perfection in educational methods and appeal most strongly to those who are trained educators.

Why ???

THE BUDGET SYSTEMS of bookkeeping have many practical features not illustrated in any other similar publication. They teach the organization of accounts to exhibit every detail of the business more extensively than any other. They teach the use of special columns in books of original entry more extensively and practically than any other. They give more information to the student as to customs, practices and usages of business in the transactions of the business world than any other. They give more drills in balance sheets, ledger closing, opening of books, adjustment of interest, gains and losses, partnership settlements and adjustments, than any other. They give more training in the opening, closing and adjustment of corporation books and accounts than any other. They give a banking set that illustrates more accurately and completely the methods of keeping the accounts of American National banks than any other. They give a manufacturing set illustrating the Voucher System that is more practical and complete than any other. They give sets in wholesale and retail, jobbing and commission businesses that are typical of the most highly organized practical systems of accounting that can be found in these lines of business.

Educationally they are preeminently superior to any other similar publication. They are the only works of the kind published that contain a clearly defined and thoroughly worked out method of mind training and mental discipline.

THEY ARE THE ACME OF PERFECTION IN TEACHING MODERN BOOKKEEPING AND ACCOUNTING

THOUGHTFUL TEACHERS need only to make careful comparisons of these systems to be convinced of the truth of the above statements.

The claim of superiority applies with equal force but differing in detail to every text book published by the Sadler-Rowe Company.

Sadler's Arithmetics, Richardson's Commercial Law, Lister's Budget of Writing Lessons, MacFarlane's Commercial and Industrial Geography, Billing's Synthetic Shorthand, the New Method Speller, Earnest's English Correspondence are each notable examples of the highest attainment in educational text books.

Correspondence is solicited from all teachers who are desirous of making themselves familiar with our books. State your wishes fully. All inquiries of every description pertaining to commercial education are answered fully and promptly.

FOR PRICE LISTS, BOOKLETS, ETC., ADDRESS THE

SADLER-ROWE COMPANY, - BALTIMORE, MARYLAND.
They Made It Unanimous.

The adoption of a text on Commercial Law in the high schools of Cleveland, Ohio, was up recently.

Lyons' Commercial Law

was submitted and received the written endorsement of:

EVERY SPECIAL TEACHER OF THE SUBJECT,
EACH OF THE FIVE HEADS OF THE COMMERCIAL DEPARTMENTS,
EACH OF THE FIVE PRINCIPALS, and lastly,
OF THE SUPERINTENDENT.

They were unanimous in the opinion that it covered the required ground in a more satisfactory manner than any other book submitted. Those who have taught the book are unanimous in regarding it as the most teachable text of its kind on the market.

Neither is this the only book on our list that should interest you. Among the many others we would name:

Modern Business Speller,
Complete Touch Typewriter Instructor,
Lessons in Pitman Phonography,
New Business Arithmetic,
Office Methods and Practical Bookkeeping.

Gregg Shorthand

Founded on natural principles, Gregg Shorthand has been adopted by progressive business schools everywhere, and is to-day

The Leading Shorthand of America

All the schools using it have largely increased their attendance through the results accomplished—which, after all, is the "secret" of its phenomenal success.

Rational Typewriting

By Rupert P. SoRelle and Ida McLenan Cutler

This remarkable book meets with the immediate approval of every experienced teacher. Although issued late in the season, it has been adopted by a large number of schools, and we confidently predict that it will soon be the most popular typewriting manual on the market. In addition to the instruction, it contains "a mine of information" on typewriting and correspondence. Ask for sample pages.

Send for booklet, "ABOUT GREGG SHORTHAND." It is free. If you are a teacher, ask for "SPECIAL OFFER TO TEACHERS."

Good Books

Taylor's Natural Method of Shorthand
Third Edition—Revised

This system has been successfully taught in the Manual Training High School, Indianapolis, for the past seven years. It combines the best features of the Graham and Pitmanic systems. The method is natural. The learner writes and reads from the beginning. Complete, including reporting style, in one book.

The Nelson Commercial Arithmetic

This thoroughly practical arithmetic has been used for years in the Nelson Business College, Cincinnati. The new edition includes mercantile and business calculations taken from different lines of business. Copious exercises in billing and invoices. Accuracy and rapidity are the ends sought.

Spencer's Commercial Law

"Undoubtedly the best book for commercial schools." Developed from years of practical experience in the class room. Clear and attractive in style. Chart analysis showing the relation of the various topics. Practical cases illustrating the text.

A sample copy of any one of the above books will be sent express paid to teachers for Examination Purposes upon receipt of fifty cents in currency or stamps.

The Bowen-Merrill Company
Indianapolis, U. S. A.
The Milwaukee Convention

The Elections

President, J. W. Warr, Moline, Ill.
Vice President, U. S. Frye, Chicago.
Secretary, J. C. Walker, Danville, Ill.
Treasurer, C. A. Faust, Chicago.

The Convention of 1902 was a successful one; the meetings in all the Association were well attended; discussions were lively but good-natured. Probably more practical work was done than at any previous convention of this important organization. The Spencerin had not fully recovered from the effect of the disastrous fire that visited the building last spring, but the genial host was so gracious and hospitable that no one was conscious of serious inconvenience. As usual, all sessions were opened late, but the sunny-tempered president of the Federation helped to keep everybody happy. Mr. Lyons made an ideal presiding officer.

The Saturday sessions of the Private Commercial School Managers' Association were unexpectedly well attended, and while a good deal of wrangling took place, a start was made that is undoubtedly the promise of greater things to be in the application of modern business principles to the conduct of business schools. The business meeting on Tuesday was a lively and somewhat protracted one, but the results were apparently satisfactory to the large majority of those who have the good of the Federation at heart, and are willing to work for its interests rather than for personal advantage.

Let us all look forward with pleasure to the next holiday meeting at the Bartlett Commercial College, one of the pioneer schools of this country. And let us all unite to help J. W. Warr, our true-hearted, high-minded president, make the 1903 meeting eclipse all others.

The General Meetings

About one hundred and fifty persons assembled in the Spencian Business College about 10.30 o'clock, Monday morning, December 29, to listen to the welcoming address of Mayor Rose, of Milwaukee; but the Mayor was absent, so Robert C. Spencer, in his happiest vein, cordially welcomed his guests to the Cream City and to the Spencian. A. S. Parish, of Grand Rapids, was to have responded to the welcoming address, but he was unable, on account of sickness, to be present, and A. A. Palmer kindly consented to step into the breach. After these formalities were out of the way, President Lyons read his address, which contained many worthy recommendations, among which was none better than that in regard to lengthening and improving the courses of study in our commercial schools. Mr. Lyons was practical in what he said, for his suggestions are being put into practice in the Metropolitan Business College, of Chicago, of which he is the Vice-President. When this address appears in full, it should be read with care by every commercial school teacher and proprietor.

The Generous Host of the Federation

ROBERT C. SPENCER,
President Federation 1902.

J. A. LYONS, CHICAGO,
President Federation 1903.

J. W. WARR, MOLINE,
Monday evening, about eight o'clock, quite as many teachers again assembled at the Speecianian to discuss the subject of English. This was to have been a joint session of the Commercial and Shorthand Teachers' Associations, but the Penmanship Teachers hurried off their evening program during the afternoon, and so practically the full membership took part in this interesting meeting, over which A. C. Van Sant, of Omaha, presided very acceptably.

The ball was set rolling by B. F. Williams, the manager of the Commercial Text Book Company, of Des Moines, who read a thoughtful and practical paper on "What Place Should English Grammar Occupy in the Commercial School Curriculum?" A hot discussion began at once and continued without cessation until adjournment, about 9:30 o'clock. G. W. Brown, Geo. P. Lord, Wm. Leuders, C. T. Platt, J. A. Hiner, C. C. Marshall, T. J. Allen, a lady representative of the Gregg School of Chicago, and others, were active participants in the general exercise. One of the most enjoyable incidents of the evening was a spirited tilt between G. W. Brown and the Chicago lady just mentioned. Brother Brown is a terror to the uninitiated, breaking forth into song on the slightest provocation, and using his tornado-like style of speech and his power of ready retort to crush his opponent without mercy. But the lady from Gregg's so completely took the starch out of the veteran debater that the crowd applauded her to the echo. Many interesting points were brought out, but the substance of it all was, that English was very much needed, but we do not know exactly what we want and should not know how to get the students to take it if we did.

Tuesday afternoon, at about 2:30 o'clock, all of the Associations met to take part in the business meeting and watch the other fellows elect the officers of the Federation. Through the failure of the Secretary to make any minutes of the general meetings at Detroit two years ago, the amendment to the Constitution adopted there, making it possible to have nominations and elections participated in by everybody, was not recorded, and through some hocus-pocus arrangement this serious omission was sanctified at St. Louis one year ago. As a result the same old wheel-within-a-wheel scheme was followed in the Milwaukee general election. That is, an "electoral college," made up of the president, vice-president, secretary, and three executive committees each of constituents, (six from each of the four Associations of the Federation), nominales and elects the officers of the Federation. The members of the various Associations sit and look on as spectators, but, as each is in the sport besides there—unless, indeed, they have taken a hand with an ulterior purpose in view, in the elections in the various sections, where these "electors" were chosen. Theoretically, the plan is a good one, for it gives equal representation to each of the Associations, in the make-up of the general body. The Penmanship Rhode Island has as much influence as the Shorthand New York; but many members would prefer the more democratic plan of an election in open meeting, with a vote for each one. The election was disastrous to the two-year-old machine, but it was overwhelmingly popular.

When it came to choosing a meeting-place, there was a distinct change in the atmosphere, because here was something in which each one could take part. Some motions that were made in a spirit of fun resulted in a parliamentary knot, which President Lyons very affectively cut, and in comparatively a short time Cincinnati was chosen for the next meeting. Cleveland being the only other aspirant for the honor that was in the race at all, although invitations were received from Quincy, Little Rock, Chicago, and Niagara Falls. C. M. Bartlett showed himself a skillful and persistent fighter, and he was ably seconded in his efforts by D. D. Mueller, his efficient principal.

After the business meeting, the regular program was taken up.

L. L. Williams, who was to have read a paper on "The Early History of Education in America," was absent. We
hope to publish his interesting paper in a future number.

Horace M. Battin, State Auditor of the Standard Oil Company for Wisconsin, read a very able paper on "Office Organization and Methods of a Large Business." In the masterful style of the company he represents, Mr. Battin set forth the modern requirements for successful accounting. And, incidentally, he made it quite clear that most of the business schools of the country are teaching only the most primary part of the subject of accounting. As coming from a representative business man of the modern type, the following is one of the best things in his excellent paper:

"One of the essentials in a business career is a good general education, and those who take up a commercial course before having successfully mastered at least the grammar grades in the common school, or some other school of equal grade, make a lasting mistake. The commercial school should be the finishing, not the preparatory school. It is not my purpose to criticise, but permit me to suggest that any commercial school or college that will admit pupils who have not a good general education, perpetrate a wrong upon themselves, the pupil, and the business community. It is, or should be, your purpose to equip young men for business to be of use to themselves and their employers, but I am sorry to say, from my observation, that this is frequently not done, partly because not all young men who try can become good accountants, any more than they could become proficient singers without voices, and partly because they have not the correct foundation of a common school education on which to build."

H. M. Rowe, of Baltimore, followed Mr. Battin with a very thoughtful and carefully prepared paper on "The Benefits of Universal Organization Among Commercial Schools." It would be unfair to the hard-working and able author of this paper to attempt to epitomize here the valuable address that he read. We shall hope to give it to our readers in full in an early number. It will be found very suggestive.

The session Wednesday afternoon in conjunction with the Wisconsin State Teachers' Association, was not as well attended as it should have been, because many of the commercial teachers had to save the city during Wednesday forenoon. The program carried out, however, was one of great interest. Prof. J. Monahan, of the University of Wisconsin, was the star of the afternoon, though Robert C. Spencer was listened to with close attention, and Prof.

C. E. McLenigan, of the West Side High School, Milwaukee, spoke with emphasis of the invaluable part that the high school plays in correct commercial training. It is a matter of regret that every commercial teacher who attended the convention was not permitted to remain for this profitable session.

The Banquet

At about ten o'clock Tuesday night a hungry crowd of pedagogues suddenly solved to quit all appearance of polite indifference as to the desire for food, and so, without waiting for the elevator, they began to climb the stairs toward the sky parlor, on the fifth floor, where the banquet was to have been served at 8:30 o'clock. The baldheaded German genius who presides over the destinies of the St. Charles Hotel met the famishing banqueters-to-be, and calmly closed the door. When his Highness got thoroughly ready, he indicated that fact to President Lyons, whose towering form barred the only means of ingress until Peck's Bad Boy (Ex-Gov. George W. Peck, of Wisconsin,) Robert C. Spencer, and the other speakers and officials could squeeze in. Then the famishing ones had their innings.

After a painful pause, which, though only minutes, seemed like hours, the major domo signaled to President Lyons by wireless telegraphy that he might sit down, if he wanted to, and, as he wanted much to sit down, realizing that he could not restrain his fastidious friends much longer, he quickly seated himself and we all followed suit. Salted almonds and olives soon vanished, and the genial editor of The Western Pennman nearly brought about a riot by cornering all the pickles within reach. An old war-horse from Des Moines, one Giessenman by name, got his revenge on the peripatetic philosopher from Cedar Rapids by bombarding said philosopher with holly berries parloined from the table "decorations." The editor of the Metropolitan Journal was seated not far away, but he was none of this, for he had troubles of his own; and Zaner was meditating on the sin of going to a theatre on Sunday night.

Probably one hundred and seventy-five persons were at the banquet tables, and they spent an hour and a half in disposing of a fairly good fifty-cent hotel dinner. They were not slow. They were not overfed. They had to wait on the waiters, who were girls that had done the usual day's work for an abnormal number of hotel guests, and that were, at this midnight hour, doing the work that should have been done by an entirely new set of waiters. All things considered, they did admirably, and practically everyone, when the last armful of dishes spasmodically disappeared, sat
back in a peaceful frame of mind to enjoy the real feast, "the feast of reason and the flow of soul."

G. W. Brown, as toastmaster, introduced each of the speakers in his characteristic manner, and in some instances, after the speaker had finished, commented very appropriately on what had been said.

Ex-Governor Peck was delightfully entertaining in his remarks, which were put to the occasion. He closed with an inspiring appeal to teachers and to parents to try to understand the boys, to have fellowship with them, to make chances of them.

George William Bruce, editor of The American School Board Journal, made no effort to be humorous, but he delivered a finished address that was one of the very best heard during the convention. In closing, he painted a touching word picture of a pale little factory lad who went to an evening commencement school under the instructions of our Uncle Robert Spencer: and before he had ended his pathetic, though uplifting story, we all knew, while the unbidden tears started to our eyes, that we were listening to that same pale-faced factory lad—now one of the distinguished citizens of Milwaukee—as with moving eloquence he poured forth his gratitude in a beautiful oration of our great-hearted host. Who can doubt that Editor Bruce is a friend of the honest business school.

J. W. Warr, the only Warr, was at his best, though he evidently gave us a meal of the busier orator; in other words, a speech that had been prepared for and delivered on another occasion. It was essentially an address for a G. A. R. campfire, but it caught everybody within the sound of Brother Warr's voice. He declared that after he returned from the Civil War, he "joined the silent majority"—he got married. And then he gravely assured us that for eleven years thereafter "there were Warrs and rumors of Warrs," Of course we wept—with violent laughter. As the toast master said, in introducing him, "Peace has her victories and so has Warr."

Well, we are proud of our new president.

Only those who have heard the inimitable Carl C. Marshall can appreciate the treat that was enjoyed when he gave his address. Sarcasm is one of Mr. Marshall's most dangerous electrical weapons, and he is a pastmaster in its use, but in the admirable address that he gave at the Milwaukee banquet he struck a high note which carried him happily above the range of sarcasm. He made an earnest plea for higher practical ideals in our twentieth century teaching, concluding with Edmund Vance Cook's recently published poem, "How Did You Die?" which was received very effectively.

The best of the wine was kept to the last of the feast, for beyond doubt none other than Mrs. John K. Gregg could possibly, at almost one o'clock in the morning, have kept an all but worn-out audience awake, to say nothing of arousing enthusiasm. But if any mere man had dared to blink an eyelid during the spirited postprandial address of Mrs. Gregg, we are sure that he would have been unceremoniously dropped from the fifth story window of the banquet hall to the indelicate pavement below, in order that he might be thoroughly awakened—or properly put to sleep. Mrs. Gregg declared that if a woman could not be elected to Congress, she would at least be Speaker of the House—and now we know why John Robert is so meek, and therefore why he seems about to "inherit the earth." Mrs. Gregg has a voice of excellent quality for public speaking, she used pure English, and she is a good enough railway official to appreciate the importance and use of good terminal facilities.

The Milwaukee banquet will be long remembered for the lateness of the eating, the very ordinary menu, the conspicuity of the Saxon hotel manager, and the unusual excellence of the speaking.

MRS. J. K. GREGG, CHICAGO.

The Private Commercial School Managers' Association.

REPORTED BY JOHN K. GREGG, CHICAGO.

For some weeks previous to the Milwaukee meeting there was much speculation as to the probable nature of the proceedings of the Private Commercial School Business Managers' Association. It seemed to be the general impression among school men that the Association was "getting out of its swaddling clothes" to quote President Enos Spencer, and that it was about to adopt some measures of far-reaching importance to school proprietors. This belief probably accounted for the fact that, although the first meeting was held two days in advance of the regular opening of the convention, the attendance far exceeded that of the meeting of the Association held last year.

President Enos Spencer delivered an able and virile address in which he reviewed the work of the Association in the past and made a number of Important recommendations. Incidentally, he delighted the audience by his plain-spoken references to those "narrow-minded, selfish and penurious" school men who held aloof from the organization while profiting by its fruits. Among other things, he declared that the endorsement of a particular typewriter by the Association last year had resulted in concessions from other companies favorable to the schools. The recommendations of Mr. Spencer were afterwards, by vote of the audience, placed in the hands of a committee instructed to have them duplicated and distributed among the members to facilitate the discussion in the afternoon session. As these recommendations were discussed in executive session, we cannot refer to them here.

The constitution of those assembled may be imagined when it was announced that the secretary and treasurer, Mr. M. G. Rohrbough, was not present, and had omitted to forward the books or records of the Association. A privacy was absolutely imperative regarding most of the proceedings, and there was no way of ascertaining who were or were not members of the association, or of reporting the work of the organization in the past year, it appeared that the only thing to do was to adjourn, and a motion was actually made to that effect. Here was a situation! A large number of school proprietors had come from all parts of the country at considerable expense, two days in advance of the Federation opening, at a time when the approach of the January opening of their schools made every day of importance to them, and all this sacrifice of time and money to be rendered absolutely useless through the negligence or in-
difference of one man. As a matter of fact, the books and records did not arrive until Monday or Tuesday, too late to be of any material service.

Mr. Lyons interposed with the suggestion that the time might be spent in discussing those things which were of a general nature, and the motion to adjourn was withdrawn. The remainder of the session, to which so many had looked forward in the confident expectation that it would bring forth something of momentous importance, was spent in discussing questions which obviously belonged more properly to the shorthand or business sections.

The first topic was: "How much of a business connection in shorthand typewriting can be taught to student before he goes to work?"

Mr. Lord said that in his school most students take the whole course and "some of them take it twice." Mr. Bartlett stated that it was necessary in his school for the student to be proficient in punctuation, spelling, correspondence, and penmanship, as well as in shorthand and typewriting, in order to graduate. He believed that a small set of books in the hands of each student would be of incalculable value. In spelling, students were required to correctly spell 90 out of 100 words.

Dr. Rowe declared that the whole matter was covered by the question: "How much will she need to make her services valuable as a stenographer?"

What was expected was the practice of the first class stenographer, as the subject which brings into use knowledge of English and punctuation. The stenographer does not need book-keeping, penmanship, etc., but it is important that she should understand and be able to use shorthand and typewriting, with speed and accuracy.

The stenographer must be able to write documents, bills, notes, drafts, acceptance, endorsements, because these are referred to in the correspondence, and it would be difficult for the stenographer to write intelligently without some knowledge of them. He believed it desirable that the stenographer should have at least an elementary knowledge of accounts, and pointed out that many large houses were now employing stenographers to make out statements on the machine.

The stenographer should also know something of commercial law, so as to be able to write contracts and legal papers; in fact, he thought a good law book should be used for dictation purposes to acquaint the student to law terms. For this reason he often recommended teachers inquiring for a dictation book to use Richardson's Commercial Law, published by the Sadler Row Company. (Here President Spencer instructed the acting secretary to charge up ten dollars against Dr. Rowe for advertising.)

Mr. Walker Rasmussen stated that in his school students were required to write forty or fifty law forms, and an explanation was given of the terms occurring in them.

Mr. C. M. Miller described the work of his Model Office, a term borrowed from his friend, Mr. Lord. In this department there are thirty machines in drop cabinet desks; a teacher is in charge who dictates to the students, both collectively and individually. The letters are afterwards dissected, the information contained in them placed on cards and duly filed, under the direction of the teacher. While this department is a regular part of the school, the whole effort is to create the business atmosphere surrounding a business office. As a result, students take more responsibilities and command higher salaries at the beginning of their business career, and it is easier to find employment.

Mr. C. M. Miller believed there could be but one answer to that question: that schools should train their students in the use of the machine, and that they are likely to be called upon to use when they leave the school.

A gentleman whose name was not given took the opposite ground, maintaining that the school was the duty of the school to guide students, and that schools should be established to provide the best possible education for the student, so that he could effect improvements when he found existing methods defective.

The writer expressed the opinion that while so many concerns constantly devoting new and improved office methods, the busy school proprietor was fortunate if he could find time to make himself fully acquainted with these methods already on the market. It is not the province of the school to devise or create new office devices any more than it is to devise or create a demand for new typewriters.

The proceedings at the other meetings of the Association were for the most part held in executive session, and cannot therefore be reported. It will suffice to say that it was decided that the suit in regard to second-class rates on school journals should not be carried to the Supreme Court. The Legislative Committee was, however, continued with a view to securing concessions favorable to commercial schools.

A committee to look after the interests of business schools at the St. Louis World's
Fair was appointed, consisting of E. H. Fitch, St. Louis, L. A. Arnold, Denver, and —

The most notable feature in connection with the proceedings of the Association was a paper on "Organization," by Dr. H. M. Rowe. This paper was the subject of much vigorous discussion; and while there was considerable difference of opinion regarding some of the plans outlined in it, the paper was conceded to be an extremely able one. It was evidently the outcome of much close and long-continued thought, and greatly enhanced the reputation of its author as a thinker and organizer. A committee of five was afterward appointed to take up the question of organization and submit a plan at the next meeting of the Association, which is to be held in Boston next July, in connection with the convention of the National Teachers' Association. This committee consists of H. M. Rowe, (Chairman), R. C. Spencer, F. B. Virden, C. M. Miller, and J. C. Walker.

Members Business Managers.

BY W. E. WHITE, QUINCY, ILL.

MILWAUKEE, WIS., DEC. 29, 1902.

The Business Teachers' Association convened in the rooms of the Spencerian Business College.

The time from 9 to 10 a.m. was taken up with registration of members.

W. E. White, of Quincy, was appointed temporary secretary.

President Frye, on account of other duties, turned the meeting over to Vice President Brubeck, who took charge.

At the instance of the vice president a committee, consisting of Carl C. Marshall, of Cedar Rapids; J. A. Hiner, of Louisville; F. M. Allen, of Wilkes Barre; and N. B. Van Matre, of Omaha, was appointed to draft suitable resolutions expressing the sympathy of the members with our honored president on the recent death of his wife.

The report of the executive committee was read by J. C. Walker, of Danville, Ill., President Frye delivered an address on his work in connection with the bank examiner, at Chicago, giving many interesting points in this connection. He also made some valuable suggestions on auditing.

In the absence of Secretary J. H. Craf- ton, the temporary secretary was elected to that office for the session.

W. T. Bookmyer, of Sandusky, O., sent notice he could not be present.

J. A. Hiner, of Louisville, Ky., presented his paper on "What a Business Education Ought to Do for the Individual." This paper was discussed by Geo. W. Brown, of Jacksonville, Ill., in a way that excited considerable enthusiasm.

The President then appointed a Conference Committee on the Spencerian library project. This committee consisted of Geo. W. Brown, of Jacksonville, Ill.; H. M. Rowe, Baltimore, Md.; and W. H. Whigan, Chicago.

R. A. Brubeck, of New London, Ct., then delivered an able discussion on "The Future of the Business Schools," in which he expressed his belief that they would remain a permanent feature of our educational system.

S. B. Fahnestock, of McPherson, Kan., read an able paper on "Discipline," illustrated with several interesting object lessons designed to show his method of attracting the attention of his pupils and of developing their powers of concentration.

W. T. Boone, of South Bend, Ind., led in the discussion of Mr. Fahnestock's paper under the heading of "Problems That Confront the Teacher." Other discussion followed.

The committee on resolutions reported through its chairman the following expression of sympathy, which on motion was adopted and ordered spread on the minutes, and the secretary was instructed to prepare a copy to be presented to our president, Mr. U. S. Frye.
Resolution.

WHEREAS, A domestic bereavement—painful and grievous beyond the power of words to express, has fallen with crushing force upon the heart and life of the worthy and honorable president of this association, and whereas, though we realize that no paeon of sympathy and condolence may assuage the pain of such a grief, we yet know that the desire to offer such an expression rises naturally in every manly or womanly heart, and works that "fellows feeling that makes the world go round.

Therefore, Resolved, that in the recent death of Mr. L. Wilton G. C. G. M. there has gone from among us, and from her sorrowing husband, a noble and gracious presence, a bright and winning companion, a faithful friend, and a loving wife.

Resolved, That sorrowfully, and in tenderest sympathy, we offer to her stricken husband our sympathies and condolences, and cite him to such consolation as may be drawn from a remembrance of the virginal and lovable qualities of her that has passed away, and from that promise of hope that the Giver of all joy and sorrow has vouchsafed to them that walk in the way of truth and love.

[CARL C. MARSHALL, Committee]
J. A. HINER,
P. M. ALLEN,
X. B. VAN MAIRE.

A motion to appoint a committee to look up more members was laid on the table.

December 30, 1902.

The Secretary was instructed to read a letter from D. W. Springer, of Ann Arbor, Mich., stating his inability to be present to present his paper on "Commercial Geography." On motion the same was placed on the file.

D. W. Springer, of Ann Arbor, sent his paper to the secretary to be read before the convention, but on account of the crowded condition of the program the same was ordered printed in the "Practical Age," for the benefit of the members of the section.

Wilton F. White, of Quincy, Ill., then led in a symposium on "An Ideal Business Practice Course," which stress was laid on an ideal course of practice, an ideal teacher, and ideal equipment. J. C. Walker, of Danville, followed on the same topic, using blackboard illustrations and emphasizing business-like transactions to the exclusion of overdrawn conditions, and unheard of undertakings. W. H. Whigam, of Chicago, followed as the third member of the symposium, discussing some points mentioned in the previous papers and also many new features, such as the importance of intercommunication, etc.

The discussion which followed was very spirited, Enos Spencer, J. E. Brandrup, U. S. Frye, M. Lister, H. M. Rowe, Geo. P. Lord, and O. L. Trinay, participating.

Enos Spencer, of Louisville, Ky., then read his paper on "Advanced Accounting," strongly recommending loose leaf systems, the banishing of expense account, the pruning of the merchandise account, the use of adding machines, and noted the fact that courts of law are now insisting on the use of typewritten records.

M. H. Lockyear, of Evansville, Ind., at the invitation of the Business Teachers' section, presented his paper on "How and Where Business Schools Should Advertise." He condemned programs, special editions, etc., and recommended local city dailies and country weeklies. He also thought small space used often better than broadsides occasionally. He also urged the use of good paper and good printing in the school papers and circulars. Mr. Lockyear's paper was well received and called for considerable favorable comment. It was written to be read before the Private School Managers' Association, but was crowded out of that section for want of time.

The newly elected president appointed the following as the executive committee for the ensuing year: W. H. Whigam, Carl C. Marshall, and J. A. Hiner.

Adjourned to general session.

December 31, 1902.

Several members who could not be present, sent in their membership fees, among them being J. A. Clark, D. L. Muselman, A. W. Dudley, D. W. Springer, Chas. Hermann, J. C. Olson. J. W. Waar, editor of the "Practical Age," read his paper on the "Use and Abuse of the Tongue in the School Room." It was a strong paper, and sparked with Brother Waar's usual good sense.

A spirited point of "hobby" riding was then indulged in, and a series of short, extemporaneous talks on points of teaching, which the members thought worthy of special attention in the school work, resulted. J. C. Walker, of Danville, Ill., touched on his pet hobby of teaching spelling. This was discussed by several members.

Carl C. Marshall aired his plan of teaching some composite numbers less than one-hundred which do not appear in the ordinary multiplication table. Discussed by Dr. Rowe, of Baltimore.

M. Lister, of Milwaukee, spoke of his method of teaching the subject of journalizing with special reference to drafts and notes. Discussed by Carl Marshall and Enos Spencer.

Enos Spencer then rode his hobby of making students clean, accurate writers and calculators. He used the blackboard to illustrate his ideas of the utility of cross multiplication.

The Capital City Commercial College Delegation, Des Moines.

[Images of delegates]
Mr. Lockyear showed his method of using check figures and also spoke on rapid addition methods. This subject was further discussed by W. E. White, Enos Spicer, M. Lister, J. C. Walker, G. E. King, Robert C. Specht, and other members.

Dr. Rowe extended a cordial invitation to the meeting of the Helley School in Brooklyn with the Eastern Commercial Teachers' Association. No action was taken on the invitation.

N. B. Parsons, of the Library Bureau of Chicago, read a paper on the "Values of Card Systems." He thought that results were at least two to one in favor of the cards, but made the point that they were not perfect, and that they required as much attention as other systems. He showed that they were especially adapted to insurance companies, banks, signature books, savings accounts, commercial ledgers, etc., and strongly recommended the use of the vertical filing system. On motion a vote of thanks was extended to Mr. Parsons, which was graciously acknowledged.

On motion the body adjourned to "take the Wisconsin teachers' examination" provided by "Uncle" Robert. Dr. Rowe received the highest markings on the test, which was very exhaustive. Certificates will be issued later.

Members Business Section.

The National Shorthand Teachers' Association

REPORTED BY F. M. VAN ANTWERP, LOUISVILLE, KY.

The Shorthand Section was called to order at 2:00 o'clock, Monday, Dec. 29. After a few remarks by President Arnold, and Mr. C. T. Platt, Chairman of the Executive Committee, the President's very practical address was read. He advised plans for helping each other in the work of the school room by a more extensive use of the exhibit room, by bringing to the conventions a larger variety of the work of students, by a more free and open comparison and discussion of methods of teaching. The standard of efficiency is steadily increasing because of the demands of business men, and the teacher should be more observing, alert, and progressive so that he may be better able to train amanuenses who will meet these demands. A continuance of the summer school for shorthand and typewriting teachers was recommended, the program of last summer proving very satisfactory.

The report of Secretary Davis showed the Association to be in very good shape, forty new members having joined during the year and thirty-six having renewed their membership. The Secretary recommended that the Constitution be so changed that the Secretary can be elected for three years, for in one year it is impossible to become acquainted with all the teachers and be in a position to do the most good. The Secretary's report was unanimously adopted.

The first number on the program was a paper by Mr. William Whitford, "The Importance of Writing Names in Shorthand, Instead of Longhand," but on account of the absence of Mr. Whitford his paper was not read.

"How I Prepare Amansses," by Mr. J. Clifford Kennedy, was probably the most interesting and beneficial number on the whole program. Mr. Kennedy outlined his method of teaching and traced the progress of the pupil, step by step, from the day he enters until the day he graduates from the Model office and goes out into the business world. Some of the more salient points brought out by Mr. Kennedy are as follows:

Pupils should be supplied with two note-books—one for miscellaneous practice, and the other for the regular work mapped out for the teacher, which must be done. The latter should be regularly and systematically inspected and corrected by the teacher, and the pupil required to rewrite all incorrect outlines.

The words in every lesson are dictated to the pupil after he has practiced them, and he must reach a rate of 50 words a minute on the first lesson before being permitted to leave it. The rate is increased five words for each lesson until a rate of 90 is reached.

A rate of 75 words is required for beginning dictation. Three dictation classes, A, B, and C, are held every week for promotion and for graduation. Time required to finish the comes six to ten weeks on the theory; sixteen to eighteen weeks in dictation.

The discussions which followed were extremely lively, interesting, and instructive. Everyone was urged to ask Mr. Kennedy...
Mr. H. G. Healey informed Mr. Kennedy on the same subject with a well written and well delivered paper which told a great deal of what should be done, but very little of how to do it. The paper was a good one, an inspiring one, and should be read by all teachers. Mr. Healey emphasized particularly the fact that we should never train amanuenses with the idea that shorthand is to be the end; that we should not train for subordinate, but for principal positions. The men who draw the salaries today are the ones who get business, not those who perform the little details of taking care of it. "You will not get good business" would be a very good motto for every young man to start out with in the business world.

At a business session held at this point, a resolution was passed authorizing the President to appoint a committee to consider the recommendations contained in the President's address and the Secretary's report. Also a resolution was appointed by a Special Committee whose duty it would be to promote a wider circulation of the proceedings of the Association, and other information pertaining to it and its work, by furnishing the Associated Press and other news-gathering agencies with such information. If this plan can be carried out, it will be the means of bringing the National Shorthand Teachers' Association and its work before all the newspaper readers of the country.

Tuesday, 9:00 A. M.

"The Opportunities of the Amannensis" was the subject of a very interesting and helpful talk by Mr. Fred Irland, of Washington. The demand for competent stenographers, especially untrained, is never so great as it is today, and the opportunities for advancement offered the amanuensis are far greater than are offered in any other clerical position. But the standard of efficiency required by the business world is increasing, and shorthand schools must see to it that their courses of study are so much improved and their work so well done that they will be able to send out graduates who will fulfill the requirements of the business world. When they do this, they will have given the young man a training which practically assures his success. Mr. Irland related many instances of men and women who have come under his observation, showing the excellent opportunities that are offered to the young man who is prepared to take advantage of them. Every young man should make it a point to acquire a reserve fund of information and capability that may be instantly drawn upon in an emergency, for the emergency is sure to present itself sooner or later. Be prepared always for something better than that which you are now doing.

The subject of "How I Prepare Amannensis" was again taken up, and Mr. Selby A. Moran of Ann Arbor, Mich., gave his idea of the best method. Much of the same ground was gone over as at the session the day before, but some new ideas were advanced. Mr. Moran laid special stress upon the importance of learning many other things in addition to shorthand. The more general the education, the more successful will the pupil be in shorthand. We make a mistake often in trying to make shorthand too easy. Discussions by Irland, Platt, Hall, and others followed. The idea conceived by the Executive Committee of having different teachers tell explicitly just how they do things was an excellent one and resulted in bringing out a freer and wider discussion and expression of methods than at any other meeting.

At the business session officers were elected as indicated in another column, and Charles T. Platt and R. A. Grant were elected directors of the summer school.

The resignation of The Typewriter and Phonographic World as official organ of the National Shorthand Teachers' Association was read, and after some discussion, was accepted. A vote of thanks was extended to Mr. E. N. Miner for the many courtesies and services rendered the Association by The Typewriter and Phonographic World.

Wednesday, 10:00 A. M.

"The Work of, and Demand for, English-Spanish Stenographers" was the subject of a paper read by Mr. Francis E. C. Cleveland, New Mexico. Mr. Lester is in a position to know something about this subject and he gave the Association much firsthand information. The demand for English-Spanish stenographers far exceeds the supply, especially in the states bordering on Mexico, and also in the larger seaport cities from which business is transacted with the Spanish-speaking countries of Central and South America, Cuba, Porto Rico, the Philippines, etc. Mr. Lester thinks the induberences are so great that it would be a good investment for more young men to learn Spanish and prepare themselves for this line of work. The demand for many years to come will be steadily on the increase.

Mr. Rupert P. SoRelle, of Chicago, read a paper giving his method of teaching typing. The subject was discussed by fully half the members present. A vote was taken which showed that a very large majority of those present advocated the use of the blank keyboard. It seemed to be the general opinion of those present that in this way the best results can be obtained.

Members Shorthand Section.

Promptly at 1:30 on Monday, December 29th, the seventeenth annual convention of penmen from various parts of the country, assembled in the rooms assigned the National Penmanship Teachers' Association at the Spencerian Business College at Milwaukie, Wis. This meeting proved to be one of the most successful, if not the most successful, in the history of these meetings. It was attended by representatives of the profession from Nebraska on the west to the New England states on the east, and from Kentucky on the south, to the extreme north. A high tension of enthusiasm prevailed during the three days of the meeting which proved entirely too short to exhaust the bottled-up knowledge in the way of methods and ideas for developing the field of penmanship. Something less than the pressure of a button would cause a flood of information to burst forth with so much continuity, that it frequently required the firm, but courteous voice of the presiding officer to regulate the proceedings so the different members could get an opportunity to air their views.

After a general handshake and numerous introductions, President Horace G. Healey, Editor of the Pennman's Art Journal, New York City, delivered his annual address.

Mr. Healey's address, which was mainly technical in its nature, was well received by the association. After making a plea for better writing in the schools of our land, he reminded those present that this is the semi-centennial of Spencerian writing, and urged the revival of a plan that was set on foot a few years ago for the erection of a memorial at Geneva, Ohio, in honor of Platt R. Spencer, who is known throughout the country as the founder of the Spencerian system of penmanship. It is resolved that a committee of the penmanship section be appointed to meet with similar committees to be appointed by the other sections of the Federation to devise a plan of action whereby the commercial teachers of the land can arrange to cooperate with the cit zens of Geneva, O., the former home of the grand old man of achievement, who has done more to develop the beautiful and practical art of writing than any other who has ever lived.

The committees appointed were as follows: National Penmanship Teachers' Association: H. G. Healey, Baltimore; W. F. Giesemann, Des Moines; C. F. Zaner, Columbus, O.

National Shorthand Teachers' Association: W. L. Musie, St. Louis; Charles R. Platt, Hoboken, N. J.

Mr. D. S. Hill, of Evanston, Ind., then read a paper on "Essentials of Practical Handwriting," which was well taken. Mr. Hill took a stand practically opposing the vertical style of writing, not because it is upright but because it is detrimental to speed. He held that there is a general tendency to the slant style as speed is encouraged. It is believed he touched a popular chord when he urged intelligent practice on a few copies during the writing period, rather than the use of many copies. This paper was discussed by Messrs. Courteney, Fish, Jones, Gaylord, Palmer and Lister.

Mr. Zaner then read a letter from Mr. C. N. Crandle, of Chicago, expressing his regrets at not being able to be present, owing to illness in his family.

This was followed by a paper in a humorous vein on "Pennmen I Have Known," by Mr. H. W. Ellsworth, the veteran penman and author of New York City. He thought it would have been more appropriate to have adopted Seton Thompson's book title, "Wild Animals I Have Known," and said that most professional penmen were more like professional jack rabbits. In speaking of the penmen of long ago who lived by organizing writing classes, he said that "when the money had been collected the magic power of the 'Professor' often evaporated—likewise the class."

There was a call for remarks from all penmen over fifty years of age, but Mr. W. H. Duft of Duft's Business College at Pittsburg was the only one who was willing to admit that he was over fifty—wouldn't have thought this of a body of men.

The next thing on the program was the speed contest. About twenty penmen engaged in the contest, and considerable jolly good humor was manifested. Some time was spent in deciding just how to conduct
it. Messrs. Palmer and Gaylord said they
"wouldn't play if the others wouldn't play
fair." The contest was informal and created
much interest among the participants;
and a lack of time, it was not
officially decided. However, it developed
that there were many who could make from
sixty to eighty-one good business capsu-als
in a minute, or from sixty to eighty-six
in a similar time. Some of those who par-
ticipated were Messrs. Zaner, Healey, Pal-
mer, Gaylord, Grant, Loomis, Way, Lister
and Mrs. Yocum, and others.
Following a day, W. F. W. Giessean of Des Moines, Ia., read a most
elegant paper on the "Worth of Good
Writing." It is an excerpt from The
Business Educationalist further comment
is not necessary.
Mr. T. Courtney, of Des Moines, handled the
subject assigned him, "Accurate Writing
"in an interesting manner. He first read
interesting letters on the above subject
from Messrs. M. N. Zaner, Glick, Hin-
man, Palmer, Lehman, and others. He
thinks most penmen are egotistical. There
seems to be no doubt but that many men
who have the ability to become good pen-
men, are spoiled early in their career by
the flattery of well meaning friends, who
are not competent to judge penmanship. They
make a spurt in the writing field, so to
speak, some unwise admirers tell them that
their writing is phenomenal, and further study
and practice in that beautiful art, which
is almost endless in its possibilities, is
deemed useless. Egotism spoils them.
Mr. G. E. Spohn, of Madison, Wis., in his
"Lesson in Business Writing," which he
presented in a masterly manner, advocated
large exercises at first, two or three spaces in
height. (By spaces, I think he referred to
the spaces between the blue lines on the
customary practice paper) whole arm
movement at first, followed by gradually
changing to smaller writing. He also be-
lieved that the capitals should be taught first.
Penmen are divided on this point. The
point in favor of Mr. Spohn's theory is
that it is easier for the pupil to introduce the
arm movement into the execution of larger forms—than the smaller let-
ters. However this may be, it is true that
most of the successful writing teachers
cling to the plan of training the hand on
the straight line and oval exercises, and
then learn to apply it by beginning with the
simple small letters in the form of gliding
exercises, and gradually leading up to
the more complex letters and to the capitals.
Mr. Spohn urges the importance of thought-
ful practice, and that the letter not well
formed back of the eye can not be well
formed before the eye. This is a point that
decides against an irregular method. He
also discussed the question of placing common faults in
writing on the board before the class was
discussed, for and against. I believe that
Mr. Zaner struck the key note when he said he
had discovered some that were general.
And that he would then proceed to point
them out on the board, and thereby benefit
all in the time it would take to point out the
era characteristic faults. He would point
out the error individually if it was un-
common and only occurred occasionally.
There was an open period on Tuesday
afternoon, and it was decided to hold an
informal meeting of the "Cranks." The
plan was for the president to call a number
to the board and let him demonstrate his
method of handling some feature of the
writing lesson. Those who responded were
Messrs. Zaner, Lister, Palmer, Healey, and
others. It was a departure from the usual
program, but was voted a success. It is
believed that no other period brought out so
much genuine enthusiasm, and an effort
will be made to arrange for a meeting of the
"Cranks" on the program for the next
annual meeting.
At the meeting on Wednesday morning
a resolution was passed empowering the
president to appoint a member from each
state represented, to act as secretory for his
respective state. His duties will be to
give correspondence with the various mem-
bers of the profession in his state and attend
earnestly at these conventions. These
appointments will be made later.
The last and by no means least feature of
the program was a talk of unusual interest
by Mr. Zaner, of Des Moines, Ia., "Uncle
Reek," as he is known to the profession. His subject was
"Reminiscences." He confined himself
largely to those interesting events and pro-
ducts in which his father figured so promi-
nently. He said the name "Spencerian," as
applied to writing, was not of Mr. Spen-
cer's choosing, but was given to it by Mr.
Lask, a pupil of his. He described the ori-
gin of Spencerian writing, which he held
was a compromise between the broad turns
on the one hand and the extremely angular
style, which was of German origin, on the
other. He considered the oval the organ of
nature—being similar in shape to the head,
the heart, the brain, the pebble, etc. His
dominant spirit in teaching was philan-
thropic—his love for mankind being upper-
most in his mind. He had a grasp and a
view of writing beyond any other past or
present.
He had the misfortune to contract alco-
holism, and to free himself of same he
sought the wilds of Ashtabula county, Ohio, with his devoted young wife
and family, where he not only freed himself
from drink, but bought a home as well.
Mr. Spencer was a poet of unusual merit,
and a master in the use of closely resembled turns in poetic style.
A number of Mr. Spencer's poems were
read. Some were truly sentimental, while
others were humorous, one of the latter
very well received by the pupils of the
Des Moines public school.
Executive Committee: H. G. Healey,
New York City; D. S. Hill, Evansville, Ind., and
W. F. Giessean, Des Moines, Ia.

T. COURTNEY, DES MOINES, IA.
A Theatre Party.

One of the most enjoyable side incidents of the Milwaukee meeting was a theatre party given by genial Mr. J. E. Neuhr, of Boston, General Agent of the Underwood typewriter. The party consisted of the following: H. M. Rowe, J. C. Kennedy, W. O. Davis, Enos Spencer, C. C. Lister, C. M. Bartlett, R. A. Bruback, H. D. Harris, H. B. Boylos, M. H. Lockyear and C. P. Zaner.

"The Suburban," Davidson Theatre, and Mr. Neuhr will not soon be forgotten by those who were "up against the real thing." The play was melodrama, but between Bartlett and Rowe we had Komette and Julio, and between the crowd and one of Milwaukee's famous German "tea and cracker gardens" there was plate glass galore. We looked, and Lockyear walked straight on—through the snow, and the other eleven followed—dry on the inside, and sober, to dream of drama—and dramas not drunk.

Convention Notes.

The weather man was good to us. Perfect winter weather ruled while we were in Milwaukee.

One more added to the list of mythical mayors. Mayor Rose did not blossom in our presence.

WANTED: A handy manual on Parliamentary Practice. Address the ex-President of the Federation.

The Shorthand Association did wisely in re-electing Secretary Davis, he is "actual business from start to finish."

The Speed Contest proved a most exciting, instructive, and enjoyable affair. Let us have it all over again—and then some.

President Arnold was a good presiding officer and a hard worker for the success of the Federation. He will bear watching; better things are in store for him.

The Shorthand Section always elects its best men for office. This accounts, in a large measure, for its being the largest section of the Federation.

Genial Fred Irlan has the sincere thanks of the shorthand teachers of this country for the hearty interest he takes in their work. We hope to have him with us every year.

The Spencer family reunion, so widely advertised, was only a dream. Lyman F. Platt, R. Jr., and Harvey, whom we all wanted very much to see, were not in evidence.

The various section meetings were more than usually interesting, although there were more absentees among those advertised to speak than has been the case for several years.

Lister captured the pennies—and the presidency. With such officers as Healey and Lister, the association must prosper. Lister is a level-headed fellow, a fine picman, and a noble man.

President Healey proved an ideal officer. The excellent program as carried out in the Penmanship Section was the result of his "spur on the spot" suggestions and creations. Congratulations, brother.

An unfamiliar though welcome figure at the convention was that of C. L. Bryant, of the Buffalo B. & S. School. Mr. Bryant was looking for two good teachers. It pays teachers to attend these meetings.

There were no contests for any of the offices in the National Shorthand Teachers' Association, and there was no politics in the election. Everybody knew the best man for the place and voted for him, and that settled it.

The typewriter companies outdid themselves in their exhibits this year. The Denison people were especially happy in their choice of an attractive, ten-year calendar, bound in celluloid, which was distributed as a souvenir of the occasion.

A member of one of the other sections remarked, on entering the Shorthand Section, that whenever matters were dragging along in an uninteresting way in his section he always went over to visit the Shorthand people, for there was always "something doing" there.

One o'clock in the morning is an unconscionable hour at which to rise from a banquet table. Arrangements should be made so that the physical part of a four-day banquet may be out of the way by nine o'clock, so that the speakers may have wide-awake listeners to the end.

For Sale: Cheap, a "machine" that has been doing good convention work for two years. It was slightly damaged in the recent convention at Milwaukee, but it is certain that there are in it still sundry elements of usefulness. Apply, after office hours, to the Chief Cook and Bottle-Washer.

Zaner's simplified writing justified all that their hearts and ambitions were worth. Not only did Zaner outdo the famous "mucular movement" champion in point of speed, but he did his work beautifully, and without fuss and feathers. There was no mistaking the fact that the crowd was with him.

Uncle Robert did everything just right. He stands alone in the hearts of his fellows, as one who labors unceasingly for the cause of business education, lie has no equal. All honor to "the grand old man." The "samples" of good cheer which he freely gave to all are cherished by many to whom their trip to Milwaukee will long remain a pleasant and uplifting recollection.

S. Van Vliet, of the Cleveland Spencerian, and C. W. Benten, of the Valparaiso, Indiana, Normal School, are "a pair to draw to," as the boys say. They are such physical giants that an ordinary man of five feet ten looks like a school boy in their presence. And their hearts and ambitions are just as big as their bodies. They aspire to the best and biggest in their profession.

The man who has contracted the bad habit of eating too fast should spend a month at the St. Charles Hotel. Those who attended the convention will sign a testimonial unanimously declaring that such a course of treatment will certainly effect a cure—while he is at the St. Charles, at least.

It was commonly voted the lowest place that a commercial teachers' convention ever struck.

Everybody enjoyed Uncle Robert's playful allusions to, and descriptions of, the Milwaukee examination prescribed for...
those who aspire to possess a teacher's certificate. Several glasses of a variety of Milwaukee's famous product are set before the applicant for pedagogical honors, and he is expected to show his discriminating taste by sampling and naming each brand. Uncle John called for volunteers, and was really surprising to see how many were willing to take the Milwaukee examination.

Some of the engraved cards that were freely handed out in and about the penmanship section had a remarkably suspicious resemblance to the classic hand of Nadaraz, and it was strongly suspected that Adolph, who had not improved the situation. Let's see, Nadaraz will write cards, will he not? And zinc engravings can be made from them, can they not? And then other cards can be printed from these zinc etchings. Of course no one would do such a thing, but such things might be done, and—there were those who wondered.

Talk about fun! How could anything generate more downright, dead-in-earnest fun than a tug-of-war for a matching place? What a marriage! City of Roches, as he styled Little Rock and Secretary Wilson's "perfume of violets, aroma of roses, and fragrance of carnations"—all alleged to be extravagantly blooming on the Arcadian hills after the Clean. We began to hunt "In the Good Old Summer Time," and then there decided to cross our legs under Brother Bartlett's mahogany, in Cincinnati, Queen City of the Ohio Valley.

The Metropolitan Business College "wasn't so good" an aspect of the many times during the voting for a meeting place for 1905, but it is likely to be a prime favorite for 1904, because its magnificent new quarters, its perfect equipment, its advanced courses, and its probable position as the largest of the western commercial schools, will make it a powerful magnet. No one should fail to see the new Metropolitan, when passing through Chicago. Mr. Powers is to be congratulated for the business enterprise he has shown and the success he has achieved. Here's to his health and his family's. May he live long and continue to prosper.

Honesty is apparently not the best policy—in the Private School Managers' Association. When the presiding officer said, in his annual report, that he had considered it advisable for membership in that body, one honest man arose and said that he had guaranteed positions to his constituency, condition that he explained. He wanted to know where he stood. As compensation for his candor he was lambasted without mercy. Another proprietor, much better known, one of the school presidents, went so far as to say that such a practice, is also guaranteeing positions, but he believes that silence—on certain subjects—is golden; but he lifted up his voice at frequent intervals on less dangerous topics, and asked why the school presidents should have rewarded him with the highest office in the Federation.

Worth of Good Writing

BY W. F. GIESSMAN, CAPITAL CITY COMMERCIAL COLLEGE, DES MOINES, IOWA

For nearly twenty-four years I have been teaching penmanship almost daily, and in all that time I have not felt the necessity of formulating an expression of the worth of good writing. Taking it as a matter understood that good writing was a good thing and that everybody was anxious to get all he could, conscious of the fact that his getting would not lessen the amount for his neighbor.

A good handwriting is worth more today than ever before, notwithstanding the encroachment in its field of shorthand, type-writing, the telephone, the telegraph, the phonograph, etc.

Hundreds of letters are now dictated and transcribed, where one would be written with a pen. Thousands of messages are sent by telegraph and many require the intermediary of the pen, but in keeping with all this growth, the pen is used more, and skill with the pen is rated higher than in any previous decade. In business, especially in the larger things, things have lightened work, recorded the multiplicity of transactions and made a place of their own.

The requirements today are greater; both speed and accuracy are being held efficient than heretofore. This is true of other things as well as penmanship. There are many penmen today, more penmanship teachers, policy writers, engravers, etc. They earn more, and certainly appreciably, enjoy greater advantages than ever before. The centuries have never known the possibility of a penman's convention until this present generation.

Good teachers in penmanship are in steady demand, and there is an increasing demand in the private schools, and a larger field to be developed in the public schools. The key for which today that formerly required the intermediary of the pen, but in keeping with all this has grown, the pen is more used, and skill with the pen is rated higher than in any previous decade. In business, especially in the larger things, things have lightened work and recorded the multiplicity of transactions and made a place of their own.

The Importance of Personality

This country is overrun with men and women who have diplomas from our great colleges and universities reciting degrees. Many of these individuals are laden with letters of recommendation as to character and ability. Why is it that hundreds of persons thus well educated are on the books of every teacher's agency in the land, willing to accept a salary that most commercial teachers would scorn to consider? There is commonly something objectionable in their personality. Alice Freeman Palmer sets forth most forcibly, in the following paragraph, the importance of this element in the make-up of a successful teacher:

The time will come when the examiner of a candidate will inquire first into the personal and private character of the teacher. High ideals are not secondary to noble character. It is not the learning that she has, nor the training that she has, that makes the true teacher. It is her personality. Many of the best teachers today never received a normal school certificate that they had been thoroughly grounded in the newest and most approved methods. Their success lies in the power of their own high character, and their endeavor to promote, through love and sympathy, the best possibilities of the children under their charge. Professional training is not to be disparaged. It is a great power in itself, but it is not the greatest nor the highest. Manners and morals, and they are one, in the teacher's personal character are of far greater value. To feel that his teacher lives a noble and beautiful ideal will make the pupil aspire to such an ideal.

Rapid Calculation.

L. C. Horton, Winsted, Conn.

The teacher should put "lots of enthusiasm" into the subject of interest. It's a dry subject to many students and it needs a rain fall of spirit and dash by the teacher to grow desirable results.

Students can be taught to compute interest at an astonishing rate of speed, and they can be taught so that they will not forget the principle involved.

It seems to me that the wisest thing to do is to thoroughly teach them "principle" first, and "rapidity of reckoning" second. The table given below is one which I use in my classes.

1. It comes as near being a mechanical method as any I know of. Don't understand me, however, as advocating a plan of computing interest that involves no reasoning by the pupil.

I explain this table as thoroughly as I know how, and the explanations are given very often.

I use the 6% rate almost exclusively. It must be apparent to my fellow teachers that this rate has greater possibilities for "ready reckoning" than any other.

The number of days in a month, in a year, and the number of months in a year are ready multiples of 6. The rate, too, is universally used by our banks.

Let me show, to an extent, how I explain this table: Suppose I wish to use the 6% rate. I place a proposition on the board like this:

$4200 for 24 days at 6%;
360 days to the year (ordinary int.)
The $4200, the 6% rate, and the 24 days are all multipliers, and the 360 days (ordinary int. year) is the divisors.

I arrange the proposition as follows:

$4200 x 36 x 24
--------- = 36000

The 6% has been set down in decimal form.

Strike out the decimal and add two ciphers to the 360

$4200 x 36 x 24
--------- = 360000

Cancel the 6 into the 36000

$4200 x 6 x 24
--------- = 360000

If $4200 is put at interest for 6000 days at 6% it will earn $4200,—that means 100% of itself.

The interest then on $4200 at 6% for 6000 days is $4200.

What is the interest for 600 days?

$4200 x 6 x 24
--------- = 36000

Moving toward the left, cut off one place in both your "sum at interest," and the 6000 days, and the result is $420.

What is the interest for 60 days?

$4200 x 6 x 24
--------- = 3600

Moving to the left cut off still another place and the result is $42.
What is the interest for 6 days?

\[
\frac{420\times 6 \times 24}{36500} = \frac{5040}{36500}
\]

Moving to the left cut off again another place and the result is $4.20. We have now cut off as many places as we can.

It is apparent that the interest for 6 days is $4.20. For 24 days we may now multiply the $4.20 by 4. (24 days is 4 times greater than 6, so the interest will be 4 times greater). Result $16.80.

Now we may arrange an explanation something like this:

<table>
<thead>
<tr>
<th>Principal at Interest</th>
<th>No. of days at Interest</th>
<th>Rate</th>
<th>Number of Places to Point off</th>
</tr>
</thead>
</table>
| 4200 6%              | 6000 6%                | 42 0 | 4
| 420 0%               | 600 6%                 | 42 0 | 4
| 42 0%                | 600 6%                 | 42 0 | 4
| 4 0%                 | 60 6%                  | 42 0 | 4

Number of places that must be cut off in the $8’s when the days are,

**NUMBER OF PLACES**

| 6,000 | 1 |
| 600  | 2 |
| 60   | 3 |
| 6    | 3 |

Here is a good illustration:

\[
\frac{4\frac{2}{3}}{60} \times 6 \times 24 = \frac{20}{100}
\]

The final result in each proposition given below is the same. I show the student why it is so.

$4200 for 24 days at 6%

$420 for 6 days at 42%

$6 for 24 days at 4200%

$6 for 420 days at 4200%

$24 for 6 days at 4200%

$24 for 420 days at 4200%

In the beginning I give the class simple propositions, I keep on the simple examples and concern myself with the principles involved. By easy steps I go to the more complex examples, i.e., those of odd number of $’s and days, and of different rates.

The matter of dividing up the number of days at which principal is at interest must be carefully gone over. Upon a good division very often depends the accuracy, and most assuredly the speed.

Sometimes it is advantageous to compute on a basis of 6 days, and other times on a basis of 60 days. Depends upon the number of “interest days” or the amount of the principal.

*(To be concluded in March.)*

**THE BUSINESS EDUCATOR AND EXPERT ACCOUNTANT. SUCHS TO PNEUMIA.**

On January 9th, Fred Haskett, dean of the N. Y. University School of Commerce. Accounts and Finance, died of pneumonia. He was also Pres. of the N. Y. State Society of Certified Public Accounts and of the National Federation of Societies of Public Accounts in the United States, and senior member of the accounting firm of Haskett & Sells.

Fred Haskett was born in Brooklyn, Jan. 11, 1852. He served an apprenticeship of five years in the accounting department of the Importing House of Frederick Butterfield & Co., of N. Y. City. He next entered the accounting department of the North River Construction Co., and soon had supervision of the construction accounts of the company. Later on he became a general bookkeeper and auditor of disbursements, after which he entered the profession of public accountant upon his own responsibility. He held many important administrative offices. Two years ago he was engaged to examine and report upon the system of accounting of the Bureau of Mint. Being the founder and dean of the University School of Commerce, he became in a short time a prominent man in business education circles.
A History of Penmen, Early Business Education and Educators in America.

Albert G. Scholfield's Commercial Academy of Providence, R. I., the second Pioneer Business School of New England, was founded in 1846. At that time the idea of such a school was new and strange, and the sceptical public was induced to patronize it only through the most vigorous soliciting of the principal. For the first three years only business men and their clerks were induced to attend, but by the very persistent efforts of the manager, young men were drawn into the school, and the idea gradually grew into public recognition. It was shown that good accountants could be made in a school, and that growing up in business through apprenticeship was not the only or best way of mastering the science of accounts.

During the earliest years of the Scholfield Commercial Academy, writing and accounts were the chief branches taught. Gradually the public grew less sceptical and recognized the necessity of business training as an aid to young men wishing to engage in business as merchants, clerks and accountants. Then other branches were added, until in 1880, the name was changed to Scholfield's Commercial College. The common and higher English branches were embraced, also a mechanical drawing department. In the absence of suitable quarters, not to be found in the city, the Academy was first located in the Mallet building, while the Jones building was built in 1847, with apartments arranged for the Academy. The growth of patronage was so great in 1850, that the Academy was removed to the McNeal building, where it thrived beyond all precedent. At this stage of growth, it crowded seven large apartments to their utmost capacity, until the constantly increasing number of students compelled the removal of the College to the Howard building, where it occupied the entire 3rd floor, 62 feet in width by 198 feet in length. One room contained 100 students, 4 other rooms had a seating capacity for 300 other attending students. In time, other removals were made to more modern buildings, and finally to 28 Westminster St. The College patronage has ranged from 50 students to 250, and the teachers have numbered from 2 to 12, as the business has demanded. During the 56 years of its existence, the College has enrolled 12000 students, and graduated 8000 accountants.

(Continued.)

Our Report

We desire hereby to thank Mr. John Robert Gregg, Chicago, Mr. W. E. White, Quincy, Ill., and Mr. F. N. Van Antwerp, Louisville, for their assistance in putting out what now appears to be one of the most concise reports thus far made of the National Commercial Teachers' Federation. Their services were as prompt as they were efficient.

A Penman's Toast to the Farmer.

"Here's to the Farmer that tills the soil, that grows the corn that feeds the geece, that raises the quills that flourishes the birds, that lays the eggs that lay in the nest that Penmen draw."—C. S. CLARK.

No Concern.

I have greatly admired the color effects on your cover designs which are far in advance of any other similar publication, and when I send you a design for the cover, I have no concern as to its artistic effect when engraved and printed. THE BUSINESS EDUCATOR from cover to cover shows the effect of your skill and judgment concerning matters artistic.

Sincerely yours,
E. L. BROWN.

How's This for a New Year's Present

Born, Paul Howard Staley, son of Mr. and Mrs. W. I. Staley, Salem, Oregon, Jan. 1, 1903. Congratulations. May all prosper and the son "get there" sometime as a practical educator as has his father.

Worth Hundreds of Dollars.

Every number of THE BUSINESS EDUCATOR represents the highest grade of work in our profession, the originals of which are worth hundreds of dollars. No one who is at all interested in penmanship can afford to do without a single number of THE BUSINESS EDUCATOR. I hope you are securing a very large subscription list this year. With best wishes, I remain,

Your friend,
E. C. MILLS.
Rochester, N. Y., Oct. 9, 1902.
Observation and experience have been his instructors, conscious responsibility his incentive; and singleness of purpose admitted of nothing else but to go forward in the line of duty. For what he is and what he wrought.

Lessons in Engrossing—Number Twenty-three—By H. W. Kibbe, 181 Tremont Street, Boston, Mass.

Memorials and testimonials are not always written in the form of resolutions; they are sometimes short, and in making up a booklet it is desirable to make as many pages as possible; in such cases a few lines may be written just a little above the middle of a page, well separated, and one or two ruled lines drawn above and below as shown in copy. Slender end pieces of any desired elaborateness may be substituted for the ruled lines. Following this plan, no attention is paid to paragraphs or even sentences; just fill up the allotted number of lines.
The student should bear in mind that good writing is the result of a systematic course of training of the writing muscles. These muscles are located in the hand, forearm, upper arm and shoulder. While all these muscles are used more or less, in the various kinds of writing, the muscles of the arm predominate in strong business writing. The use of the muscles of the fingers and hand give accuracy of form, the larger muscles give strength and endurance. The finest writers we have, have acquired wonderful control of all these writing muscles, so that a slight action of the fingers or hand can be brought into use almost imperceptibly, while the hand is being propelled or swung along from letter to letter. The ability to combine the use of these smaller muscles with that of the larger muscles—those of the arm—combined movement, if you please, gives the greatest skill in writing.

It is well, however, for the beginning pupil to devote himself largely to the use and control of the larger muscles, because, as a rule, he has been accustomed to an excessive use of the finger muscles. A little time spent daily on some of the large movement exercises in Plate One of the January lesson—preferably some one appropriate to the copy to be practiced—will tend to develop the use of the arm muscles. Then a faithful effort on a copy comprising some letter or letters of the alphabet will gradually develop control and accuracy. It must be remembered that nice control and easy movement come slowly. It takes time, but every copy or exercise mastered, brings you that much nearer the goal. He who does his best every day, betters his best.

The copies to be taken up this month consist of the remainder of the one space letters and the figures. These will tend to continue the development of the movement of the hand from left to right. Great care should be given to the space between letters, and to the width of the letters. Fairly formed letters, nicely spaced, make more legible writing than well formed letters irregularly spaced. It is a good rule to make the space between the letters wider than the letters.

Each letter has something about it that is peculiar to itself. Whatever this is, must be discovered and cultivated. Then every letter, or nearly every letter, has some double; that is, some letter that is likely to resemble closely, especially if it is a little deformed. Consequently, care must be taken to avoid this deformity.
PLATE 6.—Copy No. 1 in this plate is a good exercise to practice awhile at the beginning of each practice period while working on the remainder of the copies on the minimum letters. It serves to develop that easy swing from left to right. Make two little check marks about an inch apart, then glide back and forth around them. Notice the little double turn in the first part of r, and that little dot as a finishing point before turning to the next letter. The o should be nicely closed at the top, or it may resemble the r. The a is a slanting oval, nicely closed at the top and finished just like the small i. Be sure always to drop to the base line in finishing the a, as that is the chief distinction between the o and a. Practice these letters freely, both the way the lines run and across the lines, as illustrated in Plate Five of January lessons. This cross line practice stands supreme as a scheme for cultivating good spacing and lateral movement.

PLATE 7. It is an excellent plan to take any one of the one space letters and repeat it about one-third across the page, and then finish by adding a flat figure eight over the entire group of letters as illustrated in copy No. I of this plate. Always begin the c with a distinct dot or period at the top and let it curve but little on the downward stroke. Of course, much curvature does not detract from the legibility, but it does somewhat from the beauty of the letter. Learn to join the c's nicely without lifting the pen. The a should be sharp at the top and closed nicely at the base. The style of r in Copy No. 10 is a good standard letter. Care should be taken to get that little kink in the top. Many make it too quickly to get it just right. If made too narrow, it may be mistaken for i.

The various words given in these copies are selected with a view to giving good words to practice the different letters and joinings of letters as they are introduced. Try to get so you can write them smoothly and space the letters nicely.

PLATE No. 10 contains words using all the letters introduced up to this point. Take them one at a time, and write them over and over until you can make them look like good business writing.

It is worth a great deal to anyone to be able to make good figures rapidly. In order to acquire this accomplishment, it is necessary to take the different figures, one by one, and study them and practice them the same as you would the different letters of the alphabet.

There are but ten different characters to master in order to be able to express all the numbers we will ever have occasion to write. But each figure should be very distinct and precise. Each figure has something about it that is different from all the other nine figures. Learning to make good figures means learning to bring out these different characteristics distinctly and to do it quickly. An excellent place to take up the figures is right after the thirteen minimum letters, as the practice on these small forms should prepare you for practice on the figures.

We will take the figures made principally of straight lines first, as we can get started just right on them with less difficulty than the more complicated figures. Some people make smearsy, ragged, heavy looking figures and others make sharp-line, clear-cut figures. It is the latter kind that you should cultivate—those that have life in them. If you place your pen on the paper, move it slowly and carefully, and bear on the pen slightly, you make such figures as primary grade pupils would make. If you place the pen on the paper and move it with a quick, sudden motion you produce a clear cut figure.

Take the figure 1 and make it with a light, firm stroke. Learn to place it accurately. Stop with the pen on the paper. Move the hand to the right about half an inch, letting the pen touch the paper lightly as the hand glides from figure to figure. It is a good plan to count "one" for the figure and "two" for the dash or glide. Make them about the size of the copy. Do not try to make them very rapidly at first—let speed come afterward. Make a page carefully, then take the figure 2. It has three quick movements—down, out, down; or 1, 2, 3. Always begin the last part of 4 higher than the first part and stop short below the lateral stroke to avoid giving it the appearance of 7. Next take the figure 9 and make the top just like the small a.

PLATE VII
which has already been practiced, then make a quick downward stroke, stopping a little below the base line. Be sure to close the \(9\) at the top, otherwise it may resemble the \(7\). There are two motions in making the \(9\). After these figures have been practiced liberally individually practice them together. See how many of each you can make in a minute. In making the \(7\) press the pen to the paper, make a light quick movement to the right, then downward, finishing below the line as in the \(9\). The \(7\) sometimes looks like the \(4\). Avoid this tendency.

Make the \(0\) small, round, and always closed at the top. A flat \(0\) is sometimes mistaken for a \(1\) and if left open at the top, for a six. Begin the \(0\) a little higher than the other figures so it may not be mistaken for an \(O\), and finish with a quick turn at the bottom.

Review the \(1, 4, 9, 0, 7\) and develop speed on each. Never practice, even in speed drills, faster than you can make good figures. Make the \(2\) by pressing the pen to the paper, making a little dot or a very small loop, turning quickly to the blue.
line and finishing just like the cross stroke in a 4. Be sure to make a sharp point where the 2 touches the line. Begin the 3 the same as the 2 and make two quick turns downward and to the left. Exercise No. 8 in plate eight is excellent to develop the motion used in making the 3. Place the pen firmly on the paper, then turn downward and to the left rapidly. Give it a little swing just as you finish. Make very small loops. Some finish the 3 with a dot, while others lift the pen while swinging it around to the left and upward. Finish the bottom part of the 3 like the 4, and always try to join the little dash at the the top of the 3 to the beginning point.

In making the 8 press the pen to the paper, form a small 8 and finish by gliding the pen up through it toward the next figure. Review all the figures, try your speed on them separately and in combinations, then see how neat a page you can make. Practice across the lines, making figures on the lines and between the lines, as indicated on plate 9. Figures should be small and equally spaced in all directions. This kind of practice should encourage proficiency in arrangement, size and spacing.
Lessons in Practical Business Writing

BY

CANNON'S BUSINESS COLLEGE.

Number Six.

Lesson No. 32.

In this plate and the next one I give some movement exercises which you no doubt will be interested in. They will develop your movement, form of letters and the art of joining them together.

To the Student.

The lessons from now on are intended to act as a review of what we have gone over and to gradually lead you into body writing. It will not be necessary for me to give you instructions regarding them, but I am sure that if you follow, study and practice them carefully, you will develop a strong business hand.

The Business Educator

The Business Educator is the Best Advertising Medium of Its Class.

We have recently been hearing from a number of advertisers who hesitate, unwillingly and voluntarily commend THE BUSINESS EDUCATOR as an advertising medium in words of the very highest terms.

Advertisers are beginning to find out that THE BUSINESS EDUCATOR is unquestionably the best medium in its special field. Our subscribers have no doubt noticed that more advertisers are coming to our columns and that the old ones remain.

We wish to state in this connection that much of our advertising patronage grows, as it is bound to do when others learn of the real value of our columns, the journal will be enlarged, so that as much or more space will be devoted to advertising as in the past, with the addition of pictures, etc., as has been devoted to this purpose in the past.

But why is THE BUSINESS EDUCATOR the best advertising medium of its class?

The reasons are clear. It is the most beautiful, interesting and valuable journal of the kind, and is therefore preserved as is no other similar publication.

We publish no cheap student's edition. It is well known that the student's editions of some journals make up a surprisingly large part of their circulation, and that these student's editions are worth little or nothing to the advertiser of school books, etc. These editions are thrown aside after the first issue, and so the writing lesson.

Not so with the attractive BUSINESS EDUCATOR. It follows then that the better editions of these journals are surprisingly small, and that when they are compared, the business school edition with THE BUSINESS EDUCATOR, the latter seems as a mountain upon a hill.

These are only a few reasons for advertisers to consider. Many more could be given. Investigation will lead to no other conclusion.

Take Business Schools.

Now and then we hear some disgruntled, misguided individual assert that most business schools are "fakes," "frauds," "imposters," etc. As a rule the person speaking is not a success himself, and he naturally "has it in" for business schools for having discovered that he was a failure as a teacher or as a man.

There have been, and there are, some business schools, but nothing to what there are in the clothing business. There are fakes in our line, but each year they are getting fewer.

We have been pretty intimately acquainted with business schools and business educators for the past decade or two, and must confess to having known some pretty tough cases, but I'm that "bygones be bygones."

Our magazine is a credit to the community, and the average commercial teacher and penman is intelligent, practical, progressive, temperate, and moral.

Few people as a class are more temperate than penmen today. At our associations we rarely see a glass of beer pass the lips of a member, and few or no cigars have been noticed. Then, too, the conversation has generally been unusually chaste and upright.

These things mean that business education stands for moral education as well as for commerce. Since the teachers of business schools are moral, upright men and women, it means that the schools in which they labor are the same.

Where you find one "fake" business school you will find many good ones. Business schools, commercial teachers, and penmen are all on the mend, and have been from the beginning. They now compare favorably with the best in any other profession.

It is now an honor to say that you are a commercial teacher or a penman. As so it shall continue. Onward and upward, forward and outward is the outlook.

Our Portraits

"What is worth doing is worth doing well" is an old, old saying, and well worth keeping in mind. Of course, one can stand out through the long run, the good, the excellent is better at any price than the poor, the middling or the cheap. The portraits that we present from time to time are the best we can secure. They are good size, fine in quality, and in price two and three times as expensive as the small, cheap ones so frequently used. We receive many compliments upon this one thing alone. But in this, as in other things, THE BUSINESS EDUCATOR endeavors to lead all others of its class.

At Chicago.

While enroute to and from Milwaukee we stopped in Chicago to visit pupils and friends. Business schools, books, and Rounds were each prospering and progressing. Mr. H. is building up quite a business in designing and engraving. Mr. P. is forging to the front as an illustrator, and is the owner of a most commodious home in Forest Park. Mr. K. is doing the finest engraving in Chicago, being the head man at Ricketts' engraving establishment.

Mr. Ricketts, the engraver, has built up a substantial business, and years ago he had a severe sickness on account of too many years of hard work, and we were sorry to learn, while there, of the serious illness of his family. Our best wishes, brother.

Mr. J. C. Y. Cornwall, the veteran card- writer and all-round true gentleman, unable to carry on his business because of age, being seventy-one years old, is now enjoying life as became one used long and well. He has doubtless met more famous men and women than any other man in our calling. He is a man whose talents would hold a credit to any profession. Penmanship has been a peculiar gift as penman, and polish and true worth as a man. May we see many more New Years together, honored brother. Here's to your health and congenial, hospitable family.

Brown Burned Out

The following was taken from a recent letter by W. E. Compass, Principal of Brown's Business College, Rockford, Ill., and is self explanatory:

"Enclosed find draft for $100 in payment of our subscription to THE BUSINESS EDUCATOR.

"You have no doubt learned of the total destruction of our school by fire on Thursday night, December 11th. I am pleased to announce that, owing to the prompt and efficient action on our part, we are not only quite comfortably housed in very pleasant temporary quarters, and that the question is being agitated by the business men here of a fine building for a permanent home for Brown's. It behooves us, then, to have it ready for us some time next fall.

"We lost only a few days school on account of the fire. In fact, our shorthand department resumed work the Monday following the fire, having lost but one day. The bookkeeping department lost only three days. This scores another mark for President Brown's ability to bring things to pass."

The Bounding Stag.

Mr. W. E. Dennis, the inimitable penman, flourisher and engroser, whose advertise-ments appear in this journal, has recently gotten the finest specimen of the kind ever seen in this country. Mr. Dennis has a peculiar stylish's old English lettering, with the added beauty of the penmanship of John L. Williams, and we mean the rough, untidy look of the pen of that world renowned penman. When it comes to the hand of Mr. Dennis, we doubt whether Mr. Dennis has or ever had an equal in this art. The swans, birds and deer are certainly the embodiment of grace and beauty. How anything can be done in this line, and yet not be what we do not know. Aspiring penmen, professionals and schools will do well to secure a copy of this masterpiece. It is certainly worth more than the price asked, as no one but a Dennis could have done the work.

Brown's Business College, Rockford, Ill.
The Students of Spencer's Business College, Kingston, N. Y., made the principal of the Commercial Department, Mr. L. E. Stacey, his guest a few days ago. This speaks well for Mr. Stacey and the students who realize that they appreciate a good thing.

T. J. McNamara, the well known penman of Philadelphia, Pa., recently renewed his subscription to The Business Educator, and with this, the following words: "I consider your paper the best of the kind ever published."

We might add that Mr. Rineer has voiced the opinion we are receiving from all quarters, which is truly encouraging, indeed.

J. W. Anshutz, a former Zanerian student, recently submitted his resignation from the Zaner & Bloser Employment Bureau, with the Lebanon, Pa., firm.

Mr. Anshutz is a well educated, skillful, reliable gentleman, and will no doubt make a valuable addition to the faculty of the above named institution.

Miss Julia Bender, a student of the Zanerian during the past summer, is now teaching penmanship in the business department of the W. Va. Conference Seminary, Buckhannon, W. Va.

Miss Nellie B. Hight, of Saco, Me., has been doing some itinerant teaching in writing at Eastport, Me. Miss Hight is one of America's most skillful lady penmen, and possesses the qualities of an artist in the way of enthusiasm and hustle, which go to make up a successful teacher of writing.

The Mountain State Business College, Parkersburg, W. Va., on Dec. 7, 1902, gave a house concert by Mr. John J. Edgell, of the firm of Edgell & Company, in the Auditorium. Mr. Edgell was in the audience.

The Register, the official organ of the Knights of Columbus, has in full front page article the story of number, sketching the career of Mr. J. Sweeney, the editor of Chat. We are pleased to note that Mr. Sweeney received some of his varied training, and under the instruction of Mr. J. J. Edgell, the very able proprietor of the Egan School of Penmanship, Boston, N. H., by the way, the handwriting of Chat was exceptionally good. Those of our readers familiar with Chat will appreciate the special charm that has come to one of the annual events of importance there. Cemtris Griscom, the student of Mr. Sweeney, representing The Hilarious Real News, of the Marine Co., of the latest of the great Morgan combinations, was the presiding officer.

and Senator Hanna and Ex-Governor Renville D. Minneton, Director of the Census, were the speakers. It is needless to say that the exercises were up to the usual high standard.

L. A. Arnold, the new proprietor of the Central Business College, Denver, is putting the school on a really first class footing. The qualities that have made Mr. Arnold good presidential times are also characteristic of the National Federation of Commercial Teachers, will win success way up the Rockies; former students of the college have told out, his enthusiasm never burns low.

H. B. Smulliere, principal of the Elliott Commercial School, Clarksburg, W. Va., recently sent out the following number of the Clarksburg Daily Telegram.

The Globe Business College, of St. Paul, Minn., is in the hands of the young men who might well fill the description (except the money in their pockets) as they are given in a very old dictionary. It says, "The flea is a small animal with six legs, an unfledged creature." We receive literature of every description, from St. Paul, containing bright original photographs, illustrations and advertisements of the Globe Business College. Success to these young men who have added boys and girls to their excellent school, but who carry the principle into their homes, a donation for Mr. Knoxville of the Clarksburg Daily Telegram. If Mr. Green is the author of the wonderful rate, the other fellows might as well hop into the band wagon.

Mr. E. N. Hull, who is with the Home Correspondence School, Laconia, Mass., has prepared a most excellent syllabus on Commercial Law, basing his outline on the law of business. The accompanying parallel readings in many other books on this subject are equally well prepared. These "puzzles" would be helpful to many of our readers who are commercial teachers.

Through the courtesy of E. M. Barber, of New York, and Mr. Blachley, of the By-Laws of The New York State Society of Commercial Teachers, we are able to note that in December of last year there were 80 members, and among them are at least four former students, Mr. John H. F. Smith, Mr. John K. Sparrow, A. W. Teele, and A. O. Kittredge.

The December number of The Michigan Alumnus, published in the interest of Michigan University, contains a very interesting article on the subject of Commercial Education. Among many good things in these articles, we append the following:

"The hard test which it is necessary to make that not all of the men who emerge from college with degrees are educated, in any real sense of the word, by night work and private study, has made up for the work that would be done in the classroom, and whose mind is better trained and stored with useful knowledge than that of the colonists of old who built a university was largely occupied with social and political discussion."

We acknowledge with thanks the receipt of attractive announcements of the American College of Medicine and Surgery and the Dental College, both of which are under the direction of Prof. H. P. and Mrs. N. P. Brown, with Northern Indiana Normal School, Valparaiso, Ind. By the way, in our next number we have an exceedingly interesting and practical article from President Brown, on "The Relation That Should Exist Between Teacher and Pupil." Those who know best the remarkable personality of President Brown, and associate most a treat in store for them.

We note that W. E. Lamb, formerly of Vassalboro, Me., is now in charge of the commercial department of the Freedhil Military School, Freehold, N. J.

Mr. H. E. Brown, of the commercial department of the Rock Island (I11.) High School, is to make a talk at the high school of Naperville, Ill., which will be present at the public opening of the new school of Naperville, Ill., which was held Dec. 19th. Mr. Brown is to conduct a talk on his being able to work in so handsome and convenient a new building as has been a befitting welcome to his old home in having Mr. H. H. Hayden as his city superintendent. We know Mr. Hayden to be one of the progressive educational men of Illinois who are wide awake to the possibilities for good educational training, when properly carried on.

We received with pleasure, an invitation to the graduating exercises of the Capital City Commercial College, Des Moines, which took place December 20th. We wish that we could have attended this event, and heard the chief speaker of the evening, President Honer H. Scred, of the Iowa State Normal University, who was the speaker. He was one peculiarly fitted to call forth his best efforts. The four C's is the largest commercial school in Iowa, and one of the best in the land.

"Learn to Do What the World Wants Done" is a good motto, and it is one of the advertising specialties of a booklet sent out by the Nebraska Business Institute, Lincoln, Ne. It will be of interest to some of our older readers, at least, to know that the principal of this school, Mr. A. E. Atkinson, is a son of Mr. E. A. Atkinson, the pioneer commercial teacher of Sacramento, Cal.

School Advertising

The Northwestern Business College, Madison, Wis., is issuing a clean eight page journal.

The Danville, Ill., Business College Jour- nal has been issued for some time favorably. The President, Mr. J. C. Walker, is a man prominent in his profession.

The Parsons, Kansas, Business College, is curiously illustrated, and we may judge from the advertising received.

The Capital City Commercial College, Des Moines, Ia., issues some of the highest grade things in our line of business. The latest are a booklet entitled, "A Directory of New Students of the Four C's, and the other is a folder containing illustrations of their big work.

The American Book Co. has just issued an illustrated twelve page circular devoted exclusively to the Williams & Rogers series of "Modern Illustrative Bookkeeping.

Rusklin College, Trenton, Mo., is issuing a fifty-two page catalogue of that famous institution. The plan and scope of this institution are unique. We are sure that all of the Business Department, is one of the big men of the profession.

The Santa Rosa Business College and Business Institute, is the title of a very attractive college journal by J. S. Scott, Santa Rosa, Calif.

On Sunday, December 25, 1902, the South Bend Tribune presented some attractive illustrations of the proprietor, faculty and students of the South Bend Commercial College. We have since learned how connected with either of these institutions.

C. E. Elster, a Penmanship Expert and Eclading Teacher, Says:

"I have just examined with great care a copy of "The Natural System of Penmanship," and wish to say that you have rendered the public a real service by putting before the public something entirely new in the way of a series of lessons in practical writing."

"The free trip is a work of art, the illustrations of position, penholding, etc., are natural.

"The abundance of well written copies given me to examine, and published in good business writing, and the work in correspondence is a very commendable fea-

Practical Penmanship Suggestions.

By an Observing Penman.

Fine penmanship does not come to those who get tired of writing and thinking of graceful forms.

Small things neglected often mar the appearance of an otherwise beautiful page.

Strive to make every stroke count.

To write with poor pens, paper and ink is enough to make any one sick of penmanship.

Clean your pens often and keep the arm swinging on the forearm muscle and little finger rest.

Be patient, practice, think, then practice again.

All things come to those who wait, and work.

Intelligent perseverance makes success of anything.

Successful penmen imitate the postage stamp by sticking to one thing.

Does it pay to spend the winter evenings in hoarding when there are so many calls for good penmen at good salaries?

If the future penmen are not up and doing they will be down and out for nothing.

Let your overtover ambition be to make the most of your time, talents, heart—everything.

Teachers and Positions

The Practical Age

The Practical Age, which is very exactly taking its place with the standard magazines of the country, offers the following great values for the following small sum of money:

Frank Leslie’s Popular Monthly. Frank Leslie’s Art Calendar for 1903, and the Practical Age, one year, for $1.30.

The Practical Age is a magazine for people who think and act. The editorial discretion exercised in the selection of manuscripts appearing in the Practical Age, is experienced and fair, making for the best interests both of magazine and readers. Besides the several departments already appearing in the magazine, new, interesting, and invaluable departments will be added, from time to time.

Artistic Engrossing and Designing

Lessons in
Off-Hand Flourishing.

BY
W. E. DENNIS
Brooklyn, N. Y., 337 Fulton St.

Number Five.

In this lesson we will endeavor to present a more practical side of flourishing. Old English and German text lettering never look complete without the flourishes. There are two distinct ways of flourishing. Old English and German text, especially Old English. One, the engravers' style, is making a very plain and rather set flourishes, having the appearance sometimes of being done with a pair of dividers. This is a neat and often a very appropriate style, such as is often used for diploma headings, in resolutions, etc., where a gaudy display of flourishing would be entirely out of place, and give the work a ridiculous appearance. But in large pieces of ornamental penmanship where great command of the pen and a fine conception of harmony and grace are to be displayed, then a different style is employed, more like the specimen given herewith. In this style of flourishing text lettering a great many graceful and intricate curves may be introduced with good effect, only the penman should bear in mind that even in this he can overdo. Nothing detracts more from a graceful piece of flourishing than to load it down with senseless and meaningless ornaments. The ornaments should add and not detract from the work. Tasty and neat ornaments in the right place tend to give finish and beauty to the flourishing. A good rule is to stop when you are not sure that something more will add to the general effect. Much study and observation are necessary to show just what to ornament. As a rule beginners put too much, for getting that it is not the amount of work they put on, but the manner in which the lines and ornament are arranged that gives character to the work.

Much boldness, freedom of movement and confidence in one's hand are necessary, which come only by practice. Put in the bold strokes first—those which have the most to do in giving the right character to the work, then the minor strokes suggest themselves, and last of all the ornaments and delicate touches. Be careful not to flourish a piece of lettering so much that you see nothing but flourishes and no lettering. The lettering should be the foreground and the flourishing the background to give it the right pictorial effect.

"SCRIB" THE "SCRIBBLER"

Will send you beautiful specimens including Flourished style, embellished with gold. A line of fancy Script, and 1 dozen finely written cards for use with stamps or silver.

C. D. SCRIBNER, 49 West High Street, Room 38, Columbus, O.

DO IT NOW. Send 25c and receive 3 Sets of Capitals by A. D. Taylor, who was censured to be the finest penman that ever lived. Zandonay says: "The large set is the best I ever saw." Chariton V. Howe writes: "They are the finest capitals I have ever seen—and in fact, they are ideal in their grace and beauty." A Pleasant Surprise.

C. S. JACKSON, 90 West 2d Ave., Columbus, Ohio.

WANTED A well educated, male teacher of the Gregg system of shorthand, who can assist in the type-writing department. Address, BRYANT & STRATTON COLLEGE, 64 LOUIS, MO.

Degree Business Course

at home or on campus, by correspondence or come and take Resident Course at the College. Course covers Bookkeeping, Shorthand, and all the commercial branches, and diploma with degree of "Bachelor of Accounts" will be granted on finishing Terms. Boarding department in college building. For full particulars, write CHAS. J. BURTON, PRESIDENT, Mahaska Business College, SKALKOSA, Ia.
Reforms and Reformers in Writing

Part Four—The Era of Beauty and Business.

About 1830, Dunton, Lisk, and Spencer came upon the scene of action, as regards penmanship. They found the round and angular hands being taught. They discovered that the former was too slow and the latter was too illegible. They decided to abandon the heavy shading and extreme rotundity of the first, and the extreme angularity of the second. The semi-angular (angular rather than round) hand was created. It was a distinct improvement over its ancestors. It was graceful, fine-lined, and free. It enabled people to write more rapidly. Its characters were connective and contained certain essentials of speed. In fact, with the new hand came what is now known as the connective slant.

Previous to this, in the old round hand, the up and down strokes were made on about the same slant by means of retracings. But in the semi-angular hand, the retracings were omitted and the up strokes slanted more than the down strokes. It seems to be a fact that the up strokes of writing have been created for the purpose of speed.

Following in the footsteps of these reformers came Ellsworth and Ames, who are still living. Many more names come to mind and deserve to be mentioned but space forbids. Spencer’s sons, particularly Lyman P., and P. R., Jr. (still living), and H. C., and H. W. Flickinger, are names we cannot omit. They improved, beautified, and unified the heritage they received.

The semi-angular hand was both a success and a failure. It was a success inasmuch as it was an improvement upon that which superseded and in that it is truly graceful and beautiful. But it was a failure in the business world because it was too beautiful for every day, knock-about service. Its claims were that it was a thing of beauty and a thing of business. Thus it was a thing of beauty rather than of business. The world, in 1850, demanded a handwriting that was at once graceful and rapid, and the Spencerian, as we now call the then new creation, supplied that demand admirably. It is the same story over and over: the same round-hand that was a success in 1830, proved a failure in 1860. That which proved a success in 1830 could not meet the conditions of 1860, without at least, considerable modification. The forces that demanded elaborated script characters in the eighteenth century, condemned the same in the nineteenth. The forces that demanded beauty in 1850, deserted it in 1860. Conditions changed gradually. Commerce increased surprisingly. Writing changed only at intervals. Reforms and reformers were necessary. Doctors in all lines will fail behind. Doctors do not seem to be an exception to the rule.

---

What C. E. Brown, Pen Artist, Has to Say:

“I have perused the pages of "The Natural System of Penmanship" very critically, and will say that I find the instructions for penholding, position, etc., brief and to the point. The paragraphs are accurately written and carefully graded. The book in its entirety is practical, artistic and instructive, and its pages challenge emulation as well as admiration.

It is sold for $1.00 to Hofmann’s Metropolitan Business College, Pub. Dept., Milwaukee, Wis., and receive Guide and "Progress" magazine free for one year.

CATALOGUES

The New Britain, Conn., Business and Shortland College Journal, indicates a successful school under the management of T. Clay Cavanagh, and under the principalship of Miss Aina P. Hudson.

"A Brown Study" is the title of one of the brainiest, loveliest, best envelope-booklets received at this office. It is issued in the interests of Brown's Business College, Day report, La., under the management of J. E. Gustus.

Central College Journal, Denver, Colo., published by the Central Business College, L. A. Arnold, President, conveys the impression of a thorough, up-to-date, big business school.

"A Yard of Orders" is a unique folder put out by the Practical Text Book Co., of Cleveland, O. On one side is a yard measure, and on the other are the names of prominent schools who have recently ordered books. The statement "25,000 books to twenty-five commercial schools" is startling, but is substantiated by the names of the schools and the number of books they ordered being given.

The Parsons, Kansas, Business College, J. C. Olson, President, issues a very neat catalogue printed on pink paper covered with purple, with a very graceful monogram in gold printed thereon.

The Lansing, Mich., Business University is greeting its patrons with a silkworm-like covered catalogue of pale green with half-tone illustrations on the inside printed with a darker tone of the same color. The catalogue has more individuality in its get-up than most such catalogues have that reach our desk. It is a credit to the school and the cause it represents.

The Commercial College of the Ohio University, of Athens, Ohio, issues a little twenty-two page circular concerning that institution. We are personally acquainted with Mr. Copeland, Principal of the Commercial Department, and Mr. Cunnin, Instructor in penmanship, and know them to be men of ability, enthusiasm and character above the average.

The Lima, O., Business College, issues a thirty-two page catalogue covered in red that bespeaks a good school, under the proprietorship of Mr. J. P. Chees, a gentleman with whom we touch elbows as students in '86 at Delaware, Ohio.

"The Sacred Heart Collegian," Water town, Wis., is a clean, well written and printed journal of its kind.

The Souvenir Program on the thirtyseventh anniversary of Spalding's Commercial College is a very neat thing. A splendid half-tone mount of the President, James F. Spalding.

The Central Commercial College, Cumberland, Md., issued some very beautiful invitations to its fourth annual commencement on December 19, 1902.

"The Three P's—Push, Pluck and Perseverance" is the unique title of a college journal issued by and in the interest of the International Business College, Saginaw, Mich.

HAVE YOU READ

"What Official Reporters Say About the Benn Pitman System of Phonography?"

IF NOT

We will send it to you gratis. It is an array of solid inordences by the bone and sinew of the Reporting Profession of the United States.

THEN READ

"What Leading Schools and Colleges Say,"

And you will realize that the Benn Pitman System of Phonography Is the Best for the Reporter and the Best for the Amanuensis.

PUBLISHED BY

The Phonographic Institute Company
CINCINNATI.

BENN PITMAN, President. JEROME B. HOWARD, Manager.
"The Penman Entertainer" is the title of a blue backed, nicely gotten up circular by Francis H. Courtney of N. Y. City. Mr. Courtney is planning to give out a little of his versatility and talent in the queen of arts to public entertainment.

"Simpson College Bulletin," Indianola, Ia., is a folder gotten up somewhat outside of the conventional lines. Mr. E. L. Miller, Principal of the commercial department, is one of the best men in our profession.

Cannon's Commercial College, Lawrence, Mass., G. C. Cannon and H. O. Keeling, Principals, is issuing a very neat, high-grade booklet in the interests of their school. The same is covered in dark green and printed in brown and black. This same school also issues a well printed four page circular.

"Plain English" is the striking artistic title of a sixteen page circular advertising a text book devoted to that subject, published by The Practical Text Book Co., Cleveland, Ohio. On the back is presented a half-tone illustration of the new home of the company and of the Spencerian Commercial School. Circulars issued by that firm are of the very finest grade, and evidence more originality than any similar line of circulars received at this office.

The Commercial Text Book Co., of Des Moines, Ia., is sending out some attractive advertising calling attention to their line of text books, which are meeting with unusual favor.

One of the very best, if not the best illustrated school journals received at this office, came from the Ryder-Moore & Stewart School of Business, Trenton, N. J. It is worth looking into.

The Trenton Times, December 31, 1892, contained a full two page advertisement of this big institution. This is one of the largest and most beautifully illustrated advertisements that has reached our desk.

YOU OUGHT TO HAVE IT: addition, subtraction, multiplication, fractions and square root, and velevon work, only 10c. LIGHTNING CALCULATOR, Box, $1.00. Write for Circulars. D. L. Musselman Pub. Co., Quincy, Ills.

The Automatic Shading Pen

STOAKES' IMPROVED
large taper holder, nickel-plated ferrule
Sample, 10c Each.
STOAKES' DUPLEX
SHADING PEN.
Each pen makes four styles of mark and does a greater variety of work than any two ordinary shading pens.

SEVEN PENS comprise one set. In sizes from No. 6 to No. 8 and the seven pens will do all and more than the old school of 24 shading, marking and plain pens combined.

Price per Set. $1.00, Sample, 15c.

My Shading Pen Inks are without a rival for quality and color.

Sample for 12c Stamps.

Anna M. Thurston, Mgr., 378 Wabash Ave., Chicago
In this number we present a variety of show cards and price tickets, made up of the alphabet and figures given in October and November numbers. This style of alphabet can be made very rapid in any size desired. The size of show cards depend more on the surroundings than on the amount of lettering they contain.

Cards, something of the order of "Goods that never vary," in above illustration, should not be larger than 1½x2 inches. In this size and about the same wording using a brush that will throw a line one half inch wide. The same composition on a card 1½x1 inches, or even less, may be made strong and prominent with a smaller brush or lettering pencil.

The tip finish—small horizontal curve, at top and bottom of letters, will add strength to lettering of this style. This can be neatly done when you have the lettering pencil worked down to a chisel point as when finishing a word, or when paint is about all used in the pencil. Care should be taken not to have too much paint on brush or pencil when adding this light curve stroke.

Price cards may be made any style or shape with good results. To cut out novel designs, first outline a pattern the desired shape and cut it out with scissors or sharp knife for a pattern in future use. Square cards may be made very neat with either a plain border line or simple scroll. In the above illustration we give a few scroll outlines which may be used to good advantage. An endless variety of neat and novel designs can be used in the make up of display signs, window cards, etc.

Our publications are universally recognized as the finest along their lines. The prices are very low, considering the quality and character of the work. All books mentioned below are sent by mail, postpaid.

Zanerian Theory of Penmanship—A thought-provoking work that deals with the numerous problems pertaining to penmanship. Some have termed it the Shakespeare of penmanship literature. All who intend to teach writing should read it. A hook of 176 pages, cloth bound, $1.00.

Lessons in Ornamental Penmanship—A work in slip form embodying the $100 course formerly given by us, with some extra plates. A thorough and complete work for home learners, 75c.

Compendium of Simplified Vertical Penmanship—in book form, and by far the most thorough and complete instructor in vertical writing yet published. 50c.

Manual of Simplified Script—A work consisting a thorough, graded course of photo-engraved copies from the pen of that master penman and artist, C. P. Zaner, all in the simplified style. For rapid business purposes many persons believe this style of writing unequaled. 50c.

Zaner's Gems of Flourishing—A book devoted exclusively to the fascinating art of flourishing. It begins at the beginning, showing the student how to make the simplest strokes and exercises and finishes with a great variety of designs, showing the highest degree of skill attained in this art. Two editions of this popular work have already been sold. It unquestionably the best work on flourishing ever published. 50c.

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks.

Address,
ZANER & BLOSER, Columbus, Ohio.
Lettering and Designing
Number Nineteen
BY E. L. BROWN, ROCKLAND, MAINE

DECORATIVE END PIECE.
The original of this design was made 12½ inches long by 7½ wide. First draw top and base lines, then bisect these lines and place the face in the center, giving special attention to the drawing. Next draw the few lines of leaves and fruit, suggesting the light and shade. The light is supposed to come from the upper left hand corner, and all the shadows must appear on the fruit, leaves and face. Opposite this point, in adding the ink observe carefully the arrangement of the light and shade.

SPECIMENS RECEIVED.
Our first aim in planning this design was to make it appropriate for the purpose required, and our next to make it neat and artistic in appearance. The original drawing was made from sketches, and the lines were made quite strong and coarse to allow for reduction in engraving. The work on this design was all done with a pen, which fact accounts for its swing and dash.

Modern Art Publications for Artists and Teachers
Our publications are universally recognized as the finest along their lines. The prices are very low considering the quality and character of the work. All books mentioned below, are sent by mail, postpaid.

Portraiture—The best book yet published that teaches how to make portraits with pen, pencil, crayon, brush, etc. It is a large and beautiful book containing 376 magnificent and explicit instructions. Each specimen comes with a specimen. $1.50

Sketching from Nature—A most beautiful book that teaches how to sketch from nature. The bound copies are lithographed from actual pencil drawings and are much finer than photo-engravings. 50c

Light and Shade—A manual on drawing by Mr. Zaner. It contains 88 pages, 5½ x 7½, of illustrations, and plain, simple text. It is just what home students need, and what all others who are not at home in drawing need, to make them feel at home. Any one can learn to draw by the aid of this book. The illustrations are lithographed from actual pencil drawings and are much finer than photo-engravings. 50c

Pen Studies—A portfolio of twenty-four pen drawings, consisting of scrolls, objects, birds, fruit, scenery, etc. It begins at the beginning, showing the pupil how to make the basic strokes and to gradually evolve the finished design. 50c

The New Zanerian Alphabets—A guide to engraving, containing a great variety of alphabets, designs, etc., with complete instructions. A substantial book bound in cloth, 5-inch pages of this book will mail for only 35c.

Progress—C. F. Zaner's masterpiece in flourishing. It represents an eagle, forceful, beautifully modeled, and flexible, through intricate curves and branches. It is done one inch, and 2½ inches. The original of this design hangs on the wall of the Zanerian Art College, and is valued at $100. "It's great." "It's certainly a bird," are some of the expressions that have been made on seeing it. 50c.

Cash should accompany all orders. Remit by money order, draft, or stamps for small amounts. Do not send personal checks.

ZANER & BLOSER, Columbus, Ohio.

A MASTERPIECE of Penwork for One Dollar

Of course the ORIGINAL, which is 3½ x 3½, is the BROMIDE PRINT, 12½ x 18½ inches, which reproduces every line in the original exactly. Those who have seen it say it is a most wonderful reproduction.

What it is. A large spread Eagle, flourished and drawn in a graceful and unique manner. Below is the Declaration of Independence, reproduced in several different styles of Lettering and Writing, with a pen portrait of Washington, said to be an excellent likeness by those who claim to know. The whole is a masterpiece of "America," lettered in antique style, thus making it not only a grand piece of penwork, but something patriotic and very appropriate for the school room or any American home.

To the Student. A copy of this work is worth many times the cost, and to one having a taste for anything artistic, it will be found a pleasing and interesting subject. If, after ordering it, you are sorry and would rather have your dollar back, you can have it by returning the piece in good condition.

A BROMIDE PRINT, same size as the other, for ONE DOLLAR, prepaid.

Another Different Design for One Dollar.

TWO BOUNDING STAGS, six of original design, with a variety of Ornamental Designs, Lettering, Script and a Pen Portrait. This is an old design, but in a new way, and makes over almost every kind of Double Penmanship and Lettering. Some is sent with the following free penwork paper, but it is certain that it is equally good and can be used different. Just opened and ready to use. Written in line to form a

The two different prints for 1.75.

FULTON ST., BROOKLYN, N. Y.
Our success as Script writers will not be measured by the writing of a word but by sentences and pages. This is the most difficult of all, and requires our best efforts.

Slant and shade must be uniform: indeed, uniformity is the characteristic of all successful page writing, i.e., the letter is in the middle of a page must be as good as at the top or bottom.

Watch spacing between words and sentences. The looks of a page can be improved by spacing up the ends of the strokes.

The idea that fine Script writing is only for the few, will vanish from your mind as soon as you have an earnest desire to acquire the art, and begin to practice all your spare time, in a thoughtful, persistent manner.

You have now the elements of Script. Your success depends largely on your own efforts. Strive for supremacy. Do not be satisfied until you have reached the top. It lies now within your reach. Will you have it?

**hron's Bus. Colleges, Nashville, St. Louis, Atlanta, Montgomery, Pl. Worth, Galveston, Little Rock, Shreveport. May deposit money in bank till position is secured. 10,000 students. For Booklet one "Home Study" or College Catalog, add. Dept. 34, Draughon's Bus. College, Nashville, Tenn.
"Practical Lessons in Newspaper Illustrations," published by the School of Illustrations, Chicago, Ill., is the title of a series of booklets of about twenty-four pages each used in connection with lessons in drawing, designing, illustrating, &c., by mail. Parts 1, 2, 3, 4, 5, and 6 were reviewed some time ago in these columns. Parts 7, 8, 9, 10, and 11 have just been received at our desk, and we take pleasure in saying that they are what their name implies—practical.

Part 7 is devoted to Caricature, and we find it is treated in a most liberal, varied and effective manner. The student who cannot find in these lessons the necessary information and stimulus has certainly missed his calling.

Part 8 is devoted to General Illustration, and the variety of character, style and technic presented is such as to give a very comprehensive view of modern illustration. In spite of the generalness by way of illustration the text is quite definite as to details.

Part 9 is devoted to News Illustration and gives examples and information concerning the class of illustrations demanded and most suitable to newspaper drawing and illustration. The examples throughout the series are not drawings made for these books, but actual illustrations culled from actual every-day experience.

Part 10 is devoted to Portraits and the examples used are practical as well as artistic. In this as in other parts the work has been done by the leading illustrators of the world in their respective classes.

Part II. Decorative design includes some lettering and initial making; headings, end pieces, title pages, etc.

It gives us pleasure to recommend, such meritorious publications. Terms and conditions can be had by addressing as above.

Stauffer's Inter-Communication Business Practical Manual is the title of a twenty-four page booklet devoted to the subjects implied in the name, published by G. R. Stauffer, Los Angeles, Calif. Those interested in this modern branch of business education would do well to correspond with the author.

"Model Business Letters," by Chas. R. Weirs, is the title of a forty page book, a practical catalog of typescripts of large and small size. The book is published by the author at Trenton, N. J. The book best describes itself by the following headings found in it: Importance of letter writing; construction of letters; general information; a few practical do's and don'ts on correspondence; outline of letters; letters containing enclosures; letters of application; letters of complaint; summon letters; letters ordering goods; letters of acknowledgment; letters of endorsement; letters requesting quotations; letters of inquiry; letters containing requests, and miscellaneous letters.

Our one criticism is that it contains no modeled letters in script or typewriting. Price and further information given upon application to the author.

"Moderno Punctuation," a book for stenographers, typewriter operators, and business men, published by Isaac Pitman & Sons, 1 Union Square, N. Y., price forty cents, is the title of 12 page book devoted to this very necessary but greatly neglected part of a common English education. The illustrations and examples given are taken from the text-books and the phraseology of the business world rather than from the usual literary sources. The book is well worth looking into.

"Progress," published by the Hofmann-Metropolitan Publishing Co., Milwaukee, Wis., single copy five cents, one year twenty-five cents, issued quarterly, is the title of a new claimant for public favor in the form of a twenty-cent monthly, devoted largely to the interest of practical education and office duties. The first number of this magazine impresses us as possessing an abundance of punch and brains. There is room for a magazine of this kind, and we see no reason why "Progress" may not be a permanent success.

"Photographic Outlines of Medical Terms," by the Society of Medical Photographers, published by Isaac Pitman & Sons, 31 Union Square, New York City, N. Y., price sixty cents, is a uniquely gotten up book of seventy-six pages, all of which have been engraved and printed from stone. The entire volume, with the exception of the Preface and Introduction, consists of definitions of medical characters. Any one interested in medical terms will do well to give this book attention.

"The National System of Penmanship," by O. A. Hoffman, published by the Hoffman Metropolitan Publishing Co., Milwaukee, Wis., reviewed in our January number, is received, and contains some very creditable work. The plan is somewhat out of the ordinary, and embodies Mr. Hoffman's well known check system of instruction. The printing is first-class, as is also the paper. The title is a beautiful piece of work, being the product of Mr. E. E. Brown, whose work is a regular feature of THE BUSINESS EDUCATOR.

The publishers are offering prizes to those who make most improvement in writing by practicing on the book. Conditions made known by application to the publisher.

A VERY DIFFICULT TASK

It is to write a letter of condolence, but there are those who can write such a letter perfectly. Here is one written by the great naturalist, Louis Agassiz, to Charles Sumner, the foremost statesman of his day:

My dear Sumner:
You have my deepest and truest silent sympathy.
Ever truly your friend,
Louis Agassiz.

It looks easy, doesn't it? But its apparent ease is the product of much study and long experience with the "ups and downs" of life. And this suggests the subject of Correspondence, invaluable in its relation to successful business life, yet neglected or haphazardly taught in many schools that are teaching the commercial subjects, not one of which exceeds this one in importance.

We shall send our customers a circular descriptive of our books on Correspondence, and containing scores of enthusiastic testimonials from commercial teachers in every kind of school in all parts of the country. If you do not receive our printed matter regularly, please send us a postal card request for this circular, which we shall be glad to send to you with our catalog, without cost to you.

We publish popular text-books on each of the commercial subjects, except Geography and Economics. Write to us when you need anything in our line. We shall be glad to be of service to you.

THE PRACTICAL TEXT BOOK CO., 475 Euclid Avenue, Cleveland, Ohio.
The above is one of the many pages found in

**Zanerian Script Alphabets,** The New Book on Penmanship,
By C. P. ZANER.

The work contains one hundred and sixteen pages, 8 x 12 inches, is bound in art linen, and printed on the finest plate paper with a new ink that closely imitates actual pen work. It contains over thirty-six distinct styles of script, with instructions on opposite pages; small letters, capitals, figures, paragraphs, notes, letters, signatures, and specimens.

**Leading Critics Pronounce It the Greatest Work of Modern Days.**

Note the following quotations from full page letters by America's master penmen:

Zanerian Script Alphabets’ is without question the greatest work of modern times.

Y. H. COUTTNEY,
Wood's Business College, N. Y. City.

"Your new book is, editorially, typographically, artistically, philosophically and educationally the equal if not the superior of any similar publication ever issued." A. F. ROOT, Kingsville, O.

"Finest penmanship publication issued for years." C. C. CANAN,
Duke Center, Pa.

"A veritable encyclopedia of script writing, beautifully gotten up." C. E. BONNER,
With The Penman's Art Journal, N. Y. City.

"The reproduction of the graceful and artistic letter from the pen of the late A. D. Taylor, is alone well worth the price of the book." CHARLTON V. HOWE,

"A most valuable book of reference for the professional penman, and instruction for the student and amateur who are looking for the best." W. C. HENNING,
Cedar Rapids, Ia.

When such prominent penmen publicly praise a penmanship publication there must be merit in it.

The book is positively worth $5.00, but our price is $2.50, prepaid. It will not disappoint you. Send for a copy to-day.

ZANER & BLOSER, Publishers, COLUMBUS, OHIO.
A New Departure—RAISED LETTERING

For Novelty Signs and Show Cards in any plain color, Gold and Silver Bronzes, Metallics, Flitters, etc. Presents the appearance of fine embossed lettering, but in greater relief and more attractive. In producing this style of work the operator simply manipulates the air pencil as he would an ordinary pen or lead pencil, the raised work or lettering being produced wholly by the pressure of the air pencil in the hand of the operator. It is a money-maker from the start. Circulars free to all interested. Headquarters for Show Card Writers’ Supplies. Address:

W. A. THOMPSON  Pontiac, Mich.

ROUND’S SPACING T SQUARE

A Great Aid to the Pen-Artist and Draftsman.

This cut shows the head section of 24-inch blade and a few specimens of shading, photo-engraved from work done by aid of this square with a common ruling pen, the lines being separated at perfect intervals and made as rapidly as by free hand. Space between lines may be varied, by turning thumb screw from zero to one inch; lines are made horizontally or upon any desired angle.

Used and recommended by Draftsmen and Pen-Artists everywhere.

CHICAGO, Nov. 1, 1902.

The T Square I recently bought of you works “like a charm.” I am fully satisfied with it and believe it would sell for a larger amount of money if you would ask it. It certainly worth more than $6.00.

R. H. HURWITZ

Price $4.00, shipped securely packed, by express, on receipt of money order.

H. A. ROUND, 513 Carroll Ave., Chicago.
A Standard High Grade Course of Study

Cannot be maintained unless efficient text books are used. Such a course must accomplish two essential objects first,—it must discipline and strengthen the mind in accurate, logical and orderly thinking,—it must direct the pupil in his acquirement of information by correct mental processes; second, it must impart a practical and efficient training in the subjects taught.

These results can be best obtained by the use of the Sadler-Rowe Company's commercial publications, because they represent more fully than any other the best accepted educational methods of the scholastic world and the most practical methods of the business world.

Here is a commercial course that meets these requirements fully in every particular:

<table>
<thead>
<tr>
<th>Subject</th>
<th>Time</th>
<th>Books Used</th>
</tr>
</thead>
<tbody>
<tr>
<td>BOOKKEEPING</td>
<td>20 periods per week of 45 minutes each.</td>
<td>Business Bookkeeping and Practice or Commercial and Industrial Bookkeeping—5 sets each with or without Business Practice and Office Work.</td>
</tr>
<tr>
<td>ARITHMETIC</td>
<td>5 periods per week of 45 minutes each.</td>
<td>Sadler's Commercial or Essentials of Arithmetic.</td>
</tr>
<tr>
<td>ENGLISH and CORRESPONDENCE</td>
<td>3 periods per week of 45 minutes each.</td>
<td>Ernest's English-Correspondence.</td>
</tr>
<tr>
<td>PENMANSHIP and SPELLING</td>
<td>5 periods per week of 45 minutes each.</td>
<td>Lister's Writing Lessons and New Method Speller.</td>
</tr>
<tr>
<td>COMMERCIAL GEOGRAPHY</td>
<td>4 periods per week of 45 minutes each.</td>
<td>Macfarlane's Commercial and Industrial Geography.</td>
</tr>
<tr>
<td>PUBLIC SPEAKING and DEBATE</td>
<td>1 period per week of 45 minutes each.</td>
<td>Roberts' Rules of Order.</td>
</tr>
</tbody>
</table>

In the above course one-half of each day consisting of eight recitation periods is devoted to the subject of bookkeeping. The remainder of the time is distributed between the other important commercial branches. The course can be completed by the average student in from six to eight months. Students of unusual energy and ability will complete it in less time.

This is a course that you need not be ashamed of. It will stand the test. Students that complete it know how to think, know how to do. Adopt it, and your school will be up to the standard if your text books are backed up by good instruction and efficient teaching.

We are in correspondence every day with teachers all over the country who consult us in regard to strengthening and improving their course of study. We invite such correspondence. It is a part of our business, as well as a pleasure, to render all possible assistance in raising the standard of commercial education everywhere. "Come, and let us reason together."

Last year we placed about 150 teachers in better positions.

We are continually receiving requests for teachers which we cannot meet. We make no charge to either party. Our purpose is simply to bring teacher and position together. Can we serve you? If so, write us.

SADLER-ROWE CO.,

ACCOUNTING AND BUSINESS PRACTICE

A Shorter Course and a Complete Course

Shorter Course, List Price, $1.10
Complete Course, List Price, 1.40

"Accounting and Business Practice" is a thorough, practical and comprehensive text for the use of teachers and students of book-keeping. It is intended for use in high schools, private schools, and all institutions where accounting is taught, and is well adapted for teaching by correspondence.

A FEW SPECIAL CHARACTERISTICS

1. The work is complete in itself and is not accompanied by a system of vouchers.
2. Divided into a SHORTER COURSE and a COMPLETE COURSE, the work is elastic so that it may be used in a great variety of classes. The Shorter Course is intended especially for general classes in bookkeeping in secondary schools; the Complete Course, for commercial departments in schools and business colleges.
3. Financial statements are given in connection with all the different sets.
4. Class exercises are given in connection with every important subject introduced.
5. The text is accompanied by a Teacher's Manual giving material for class drills in practical accounting.

The BLANKS, BLANK BUSINESS FORMS, and SCHOOL CURRENCY, prepared especially for this work, are unequaled in their attractiveness and convenience.

BEST BECAUSE ACCURATE

We want every teacher to become acquainted with these excellent text-books—books that have been developed from years of classroom experience—books that have stood the test and satisfied every requirement. CORRESPONDENCE INVITED.

A sample copy of any one of these books sent express prepaid to any teacher for examination upon receipt of fifty cents in stamps
Concerning Those Lessons in Business Writing by Miss Hudson.

We have now on hand the entire series of lessons which will begin in our next issue, by Miss Nina P. Hudson, of New Britain, Conn., announcement of which was made in our January number. The lessons in point of text and illustrations are worth looking forward to, as they compare favorably with the best that is being done by our best penmen. This series of lessons will certainly dissipate the idea that women cannot do things as well as men.

Surely Miss Hudson leads in this new field of endeavor, and so does THE BUSINESS EDUCATOR.

Attention, Commercial Teachers!

It is greatly to the advantage of every teacher of commercial branches to be enrolled in one of the sections of the National Commercial Teachers' Federation.

We have left over from our last convention at Milwaukee, a large number of the beautiful souvenir badges, a cut of which you will notice in connection with this letter. It is of bronze, one side of which is a likeness of Platt K. Spencer, the other a cut of his log seminary at Geneva, Ohio. In addition to this, the publication committee getting out a complete report of the Milwaukee convention. This with the souvenir badge will be given to all members of each section of the Federation. Those who are not enrolled are urged to send in their registration fee of $1.00 and they will be enrolled in any of the teachers sections, or in the Business Managers' Section for the regular fee of $5.00.

The report of the convention will be worth many times the registration fee and no progressive teacher can afford to be without it; while the badge will be a beautiful and permanent souvenir. The price of the report alone to outsiders will be $1.00.

Send your name with fee to,

J. C. WALKER, Secretary,
Danville, Ill., and mention THE BUSINESS EDUCATOR.

Something New in the Way of Roundhand

Mr. N. A. Albright, penman in the Portland, Oregon, Business College, has prepared a series of six lessons in high-grade roundhand especially adapted to engraving, for such purposes as letter-heads, bank notes, etc. The series will be especially helpful to professional penmen who are desirous of learning how to prepare work successfully for photo-engraving. They are out of the usual line of such lessons, nothing like them ever having appeared. They will in all probability be begun in the April number of the BUSINESS EDUCATOR. Get ready for them.

Fire

On the morning of February 5th, Sadler's, Bryant & Stratton Business College, Baltimore, Md., suffered quite a severe loss by fire, the damage to fixtures, furniture, pictures, typewriters, etc., being about $2,000. Mr. Sadler immediately ordered forty-one new typewriters, secured other rooms, and proceeded without delay with the regular school program. We have not learned as to the amount of insurance carried. From a letter received inclosing clippings, Mr. Sadler says: "While our damage was great, it might have been so much worse, that we are not kicking at all. We were fortunate enough to have a couple of unoccupied rooms in the lower part of the building; so everything is moving along nicely as usual."
The sudden death of Mr. C. Dean Haskins, W. Haskins, Dean of the School of Commerce, Accounts, and Finance, of New York University, deprives the movement in favor of higher commercial training, of one of its most notable champions. Mr. Haskins was no mere theorist. He was an intensely practical man, and he was putting into the policy of his school work the spirit that brought him great personal success in large undertakings. Those who attended the E. C. T. A. convention in Philadelphia last spring will remember his excellent address on "Training for Business." His firm had been engaged to audit the books of one of the government departments at Washington, and at the time he was speaking, his assistants were at work on the municipal books of the city of Chicago. Mr. Haskins was laying the foundation for an influential school, and he will be sadly missed by those who are looking for greater things in the field of commercial education.

But the leaders among professional and business men are everywhere showing a remarkable interest in the cause of practical training for the youth of the land. The Michigan Political Science Association held an exceptionally interesting meeting at Ann Arbor early in February, at which the subject of Business Education was thoroughly discussed by a dozen of our foremost educators and the following eminent business men: David M. Parry, Indianapolis, President of the National Association of Manufacturers; E. H. Abbott, Boston, formerly of the Wisconsin Central Railway; A. C. Bartlett, Chicago, Vice-President of the Hibbard, Spencer & Bartlett Hardware Co.; James R. Dill, the great corporation lawyer of New York City.

We expect to give to our readers, in subsequent numbers, some of the excellent papers read at the Ann Arbor meeting. It is matter for congratulation that men of affairs are invited to join with educational leaders in order that the plans to be worked out may be sound in both theory and practice.

The Three R's

Former Postmaster-General James gives in this number of THE BUSINESS EDUCATION, a most vicarious example of his interest in the subject of practical education. As the president of one of New York's great banks, he is in a good position to judge of the evils of which to speak forcefully. This is a syndicate article published some months ago in several of the leading Sunday newspapers, and is another instance of the keen interest that men of affairs are taking in the subject of useful education.

The E. C. T. A. Convention

Those of our readers who are within reach of New York should be planning to attend the Easter meeting of the E. C. T. A., which will be held this year in the rooms of the Heffley School, 28 Ryerson St., Brooklyn. The Eastern Commercial Teachers' Association is as large and as enthusiastic an organization as the National Federation of Commercial Teachers and its meeting this year in the metropolis of the nation is likely to be signalized by a program and an attendance not surpassed by any other meeting of commercial teachers yet held. The exceptional ability of President Charles M. Miller, and the activity and energy of Chairman George P. Lord of the Executive Committee, give ample assurance of a meeting worth traveling half way across the continent to enjoy. Besides, it is worth while to make this trip if there were no other program than a well arranged series of visits to important business and educational institutions. Attend the E. C. T. A. convention. "If a man empty his purse into his head, no man can take it away from him; an investment in knowledge always pays the best interest.""}

Commercial teachers generally should also be making plans for attending the July meeting of the National Educational Association, which will be held this year in Boston. This is an organization that is national in every branch of its membership. Its membership is drawn from all parts of the Union, and its meetings are held in widely separated large cities; Detroit, Charleston, Los Angeles, and Minneapolis having had the honor, in recent years, of entertaining this huge Association, with its 12,000 to 15,000 visitors. Great plans are being made to entertain the teachers in New England. Inexpensive excursions to places of literary and historic interest will be a regular afternoon feature of each day's doings, and low-priced railroad excursions to the White Mountains, Lake Champlain, the resorts of Maine and Nova Scotia, the St. Lawrence, etc., will hold many visitors in this charming part of our country during the vacation season.

President J. H. Francis, of the department of Business Education, is one of a type of the well educated, forceful, inclusive Westerners. He is the principal of Los Angeles Commercial High School, and a Stanford University man. His plans for the convention of commercial teachers are sure to result in a very large attendance this year. Commercial teachers generally, and high school and college commercial teachers particularly, should arrange to be present. The program this year will be especially interesting to the latter class of teachers.

The genial reporter of the U. S. House of Representatives, Mr. Fred Irland, (the "I" is sounded as in "Irksome"), is as welcome at the conventions of shorthand teachers and writers as a burst of sunshine in a New England winter, although the implication of the latter part of the simile is inapt. In the address he delivered at Milwaukee there is so much sound advice, though indirectly given, and there is so much of encouragement to the ambitious among our thousands of young people hard at work on shorthand and typewriting, that we are glad to publish the address in full in this number.

In connection with Mr. Irland's allusion to his service on the Coal Strike Commission, the following newspaper paragraph will be of interest:

"One of the liveliest performances in shorthand reporting is credited to the stenographers of the anthracite strike commission. Sometimes there are three and sometimes only two. They began taking notes at ten o'clock in the morning and they shift every thirty minutes with the typewriters. The full and verbatim report of all the proceedings, the testimony of coal operators, miners, railroad men, boys and women of a dozen different nationalities and a score of dialects, all go into the official proceedings, together with the wrangling, examining, cross questioning and arguments of two score or more lawyers, never less than twenty-two, and the questions and comments of the seven members of the commission. Yet every morning each of the commissioners, lawyers and chief witnesses is handed a full and complete typewritten report of the proceedings of the day previous."

Mr. Irland's closing comment on the influence of the teachers that were before him suggests the uncommonly interesting and instructive article in this number, written by the honored president of Valparaiso College, a man who has the esteem of tens of thousands of practical people in this country, many of whom ascribe to the initial impulse of his magnetic influence and the singularly stimulating effect of life in the old N. I. N. S., the success they have since achieved. Read President Brown's inspiring essay.
To know what we know, be it ever so little, to know that we know it, and to make the best use of it—this is an education in itself. Let us, then, use our general knowledge to matter where we may have obtained it, so it be authentic. Let us use it in our study, as a good workman uses his tools.

Much of our difficulty as students, lies in the fact that we do not connect with our "book work," that every-day practical knowledge acquired by contact with the world around us. We are too prone to look on our study as something entirely apart from the outside world.

I say our difficulty because I am only a fellow student, a little way in advance of my classes, perhaps, yet not so far ahead but that I am often startled when I have met along the way. When I cease to study and to learn more about the work, when I no longer share the burden with other students, when I forget that I had to creep over some of the ground where others stumbled, it will be time for me to change my occupation.

When told that two persons have agreed on some point, we understand just what is meant. This is positive proof that we know in part what an agreement is. Yet when we read in the text that a contract is an agreement, etc., we are liable to surround the terms with a cloud because it is found in a book, instead of giving to it the ordinary meaning. This is only one of almost numberless illustrations which might be submitted.

The Definition and Nature of a Contract.

A contract is an agreement, but it is more. The persons who agree (parties) must be of sufficient mental and moral capacity (competent); they must agree to do or refrain from doing something definite, lawful, and possible to be done which they were not already bound by law to do (subject matter). Again, a party who agrees to do something for another, is not bound to do it unless the other, on his part, does something he was not already obliged to do in order to fulfill a promise (valuable consideration).

Essential Elements.

The essentials that must be worked into our definition of a contract are: Competent Parties; Definite, Legal, Subject Matter; A Valuable Consideration; Mutual Consent or Actual Agreement, and the Time in which the contract is to be performed.

Definition.

A definition is worse than useless unless it means something to us. Given a good firm grip on the essential elements, we can easily make our own definition and it will then not only mean something, but it will also stay with us.

How to Test the Validity of a Contract.

We must keep in mind the fact that not all agreements are contracts, but only such as the law seeks to enforce; that is, those which have all of the five elements named above. When any set of facts come up for decision, always look for the essential elements. If they are all present, and the agreement is in the form required by law, you have a valid contract.

The Great Classes of Contracts.

Thus far we have been talking of Simple Contracts only. Besides Simple Contracts, there are Sealed Contracts and Contracts of Record.

The Simple Contract.

By a Simple Contract we mean one not under seal. It may be made orally, in which case it is called an Oral Contract; or it may be written and signed by the parties to be bound, when it is called a Written Contract.

The Sealed or Specialty Contract.

A contract made in proper form and bearing a seal (a Sealed Contract) differs from a Simple Contract in the following particulars: If a contract is simple, there must be a valuable consideration; if it is sealed, it is not affected by the absence of consideration; again, if I owe you on a Simple Contract for a time, ranging from two years in some states to six years in others, and nothing has been paid or done under the agreement, the courts will not help you to enforce payment after that time. The debt is then considered "outlawed." Under the law of most states a Sealed Contract is enforceable for a longer time, and in some it will not be "outlawed" until the end of twenty years. Also a Sealed Contract often takes precedence over a Simple Contract.

Contract of Record.

A Contract of Record is not properly a contract at all. It is the obligation imposed on a person by judgment of a "court of competent jurisdiction" (a court that has the right to act in that class of cases and within that territory). This judgment must be entered of record; it is then known as a "quasi (as if) contract." No consideration is necessary nor is it necessary to have the consent of the person against whom such judgment is entered. This obligation holds good for a time varying in different states, but commonly much longer than for other contracts.

The Relation that Should Exist Between Teacher and Pupils

H. B. BROWN, PRESIDENT VALPARAISO COLLEGE AND NORTHERN INDIANA NORMAL SCHOOL, VALPARAISO, INDIANA

The school consists primarily of teacher and pupils, the purpose of each being practically the same, and yet the work of each very different. That the greatest good may be accomplished the fullest harmony must exist between these two important factors. How this condition may be most effectively brought about so that the best results may be realized, not only to the child, but to the world into which he must go, has been the study of educators for many ages.

The Master

In the early history of education the master was the one who could control, whose authority was absolute—rather than the teacher, was required. Without complaint or approval, the pupil was considered a mere receptacle for what the master felt disposed to offer. Such a condition would constantly tend to strain the proper relations that should exist between teacher and pupils and would separate them farther and farther from each other. As a result, no progress was made and the schools were held in disrepute to such an extent that the pupils would resort to any means, honorable or dishonorable, to avoid attendance. Those who were fighting for a more perfect system of public schools were disheartened and many gave up the struggle. A few brave, noble men and women continued with zeal unabated, with devotion to humanity sacred, with hope deferred yet not in the heart sick, to study the school problem.

The Pupil

Up to this time the difficulty was that but one side of the problem—the master—had been considered; and it was not until the child was placed on a common level with the teacher, considered as an equal factor, that any advancement was made. For educators of the present day to think of a condition where the pupil would not be considered is almost impossible, and yet may there not be problems with which they are struggling today which may, in after years, seem as improbable as those with which early educators had to contend?

Master and Pupil Co-ordinate

As soon as it was determined that the pupil was an equal factor with the teacher rapid progress was made. Instead of the master came the teacher. Soon these were found working together, living together, thinking together, happy in each other's confidence. It is not surprising that out of this condition should develop our magnificent system of public and private schools, imperfect in many ways, yet guided by conscientious, self-sacrificing men and women, they are constantly being directed toward that which is perfect. That which has brought about a better understanding of the relations between teacher and pupils has been that the teacher has realized that he must not only make the school attractive but that he must make it a place of real value. Children, no more than grown people, can be deceived very long. No amount of sarcasm, no apparent superiority, will take the place of true worth. Lectures have been given and many books written on this subject, yet it must be admitted that even at this late day the true relation between teacher and pupil is still in its infancy, and any new discovery along this line is hailed with delight.

The True Teacher Radiates Inspiration

Those who have experience have said that it requires as much good judgment to govern a school as to govern a state, that the mental and moral power in each instance is brought to its highest tension. Again, that the tact and good judgment that must be exercised in the one case equal those of the other. The true school will not necessarily be characterized by good order, good behavior, perfect manners. These, of course, are essential elements, yet the teacher who might stand again in the presence of that teacher. No one could describe any one characteristic in particular that the teacher possessed. It was not his superior ability as an instructor, nor his scholarly knowledge, but his power to control—it was more. He was constantly before us, a living example of the importance of truth, honesty, virtue and self-reliance. He instilled into each of us the notion that he could do something, some one thing better than anybody else. Not that any one would become especially renowned, but that he could accomplish something. This teacher was an active, living example of all these virtues. Each one present attributed a large degree of the success which he had attained to the life of this teacher. He was one of us. He entered into our little circle and made us part of his whole heart, not just in word, but in deed, and in the respect of the vanquished. He was our friend. There was no need of rules nor compulsory laws. We worked together because we knew each other—more, we respected each other, we were equal. We did what we were asked to do because of any rule, but because of the high regard we had for the teacher. Besides knowing these subjects were taught, we knew that the teacher held a knowledge of the outside world with which he made us acquainted, and which perhaps more than anything else, was the cause of the success of his pupils.

Know the Environment and Inherited Tendencies of Your Pupils

While the relations between teacher and pupil, in a general way, are the same in all schools, yet in a business college there are peculiar conditions that are not found in other institutions of learning. To understand these conditions and be able rightly to familiarize the student with them is the duty of the teacher. In order to do this he must be familiar with the new and the old, the old environment and the new, the old conditions and the new conditions. He cannot work on these subjects by the light of his own understanding, for the same conditions that are old to him are new to his pupils. He must see that his pupils see the same conditions as new. To teach them to be aware of the new and the old environment is the duty of the teacher. The new environment, he should make them understand, is the business world, in which they are to be placed. To know the business world is to know the environment of the pupil. He must make them aware of the business world.
young people, in most instances, must be attributed to parental neglect. The talents of young men and women they see little in the positions at home as merchant, lawyer, physician, teacher, or preacher, to spur their ambition; but they see in the same position platoons of well-grown men of power and influence, and they prefer to make a strong fight for the high stakes and tempting prizes of the city. These at first invade, then capture the city, and are in turn taken captive by it as by some monster than devours those who feed upon him.

INSPIRE TRUE EDUCATIONAL IDEALS.

At first those who left the country or village home and attended college were the only ones who found their way to the city. Those who remained in the country, hearing only of the successes of their companions and not of the countless failures, because restless and felt that they must enter the strife. Unprepared—failure is the result. To equip such young people for their work is the purpose of the business school. The business man who has this equipment is the work of the teacher. This teacher says to these young people, “Let me help you so that you may be able to meet the difficulties that must certainly confront you.” The true teacher will not hold out to these young folks the false notion that by means of an education they can certainly enter some of the professions, that they can become prominent in the affairs of the world, and that wealth will flow into their hands without effort. To such an extent has this false notion prevailed, that no little of the encouragement given by parents to their children to attend school is that they may make a living without working so hard; and no sacrifice is too great on the part of parents that their children may complete a course of study. Young people being thus educated, without any of the responsibility of providing the funds, necessarily come out of school feeling that they are entitled to a competency without work. To safeguard against such a failure of education and cause the young people to realize the responsibilities of life, is not the least of the teacher’s duty. Understanding the true relation that should exist between him and his pupils he will make clear the point that it is not the purpose of the business college to train young people for office positions only, but to train them for work in all the avenues of life, that they are securing an education that can be used on the farm and in the shop as well as in the great business houses, and that to use their knowledge in the one is as reputable as in the other; that a commercial education is a general education and gives a peculiar mental training such as no other department of education can give.

TRY TO REALIZE THE LIFE TO WHICH YOU ARE SENDING YOUR PUPILS.

Again, the teacher must know the world into which the pupils go. Many teachers are “blind leaders of the blind.” They take one step at a time, it is true, but not knowing whether it tends to a sure foundation or the perils of a deep abyss. The teacher must know the road over which the pupil must pass, not only while in school, but left alone in the great struggle for existence. Such a teacher familiarizes himself with the work of the farmer, the merchant, the mechanic, the lawyer, the physician, the statesman, the accountant. Dr. Harris, United States Commissioner of Education, in one of his reports says, that only three per cent. of all who attend school are required for the professions. Ninety-seven per cent. must work with their hands. Hence no teacher understands the true relation between himself and his pupils who does not realize that the education that does not recognize this condition must be defective. What, then, would I say, should be the relation between teacher and pupil?

1. Above all, the teacher’s life should be a living example of truth, honesty, virtue, industry, so that if he should say to the child “Follow me,” it would not only do so, but its respect would be so great that it would be happy in obeying the command, and would also feel that it could not go far astray.

2. That he must have a safe, sure knowledge of the subjects to be taught.

3. That he must have a proper conception of the mind and the true nature of its development.

4. That he must know the environments of his pupil before he enters school, as well as a knowledge of the world into which he must go after leaving school. Then he can safely direct him from one point to the other.

Pictorial Pointers.—Home of the Hefley School, 235 Ryerson Street, Brooklyn, meeting place of the E. C. T. A. Convention, Easter week. Plan to be there.

Soliciting Students.

CHARLES R. BARRETT, SUPERINTENDENT.

The Athenaeum, Chicago.

In response to the request that I give my opinion regarding the practice of business colleges of soliciting students, I wish to go on record as strongly opposed to this very common custom.

In the first place, it lowers the dignity of educational work and puts it on a level with stock jobbing and junk dealing. When educational work loses its dignity, it loses half its value. The solicitor starts on his begging tour along the street, from door to door, and when he finds one willing to listen, represents the institution as offering a special education as offered in the school for which he solicits. He often induces boys and girls to leave the public schools at the early age of fourteen or fifteen years to take a business or a shorthand course.

Foundation First: Superstructure Afterward.

I favor the special course plan, as all successful work must be special. The finished education of today is special, but a general education must underlie it. The foundation must be broad and substantial under all the details of the superstructure. Special educational work should be honest and dignified and so attractive as to induce those interested to avail themselves of special work when qualified for it.

The solicitor is often unqualified to have any association with schools, and his influence is harmful to reputable business schools. Every good school suffers from the exaggerated false statements of one who has no interest in the student beyond dollars and cents. He does not assume any responsibility toward the student. Therefore he will make any statement or promise for the sake of the fee. I regret to say it is also the practice of some schools to send their teachers on begging tours. This I consider even worse than sending out the mere solicitor, for it lowers the dignity and lessen the strength of those teachers in the classroom.

First-class Schools Do Not Solicit.

I assert that no first-class school solicits. It never puts its work below the level of understanding, in the commercial world the solicitor calls upon his customer three or four times a year, but is obliged to deal honestly with him or lose the business, whereas the educational solicitor separates from his patron as soon as the patron has arranged to spend a little time and money in the school.

The school that does not attract through its work and through legitimate advertising shall not exist. Proprietors of such schools should have no recognition in the educational world. Many of the students of the business colleges are wholly unfit for the courses they are pursuing. They have been induced to pursue a good work to prepare for a business career, on the guarantee of situations at good salaries on the completion of a brief course. No reputable school guarantees situations. All they can do is to qualify, and qualified students are sought. It is simply a practice of humbugging the ignorant and innocent and is often destructive of the highest aims in life. It is disgraceful practice in educational work.

A true educator is a giant among men. He not only has a developed mind and possesses and exercises good principles, but he is also engaging and others to acquire and exercise the same qualities. He thus does more than anybody else for the development of good citizenship. His work is the link between the home and the world.

The student’s patronage should be so honestly secured, and he so thoroughly instructed, that the institution will always be one of pleasant recollection in the life of the student. It should feel its influence in after years. Educational institutions should stand at the top in point of honest, dignified, useful work.

Citizenship should be their fruit.
Opportunities of the Shorthand Beginner.

FREDERIC IRVING, OFFICIAL REPORTER, HOUSE OF REPRESENTATIVES, WASHINGTON, D. C.

AN ADDRESS DELIVERED BEFORE THE NATIONAL SHORTHAND TEACHERS ASSOCIATION AT MILWAUKEE, DEC. 30, 1902.

I think if you can get any man who is the father of a boy of fifteen to tell you the thing which is giving him the greatest anxiety, he will tell you that the question which worries him most is as to what work his boy is to do; how he is to get his chance in the world, how he is to obtain a membership card in the Society of the Successful. And if the boy thinks about anything of importance, I suppose the same subject is in his mind.

WEST POINT VERSUS THE COMMERCIAL SCHOOL.

I suppose if the average boy had presented to him two chances, one to enter the Military Academy at West Point, with a view to becoming an officer of the regular army of the United States, and the other a chance to enter a good business college to study shorthand; and if he was given the assurance that in the first instance he would be able by hard work to pass his examinations in the Academy and at the end of four years receive his commission as a second lieutenant, and in the other case that at the end of four years he would have so trained his brain and fingers as to be able to write 200 words per minute in honest shorthand, there would be little doubt that his first impression would be in favor of West Point and a career in the regular army. Suppose if an ambitious mother with a lovely daughter had letters of introduction for two young men, one of whom had just been commissioned as a second lieutenant in the regular army and the other had no commission at all, but was an understood master of shorthand, she would, other things being equal, think there was no comparison between the future chances of the two men. And I should undoubtedly agree with her that this was true, but I should mean a very different thing from what she meant.

Let us consider for a moment the reasonable chances for the future of the boy who enters the United States Military Academy. The moment he is enrolled as a cadet, after passing his entrance examination, he begins to be boarded and clothed at the expense of the government of the United States, and receives a salary, I believe, of $500 per month in addition. During his academy course he has to work very hard or he will fail in his examinations. But I do not consider that this can be any figure whatever, because a boy must expect to work as hard as he possibly can the first few years in any case, or he will never attain any success by his own efforts.

The pay of a second lieutenant, not mounted, from the moment he receives his commission, is $1,400 per year, with a ten per cent. increase for every five years of service, until a maximum increase of 45 per cent. is allowed at the end of ten years, and then a salary under commission as a second lieutenant. He also receives an allowance for his board and clothes. I think military men will agree that it is a conservative statement to say that an officer in the regular army of the United States is doing very well if, on an average, he becomes a captain by the time he is forty years old. The pay of a captain, not mounted, begins at $1,900 per year, with the usual 10 per cent. increase every five years.

If this young army officer succeeds in winning the lovely daughter of the ambitious mother, as he very likely will do, the wife's daughter will have to spend most of her time during those twenty years in very uncomfortable and out-of-the-way corners of the country, and she will be in daily fear that her husband will be ordered to some other place still further away and still more undesirable. The young army officer will spend his life mostly in places where he does not want to live, and in wondering what chance there is for him, if he is lucky, to become a major or lieutenant-colonel before he is retired. You will agree with me that after all there is not much in a military career, so far as material success and comfort are concerned.

SHORTHAND A SCALING LADDER.

I think you will all agree with me that a boy twenty years old who can spell correctly, who can write shorthand 200 words per minute, who can operate a typewriter well, and who is what is called a live man, can earn at least $100 per month in almost any large city in the United States. I do not compare him with the cadet, for winning the respect of mankind, and not the opportunities for failure. I am trying to give the boys a little insight into the way to play a sure-thing game, or one in which the chances are greater on one side than on the other. If I am trying to tell them how they can pick out a "sure winner."
The Business Educator

of the important business of the United States is being managed today by men who a quarter of a century ago were stenographers, typists, shorthand clerks, secretaries, and stenographers in the offices where they are now presidents, vice presidents, general managers, general superintendents, corporation counsel, and other high-priced officials.

INSPIRING EXAMPLES OF TRULY SUCCESSFUL STENOGRAPHERS.

Twenty years ago I went to work in a railroad office in St. Louis. Across the hall were two young men, who, three or four years before that, had entered the office as stenographers, typists, and shorthand clerks, with an available capacity, and had received daily lessons in the business of the office while they were taking the letters dictated by their employers. When I went there these two young men had already risen to chief clerks in the office of the vice president, and the other in the transportation department.

One of these young men was Charles M. Hays, who recently succeeded the late Collis P. Huntington as President of the Southern Pacific, at a salary said to be the largest ever paid to a railroad man in the world, and who is now at the head of the management of the Grand Trunk Railway of Canada. The other young man was George Smith, who since then has been General Manager and President and Receiver of more railroads than I can remember the names of, and who is now at the head of the great Western Air Brake Company of Pittsburgh. I went into a hotel at Scranton, Pennsylvania, the other day, and saw my old friend Smith sitting in one corner of the dining room, comfortably reading the morning paper. I went over and sat down at his table and he said to me: "Hello Irauld, what are you doing here?" I told him I was helping report the Anthracite Coal Conference. I asked him what he was doing, and he said he was building a railroad up that valley. My friend Smith has almost always had one or two little side enterprises of this kind on hand.

If I should call the roll of the twenty or thirty other shorthand clerks employed in St. Louis at that time you would find that nearly every one of them has risen and prospered. The two I have mentioned by name have larger incomes than the President of the United States, and if you average up the success of the others and compare it with the progress of a similar number of boys who entered the Military Academy at West Point at the same time, you will find that fortune has dealt a great deal more kindly with that bunch of bright-eyed stenographers than it has with the boys who were ambitious to wear the shoulder straps. I do not say these men have risen simply because they learned how to write shorthand; but I say the fact that they were stenographers enabled them to enter a school where they learned the business of railroading as they could not possibly have learned it in any other way, and they were paid $125 a month from the beginning, and more and more each year, during all the time they were learning the railroad business.

THE STENOGRAPHER IS ON THE INSIDE.

The stenographic amanuensis knows just what is going on in the office. Every day of his life, if he has any brains, the chance is presented to him to see how the "old man" solves some difficult problem, how he accomplishes some neat piece of business strategy, how he fortifies against hostile attack, or how he avoids a fight by some smooth bit of diplomacy. Why, a boy cannot help learning, if he will simply sit

Pictorial Pointers.—A view of the Bookkeeping Room of the Hefley School. The folding glass doors will be noticed, also the limited blackboard space. The public office is behind the blackboard shown here, and the private office is at the left in the picture, separated from the Business Practice counters by a glass partition.
got into a dispute with one of the South American Republics about a matter involving a very large amount of money, and finally the matter was left to the decision of three arbitrators, one appointed by the United States, one appointed by the South American Republic, the third one being Lord Chief Justice of Canada. The protocol under which the arbitration was carried on gave the arbitrators three months in which to reach a decision. The gathering of the three arbitrators took a long time. After the lawyers on the two sides had spent several weeks in presenting the case, and the arbitrators had spent several weeks in arriving at a conclusion, one of the three arbitrators was ill for several days, and then the representative of the South American Republic, who knew that the case had gone against him, asked for a month; and the arbitrating of the decision and the opinion upon which it was based did not begin until forty-eight hours before the time limit expired. It was a very complicated matter, and the dictation of the day, being hurried work, took more than twenty-four hours. The stenographer who took the dictation and his capable typewriter assistant remained on the scene, working faithfully day and night. There was nothing done for that for which is that is what stenographers and typewriters are accustomed to. It was near midnight. The protocol expired at noon on the following day. The copy of the dictation was to be delivered to the clerks of the State Department to be written upon parchment, as is the custom in such cases. When they found that eight engrossed copies must be made in the course of the next few hours, they o'clock the next day, they reported that it would be utterly impossible to accomplish this task. The arbitrators did not know what to do. They decided to send a verdict while the time, and the writing proceedings would fail, and as one of them expressed it, they would become an international laughing stock. They began to wonder if the shortness of the time had had anything to do with the desire for delay on the part of the defeated nation. The stenographer to whom the opinion had been dictated told them that he felt certain he could solve their difficulty for them. All the necessary papers and communications were on the protocol, and this parchment copy is signed by the President of the United States. The work is beautifully done, and it occurred to the stenographer that if he could get this opinion engrossed in the same way that is, set up and printed upon parchment, a very handsome piece of work would be done. So he went to see the foreman of the Government printing office, and told him what he wanted, "There is no trouble to print this tonight," said the foreman, "but I must have an order from the State Department." The stenographer told him how important it was, that half a million dollars depended upon the mere detail of getting the decision into proper form before noon on the following day. The foreman replied: "That is all right, but I have been here for thirty years, and every piece of work that has come to this office has been emergency work. I appreciate the importance of this, but you must get an order from the State Department before I can do anything about it." It was then after midnight. The State Department was closed, the whole proceedings was out of the usual course, and the stenographer knew from experience that if he went to the head of any one of that department his request would be refused.

I think Solomon had in mind when he wrote the proverb, "Seek thou a man diligent in his business? He shall stand before kings."

**THE OPEN DOOR OF OPPORTUNITY**

I want to say to you that this matter of getting a chance at what you want is the finest thing in all the world. Most people spend the best part of their lives outside the place they long for to dream about, and through long waiting become discouraged, so that they do not spring at their opportunity when it comes. There is no more splendid picture presented to the imagination than the verse in Revelations that says, "Behold, I have set before thee an open door. Think of the millions of young people who are employed in small places, who earn a bare living, or who have no employment at all, whose hearts cry out because they want to enter the paradise of success, where the work may be hard but where it counts; where the returns are large and the compensation is ample; where a man can win the things that make life sweet. It is not possible for everyone to have these things. But I wish to say that, given health, some brains, great industry and a willingness to serve others to the utmost, the boy who learns shorthand is almost absolutely sure of at least a fair degree of prompt success, by a short and comparatively easy road. Propinquity counts for a great deal, in other things besides matrimonial matters; and it is the nature of the work of the stenographer which gives his employer a chance to find out what stuff there is in him more quickly than almost any other occupation.

It makes me tired when I hear young stenographers talk in a way that shows they are envious of the success of others, and complain that they have had no chance. Of course some have a great deal better chances than others, but opportunity knocks sometimes at everybody's door. We once had a boy in our office who was con-
continually complaining that he did not get enough salary. Some extra work came along which it was necessary to do after hours, and this boy had the opportunity presented to him to earn about $300 a year by doing this every evening for a month or two. His reply was, "My father would not allow me to work after regular office hours." This boy was always trying to please his father, he could do. In a curious coincidence that when the next session of Congress came around those who came into the office to look for this young man did not find him there.

VERBATIM REPORTING A GREAT FIELD

You will observe that in all I have said I have made no reference to the opportunities presented by the business of verbatim reporting. Very few people study shorthand nowadays with the serious intention of becoming reporters. The result is that while there are thousands upon thousands of shorthand writers, the number of competent reporters is no greater in proportion to the amount of work to be done than it was twenty years ago. I have in mind a bright young man who, a very short time ago, were employed as amanuenses, one in a government department, the other in a reporter's office. Both of them mastered the art of shorthand in ten years, but ten years of earnest work to do it. They recently started a reporting business in an eastern city, and in the very first year they made more money than the salary of a brigadier-general in the United States army.

During the recent recess of Congress, I was employed by the official reporters of a very high class, in a difficult case to assist them in getting out a daily copy of the proceedings. My daily task consisted of sitting in the court room an hour and a half in taking down what was said, and then afterward dictating to a typist that is a type that is an operator. I had no other duties, no other responsibility, and the stenographers who employed me as an assistant, voluntarily paid me a rate which averaged $50 per day, and in addition for the right of having a correct report of 90 minutes' talk. In conversation with some very intelligent gentlemen who do not know much about shorthand, I mentioned that the compensation I was receiving, and I do not think that I had yet recovered from the shock it gave them to know that it is possible for a stenographer to earn more than ten dollars a week in protest.

Let me tell you that the number of really gifted shorthand reporters in the United States is so very limited that when I was compelled to leave that case on the assembling of Congress I was situated in one of the cases in which I had been assisting in this law suit had the greatest difficulty in getting any one to assist them in the work they wanted done. The importance of the case and the technical difficulty of it did not seem to be sufficiently appreciated by the news media but I was able to get two very good reporters who tried the job gave it up after a day or two. Neither of them could stand the pressure of that 90 minutes' talk, and the $30 a day was no object to them. The Supreme Court was a twenty-five thousand shorthand writers in the United States who would have cheerfully volunteered to attempt the reporting of that case. Perhaps before you graduate a successful pupil you open the door of opportunity, and you increase immensely the chances of a successful human career. To do this is an inspiring thing, and I congratulate you upon the importance of the work in which you are engaged.

THE THREE R's OF EDUCATION.

HON. THOMAS L. JAMES, PRESIDENT LINCOLN NATIONAL BANK, (THE VANDERBILT BANK) NEW YORK CITY.

It is quite true that there has been marked progress along educational lines in the United States within the past few decades, but it is also quite true that the results of these schools and business career of the business and commercial problems.

It is all very well to declare with the voice of one crying in the wilderness that education should not be considered solely as a means of amassing wealth or of earning a living. I agree to this. It is entirely proper to encourage general culture among those who have to make their own way in the world. I say amen to any plan for mental training that will spread sound culture everywhere. But the plans which include attempts to rear the superstructure of culture before the foundation stones thereof are laid, are harmful alike to the individual schooled under them and to the nation as a whole. They impair his personal efficiency and they lower the general standard.

A MATTER OF FIGURES.

Some who read these lines will think I am old fashioned when I say that "nature study," freehand drawing, musicianship, class instruction, and a lot of the subject to which so much attention is paid nowadays in our public schools, should be rigidly subordinated to matters that are more practical. I do not mean that the pupils are concerned. In fact, none of these things, in my judgment, should be extensively "taken up" by the great mass of public school children until after they are well and thoroughly grounded in such essential things as spelling, handwriting, the construction of simple, direct English sentences, and the elementary operations of arithmetic.

Not long ago a bright looking lad under eighteen, applied for a job in a retail shop on one of the cross streets in New York. "Where have you been to school?" asked the shopkeeper.

"Public Schools; graduated from Grammar School Number 4," replied the lad.

"I like your looks," continued the shopkeeper, "and I want a boy. It's only a matter of figures. Now, if eggs are $3 cents a dozen, how many can you sell for 25 cents?"

The boy couldn't answer, and he didn't get the job, though he had spent years in the public schools of the greatest city of the western hemisphere. This boy, you will observe, was wholly unitted to grapple with the simplest practical problems. Hundreds, yes thousands, of such stories might be told, although the vast amounts by the things are so spent in proportion to school population by any other city on earth) which the city of New York devotes annually to the education of its boys and girls.

You may say that the pupil with artistic ability, who has latent talents that will enable him with proper training to make beautiful pictures, to model graceful statuaries, to become a finished musician, or to

(Continued on Page 22.)
Lessons in Business Writing.

BY THE SADLER, BRYANT AND STRATTON

The best facts or truths which are to be used as a course of study for the youth of the land, are those which serve two purposes—as mental discipline and as knowledge to be acted upon. While a course of study which develops and strengthens the mind is good, one which not only improves the mental faculties for future problems, but which also stores the mind with a rich fund of knowledge as well, is still better. Likewise, a course of physical training which not only serves to develop a sound body, but which is useful as well, is better than exercises which merely serve as physical developers. For instance, chopping, sawing and splitting wood, which not only makes a strong man but also keeps up the fire during the cool strike, is more profitable than the swinging of Indian clubs in the gymnasium, which serves only to make strong muscles. The same principle applies, in a measure, to movement exercises in writing. While the large oval exercises are excellent to strengthen the writing muscles, they are in no sense letters of the alphabet, and I believe it possible for students to waste a great deal of valuable time on big oval exercises, which could be used to better advantage on movement exercises made up of letters of the alphabet, like copies 1, 3, 5, 6, and 12 in plate 7 of the February lesson, and copy 1 in plate 11 of this issue. In fact, I have seen pupils who could make wonderful oval exercises who were nothing but scribblers so far as writing was concerned. I do not wish to underestimate oval exercises, but do not work on them excessively just because they are easy, and neglect such exercises as I have pointed out.

Plate XI

This month I desire to give special attention to the extended letters; that is, letters that are longest on the main slant of the writing. A little time spent at the beginning of each practice period on the first copies in plates 11 and 12 will tend to make it easy for the hand to play forward and backward easily and freely in the main direction of these letters. The small t should be about twice as high as the minimum letters. Curve the upward stroke well and retract to the height of the one space letters. Never form a loop in the t. Practice copy No. 2 in plate 11 until you can repeat the t 1 to 10 times well without lifting the pen, then cross the entire group with a light straight line. The final t should be made as indicated in copy 3, plate 11. Keep it short, sharp at the top and avoid spreading it too much at the base. Never make a loop in the top of it. The words in this plate will serve to apply these letters.

The d is a combination of the small a and the t. It is well to review both these letters before practising the d. Be sure to bring the t part of d down so as to join it to the small oval well. Never leave those parts of the d spread apart. The small loop-topped d is a favorite with most good writers, as it seems easier to make a loop than to retrace. But be careful not to apply too much rolling motion in finishing this style of d.

Plate XII
Two styles of p are given. The latter is but an outgrowth of the former. The former is more precise, and is possibly a prettier style, but there is an easy swing about the latter that appeals to the rapid business writer. Make a sharp point at the top and close the little oval well at the base line. Avoid making it too large below the line.

Begin the q like the figure b. Make it narrow below the line, and always join at the base line just like you would in making l. Practice freely on copy 4 in plate 13.

The exercises in copy 1, plate 14, are just the ones for preliminary movement drills each day just before working on the various loop letters. Copy 2, plate 11, is the foundation for l, h, k, b and f. Make a business of loops until this copy becomes easy. Use a great deal of rolling movement. Always make a loop in the top and a turn at the bottom.

Many persons make r's and l's alike. That is, they make loops for r's as well as l's. Liberal practice on copy 3, plate 11, will help to overcome this fault.

The important part to watch in the h is the finishing stroke. Make a good double turn, like the last part of u or n. Study the last part of k closely. It is difficult. Avoid making the bottom part of k too broad. Keep the little turn small, and try always to get that little straight downward line in the last part of this letter.
The \( b \) should always have good turns at the top and bottom like \( l \), and should be finished with a little dot or point like a \( v \) or \( w \). This little point is important, as it is what distinguishes it from the \( l \).

The first style of \( f \) has good turns at both top and bottom, and is joined at the base line—just at the line, not a little above or below. The abbreviated style is popular with good writers. It is quite easy after mastering the first style.

Practice the various letters introduced in this issue, singly and in groups, watching closely the points mentioned, until they can be repeated easily; then apply them in the words given in these copies. Write the words over and over. Become able to write them smoothly, and so they will look like good business writing.

Supplementary Lessons in Practical Business Writing

By

LAWRENCE, MASS.,

STANLEY F. Keesling.

CANNON'S BUSINESS COLLEGE.

---

Lessons-38-39-

Every endeavor earns enthusiasm

Fine figures all from fingers.

Lessons-40-41-

George gets gallant games going

Happiness holds her head high.
The W is not an easy letter. The curves are so slight that it takes critical study to perceive them. In the first style, it is well to pause briefly at the base of each part. In the second style, no pause is necessary except in the finish. The second style is becoming more popular because it is easier and swifter. Adopt the one you can make the best, and prefer. Watch the turns and angles in the letters in the sentence.

Write with a free and rolling arm action.

(Continued on Page 24.)
write thrilling romances, does not need to be able to "do sums" in mental arithmetic and has no call to worry about such petty things as the price of eggs. Suppose this is granted, the fact remains that only an infinitesimal percentage of the boys and girls of this age, or any other, have in them exceptional artistic, musical or literary possibilities. And even if every one of them by training could be taught to paint like Raphael, to model like Phidias, to compose and play like Liszt, or to write like Dickens, still only a few could find a market for their wares, while the remainder would have to make their way along old-fashioned humdrum lines, in spite of their genius.

**SOME CURIOUS LETTERS.**

The number of youngsters graduated from our public schools and colleges, too, I am forced to say—who can not write clear, concise, and readable letters, is much larger than the number who have not mastered the simplest rules of arithmetic. And here I can give examples from more direct personal observation. The financial institution with which I am connected requires written applications from all who desire to enter its employment, and these letters are kept on file. Here is one of them from one of them who has been trained in two colleges, besides, presumably, in the common schools. It will be noted, too, that part of his schooling was obtained outside New York, and I mention this in order to show that not all the inadequate schooling of the age can be charged to the metropolis:

"Sir:

"Applying for admission into your employment, I wish to state that I have never been in business, being in school at—college in Maryland, and— in New York. My father's position is a bridge carpenter on the railroad. I live at —. I refer to— and—.

Yours respectfully.

[Signature]

This letter gives no information whatever that would be of value in determining the young man's fitness for a place as bank clerk. It does not even tell his age, and, besides, it is badly composed. I am sure the most ardent opponents of "soddiness" in education will agree with me that this young man's training in the elementary subjects has been sadly neglected; that so far as rendering him capable of making a demonstration that he "has an education" it is an utter failure.

Here is another letter of application, more specific in some ways, but decidedly of the sort that causes the judicious would-be employer to grieve. I say "would-be employer," because it is true that bankers, merchants, manufacturers, even "soulless corporations," are quite as anxious to get good employees as men out of work are to get good jobs.

"Gentlemen:"

"Enclosed you will find my application.

I wish to state I am twenty (27) years of age, and would like to receive a salary of $12.00 per week at first, as I am at present holding a situation which pays me $15.00 per week, but the only objection I find is that it is not steady employment.

"Remember, I can furnish the best of references from the time I left school until present day. Any kind of a position will satisfy me, providing I receive steady work. Thanking you in advance for your kindness, I am.

Yours sincerely,

[Signature]

This young man says he can, but does not "furnish the best of references." He is in one place that he is "twenty" and immediately afterward that he is "(27) years of age. He does not give his business experience. His English is inexcusably bad. And his handwriting, like the hand-writing of the other young man whose letter I have copied, is ragged, labored, and unattractive to the eye.

**Wretched Handwriting the Rule.**

Now I have a permanent quarrel with modern school authorities practically everywhere because of their inexcusable neglect of the art of handwriting.

When I was of school age we were obliged to learn to write at least legibly. We had "copy books" with engraved "cops" printed at the head of each page. We were required to devote a certain space of it each day to imitating these copies, which were really beautiful specimens of ch
650 Students Enrolled from September 1, to February 1. 475 in Daily Attendance at Latter Date.

I remember very well the good natured ridicule that used to be poured out in print upon the copy books of other days and the goody, goody sentiments of the lines, but their abandonment has cost too much. I remember very well also the beginning of the "anti-copy book movement," if I may so term it. This began with the young women who started in some years ago to acquire what they termed the "English hand." The characters thus affected are long, cramped, sprawling and irregular, and their production has cost thousands of fair creatures much pain and trouble and worry of mind, with the net result of illegibility, ugliness and the utter ruination of much good writing paper.

**CURRENT CONTEMPT FOR SPREADING.**

In the old days, too, we gave much time and attention to spelling. We had written spelling lessons and oral spelling lessons, and the spelling school, held on specific evenings, in which the grown-ups took active part, was a regular feature every winter.

But now the "word method" has come in. Children are taught to recognize each word by its general appearance, without regard to its component parts. I have heard teachers speak with elation of pupils who had actually gone through school without knowing the order of the letters of the alphabet, without knowing anything at all about "spelling" as we understood it in my younger days. Those who believe in the "word method" declare that pupils educated under this plan - spell quite as well in actual practice as those who were educated under the method of yesterday; but, so far as I can judge, the facts do not warrant the declaration, and my view of the matter is borne out by the observation of many of my friends.

An editor of my acquaintance, for instance, showed me the other day a manuscript on a technical subject, by an expert on that subject, who was also a graduate of a standard university, and had passed through the best technical school in his line. The article was admirable as an exposition of the subject, but its English was labored, unidiomatically - in some instances positively ungrammatical - and the whole was disfigured with many errors of spelling. As to the handwriting of the expert I can not speak, since the manuscript was done on the typewriter. The errors in spelling were his own, however, for he had learned to "use the machine" and had "pounded the stuff out" with his own hands.

As a horrible example of "spelling as she is sometimes spelt," I am going to add a letter of endorsement which I received the other day, though it is only fair to say that I do not know whether the writer was an old or a young man, a product of the schools as they are or as they were:

(Concluded on Page 37.)
This plate is a good one to study. Be careful to avoid the common errors so many make, and which alone make otherwise good writing poor. Carelessness with a few details of a few letters makes writing illegible and undesirable. No writing is wholly bad. As a rule it is bad only in places. Watch, therefore, the bad places in your writing and but little else or more will be necessary.

Common faults and tendencies to be avoided.

This compound curve exercise requires a graceful motion without stops or pauses. Finish the \( T \) high enough so it will not be mistaken for \( U \). Finish the \( U \) toward the right so it will not be mistaken for \( Y \). Learn to write well by observing wherein writing is poor as well as wherein it is good. Keep the fingers from acting much, as they prevent writing being graceful or easy.

Very truly yours. Uniformity is needed.

This plate illustrates a style of writing specially adapted to correspondence and accounting. Small writing requires less energy to produce than large writing. In modern accounting, large writing is out of the question. Note the uniformity of the slant in the down strokes as well as the uniformity of height in the small or minimum letters. See how nearly you can imitate or acquire these qualities.

Writing needs to be strongly legible. Where there is much writing to be done, it needs to be rapid. In order that it may be continuously rapid, it needs to be easy in execution. To be easy, it needs to be done with a large proportion of arm movement. This necessitates much careful practice.
A History of Penmen, Early Business Education and Educators in America.

Commercial Schools in New Orleans

After the purchase of Louisiana in 1803, New Orleans was blessed with some local and with some itinerant teachers of writing until about 1810. During this period, there were also special teachers of Mathematics, of Languages, of Bookkeeping, of Music, etc. Writing schools and Writing Academies commenced about 1825 to set forth their respective advantages, and about 1840 to the Writing School was occasionally added the subject of Bookkeeping, of Navigation, or of Mathematics. In 1832 the Dolebear Brothers visited New Orleans as itinerant teachers of Writing, on the Cas- tarian system, and at the time that regular Writing Academy in New Orleans and in New York. About 1853 they connected Bookkeeping and Arithmetic with the Writing Schools and opened Dolebear's Commercial Schools, the first of its kind as a commercial college in New Orleans. It had a varied experience for many years with a low-grade course and bombastic advertising, but became extinct in 1857.

From 1855 to the present date, 1892, there has been upward of forty Commercial Colleges, Shorthand Schools, Telegraph Schools, Literary and Commercial Colleges, Commercial and English Academies, etc., all of which have ceased to exist. There are at present writing upward of thirty Commercial Schools, Shorthand Schools and Telegraph Schools, including the Commercial Departments of the High Schools, the Literary Schools and the Commercial Schools connected with the various Catholic institutions. Nearly all of these schools have short, low-grade and incomplete courses in the Commercial Sciences.

GEORGE SOULE

In 1856, Geo. Soule established the Soule Commercial College, in New Orleans, and in 1872 he extended the course of studies to include English and Academic courses, and in 1884 Shorthand and Typewriting courses were connected. Each of these schools or departments has a separate corps of teachers and is specially equipped for the course taught therein.

In the 16 years' work of Soule College it has had various experiences with commercial courses of study and methods of teaching. The questions, "What shall constitute a course of business study? and how shall it be taught?" were born with the commercial school, and, like Banquo's ghost, they will "never down." Forty-six years ago Soule College confronted these questions, and has since labored by experiment, investigation, and reason to solve them. As early as 1856, the founder of this institution taught the bookkeeping branches of a business course practically—in the sense in which the word practically was then used. J. N. Bartlett, Peter Duff, and Geo. N. Comer, the fathers of commercial schools in this country, and Jones, of St. Louis, and Gomby, of Cincinnati, the leading pioneer disciples of the fathers of commercial education, and some others of less fame had already illumined the American business world with their methods of teaching Bookkeeping. With these methods as a basis, Soule College commenced its work of evolution in methods and in course of study. In a part of its course it introduced the actual transactions of a mercantile house, and connected therewith all the business papers, correspondence, etc. It presented the exact forms of books used by the leading houses of New Orleans, and gave extended work in Practical Arithmetic, Commercial Law, English Composition, Penmanship, etc. It tried the Merchandise Card System, the Board of Trade System of Buying and Selling, the Sample Merchandise Store System of making purchases and sales. It also investigated the merits and demerits of the various fads and fakes which were front to time injected into the commercial school work, by various teachers.

Soule College as it exists today, is the growth of nearly half a century. Its attendance is yearly increasing. In 1892, last session, 677 students were in attendance. Its facilities have been year by year increased, and its courses of study have been each year extended and made to meet the demands of the continual change in business affairs and in practical education. The Commercial or Business course of study is now of the highest grade, and includes the text-book, the individual instruction, the lecture and the business practice systems of teaching, combined with actual store work, wherein real goods are bought and sold, actual money is received and paid, and in which the students keep the books by the most labor-saving forms, on the Department System. Loose Leaf Ledgers, Order Blanks, Triplicate Sales Forms and Binders, the Reverse Posting and the Check Figure Systems of proof are used in the actual store work, and actual cash is balanced by the student daily. This special feature of Soule College is not possessed by any other Business school on either continent.

Another distinguishing characteristic of Soule College is its High Bookkeeping course. It presents the special forms of books, general and auxiliary, that are used in the leading lines of business, instead of the impractical forms given in the ordinary textbooks of the day.

The growth of the college has necessitated the recent erection of a large and elegant building admirably planned for the present and future needs of each department. The work was well begun and the present department is so complete that its graduates are admitted to Harvard and Yale. Soule College is not only the largest but for many years it has ranked as the strongest in its courses of study and its equipment and the thorough equipment of its graduates. As a scholar and courteous gentleman Colonel Soule has for many years been regarded by business educators as almost an equal. Socially in his family and throughout the south he is a recognized leader. My wife and I had the pleasure of visiting New Orleans a number of years ago and arrived in the midst of the great Mardi Gras festivities which in February attract thousands to the city. Hundreds of thousands of dollars are spent in making the city a fairy land of flowers and gorgeous decorations. Scores of barges and floats of marvelous beauty form a part of a royal procession headed by the King of the Mardi Gras and his attendants. At night the King and attendants give public receptions in some house beside beautiful beyond description with evergreens and flowers. Who was to be King was a close society secret. We called upon Colonel Soule, and in stating that we supposed it impossible to gain admission to the special Mardi Gras receptions he assured us that nothing would be easier, and writing our names on a beautifully engraved card he presented it to us in confidence with the compliments of Colonel Soule, King of the Mardi Gras. During the festivities as King, and later at his beautiful home, as Colonel Soule, he gave us royal treatment. While there are today many worthy schools throughout the south, imparting business training there are none so ably managed, so highly esteemed or so creditable to the cause of Commercial Education throughout the country as Soule's Commercial College, the oldest, largest and strongest in the south.

JOHN D. WILLIAMS

Was born in Pittsburgh in 1828, but his boyhood days were spent in Newcastle, Pa. He showed an early love for writing and drawing, and his skill in the use of chalk or charcoal and a board fence would come as near making him perfectly happy as anything could. Those were the days of the various writing masters, wherein wonderful results were achieved "in ten lessons," by candle-light, with quill pens. The traveling writing master was as much a curiosity to the country boy as the menag
er or circus, and was possessed of as many antics—chirographically speaking—as the monkey or the clown. In fact, the "show" or framed "specimens" was quite as curious in general and in detail as any circus bill that was ever printed. And it never ceased to be the topic of wonder that any mere mortal could attain to such sublime skill of portraiture through the instrumentality of a quill pen; and in fact, it is an even thing whether, as mere objects of curiosity, the world has ever produced the equal of the "kit" of the traveling writing master of sixty years ago. Impossible elephants in red and blue ink, carrying their cork-screw trunks between their striped legs; flying horses, birds of gaily mixed plumage (blue and red) with out-stretched wings and fan-like tails, of species unknown to naturalist or taxidermist; angels with wings and trumpets, proclaiming to the world that "the unrivalled chirographist, Mr. Seth Jones, is about to start a writing school, at the frame school-house at Dixon's Cross Roads, on Monday night next, at early candle-lighting, to continue for ten lessons, at a dollar a head, each pupil to bring his own candle and to furnish his own paper, ink and quills. Success guaranteed in every instance."

It was just such a show as this that attracted the boy, John D. Williams, and just such inspirations that started him on a career wherein he finally made his mark as the best off-hand penman of his time.

At the age of twelve he came under the notice of Peter Duff, of Duff's Commercial College of Pittsburgh, who gave him his first writing lessons.

Mr. Duff knew how to utilize Williams' skill, and not being afraid to puff him generously in the Pittsburgh papers, he soon made him famous and gave him the incite-

ment which he needed to push him forward in his artistic field. At that time the famous and eccentric O. K. Chamberlain was running an opposition school in Pittsburgh. He was a pupil of Spencer's, though by far too egotistical to acknowledge any mere man as his master, and nothing pleased Williams or Duff better than to stop the louder boasting of Chamberlain by the superior work of Williams. Williams was a rapid and tireless workman, and he fairly "thung" his specimens about with an extravagant liberality that awakened wonder. Chamberlain was far more skillful with his tongue than with his pen, and it began to be pretty well understood that while he could beat Williams in blowing, Williams could surpass him in penmanship skill. The influence of those early and sometimes bitter contests never left him. He was always a competitor; always noticing the work of others and determining to beat it. No where was he so truly in his element as at a State Fair, where there was plenty of competition and a chance to win the premium as a "Champion Penman." He omitted none of the accessories, and was untiring in his efforts to secure the most advantageous position to display his skill, the best recognition from officers and men of influence, and the best chances of winning the premium. While he was always anxious to deserve the first place in the final award, he was just as anxious to secure it, and left no stone unturned to this end.

As a practical penman, Mr. Williams made no claim for great excellence. Owing to an accident which almost totally disabled his right thumb he was unable to make use of what is known as the "finger" or "mixed" movement, and while he was able to draw for the engraver with great accuracy, by holding the pencil as in the position for flourishing and using the arm movement entirely, he could not use the pen with any marked skill in ordinary writing. This fact was the source of much regret to him, the more especially as it left open to conjecture whether the copy lines which appeared in his published books were the engraver's or the author's. It is saying no new thing to state that no author who ever prepared copies for an engraver did it with more care or more exactness, and whatever work of

Considering the fact that we issue no partial or cheap editions; that our journal is high-grade in every particular; that the color feature of the cover alone costs hundreds of dollars; that "lessons that teach" are a distinctive feature of our magazine; that the art presented is the best ever given in a journal of this nature; and that the department of business education is upon a more comprehensive basis of good, representative plan than ever before attempted; you will readily see that the BUSINESS EDUCATOR is not only the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of Its Class

The BUSINESS EDUCATOR being the most popular and widely read journal of its kind, it follows that it is also the best advertising medium. It is read by persons interested in commercial education and in penmanship, in both this country and in Canada. It covers the commercial school field completely, going as it does to the heads of Commercial Colleges, Commercial High Schools, Commercial Departments in Parochial Schools, Colleges, etc., as well as to a large number of office workers, public school teachers, began again to move more freely, and the people felt the need of greater speed in penmanship. As a consequence the

New Angular Hand

came into use, and from 1800 to 1850 increased in popularity. As concerned speed, it was a decided improvement over the round style it superseded, but it was less legible. So much so that at times it was inclined to illegibility. The round hand was slow but legible; the angular was rapid but illegible, unless unusually well written.

The strenuous times of 1850 began to disclose the fact that a more legible hand than the angular was needed; and one that was, if possible, still swifter. Father Spencer and his contemporary laborers came upon the scene and discerned the new need and endeavored to meet it in the evolution of the

Demi Angular

or Spencerian hand, which soon proved so practical and popular. This style embodied the then essential writing, legibility, rapidity, and beauty, for beauty in shade and hair-line, and curve and flourish, was at that time thought to be a part of business writing.

In the seventies, Gaskell began the advocacy of more arm movement applied to writing, and in the eighties, Michael advocated more speed. Both of these reforms (if such they may be called) had many followers, and have had results. The chief progress that has been made has been in the discarding of fine lines, shades, and, to some extent, flourishes and complex forms. The result was that in the early nineties the Unshaded Hand

Facts—Historical and Scientific.

About the time that Columbus discovered America the scribes discovered that the

Disconnected Static Hand

was too slow for the then awakening commercial needs. In their endeavors to write more rapidly, though somewhat less legibly, they naturally drifted into connecting their letters, and the result was the development and creation of the

Simplified Writing

sprang into existence. It is a step in advance of the preceding style, in as much as it is more legible, easier to acquire and execute, and swifter. The writing of the many can be improved by making writing easier to master. This can be done by making it more useful. Writing is the old hand reconstructed and shorn of its complex and difficult features. It is not an end but a step in the direction of something still better. Give it a trial.

In our February number, in our brief and hurried notice of the death of Prof. Charles Waldo Haskins, we allowed the name to slip through as "Haskell." The notice came too late for proper proof-reading, hence the mistake, for which of course we are sorrier than any one else.

We thank you, friends."

"I congratulate you on the high standard represented by your publication, and the interest manifested in your report of the Convention is excellent."

John R. Gregg.

Gregg Publishing Co.

Chicago, Ill.

"The next best thing to being at the Milwaukce Convention is reading THE BUSINESS EDUCATOR. I have enjoyed it all over again, and am the more pleased to report that you and Brother Gaylord have displayed in giving it so complete and full. I'll club you more."

W. F. Gerigman.

Salem Com'l. School, Salem, Mass.

"You deserve congratulations for bringing THE BUSINESS EDUCATOR up to the top of the ladder. It surely leads."

J. E. Leamy. Troy, N. Y.

"THE BUSINESS EDUCATOR is the leading journal now worth a making. Grand success of it. Will send you a club in a short time."

W. L. Thomas.

Wichita Business College.

Wichita, Kans.

"Your report of the Convention is the best I have read. It is brimming over with good nature and embodying much of the spirit that should prevail at such meetings."

C. G. Finch.

Duke Center, Pa.

"I link you know that I appreciate THE BUSINESS EDUCATOR very much."

Archibald Conn.

Bank's Bus. College.

The February issue of THE BUSINESS EDUCATOR is iridescently delightful to us. It is the best number that you have ever published, and the best of its kind ever published. Your Milwaukee report is certainly going to make you many good friends."

George K. Spohn.

Nadison, Wis.
A recent number of the Chicago Record Herald contained a full page attractive advertisement for a new College of that city and a description of its "million-dollar business course." The Metropolitan is a happy middle ground in its proposed courses, having steered clear of the usual college, and having shunned the extremes. The present day experimenters in the commercial schools of the universities. If the courses outlined are to be trusted, President Powers is to be congratulated on his courage and foresight in the step that ought to be both attractive and profitable.

"Success" is the name of a very suggestive booklet issued by the American Correspondence school of Springfield, Mass., of whose commercial department Mr. E. S. Hull, former principal, has charge. Those who have school advertising in charge will do well to obtain a copy of this pamphlet.

Mr. Charles R. Barrett, the scholarly business-like superintendent of the Chicago Athenaeum, has been contributing to the Daily to-day the greatest club of instructive articles on subjects of interest to those who are trying to grow the business. Those who enjoy the personal acquaintance of Mr. Barrett know that he exemplifies in his daily the qualities of which he writes so incisively.

In an article on "the Mormons" in the December World's Work there is a hand-

Circulars.

CATALOGUES AND

One time we noticed in these columns a circular of the Commercial School catalogue of Cleveland, Ohio. Another, also very splendidly improved in the way of printing, the half-tone illustrations coming up far better than the original, has been published by the Elsworth Co., N.Y. City. If this circular does not convince you that you have been reading the right kind of paper, then you are surely not interested in pen-

"Chat," published by the Manhattan Publishing Co., No. 59 Nassau St., N. Y. City, comes to us regularly laden with short chatty, cheerful, choice articles and editorials upon timely topics, office infor-

From a letter to our friend and former pupil, Mr. J. E. Joiner, of Lancaster, Ohio, we have learned that the Commercial University of that city, which we thought a very successful school, has been placed in the hands of a newly furnished school with an equipment that is first class. I believe the course of the Commercial College, Chicago, is a much more ambitious undertaking than any similar institution in this part of the country.

He also expresses his admiration for the BUSINESS EDUCATOR.

A Universal Opinion.

"Enclosed find $1.00 for which please renew my subscription to THE BUSINESS EDUCATOR another year. I think your journal the best and most practical pertaining to penmanship and business education."

O. S. EVERLY,
Taylor, Wis.

We are indebted to J. W. Barlow for interesting advertisements of Humboldt College, Henry M. Brown said: "A Few Facts from Hessert College, comes to us, in the straightforward style of the proprietor, J. H. Hessert, Manchester.

Commercial schools, it seems, are not alone guilty of the sin (?) of soliciting students. At a recent alumni dinner in Boston, President Watt of Colby said: "I have been astonished at learning within three months of the methods employed to get students. Advance agents, who are paid so much a head for boys delivered at the college, are creating a demand in Maine that I would rather have my classes and better material at Colby."

The Fourth annual entertainment con- sisting of music, speeches and dancing, given by the Bliss Business College of North Adams, Mass., S. McVeigh, Principal, was held on Tuesday, Jan. 9th, 1906. The same was an enjoyable success if we may judge by the reports received at this side of the line.

E. C. Davis, formerly of Quincy, Ill., is the new penmanship teacher in the broken Bow, Nebr., Business College.

B. F. Wilson, formerly with the Western Normal College, Shenandoah, la., has accepted the office of principal of the Sharps- burg, Ia., Bank. D. L. Callison, the well known penman, has succeeded Mr. Wilson in the college.

To accommodate the growing demand for the Isaac Pinchant Shorthand Publications and General Fact Books, Messrs. Sons, of 31 Union Square, New York, have appointed as their general agents, Bookellers and Publishers of San Francisco, who will handle their publications on hand. A similar arrangement has been made with Messrs. A. C. McLurg & Co., of Chicago.

The Wingfield Connelly Business College, Mitchell, S. Dak., has been purchased by B. A. O'Mealy, and will hereafter be known as O'Mealy's. Mr. Wingfield is still principal, and we understand his departure is a splendid- work.

The stenographic department is superintended by Miss Sadie Brown, who is doing a splendid job. We are glad to learn that the enrollment has nearly doubled during the past three weeks.

Some time ago we noticed in these columns a fair catalogue of the Commercial school of Cleveland, Ohio. Another, also very splendidly improved in the way of printing, the half-tone illustrations coming up far better than the original, has been published by the Elsworth Co., N.Y. City. If this catalogue does not convince you that you have been reading the right kind of paper, then you are surely not interested in pen-

Our new correspondent, Mr. Burt German, who opened German's Actual, of Kansas City, Mo., on January 5th, enrolled seventy pupils during the first three weeks. This is certainly a very good start for a new business school. BUR- CATOR wishes Mr. German much success with his new institution.

Under the management of Messrs. L. H. Webber and C. H. Elliott, of Vancouver, B. C., Business College was opened January 5th of the present year. Mr. Webber claims that they already have a splendid enroll-

We notice that a very beautiful Old English head title page has been employed throughout our publication, and that it is familiar with Old English it seems a very ar- ticulate and good thing. The advisability of using this style of text for the general public, for we remember that the title page is not a mere thing to a Chinese puzzle to us. Whether or not the columns are 1903, the book is written with Old English to read it readily we are in doubt.

A "New Education in Penmanship by Countess," is the title of a little book being sent out by L. H. Hausman, River- side, Calif, in the interests of his courses by correspondence. Interest in work of this nature and in penmanship will do well to consult this work. It contains many very suggestive, stimulating ideas upon the subject of writing.

The Southwestern Business University, Oklahoma City, Okla. T. N. Nilan, Princi- pal, is sending out a good grade of advertis- ing literature indicating a progressive in- stitution.

The Northwestern Business Journal is the title of a well printed, well written, high grade, four-page journal issued by the Business College of Chicago, Ill., J. F. Fish, Principal. We have learned that he had started a school of his own in Chicago; we knew it would be a go, because he possesses the right qualities for success.

Howard & Brown, of Rockland, Me., are sending out a very handsome circular relating to their diplomas which favors as leading the business of this kind in the country. The circular is beautiful.

The Brazil, Ind., Business University Journal published by C. & H. A. Munson, reaches us regularly and always catches our attention.

A very unique and attractively illustrated folder-circular has been received from the Business College, West Point, Miss.

The Business Department of the Marion Normal College, Marion, Ind., C. W. Boucher, Manager, and O. S. Herring, Manager, are sending out a very nicely illustrated cata-

logue of thirty-two pages containing some beautiful specimens of penmanship done by Mr. Harrick, a very well known of the school for many years, and have never heard anything but good of it.

A splendidly printed twenty-four page circular of the Western College of Commerce, Lectures and Lessons, Theory and Art of business is being published by the Ellsworth Co., N.Y. City. If this circular does not convince you that you have been reading the right kind of paper, then you are surely not interested in pen-

O. S. EVERLY,
Taylor, Wis.
Annual Meeting, Heffley School, Brooklyn, N. Y., April 9, 11, 1903

Reduction in Fares on Certificate Plan

All members are earnestly requested to obtain certificates, so as to secure a sufficient number (100) to entitle to reduced return fare.

A reduction of fare and one third, on the certificate plan, has been secured for those attending the meeting in all territory covered by the New England and Trunk Line Passenger Associations. The advertised dates of the meetings are from April 9 to 11; consequently you can obtain your ticket not earlier than April 6 nor later than April 10.

Be sure that when purchasing your going ticket you request certificate. Do not make the mistake of asking for a receipt.

Present yourself at the railroad station for ticket and certificate at least 30 minutes before departure of train.

Certificates are not kept at all stations. If you inquire at your station you will find out whether certificates and tickets are to be obtained. Each certificate should be validated at place of meeting. If not, agent will inform you at what station they can be obtained. You can purchase a local ticket hence, and take up a certificate and through ticket.

2. On your arrival present your certificate to Mr. H. M. Rowe.

It has been arranged that the special agent of the Commercial Teachers' Association will be in attendance to validate certificates on April 11. A fee of 25 cents will be collected for each certificate validated. If you arrive at the meeting and leave for home again prior to the special agent's arrival, if you arrive at the meeting later than April 11, after the special agent has left, you cannot have your certificate validated and consequently you will not get the benefit of the reduction on the home journey. No refund of fare will be made on account of failure to have certificate validated.

So to prevent disappointment it must be understood that the reduction on return journey is not guaranteed, but is contingent on an attendance of at least 250 persons holding certificates obtained from ticket agents at starting points. The minimum of full fare of not less than 5 cents on going journey, provided, however, that if the certificates presented fall short of the required minimum and it shall appear that round trip tickets are held in lieu of certificates they shall be reckoned in arriving at the minimum.

If your ticket and ticket number is in attendance and your certificate is duly validated, you will be entitled up to April 15 to a continuous passage ticket to your destination by the route over which you make the going journey, at one-third the limited fare.

Hotels

The Executive Board has made arrangements with the following hotels for the entertainment of members:

St. Denis, Broadway and 1st St., Etropian plan. Single rooms, one person, $1.50 per day; two in a room, $2.00 to $2.50 per day.

Hotel Albert, 1st St. and University Place. Single room, one person, $1.00 per day; two in a room, 75 cents per day.

Banquet

The banquet will be held at the St. Denis Hotel, Friday evening, April 10. The New York Commercial Teachers' Association has accepted President Miller's invitation to hold the banquet at his own expense, under the auspices of that of the Eastern Commercial Teachers' Association, which insures a most enjoyable and brilliant occasion.

HOW TO REACH HEFFLEY SCHOOL, BROOKLYN, FROM NEW YORK

Via Brooklyn Bridge—Take DeKalb Ave. trolley at the New York end of the bridge and get off at Kyser's St., Brooklyn, (no change necessary) or take Bridge cars New York to Brooklyn; then take an East New York train on the Brooklyn Elevated railroad to DeKalb Ave. station.

Via 2nd St. Ferry—Cross 2nd St. Ferry New York to Broadway, Brooklyn, then take a Franklin Ave. car and change at DeKalb to a DeKalb Ave. car for Kyser's St.

Program of the Eastern Commercial Teachers' Association for Annual Meeting, April 9, 10 and 11, at Heffley School, Brooklyn, N. Y.: A meeting of commercial teachers for commercial teachers and by commercial teachers.

An old-fashioned meeting conducted in the old-fashioned way for the old-fashioned purpose of getting new fashionable ideas.

Thursday, April 9, 10:00 A. M., GENERAL SESSION

1. Address of Welcome, N. P. Heffley, Principal Heffley School.
2. President's Report.
3. Appointment of Committees.

Luncheon 12:00 M. BUSINESS SECTION 1:00 P. M.

2. ROUND TABLE DISCUSSION Query: "How Broad a Course in Commercial Geography Should be Attempted by a Commercial School?"

Friday Evening—Banquet at St. Denis Hotel

Saturday, 10:00 A. M., BUSINESS SECTION

1. "My Hobby," being an untruthful statement of the particular educational idea that represents the burning thought of the speaker. Each member is cordially invited to participate. Each speaker will be limited to five minutes and discussions to two minutes.

For a number of years it has been remarked by members that sufficient time was not allowed on programs for discussion of practical school problems. The Board has provided the opportunity at this time, in both sections, to bring out a rich fund of school room experience and enthusiasm, in which it is earnestly requested that all members will participate. It is hoped that the experiment will prove so successful that it will become a permanent feature in the programs of the Association.

SHORTAGE SECTION 10:00 A. M.

1. "My Hobby." Being an unpremeditated outburst forth of the particular hobby of the speaker. A Round Table Discussion
in which it is earnestly desired by the Executive Board that all members shall participate.

Each speaker will be limited to five minutes and discussions to two minutes.

Let every member of the section be prepared to air his particular daring thought.

Saturday, 1:00 P. M.

GENERAL SESSION

1. Reports of committees. 2. Election of officers. 3. Selection of place of meeting.

ADJOURNMENT

Eastern Commercial Teachers' Association.

The annual meeting of the E. C. T. A. will be held in the Heffley school, Brooklyn, New York, Thursday, Friday and Saturday, April 9, 10 and 11.

The Executive Board has put forth every effort to prepare a program of exceptional merit and attraction. Every possible precaution looking to the comfort and entertainment of the members is being taken.

It is the purpose of the Executive Board to make the banquet a particularly attractive and enjoyable occasion, and with this object in view, opportunities will be offered for the renewing of friendships and a cordial interchange of greetings between members and visitors.

The menu is the special charge of a member of the committee who is noted for his discrimination in things gastronomical, which insures the hearty approval of those who shall surround the banqueting board. Good cheer and good fellowship will be in the atmosphere, and every one is assured a royal good time during the evening.

An opportunity will be given all members who desire to discuss the various papers, and a time has been set apart for all those who desire to do so to discuss any subject in which they are especially interested.

Very respectfully,

THE EXECUTIVE BOARD.

By J. L. Wallace, Portland, Oregon, Business College, who does not pose as a professional, but who writes a remarkably practical hand, specimens of which we hope to present later.

Power in the Art of Handwriting.

Huntsinger's Business College,
The Business Educator, Hartford, Conn., November 11, 1902.
Columbus, Ohio.

Gentlemen:

Let me congratulate you upon securing the masterly hand of W. E. Dennis of Brooklyn to give a series of lessons in Off-hand Flourishing.

Although the Business College profession rarely ever indulges in dragons, horses, stags, lions, geese and other creations, the skill obtained in their execution still commands the respect of a large portion of the profession, because such skill indicates power in the art of handwriting.

Yours very truly,

[Signature]

The above is from the vigorous pen of Mr. Huntsinger, the well known aggressive, progressive business educator of Hartford, Conn. The signature is a fac-simile of the ones attached to letters received at this office. As will be seen, Mr. Huntsinger puts it on thick, and with a force and strength rarely seen. Back of this signature one can see grit, determination, ambition and thoroughness, all of which are characteristic of the man if we mistake him not from this distance. While he is penman of no mean skill, he is as skilled as a teacher of penmanship as he is successful as a manager of one of the best schools in this country. We know of no school turning out students who write a more uniformly strong handwriting than Huntsinger's Business College.

For ten years this signature has been going broadcast over the State of Connecticut, and as a consequence there are thousands who recognize it at a glance, containing as it does a certain amount of attractiveness not found in the effeminate hand written by a great many of our professional men. The pictorial arrangement of the lines are such that when once seen the signature is pretty sure to be remembered.
Brush and pen work by Mr. Skillman, who, as is clearly shown by the excellence of the work, does not belie his suggestive and appropriate name.

E. C. MILLS,
Script Specialist
195 Grand Ave., Rochester, N. Y.

If you contemplate publishing a form letter or designing a new piece of work, or if your own letters or correspondence have need of improvement, let us be of service.

Lettering Curves
For drawing simple or compound curves for letters of correspondence, the new curves are ideal. The book contains complete instructions for their use.

AMERICAN COLLEGE EXCHANGE TEACHERS' BUREAU,
DUNDEE, MD.

CAN YOU HOLD A BETTER POSITION?
If you, register with us to-day. Qualified teachers secured for schools; positions secured for qualified teachers. TEACHERS AND SCHOOLBOARDS carefully assisted co-operatively by becoming certified members of this Bureau. School properties bought, sold and exchanged.

AMERICAN COLLEGE EXCHANGE TEACHERS' BUREAU,
DUNDEE, MD.
E. O. Folsom, penman in the Cream City Business College, Milwaukee, Wis., recently favored us with a set of capitals, which are certainly very practical. The ink in places was too fast to engrave well, which should have prevented them from our readers.

G. E. Weaver, the bustling penman and artist of Mt. Morris, Ill., whose advertisement appears elsewhere in our columns, writes that he now has more students than he has ever had before. He also states that his order work is increasing. Mr. Weaver has won quite a reputation as a chalk talker, and is a manly sided man.

Some splendid specimens of business, ornamental and engrossing penmanship have been received from Joe Barnes, who is policy engrosser in the Northwestern Life and Savings, Milwaukee, Wis. Mr. Barnes has been a pupil of Mr. Gieseman, both of whom are to be congratulated upon their work.

Mr. H. O. Keesling, of Cannon's Commercial College, Lawrence, Mass., favored us with a batch of specimens of students' practice in writing, evidencing the fact that Mr. Keesling is a practical teacher as well as a practical penman. The specimens are uniformly good.

We also notice that they were written on paper ruled on the copybook standard without the "boxes." We believe this is a good idea for a very amount of practice, as it helps pupils to regulate the heights of their letters and thereby their movements as well.

Mr. Keesling is nothing, if not up-to-date.

G. A. Newman, Jr., Buffalo Gap, Va., submits specimens of ornamental penmanship, flourishing, carving, writing, etc., indicating that he possesses natural talent along the line of penmanship.

Mr. O. M. Allig, teacher of penmanship in the Olivet, Mich., College, renouces his subscription to THE BUSINESS EDUCATOR, and states that he finds the journal very helpful in this teaching. He adds that THE BUSINESS EDUCATOR is certainly "leads'em all."

Some cards Mr. Allig enclosed show that he is making rapid strides toward the top in penmanship.

Mr. W. L. Carter, of Brock, Tex., recently favored us with a title page for THE BUSINESS EDUCATOR, containing not a little merit.

Some splendidly written cards, ornamental style, have been received from K. C. Galloway, Pitts-town, Pa. Mr. Galloway was a student of the Zanerian a few years ago, and if he keeps on he will make one of the finest.

Mr. S. McVeigh, Principal of the Bliss Business College, North Adams, Mass., recently favored us with a batch of specimens of business penmanship from students indicating a neat through and practical training in this commercial art. While all are very good, the specimen of Miss Florence Pero is exceptional for its straightforward, business-like tendencies, being strong, rapid and quite accurate.

Mr. Ben Kupferman, @ Morris St., E. Boston, Mass., recently favored us with some cards and a letter which disclose the fact that he has more than average skill. He writes a number of hands very successfully, and what is still better is a successful teacher of penmanship as well.

Mr. C. R. Tate, penman in the Bartlett Commercial College, Cincinnati, Ohio, recently favored us with a batch of about three hundred specimens of writing from students in that institution. The specimens all indicate a freedom of movement that is unusual for so large a number of pupils. This indicates that the instruction in writing is pushed with more than usual wisdom and vigor. Some of the specimens are remarkably good, indicating some talent and plenty of pluck, the work of the young ladies being quite equal to that of the young men. Quantity and quality considered, the specimens are worth anything to equal the specimens before us.

Mr. Keesling, of Cannon's Commercial College, Lawrence, Mass., recently favored us with some cards and a letter which disclose the fact that he has more than average skill. He writes a number of hands very successfully, and what is still better is a successful teacher of penmanship as well.

Miss Velle deserves much credit for having accomplished so much in so short a time by her own unaided efforts. Possessed as she is of a sterling character, pleasing disposition, backed by talent and industry, there is no wonder that she has succeeded, as no one fails who possesses these qualities to a like degree. It gives us pleasure therefore to thus briefly introduce her to our readers as one who has won success.

Crisp and Strong

Allow me to commend the shortening of the name of your bright periodical, also the crisp, strong editorials.

31 UNION SQUARE - NEW YORK.
Who Can Learn to Write Well?

By C. N. Crandle, Chicago, Illinois

As the years go by, and experience ripens, our opinions change. Many things which we advocated a few years ago have been set aside, and the methods have taken their places. This truth is manifest in all vocations of life. Progress is the watchword, and ambition the motor-power necessary for success in any undertaking. The methods of the past are obsolete, and new and wonderful facilities. Many of us remember the old blue-back speller, and how we "toed the mark" when the lesson was to be recited. They were crude ways, but productive of good results. We knew how to spell, because we had to. The children were taught writing by methods which many teachers of today consider obsolete. Observation teaches that the old ways are superior in many cases, and the teacher who advocates that all pupils can learn to write equally well by the same process is certainly laboring under a mistaken idea. The subject, "Who Can Learn to Write Well," might be briefly answered in these words: "All pupils can learn to write well, regardless of obstacles. They possess the necessary desire, coupled with ambition, and their progress is steady and rapid. The teacher of such a class is likely to conclude that all persons, from a business point of view, can learn to write equally well. The old saying: "Any person with one hand, one eye, common sense, and the aid of a good teacher can learn to write," carries with it much truth.

It is generally conceded that the average person possessing sufficient physical power and a willingness to work, can develop a fair degree of proficiency in writing. Accepting this as a conclusion, we come face to face with other questions. Which style are you going to claim for your standard, the slanting or the vertical style of writing? That which is executed rapidly or slowly? The vertical writer will tell you that the old slanting style is null and void. That it covers too much space, will develop in the writer curvature of the spine, and make the reader of such writing cross-eyed. The advocate of slanting writing condemns the vertical, and proclaims that it is not writing at all—merely an excuse for poor drawing. Prejudice must be set aside, and the position of the business man assumed—be who has to pay for the writing.

What kind of writing will he require? As a rule he will not exact a particular style. It may slant to the left, be vertical, or slant to the right. The first quality he notes is that when the writing is clear, even and plain it is pronounced good. If the work to be done is not of the rush-order kind, speed will not be considered essential, and though the execution be slow and laborious, the writing is good for the purpose for which it is to be used. If the necessities require speed, the writing of such a person would be worthless. That which is good for one is poor for another. But he who can write rapidly, systematically and legibly must be acknowledged a good writer. If the latter is the only one to be considered good, then the question is difficult to answer, even if any style be required.

The nervous system of the pupil has much to do with his progress in learning to write. Should he be excitable, it will be difficult to develop a strong, even style of letter, and regular spacing. However, he appears easy and graceful, will possess the useless strokes and irregular finishes. Important factors to be considered in learning to write well are disposition, confidence, grace, mental and physical development. The person who possesses these qualities will unconsciously portray all in a page of his penmanship.

Physically who is so fortunate in the possession of all the natural gifts may become a good writer by the more common course—plodding. If the pupil is nervous, awkward, stubborn, and lacks self-confidence, it is a laborious task to either lead or drive him to the acquisition of a good hand-writing. He will not see the benefits that may be derived from the ability to write well, and the teacher, be he ever so earnest, can do nothing. If he ever improves his penmanship to any noticeable extent, it will be when he gets a position where his success depends upon his ability to write well, and the employer says: "You must get the job, or go on."

This, even in advanced years, he may be found in the penmanship class, plodding for that which he might have secured with comparative ease, had he taken advantage of the opportunity while young. Accepting any style or styles of penmanship, when well written, as being good, the logical conclusion is that any person who is physically and mentally right, and has sufficient influence back of him, can learn to write well.

TO ASPIRING TEACHERS

OF PENMANSHIP

Beginning July 1, 1903, I am going to give a TEACHERS' COURSE in Penmanship in the rooms of HEFFLEY SCHOOL OF COMMERCE, 245 Ryerson Street, Brooklyn, N. Y. This course is offered as being the best instruction ever given on the subject of writing. If Writing is What You Want, Our Method of How and What to Teach, so as to get the best results in the shortest time possible, you cannot afford to miss what you can get from me.

One of my last years' pupils says this: "The Mada-ras Method is philosophic and logical. It is my favorite, and I recommend it to others in writing. If Writing is What You Want, Our Method of How and What to Teach, so as to get the best results in the shortest time possible, you cannot afford to miss what you can get from me."

Mr. Mada-ras has points that every penman and teacher of penmanship must get, if he wishes to be noted for his profession. It gives me the greatest of pleasure to recommend the Mada-ras Method. No teacher can afford to do without it.

T. COURTNEY,
Iowa Business College, Des Moines, Iowa.

The terms will be as same in previous years, $30 for the course. This is not a mail course, but personal instruction, and can be got only by coming to New York.

The above portrait is a likeness of Mr. P. Escalon of San Francisco, Calif., formerly of Santa Ana, Republic of El Salvador, and more recently a student of Mr. F. O. Young, the left-handed penman of the Pacific Coast. Mr. Escalon is but seventeen years of age. Considering this, and the fact that he has but recently learned English, we think the work contains not a little merit.

The Three R's of Education

(Continued from Page 23.)

"Dear Sir:

"this will introduce my friend—any thing you can do for him I will apprise it very much.

"I have none him for years an upright andonest man.

Yours very truly,

PUBLIC SCHOOLS IMPROVING.

This brings me to one of the elementary studies that were made so much of in the public schools that I knew as a boy, which was placed first in the proverbial list of the "three R's"—reading. In the old days the "reading exercises" were first in the order of classes, and the pupils were taught enunciation, pronunciation, distinctness and expression. You have to listen for a half minute only to the average young man of twenty or thereabouts to know that reading alone had small place in the public schools routine for him. I am happy, to learn, though, that this art is again receiving more attention in the schools, and that in some cities it is being taught with more intelligence than ever before.

In conclusion, then, I wish to say, that for all the flaws I have seen in the practical workings of the public school system, I am by no means of the opinion that there is no improvement therein. On the contrary, I believe it is better, more thorough and more progressive on the whole than it has ever been in the past.

But in their eagerness for "general culture," so called, for "universal art education," for "variety and novelty and breadth," the authorities have temporarily neglected—I am sure the neglect is only temporary—the solid and deep foundations upon which only can true cultivation, real breadth be built. For one, I shall be glad when there is less dissection, less modeling, less wood carving in our public schools, and more real, downright hard work devoted to the three R's of other days—readin', 'ritin' and 'rithmetic.
The Prevailing Opinion

Merritt Davis, of the Capital Business College, Salem, Oregon, renew his subscription to THE BUSINESS EDUCATOR in the following language: "I think your journal is the best of its kind published, and I feel that I cannot afford to be without it."

From a recent letter from Mr. L. E. Stacy, penman and commercial teacher in Spencer's Business College, Kingston, N. Y., we take pleasure in quoting the following: "THE BUSINESS EDUCATOR is fine, and seems to get better with each number. You are to be congratulated upon your success in producing such a good paper. School is booming, and we will break the record this year."

John D. Williams

(Continued from Page 27.)

his came from the engraver's hand was an
exact copy—as nearly as the engraver could
make it—of the artist's lines.

It is, after all, as an author that Mr. Williams will be best known and longest remembered. His "Gems of Penmanship," a book prepared to preserve his style of off-hand flourishing, and to secure to him the credit of originality, which, from the extensive copying of his designs by other artists, he was in danger of losing, than as an em-bodiment of practical and ornamental writing. His series of copy-books and "Guide to Penmanship," afterwards published by Slot, Woodman & Co., were more in the line of instruction and embodied at length the "principles" of his system.

There is one credit belonging to Mr. Williams which he is not likely to have unless given to him here. He was the discoverer of the now famous "Spencerian Pen, No. 1," and which was originally Gillott's 19. The peculiarity of this pen is its quill-like flexi-bility, owing in great measure to the peculiar rotundity of the barrel. This pen was shown to Mr. Lusk, then agent for the Spencerian Books; and by him to the Messrs. Ivison, Philpney & Co., who procured its manufacture by Gillott under the name of the "Spencerian Pen, No. 1." It is prob-ably the most popular pen among good writers to be found.

It is something to be said of Mr. Williams that he never excited the animosity of his competitors, and that at the time of his death at Albany, Jan. 8, 1861, he had not an enemy on earth. The reason lay in the very nature of the man. He could not hold enmity. In love with his profession, he had a genuine respect for every man who was striving to excel in it, and he habitually took as much pride in other people's work as in his own. He had the remarkable quality of being able to criticise his own work, and he often did it unsparring. And he could just as clearly see the failings of others, and did not hesitate to point them out. His criticisms were just, and to an artist who wished to succeed on his merits, invaluable.

While teaching in the Bryant and Stratton college of St. Louis in 1866, it was my good fortune to come under the training of Mr. Williams who was then professionally known as John D. He was then superin-tendent of ornamental penmanship for the chain of Bryant and Stratton colleges and was visiting their various cities and filling each college with ornamental designs far surpassing those of all competing schools. In those days a business college had a poor standing that did not make public displays of ornamental as well as plain penmanship. Flourished specimens were sent with all letters soliciting students. Under his severe personal criticism, Archibald McLees of New York engraved Williams' "Gems of Penmanship" and nothing in the line of script or flourishing had ever been so beautifully engraved. Later Mr. McLees was made the engraver of Spencerian copy-books and their surpassing beauty rapidly won for them unequalled popularity. As a companion I found Mr. Williams very jovial, but as a teacher exacting in the extreme. As an artist in off-hand flourishing combined with lettering and pen drawing his equal was never known. His original designs in style and methods of execution have been the standard for all the leading finishers for the past fifty years.

How Shall the Pen be Held?

BY CHANDLER H. PEIRCE, DAYTON, O.

Fashion decrees that you wear your hat about as you please. This, of course, includes the fair sex. The position of the feet determines in no small way the general appearance of the individual, and it is apparent upon observation that a very wide range gives room for comment. The proper angle of the feet should not differ materially, and so we conclude that a law of action must exist in nature which provides for the greatest advantage.

There is a power in walking which comes from a good position of the feet, and this is definable when they are at about right angles with each other, giving a slant from the horizontal between 50 degrees and 60 degrees, or the standard for best written characters.

The feet placed at greater or less than what I will denominate as "standard" detracts from appearance and doubtless to speed and endurance.

The hand formation unquestionably has a best function to perform no less than that found in the feet, and unless malformed or trained improperly the position should be as closely determined for writing as the feet for walking.

Forcing the hand to the right so that the fulcrum consists of the nails of the third and fourth fingers is to me hideous and monstrous.

The oldest inhabitants can well remember the punishment sure to follow for disobeying this most rigid law, but to have clinging to such a barbarous practice down through the years of change and progress into the living present is surely nothing short of an atrocious crime.

Such teaching is not only injurious and deleterious, but stiles a principle which works disaster and ruin where betterment would yield success with one-half the effort.

The hand-rest should form its pivot on the first joint of little finger without the nails coming in contact with the paper. Practically the hand is half closed in the process of execution, with the thumb, first and second fingers curved slightly, (the second finger curved more than the first.)

The corner of thumb nail opposite joint of first finger which extends about half an inch below end of thumb.

I have said the second finger curves more than the first and extends downward, leaving a space which separates the power of motion in the fingers from the fulcrum. Half way between vertical and horizontal is the general position of the hand and will not admit the old saw "let the end of holder point toward right shoulder."

After all has been said at this distance, your head must be clear, else you will not get the essence. You think you understand but you don't, and you never will till you grow it through an experience of a pain-taking character.

Telling doesn't do much good.

How to wear your hat; how to walk; how to act, cannot be gathered from print. Neither do I wish any one to infer that perfect pen holding is the beginning or ending of the whole matter. Nicety and delicacy of touch and expression come through cultivation, and no child, or a beginner of any age, can hold the pen correctly.

No watch will keep time till adjusted. Many things enter into the adjustment of any work of art.

No amount of scribbling with an ancient holder and a rusty pen will acquire the exact way no more than you can be graceful in the waltz in a pair of cowhide boots.

The kind of holder (including the diagonal—oblique) will constitute the ammunition for another shot.

A proper selection determines your destiny.

Dissimilar Similarity

It is said that at one time there was in, the House of Representatives, a handsome man of ability by the name of Charles Henry, and also a small man of limited capacity by the name of Henry Charles. Speaker Blaine having addressed the latter as the former, Mr. Charles said, in correcting him, that there was as much difference between them as between a horse-chestnut and a chestnut horse. Equally wide is the difference between some booklets published on Correspondence, and the books we issue on that important subject. Our special circular, with scores of testimonials from all parts of this country, will reach you almost as soon as this advertisement. If you do not receive a copy of this special circular, send us a postal card request for it.

Our catalogue of a full line of commercial text-books, popular in every State in the Union, will be sent to any address on request.

THE PRACTICAL TEXT BOOK CO., 479 Euclid Avenue, Cleveland, Ohio.
Zanerian Script Alphabets
A New Encyclopedia of Penmanship

This new book enters the penmanship literature of the 20th century one of the largest, most interesting and valuable books published for a quarter of a century. It is a new view of penmanship and penmanship questions. To enumerate the contributors of this production would be to name the foremost modern penmen and engrossing artists.

Although there are a few works on this subject, none have been practical enough; they tell you what to do, but not how to do it. This book not only tells what and how, but illustrates by example so that you can be at once your own teacher. It is clear, yet concise, and was written with the view of aiding others to achieve the utility and beauty of penmanship. If you are an amateur you cannot afford to be without it. If you are a professional, it will tell you how to increase in skill. If you are a beginner this book will point the way to a good handwriting. No book has ever been published containing the same information. New light on this old subject will be revealed when you pursue its pages. After reading it, if you do not think it is worth the price to any one searching for knowledge along this line, we will refund your money.

Positively no penman—beginner, amateur or professional—can afford to be without this work.

What the Book Contains

It contains one hundred and sixteen pages.
It is 9 x 12 inches.
It is beautifully bound in art linen.
It is printed on the finest plate paper with a new kind of ink that very closely imitates actual pen work.
It has a beautiful half-tone frontispiece portrait of the author—C. P. Zaner.
It is the only book that tells what good penmanship is, and how it is done.
It tells what writing is easy to read and to write.
It tells what letters a beginner should practice first and why.
It explains how to write well, and what movements to employ in learning.
It gives the reason why finger movement fails to produce graceful forms.
It gives the scope of arm movement, and tells what writing can be done successfully by it.
It gives the secret of learning the successful hand.
It tells what the standard was, should and must be.
It tells which standard is best for children, with the reason.

Proof of Its Merits

Whenever we can induce a prospective buyer to thoroughly investigate the contents of this book, we invariably sell a copy. It could not be otherwise, for the statements of eminent penmanship authorities are too sincere for any possible doubt to be entertained as to the unquestioned superiority of such a book. Only a short time ago one of America's best known penmen said: "Zanerian Script Alphabets is without question the greatest work of modern times." Ask others equally as prominent, and you will probably receive a similar reply.

Can we publish anything more convincing, or more likely to induce you to send for a copy? If there is, we would like to know what it is.

Special Offer

In order to give intending purchasers a chance to know, in part, what the pages of this great book really look like, we will send sixteen unbound pages exactly like those in the book (only these were slightly damaged in printing) for the very low price of but 25 cents, post-paid. If you afterwards purchase a copy, we will credit you with 25 cents toward the book.

The book is really worth $5.00 if it is worth a cent, but to place it within the reach of all we offer it for but $2.50 prepaid, or for $2.00 in connection with the Business Educator one year.

PRACTICAL AGE
MOLINE, 111.
ABOUT FIFTEEN HUNDRED COMMERCIAL SCHOOLS,

Employing about 5,000 teachers and instructing about 200,000 students annually, are conducted in the United States.

Over 1100 of these schools are on our books as customers and use one or more of our commercial publications.

The hundreds of public schools using our books are not included in this list. This statement indicates the very great popularity of the

SADLER-ROWE COMPANY'S COMMERCIAL PUBLICATIONS.

and the fact that they are used in a large majority of the commercial schools.

We have frequently asserted in our advertisements that our books contain many practical, up-to-date features not found in any other books. As an illustration in bookkeeping we present the following as an example of a supplementary drill in preparing a statement of a merchandise account in the form now required in up-to-date business houses.

Where can you find a similar example outside the Budget Systems?

Notice the fine distribution of the subordinate accounts.

WE WILL SEND A BEAUTIFUL ALUMINUM PEN-TRAY

to every bookkeeping student or teacher, in schools not using either "Business Bookkeeping and Practice," or "Commercial and Industrial Bookkeeping," who will send us a correct solution of this problem in accordance with the requirements given.

EXAMPLE: Dean, Grace & Co.'s ledger shows the following:

Msec. Pehs. a/c $216,581.93; Msec. Sales a/c $216,581.93; Goods Returned a/c Dr. $7,388.87; Msec. Disct. a/c Dr. $6,741.29, Cr. $6,741.29; Freight and Express a/c Dr. $7,513.51; Drayage a/c Dr. (for goods delivered to carriers) $2,265; Boxing and Packing a/c Dr. $1,807.12; Schedules' Salaries and Expense a/c Dr. $9,212; Insurance a/c Dr. $1,200; Advertising a/c Dr. $975. The Inventory is $71,322.80.

Required ledger specifications showing the Msec. Purchases and Msec. Sales accounts after the subordinate accounts are closed into them; also the Merchandise account after the Purchases and Sales accounts are closed into it; a statement of the Merchandise account showing the total of purchases, the returns from sales, the gain and the gain per cent. on merchandise.

Solutions of the above problem must be accompanied by the name of the school with which the student or teacher is connected.

Scores of similar problems are handled without difficulty by students who are using the Budget Systems.

INDIANAPOLIS, U. S. A.
Individuality.

It is easy to hoot at individuality in penmanship, but it is well that no one has the power to destroy it. He who wages war against it fights a losing battle. How poor the work of the master penmen would seem if it were all alike—if their individualities were eliminated. No Flickinger, no Taylor, no Madaras—the charm they gave their work all gone, and just one standard of penmanship left. Their individuality is what made their work indescribably fascinating.

What is true in the higher manifestation of skill is also true in a degree in the lower.

Thousands of teachers have tried the plan of teaching one slant, one movement, one form, etc., for all—that was largely the old copy-book method—but see how their pupils have departed from their teaching.

Is the handwriting of Edison and James Whitcomb Riley wrong for their own use, and was their teaching right, or is the reverse true?

Why is the most accurately engraved script, such as is found in the old style copy-books, not best for student's copies? Because it lacks all individuality, life, and is not of the right kind.

The work of all our best business writers is strongly marked with individuality. Individuality, always within the limits of reason, should be encouraged and not suppressed. If it should be suppressed, why don't its opponents suppress their own, and give the world an object lesson?

Individuality is all right, but a few misguided enthusiasts are endeavoring to make it conform to their erroneous one-movement doctrine. But it is too late; the day is past.

Docked for Bad Penmanship.

NO SALARY FOR COURTHOUSE CLERKS WHO WRITE ILLEGIBLY.

Pottsville, Pa., February 24th.—The handwriting of the clerks in the County Recorder's office is so bad that the commissioners today refused to pay for their services. This action was taken at the request of the Taxpayers' Association and several lawyers, who allege that it is impossible to read the indexes of the mortgage books.

Judge Marr, to whom application was made to compel the commissioners to pay the clerks, decided that the handwriting must be legibly done to entitle them to salaries.—Philadelphia Press.

We are Out.

Of February, 1903, numbers of the Business Educator. If you have a copy or two, we would appreciate it if you would send us the same.

Our subscribers have, for a year, written and we cannot always foresee the demand. The Business Educator is too expensive to run extras by the thousands to lie upon a shelf.

We therefore happen to run short now and then and hereby give our friends a chance to show their generosity.

Vertical.

Frequently we learn through the mail or press that vertical writing has been dropped in this place and in that. From these reports one would naturally conclude that vertical was truly a passing "fad" and "dead." But, on the other hand, along comes information that the vertical is a vast improvement," etc., over the old slant.

E. O. Vaile, editor "The Intelligence," Chicago, February 15, 1903, says:

"We have very slight faith in the statement that business men object to clerks who use the vertical system. This statement when made can generally be traced to some teacher in a commercial school. As a class such teachers are strenuously against the vertical system. The reason is very clear. The simplicity and comparative ease with which it can be mastered tend strongly to reduce the importance of their own calling. They oppose vertical writing strictly on business principles, without any regard to pedagogical or humanitarian considerations."

"If it were a fact, as we do not believe it is, that the business world disapproves of vertical writing it would still be the bounden duty of the schools to adopt and teach it. Ease in learning, legibility, speed, absolutely every argument but custom, is in favor of it; that is as a system for children to learn. Of course no one advocates that adults or young people should work to acquire new writing habits. Is it wise for teachers to labor to make their pupils acquire a style too rigidly and literally vertical? Allow latitude but hold to the vertical standard as the ideal. Don't allow the copy-book or the writing teacher—even if you yourself are that teacher—to be a tyrant."

Editor Vaile is right in some of his statements, but to accuse commercial teachers of being opposed to vertical for "business principles" discloses the fact that he is not as familiar with business teachers as he is with school teachers. Certain it is that he himself could be accused of such "business principles," as he is the publisher of a series of vertical copy-books, which, no doubt, mean something to him, though we have never heard of their use.

We know full well from our extended acquaintance with penmen and commercial teachers that if they thought for a moment that slanting penmanship was better than slanting penmanship they would espouse its cause and instruct their pupils in the same. As a class they are as sincere as they are enthusiastic, and to thus accuse them of insincerity as Editor Vaile does, discloses the fact that he is woefully ignorant concerning this class of teachers or that he willfully misrepresents them. From what we know of Mr. Vaile we certainly do not believe it is the latter.

Much of this misunderstanding of penmanship problems comes from the fact that Editor Vaile knows as little about business college conditions as some penmen know about conditions in the primary grades, as concerns childhood and writing.

Discussions for and against the vertical adoption of books, action of school boards, opinions of superintendents, editors, etc., all seem to indicate that the present tendency is toward a slight slant which some call semi-vertical while others call it vertical. Certain it is that vertical is here, and to remain indefinitely, in the lower grades at least.

Certain it is that the rigidly up-and-down vertical is passing, to be supplanted by medium slant—by a style combining the merits of vertical and slant writing, superior to either. Certain it is, too, that with the wane of the vertical, simplified writing is receiving the attention it deserves, and which it would have received long since, had vertical not become the popular idol, for it was the simplicity of most of the vertical systems that won rather than the fact that they were vertical.

Vertical will be written by a great many people, because it takes all styles of penmanship to meet all kinds and conditions of men. Greater diversity will be manifested in the writing world than heretofore, and better writing will be the result.
February was a month of great birthdays — Washington, Lincoln, McKinley, Lowell, and Longfellow.

Would it not be a good idea to arrange to hold the annual convention of the E. C. T. A. during the first week of April, when most of the public schools have their spring vacation?

The E. C. T. A. program justifies our prophecy of last month. It is a crisp, business-like educational bill of fare, "How?" is the emphatic feature of almost every topic, and "How?" is "Teach" is the subject of at least a half-dozen addresses. This is practical, and it will surely give to visiting teachers something tangible to take with them to their class-rooms. Go loaded for discussion!

Probably one of the most interesting and forceful general addresses to be made will be given by Mr. E. M. Barber, Supervising Accountant of the Appraisers' Office, New York City. Mr. Barber is free lance, who is admittedly of the first rank among teachers who have turned their knowledge to practical account in the great world of affairs. He has had no small experience in commercial teaching, and he writes with a canistic pen when the occasion serves.

One of the best banquetts ever enjoyed by the Eastern Commercial Teachers' Association was served at the St. Denis Hotel on the eve of the great November storm, in 1898, when the Association held its Thanksgiving meeting at the Packard School. Those who were present will remember the delightful way in which W. J. Kingsley, as toastmaster, presided over the after-dinner ceremonies, and they will meet again in the banquet hall of the St. Denis this year, assured of a thoroughly enjoyable dinner, followed by appropriate vocal decorations.

In our report of the Milwaukee Convention we unjustly gave the impression that the address delivered at the banquet by President-elect J. W. Warr, had been prepared for a Grand Army reunion and was given to the teachers second-hand. A letter from the generous president of the Federation, which reached us too late to be acknowledged in last month's impression, that we were entirely wrong in our inference; that the address was prepared especially for the Milwaukee meeting, and was given its military flavor because of the Grand Army associations of our host; but that, owing to the lateness of the hour, the educational application was omitted, thus giving rise to the inference we drew. We regret exceedingly that we gave an unfair impression, and we hasten to correct, so far as possible, the wrong unintentionally committed against a man who, for ten years, we have esteemed as a warm personal friend.

A course of study is for the children and not the children for the course of study. American citizens support the schools for the children's sake, not from any love or respect for an outline of subjects. Schoolmasters are the only persons who worship a curriculum. When a teacher reports half a class as failures because they cannot reach the standard, she is cheating so many parents out of their right to receive the money devoted to a style of education suited to their children. The failure that each successive group of pupils should do the same work in the same time is not ogly absurd, but it is cheating the tax payer out of his rights. Superintendents say, "It can't be done otherwise." Yet Superintendent John H. Kennedy goes on doing it in Batavia, N. Y., and every business college in the United States has done it for years.—American Education.

One, 11th, a special examination for the position of stenographer and typewriter was held in the rooms of the Civil Service Commission at Washington, and three-fourths of the seventy-one competitors were men.

The record of the commission for the past year shows that out of 423 men eligibles, 240 men were appointed, while out of the 236 women eligibles but 33 are now filling positions. Just why women are not desired was thus explained by a prominent official: "Man," he said, "has the advantage of long training in office work, and is much better suited for its arduous duties. The chiefs of divisions frequently complain that they cannot properly control an office of women. It is much easier to say to a man that the exigencies of the office require overwork, than to tell a woman to come back after dinner."

"Then again, when a man feels tired, the chief feels no hesitancy in saying that the work must be done regardless of his personal feelings, while if he said the same to a woman he would be called brutal!"

Remember that the new secretary of the Department of Commerce made his debut in Washington as one of these plain male stenographers, less than ten years ago. "There is room at the top" yet.

The Illinois State Teachers Association went on record, at its last convention, in favor of phonetic spelling, and adopted, as a beginning, the following words, with spelling as indicated: Altho for although, catalog for catalogue, decalog for decalogue, demagog for demagogue, pedagog for pedagogue, prolog for prologue, program for programme, tho for though, thor for thorough, thr for thorough, throut for thoroughly, thru for through, thruout for throughout.

This is a subject that has received a great deal of thought and that will some day be settled right, at which time we shall all wonder how we ever tolerated so unscientific and cumbersome a system—"If a system" it can be called—of spelling; just as we shall some day wonder why we were so stupid as to go on using our unscientific tables of weights and measurements, and laughing at our Brit-
ish cousins for continuing the use of an ox-cart method of counting money, when all the while we had, in our table of United States money, a daily object lesson of the saving that might have been effected could we only have overcome our inertia sufficiently to make use of the metric system for all our weights and measurements. While it may be a question how far we shall accept the dictum of the vanguard in the matter of spelling reform, there should be no question about giving, in every arithmetic class, enough work involving the tables of the metric system to demonstrate its simplicity and superiority over our present system.

In all schools, public and private, and in all teaching, wherever done, it should never be kept before the pupils that they from day to day are building a character that must last through life and reach into the great hereafter. That just as a building is erected, one brick at a time; or stone by stone and brick by brick, until at last it stands forth a completed building, beautiful in its outlines, massive to behold, an ornament to the town, an honor to the men who conceived and constructed it, and a glory to the purposes to which it is dedicated; so, too, day by day, the youth should be taught that they are building a character. That daily they should by giving all diligence, add to their faith virtue, and to virtue knowledge, and to knowledge temperance, and to temperance patience, and to patience godliness, and to godliness brotherly kindness, and to brotherly kindness charity."

Then we have the fruits of right living set forth in beautiful language by the wisest man that ever lived when he declares that "Happy is the man that findeth wisdom, and the man that getteth understanding. For the merchandise of it is better than the merchandise of silver and the gain thereof than gold. She is more precious than rubies; and all the things thon canst desire are not to be compared unto her. Length of days are in her right hand; and in her left hand riches and honor. Her ways are ways of pleasantness and all her paths are peace."—D. F. Forney, at the dedication of the new high school building, Clearfield, Pa.

**Business Tips.**

**George Horace Lorimer.**

(Extracts from "Letters from a Self-Made Merchant to His Son," an instructive and altogether delightful series of articles by George Horace Lorimer, that for some months have been appearing in The Saturday Evening Post, and that are soon to be published in book form by Small, Maynard

Your head. You're going to meet a good many stray fools in the course of business every day without going out to hunt up the main herd after dark. Because a fellow cuts ice on the Arctic Circle, it doesn't follow that he's going to be worth beans on the Business. A man's as good as he makes himself, but no man's any good because his grandfather was.

On Modesty and Persistence.

I hope that when I get home your boss will back up all the good things which you say about yourself. For the future, however, you needn't bother to keep me posted along this line. It's the one subject on which most men are perfectly frank, and it's about the only one on which it isn't necessary to be.

A man who does big things is too busy to talk about them. When the jaws really need exercise, chew gum.

A man who's giving a dollar's worth of himself for ninety-nine cents doesn't need to throw in any explanations.

Hot air can take up a balloon a long ways, but it can't keep it there.

Life isn't a sport, but a long, steady climb. Some men do a day's work and then spend six lolling around admiring it. They rush at a thing with a whoop and use up all their wind in that. They mistake intention for determination, and after they have told you that they propose to do and get right up to doing it, they simply peter out.

Nothing can cheapen a man who sponges instead of hunting any sort of work, because he's as cheap already as they can be made.

On Abuse, Flattery, and Worry.

There are two things you never want to pay any attention to—abuse and flattery. The first can't harm you and the second can't help you.

Some men are like yellow dogs—when you're coming toward them they'll jump up and try to lick your hands; when you're walking away from them they'll sneak up behind and snap at your heels.

As long as you can't please both sides in this world, there's nothing like pleasing your own side.

There are mighty few people who can stand a thing except their own side.

The only thing I've ever put into my business which didn't draw dividends in fun or dollars was worry. That is a branch of the trade which you want to leave to your competitors. I've always found worrying a blamed sight more uncertain than horse-racing—it's harder to pick a winner at it.

You worry because you're afraid your business is going to smash, and your health busts up instead. Worrying is the one game in which, if you guess right, you don't get any satis-
From the Business Manager’s Desk.
An Advertising Suggestion.

Last year Mr. R. J. Shoemaker, at that time the principal of the well-known school that bears his name, evolved what proved to be a most successful advertising scheme. He made it known that the school would give $50 in gold to the church or charitable institution in Fall River that could muster the largest number of votes in its own favor. His office was packed with the eager members of rivals for the coveted prize, and his efficient corps was kept more than busy showing interested people through his rooms. He decided that it was one of the most effective and, all things considered, one of the most inexpensive, advertisements that he ever used. The ballot is shown below. We should like to hear from others who may decide to try this plan.

### VOTING CONTEST FOR $50 IN GOLD TO BE GIVEN BY SHOEMAKER & CLARK.

**Date**

**I Vote for**

**Name**

**Address**

**Remarks**:

**SHOEMAKER & CLARK’S SCHOOL OF BUSINESS.**

109 S. MAIN ST., FALL RIVER, MASS.

**VOTING CONTEST FOR $50 IN GOLD TO BE GIVEN BY SHOEMAKER & CLARK.**

Read conditions printed at the bottom and vote only with this Coupon.

**Date**

**I Vote for**

**Name**

**Address**

**CONDITIONS: **Vote at the school office. No one under 15 years of age may vote. A ballot may be cast for any Church, Society, Hospital, or Charitable Institution in this city. Fill in all blanks in both stub and coupon. No person shall cast more than one ballot each day. Contest closes Friday, Aug. 29, at 8 P.M.

The purpose of this contest is to induce visitors to call to see the school, its superb furnishings, and to better understand the scope and value of its training.

---

**FALL RIVER’S GREATEST SCHOOL.**

Some Facts Concerning Shoemaker & Clark’s School that Should Command Your Attention.

Shoemaker & Clark’s School begins its SIXTH year September 1, 1902. It began its first year with nineteen pupils, and has since enrolled over Seventeen Hundred. The teachers who began with the school, are with it today. Such a Faculty grows stronger every year. It would be impossible to conduct anything but a GOOD SCHOOL with such teachers. The School is known for its honest, aggressive and businesslike policy. Its distinguished annual commencement exercises are in keeping with the standard set by the school.

The Proprietor is a teacher and is competent to criticise the work of every department of the school. Every pupil has the benefit of his personal criticisms. Money spent in such a school for such instruction, is an investment, and is bound to come back a hundred-fold. It conducts two sessions daily—day and evening. Its pupils range in age from 13 to 50 years. Some are learning to read, write and handle figures; some are studying the higher English branches; some are studying shorthand with its kindred subjects; some are studying book-keeping and the branches that complete that course; and many are preparing for Civil Service Examinations. Day Sessions begin September 2; Night Sessions, September 8. Office of the School is open daily from 9 A.M. to 5 P.M. Call at the School and talk with us about what you want to study.

R. J. SHOEMAKER, PRINCIPAL.

---

**Commercial Education in Montana**

H. E. WYMAN, COMMERCIAL DEP’T HIGH SCHOOL, LIVINGSTON, MONT.

The word Montana, to the average Easterner, brings a vision of Indian massacres, gold mines, round-ups and rugged mountains. Room there is for such visions, considering that the state covers a territory as large as New England, New York and Indiana. It contains immense tracts of forest and Indian reservations and mines known the world over, the finest of grazing lands upon which hundreds of thousands of cattle, horses and sheep feed the year round, and some of the best grain producing land in the country.

The population, which is about that of Newark, New Jersey, is scattered throughout the state. There are only eight or nine towns with a population of over three thousand. Considering the sparseness of the population, the educational advantages are wonderful, and many of the school buildings compare favorably with those of Eastern cities of much...
larger population. Commercial education, while still in its infancy, is awakening to its opportunities and responsibilities.

Helena, the Capital City, has one of the finest high school buildings in the Northwest. A stenographic department has already been established and a business department will soon be introduced. To those who claim that women have no part in commercial education, we can point with pride to the Jackman Business College as a result of the untiring efforts and ability of Miss Mary E. Jackman, proprietor, a cultured and charming woman. The school has been fortunate in securing the services of Mr. S. A. D. Hahn, as head of the business department. The teaching staff consists of six instructors.

Butte, the mining center of the Northwest, with its sixty or seventy thousand population, has a school of which it may well be proud; the Butte Business College, owned and conducted by Messrs. A. F. Rice and C. V. Fulton, can boast of a daily attendance of three hundred fifty students. The shorthand department is under the principalship of Mr. L. A. May.

Besides the regular branches, a course in assay ing has been provided.

The school publishes a bright, wide-awake monthly, which is devoted to practical education and practical ideas. The Butte High School has recently introduced a thorough four years' commercial course, and under the able management of Mr. D. C. Alhers bids fair to be a great success. Mr. Alhers certainly has a thorough understanding of commercial work.

Great Falls, with its population of twelve thousand, is one of those enterprising cities which has characterized the West. The work is here represented by the Great Falls Commercial College under the ownership of S. H. Bauman and F. C. Preston. Four gentleman and two lady teachers are employed. The enrollment for the first term of the year was one hundred and eighty-seven. Messrs. Bauman & Preston are enthusiastic in regard to the future of commercial work in the West.

To Missoula, with its nine thousand population, belongs the honor of being called the Garden City of the state, and to Mr. E. C. Reitz, proprietor of the Garden City Commercial College, belongs a large share of the honor of raising the standard for business schools. In the shorthand department no students are enrolled for less than a ten month course, and education necessary for enrollment must be equal to one year of high school work. The Garden City is the only school in the state which holds strictly to commercial work. Thoroughness is Mr. Reitz's motto.

The Billings Business College is setting forth the advantages of practical education in the Eastern part of the state.

Bozeman, the home of pioneers, is the pioneer city of education. The Bozeman State College has a complete commercial course and its equipment is of the best. Mr. H. G. Phelps is at the head of the department.

Livingston, the Gateway City to the Yellowstone National Park, has in its high school a full four-year commercial course.

Business education is already considered a necessity among the educators and business men of the state. Graduates are in demand and are well paid. Solicitors have so far left us unmolested and the standard for the schools has been higher than the average. We feel that we have no apology to offer to our Eastern co-workers for the position business education occupies in Montana, yet we believe great results will be hers in the next few years.

PICTORIAL POINTERS—This is an excellent picture of The Templeton, home of the Salt Lake Business College, Salt Lake City, Utah. The famous Mormon Temple, with its handsome grounds, is just across the street from this beautiful, modern office building.
A few plain principles underlie the Law of Contracts. First make a thorough study of each principle as you come to it, turning it over in your mind and examining it on all sides until you are as familiar with it as with the alphabet.

You can do the most valuable work in time which is generally wasted. When reading or listening to instruction, jot down statements which strike you as important, on a card or in a pocket memorandum book, where you can look them over occasionally while walking or riding. Make it a point to refer to such notes only after trying to recall them without the aid of the memorandum. Use the notes to test the correctness of your ideas rather than as a substitute for solid thought and reflection. It is not necessary to have the book before you in order to study. Too much book is as bad as not enough. It tends to make you entirely dependent upon the text, in which case you will become a memorus versicell with few, if any, ideas of your own.

Everything depends on thinking and reasoning—assimilating what the mind has taken in. Good reading or good instruction, well received, drives the nail; thinking it over carefully afterward clinches it. Whatever is worth reading at all, is doubly worth thinking about to fasten it firmly in the mind. Many people go about thinking of nothing, or what is worse, thinking nonsense. It is small wonder they complain of inability to remember what they read. They take something into the mental receptacle then straightway turn the dish upside down and grumble because they do not retain more. It is surprising that they retain as much as they do. Show me a person who goes about with an empty head, and I will show you a failure.

Dr. Holmes said: "Knowledge and timber should not be much used until they are seasoned." Beware of attempting to apply a rule of law before you have seasoned your knowledge by taking thought.

THE PARTIES TO A CONTRACT
At least two competent parties are necessary to a binding agreement.

A person cannot make a contract with himself or with himself and others.

Question: A, B and C execute a bond in favor of A. Is the bond enforceable?

COMPETENCY
A person of age and rational (in his right mind) is competent to bind himself by a contract.

INCOMPETENCY
Those who are under the age required by statute law (twenty-one years in most states) or are not of sound mind, are said to be incompetent. These are not bound by their contracts generally. Why not?

CONDITIONS OF INCOMPETENCY
Minority,
Insanity,
Idiocy,
Intoxication,
Daress,
Undue Influence,
Alien Belligerency.

MINORITY—"The law assists minors." The minor is not supposed to have the reason and judgment which comes with age and experience. If he were to be bound by his contracts generally, he might be led into making deals injurious not only to himself, but to the general public. For it is for the good of the minor that each should make proper use of his wealth so that he may not become a burden to society. The minor is, therefore, allowed to avoid his contracts in most cases. This means that if X, a minor, enters into an agreement with Y, a competent person, X may avoid the contract if he will, or he may elect to perform his part and hold Y to the contract. This gives the minor great advantage.

As a general thing, one who is allowed for any reason to avoid his contract must return what he has obtained under the agreement. For example, if B, an adult, has purchased from C a quantity of lumber and C has received him to the quality, B may avoid the contract but he must return the lumber. If a minor wishes to avoid his contract, for goods already delivered, he must return the goods if he still has them, but if he has wasted them or disposed of them, he may still avoid the contract. Why is this?

CONTRACTS FOR NECESSARIES—May a minor ever bind himself by a contract? He may for the purchase of "necessaries." Why? Because "the law assists minors." How does this assist the minor? Give this a little careful thought.

What are "necessaries"? The word "necessaries" has been used, is a technical law term and must not be limited in meaning to just the bare necessities of existence. It always includes these and it may cover many other things. In determining what are "necessaries" in any given case, the age, physical condition, social standing, and wealth of the minor, must be taken into account. What is necessary for one might be wholly unnecessary for another. Medical attendance is not necessary for one who is in excellent health, and even food is not necessary to him who is already amply supplied. It would make no difference that the dealer did not know this. Why?

A minor living with his parents would not be bound by his contract for "necessaries," even though he were not properly provided for at home. Think out the reason for this rule.

The minor is never bound to pay more than the reasonable value of the goods received, even though they are "necessaries." Of course he is never bound to pay more than the price agreed upon.
Money is not a "necessary," even though it is lent to the minor to enable him to buy "necessaries." But one who had lent money to a minor under such conditions would probably be able to hold the minor for the reasonable value of the goods purchased, but not necessarily for the purchase price. Again, if minor purchased something not "necessary," or squandered the money, the lender would have no redress. Why not?

Reparations to the property of the minor not "necessaries." It may be necessary to repair a building belonging to a minor in order to keep it from decay, yet reparations to property will not come under the head of "necessaries." The law is plain that "necessaries" must concern the person of the infant" or minor, or his family if he is married, and not his property. From all that we have seen we may safely conclude that "Whoever deals with a minor does so at great risk."

The party claiming incompetency must prove that he was incompetent when he entered into the agreement.

Ratification—On becoming of age, the minor may ratify a contract previously made; that is, he may make it binding upon himself. By the law of some states, this must be done in writing while in others an oral statement would be sufficient. The minor might, in the absence of a statute to the contrary, bind himself (ratify a previous contract) by conduct. This he might do by continuing to keep an article received under such an agreement, for an unreasonable length of time after attaining his majority.

Insanity—The lunatic is not bound by his contracts generally, because he is not capable of reasoning logically so as to determine the consequences of his acts. He may be "cunning" but he is not "rational" and therefore cannot give intelligent "consent" to a contract. An infant does not differ much from a lunatic. This means that the minor and the lunatic are treated much the same in regard to their contracts. The lunatic is bound as by contract for "necessaries" furnished. In such cases "consent" is implied for the benefit of the lunatic, in order that he may be properly cared for.

Idiot—The idiot cannot make a contract because he has no mind and of course cannot "consent" to anything. His estate is answerable for "necessaries" furnished him, for the same reason as in the case of the lunatic.

Intoxication—A person so thoroughly intoxicated as to take away his power of reasoning, may avoid contracts generally, if made while he is still in that condition. But such person must, on recovering his reason, hasten to return what he obtained under the agreement, and he must notify the other party of his intention to avoid the contract; otherwise he will be bound. Partial or slight intoxication is not sufficient grounds on which to avoid a contract. Even complete intoxication is no defense against a crime.

Dress—A person who is forced, through fear of injury or imprisonment, to make some agreement against his will, or who makes such an agreement in order to effect his release from imprisonment, may avoid his agreement if he can show that he had reasonable grounds for fear or that the imprisonment was not according to law. If he is only paying a just penalty for some offence, he is not said to be under duress. If under duress of fear, he must have reasonable cause for fear. In determining whether or not there was cause for fear, the age, intelligence, and physical condition of the person should be taken into account. What would fill the mind of a weak person with terror might not, in the least, affect a stronger mind.

Undue Influence—A person who is influenced to make an agreement against his will is said to be under undue influence and may avoid his contract so made. This does not mean that every person who is induced by the arguments of another to enter into contract may avoid his contract where he has not been deceived. Very often one member of a family has such control over the others that they practically have no will of their own in dealing with him. Sometimes a person whose mind is naturally weak, or has been weakened by age, is easily led into making contracts against his own interest.

In such cases, they cannot give the "consent" which is necessary to a valid contract.

Alien Belligerency—An alien is a citizen of another country. In times of peace he is generally allowed to sue and be sued in our courts, and his contracts are binding upon him. In times of war he is an "alien belligerent" and cannot make a contract with a citizen of our country which will be liable in any way to interfere with the war. Any contract which would necessitate communicating across the line of hostilities would be dangerous, as the secrets of our fortifications or our plan of action might thereby fall into the hands of the enemy. If such contracts were begun before war was declared, they would stand as they were until a peace was concluded, when they would revive.

Following are some questions, the answers to which may be worked out by applying the principles and rules given above. You should think them out for yourself and write down your answer, then compare your conclusions with the answers which will be given in the next issue.

EXERCISES

1. A minor hires a coachman for three months and at the end of one month discharges him. Suppose that, for one in his circumstances, the services of a coachman are necessary; that the salary agreed upon is more than such services are reasonably worth, and that the minor refuses to pay anything. What are the rights of the coachman?

2. A minor, living with his parents, bought clothing on credit. At the trial it was proved that the minor was not provided with clothing suit-
able to one of his age and social position. Should the minor be bound by his contract?

3. A minor purchased an article not "necessary," on credit. He sold the article and wasted the money. Could he then avoid paying for it?

4. Brown wishes to avoid his contract with Smith on the ground of minority. Must Smith prove that Brown was of age when he entered into the contract, or must Brown prove that he was not of age at that time?

5. A minor makes an agreement to work as an apprentice (to learn a trade) for three years, at a stated salary, which is reasonable in amount. Is the minor bound by his agreement?

6. A minor buys a carriage and span of horses. On attaining his majority, he continues to use the outfit for a year. Can he then avoid the contract on the ground of minority? Why?

7. A, while thoroughly intoxicated, buys a carriage. On becoming sober he continues to use the carriage for a week. He then wishes to return the carriage and avoid the purchase. Can he do so?

8. B, while suffering from delirium tremens, is cared for by C. As soon as B recovers, he seeks to avoid paying C for his services. Decide the case.

9. X, while slightly under the influence of liquor, makes a contract. On thinking it over he wishes to avoid the contract on the ground of intoxication. Can he do so?

10. A has made a contract with B, which he now wishes to avoid on the ground of duress. A claims that he stood in no fear of B but that he consented to the agreement as being the quickest way of getting rid of him. Is the contract binding?

11. B has committed a wrong against me for which I could have him imprisoned. I settle the matter by taking his note for a certain amount. Can B avoid paying the note on the ground of duress?

12. An aged father is induced to deed his property to one of his four sons for one-third its value. Would you consider the deed valid?

13. B, an aged lady, sells her property for half price to one who, for many years, has been her attorney. Is this a valid sale?

14. Suppose X, a resident citizen of France, had a valid claim against B, of New York, but before it was settled was carried away by France. What would become of the claims?

15. Could a married woman make a contract in her own name, under the common law? How is it under statute law?

16. X, who is insane, makes a reasonable contract with Y. X appears perfectly rational, and Y, having no knowledge that he is insane, performs his part of the contract. Is X bound?

17. A has been adjudged insane by the court. B does not know this, and, acting in good faith, makes a contract with A. Is A bound?

18. C is insane on the question of social equality, but perfectly sane otherwise. Would he be bound by a contract to purchase property?

19. D is subject to fits of insanity although he has never been adjudged insane. He makes a contract with E after a sane interval. Is the contract binding?

20. X has been adjudged insane and a guardian is appointed. He is now in his right mind again, but the guardian has not been removed. Can he make a binding contract?

**Success In Life.**

Senator J. P. Doliver.

[Synopsis of an address recently delivered before the students of the Capital City Commercial College, Des Moines, Iowa.]

**Three Theories of Success.**

There are two or three theories about getting through this world; one of them was propounded not very long ago by Mr. Schwab, the superintendent of the United States Steel Corporation. He was feeling very comfortable in the possession of an income variously estimated from $800,000 to $1,000,000 as the salary of the general manager of that corporation, and in one of his minutes of enthusiasm, he laid down a proposition that a person, in order to get through this world in first-class shape, needs, no education of a book character at all, and to prove it, he pointed to himself as having graduated from the primary class into the rolling mills of Pittsburgh.

There is another theory that if a man desires to get a good grip on this world, he must have a business education and nothing else. That he must be familiar with the intricacies of commercial intercourse and correct financial management, whether or not he knows anything of science, literature, or the arts.

There is a third theory that a man amounts to nothing unless he has a university training,—has had his mind stored with the riches of the world of knowledge and learning; and that school looks with some degree of contempt upon those of us who are in a humble way making preparation for plain, every-day careers in this life. There is a measure of truth in all of those theories. It is true that a man may get through the world without any book learning at all, as did Mr. Schwab, and as Abraham Lincoln did, in a larger field of the world's highest labor. A man may make a success who has a plain business education. There are not wanting, examples of those who have found a university education sufficient to warrant all the sacrifices needed in getting it. The truth is, ample preparation is needed for the work we have to do in the world, no matter what that work may be. In some cases it would seem that a fair and square contact with the work he is doing constitutes in itself, an education for that man.

**Definite Knowledge the One Thing Needful.**

It is also true that a man may get a good education by simply preparing himself for business and taking his chances in the rough and tumble of life, and it is also true that every man,
whether he is a workman or a business man, or a learned university professor, can get an invaluable advantage if he can find the time, leisure, and the opportunity to devote himself to the higher range of culture. What is needed is preparation for the thing which a man has to do.

I had the advantage in my early youth of a college curriculum, and I must say in looking back at it, that while I think it did me a great deal of good, it left me absolutely helpless in the world in which I was living. I found it impossible to take a step in any direction. Living in West Virginia, I was compelled to betake myself to a neighboring brickyard in order to earn money enough to get out of the state. I am bound to say also that the usual university curriculum is a very inadequate preparation for work in this world. I found it practically impossible to pass an examination to teach school in a rural district in Illinois. I found that there were a good many things you had to know definitely in order to pass an examination. I recollect that while at the university, I committed to memory the Universal History of the World,—actually memorized it from day to day. I found after I got out into the cold world that it did not make any difference how much or how little history I knew. The thing that this age needs, I think, is definite knowledge about some thing, and that is one reason I have taken a great interest in this wonderful commercial school which has been built up in the past twenty years, and which has sent out in that twenty years, hundreds, and I may say thousands, of young men and young women to take honorable positions in the state and the nation.

MAKE THOROUGH PREPARATION FOR DEFINITE WORK.

If a man is desirous of entering the business world, there are certain definite things that must be known. A man who can add and subtract cannot get a position in the business world. Although a man may begin at the very bottom to acquire these things for himself, an institution like this, in giving a man a definite preparation to do some definite thing in this world, does him an infinite service. The world is more anxious than ever before for people who can do the thing they undertake to do. If a man undertakes to be a bookkeeper he has an immense advantage over every one else if he understands that business. And the reason, in my judgment, that so many of the boys fail in the labor of life, is, not on account of a lack of ability, nor want of brains, but because when it comes right down to the doing of something, they are wanting. They cannot do it well. There are a great many people who can do the same thing better than they can. In the higher range of thought, there is absolutely room for everybody's attainments. The number of people in this world, that can do things accurately and well is far below the demand and always has been.

TODAY DOLLARS STAND FOR LITTLE; MAN FOR MUCH.

I believe there are greater opportunities in the business world today than there ever were before in the history of our country. A great many people are discouraged; they say an individual man now amounts to nothing, that everything is in the corporation. I myself have lived to see a wonderful growth of corporations in the United States and I have studied with some degree of anxiety and interest into the effect of modern conditions upon the prospects of young men and young women in the race of life, and I have made up my mind that the great corporations, instead of hindering the success of men are going to make a demand for a higher business training than was ever before needed, and the young men and young women who are able to respond to this demand are going to make a success. There never was a day when a dollar, taken by itself, stood for so little, and when a man, taken by himself, stood for so much, as at the present time. A great many men count financial success as the only success there is in this world. Many men feel that the prospect of getting rich is the first object in life: to other men, honor and distinction are the things to seek for. If I ever did see the time when I thought wealth was the measure of a man's success, I have dropped that philosophy,—if I ever did see the time when I felt that distinction and honor were the objects in life, I have dropped all that. I cling to the homely philosophy, old, but never truer than it is today, that the real measure of a man's success in this world is the fidelity with which he approaches the every-day duties which lie all around him in the every-day road of life.

At the November (1902) meeting of the Essex County (Mass.) Teachers' Institute, the question of organizing an association of high school commercial teachers was discussed, and a Committee on Organization was appointed, with instructions to call a meeting of high school commercial teachers during the winter, to consider the feasibility of completing such an organization. The Chairman of the Organization Committee, H. G. Greene, of Metrow, Mass., called this meeting for March 11th, in the Engineering Building of the Massachusetts Institute of Technology.

About sixty teachers from the various sections of New England gathered at the beautiful new Colonial Theatre in Boston, at 11 o'clock, March 7th, to listen to a lecture by Mr. E. J. James, president of Northwestern University, on "The Problem of Commercial Education." A part of this excellent address appears in this number.

At 2:30 o'clock, in the absence of Chairman Greene, who was kept away by sickness, E. W. Engler, of Lynn, a member of the Committee, called the meeting to order.

(Continued on Page 30.)

PICTORIAL POINTERS—Here is an illustration of a unique method of using the phonograph, both for shorthand dictation and for speed practice on the typewriter. Mr. Nelson calls this his Speed Room. We know by having seen it that it is like all the other rooms of this progressive school, a very attractive room. The utility of glass partitions as here used will appeal at once to practical school people.
The Problem of Commercial Education

Dr. Edmund J. James, President of North-Western University

[This is the latter part of a lecture delivered March 7, before the 20th Century Club, Boston. The introduction was a scholarly review of the elements, purpose and place of education in human society, and it led up to a consideration of special technical education, thus to conclude what we take up in the address, which I delivered before a very large audience of cultured people.-- The Editor.]

You are ready now, I believe, to take another great step in advance and to wrestle with the problem of providing a special training for that large proportion of our young people who expect to go into mercantile, commercial, or business life.

A TRIBUTE TO THE AMERICAN BUSINESS SCHOOL.

Thus far, with few exceptions, the only special provision for such training has been made by the so-called business or commercial colleges, which are such a striking characteristic of our American educational system. Proprietary institutions, nearly all of them: having a purely practical—one might almost say national aim—I do not wish to say a word against them. I believe they have done, and are doing, a most valuable service, both to the young people who attend them, and to the business classes whose interest they subservce. I have no sympathy with the current slurs upon their function or their character. Such belittling criticism as is usually meted out to them, springs, as it has always seemed to me, from ignorance of the work of these schools and the practical needs of our American life. Lincoln has well said, "You can fool some of the people all of the time, and all of the people some of the time; but not even the shrewdest of knaves can fool all of the people all of the time." The fact that year after year young people can be found by the hundreds and thousands who have to earn their own money, who will pay high rates of tuition for the teaching of these schools, and that they will advise their friends to do the same thing, and will send their own children to the same kind of schools, is, to my mind, a proof of the value of what they are rendering to society, which the unanimous testimony of all the college presidents in the country to the contrary would not weaken in the least.

They are, however, of a purely elementary character, far from being as efficient for the purpose as they should be, as is shown in the test specimens, and in the worst, they almost justify the severest things said about them.

COMMERCIAL EDUCATION IN THE PUBLIC SCHOOLS.

Now even this work I believe our public school system should take up and our endowed academies and institutes should cultivate and foster, because I believe they could do it better amid better surroundings than the average commercial college can do it. They could turn out better stenographers, typewriters, and bank clerks of a higher type, because the spirit of the school would be more liberal and educative.

The easy objection to this is, that this would be paying for trade and professional education. Of course it is. But by what system of reasoning can you justify the support of high schools to prepare the children of the well-to-do for college and the professional school, as is done now in every state of the Union; or the support, at public expense, of universities where the children of the well-to-do can get the training for the practice of medicine, or law, or engineering, or farming, as is done in nearly forty states of the Union, and yet deny all opportunities to the children of the less fortunately situated to get a training which would prepare them to be more efficient members of society in their field of work?

The properly organized, well equipped commercial high school, such as exists in France, Germany, Austria, and other countries, will serve this purpose; and I believe that every large city in this country should have such an institution, and the largest cities several schools which would insist thoroughly on the disciplinary and liberal quality in their curriculum, while at the same time they would offer the opportunity to get that practical knowledge and skill which would facilitate the obtaining of employment. If the curriculum is properly constituted and properly taught, the young people will get a valuable mental discipline and culture, though it may not carry with it a knowledge of the phylology or history of the wonderful peoples of antiquity.

ADVANCED SCHOOLS MUST TRAIN LEADERS.

But in our schools of national education, we should not stop with providing facilities for commercial training for employment, in our secondary schools. We must propose to train leaders in commerce and business, not merely clerks and bookkeepers. We must insist that the Universities shall turn their attention to training men for the careers of railroading, banking, insurance, merchandising, as they now do for law, medicine, and engineering.

The common answer to this by institutions that are unwilling to adopt innovations or that have no established principle is, that the best training for business is a general college education, which will increase a boy's power, set him intellectually and morally free; and then let him go into the practical work. It has not been so very long since we heard that doctrine preached in regard to the training of the chemist, lawyer, physician, dentist, engineer, farmer, teacher. It is the same old objection that has always been made to any kind of special, professional or technical education. Surely we need such education badly enough if it be found practical to create a curriculum.

THE CALL FOR WELL TRAINED LEADERS IN FINANCE.

Look at the state of the business world today, even in the most successful and commercial country. Look at the banking system of the country. In a chronic state of fear bordering on panic because of the absurd system of government finance, and yet no bankers or statesmen seem to have been found thus far who can devise a scheme which will be practicable and acceptable at the same time. I do not suppose that a lot of college professors constituting the faculty of a school of commerce could devise such a scheme. I know them, alas! too well to dream such a thing—but I do believe, that if such schools turned out young men with a sound training in the principles underlying this great department of business, some of them would become wise enough in the great scheme of things to solve this problem, as their brothers from the technical schools build our bridges and our skyscrapers.

INCAPACITY IN HANDLING TRANSPORTATION PROBLEMS.

Look at the condition of our railway system of today. Who will say it approximates perfection from any point of view? What a breakdown in our whole transportation system have we seen this winter. Who does not believe that if our railroad men were better educated we should have a better managed railway system?

Why, it has grown clear beyond their ability to grasp. They cannot even control a freight car. Cars leave the city of Pittsburg today for Chicago, much as the old-time sailing vessels left New York for London. They are launched upon a trip whose duration no one can foretell; nor even the system of wireless telegraphy enables any shipper or railroad official to trace their course. After
the lapse of many days they may arrive at Chicago, only to be lost in the mazes of a freight-yard whose intricacies of combined wisdom of the freight agents of Chicago can scarcely trace.

What does all this consolidation of railroads mean, except that three-fourths of the men in charge of railroads do not understand their business, and have managed it so poorly that bankruptcy finally stared them in the face, in spite of such an abundance of traffic that they could scarcely move their trains?

A GLANCE AT BIG MEN

Take the whole system of trust which is exciting such universal attention. Many are the contributing causes leading to this wondrous development, but the latter has been the question, that one of the prime causes is the inefficiency, cowardice, and ignorance of the average business man. Mr. Morgan, Mr. Rockefeller, Mr. Havemeyer, Mr. Hill, etc., are all able men, large men, but they are chieft so because the average man engaged in business is so small a man. He is timid, distrustful, resourceless, helpless in the face of a sudden crisis, ignorant, uneducated, untrained even in his own business. The people perish from lack of knowledge now, as they did 3,000 years ago in the time of the Hebrew prophet.

Who can doubt that our business classes, as well as education and training, not in the classics—though I have no objection to that of course; quite to the contrary, in fact—but in the principles underlying their own practice.

THE MUTUAL REACTION OF SOCIAL INSTITUTIONS AND EDUCATION

The remarkable development of our society in its economic, social, and political aspects has caused a corresponding development in our educational system, and at the same time has determined the form and substance of this education. Our schools have of course had a great influence in our economic advance, but the latter has been created by circumstances and powers outside of both.

An advancing and educated society demands, by the very law of its own development, an educated and trained body of men in all departments of its life. This body of men will have. If life itself produces them without the instruction of the schools, well and good; we may safely leave it to life. If life fails to do this and the schools have anything to offer, we may be sure that their services will be in demand.

THE GROWING INFLUENCE OF BUSINESS ON EDUCATIONAL METHODS AND POLICIES

I believe that we have reached a time in this country when all conditions are favorable to large development of special training in our schools for the future business man. In the first place, the country demands, now as never before, and the demand will become more and more imperative—that its business men shall be educated gentlemen as well as good business men, and experience shows that the rank and file of a profession or calling will get a high degree of education and culture only in connection with professional or special training.

In the second place, the business men themselves are beginning to demand of their sons, who will succeed them in business, a higher standard of education than that which they are looking for for a center of study and a curriculum which will not wear their boys from business, but will stimulate their interest in business while it qualifies them for its problems.

In the third place, the youngest who feels within him the desire of going into business is now asking himself, as his predecessor never thought of doing, "Now, is there any school where I can prepare myself better for my future career?" and so he is looking about for just this opportunity.

In the fourth place, the progress of the economic and social sciences has finally begun to give us a body of doctrine and knowledge which furnishes us the requisite means of training the intellect by the study and application of principles at the same time that it supplies a mass of facts which, interpreted by its principles, may become the basis of practical training.

And, finally, the college instructors themselves are waking up to this need as never before, and they are all asking, "What can we do to supply it?"

THE PRESENT OUTLOOK

President Wilson of Princeton, asked some time ago, "Why, you wouldn't have the colleges teach business men, would you?" Well, perhaps not the colleges; but certainly they began to give us a body of doctrine and knowledge which will make them the first to come will be our business men. But our country is becoming civilized and educated. We shall wish that our leaders shall be educated and trained men. The rank and file of our great body of men never become educated and trained except in connection with a trade or business which has called out their energies and efforts. Hence, great commercial schools will be developed. As these schools must have their training, if it is to be high training at all, on the science and principles, they will be most easily and efficiently developed in intimate relation with the other schools, which train for the higher sort of work; and all commercial schools must make up the university.

Hence, the home of the highest sort of commercial training, like that of the highest sort of any kind of training, must be the university. We may therefore accelerate the movement somewhat, if we work for it; we may retard it a little, if we oppose it; but, in either case, its progress is sure; its ultimate victory, inevitable.
A History of Penmen, Early Business Education and Educators in America.

Mr. Harvey Gridley Eastman was born on his father’s farm in Waterville, New York, Oct. 16, 1834, and died in Denver, Col., Dec. 13, 1878. Beyond a common school training, his education was completed at the Albany Normal School, after which he was for a time engaged in the nursery business. In 1854 he attended the Business College of his uncle, Geo. Eastman, at Rochester, and was engaged in that institution, where he gained his knowledge of teaching business by the use of samples of cloth, grain and cards representing merchandise. Mr. Eastman after a time withdrew and traveled for a time in Western New York, as writing master and card writer. In 1855 he went to Oswego and opened his first business school, which he sold. He went to St. Louis and opened a business college in 1858. This was in slavery times, three years before the war of the rebellion, a time when northern anti and pro slavery discussions were at their height, and as Mr. Eastman announced a lecture course with noted northern abolition speakers, Joshua Giddings, Wendell Phillips, Horace Greeley, and others, and as St. Louis was then a pro slavery city, the announcement of such speakers caused numerous citizens to advise him for his personal safety to leave the city as soon as possible. To do this quickly, caused a loss of his capital invested in St. Louis, as he turned his school over to Bryant and Stratton.

Why Poughkeepsie?

After leaving St. Louis and coming to Western New York, Mr. E. began to look around for a place to establish another school, and, as he used to tell the story, he took the map of the United States and made a careful examination of it that he might determine what, in his judgment, would be the very best place to establish a business college. His ambition was to have the largest and most popular school of the kind in the world, and in order to build up such an institution he realized the fact he had but a sufficiently distant from any great city to avoid the necessity of bringing the young men who patronized it within the vile influences of city life. He discovered that Poughkeepsie, which lay upon high, and naturally healthy ground on the east bank of the Hudson River, midway between the metropolis of the nation, and the capital of the Empire State, was the ideal spot. In reading up the Revolutionary History, he found that great events clustered about this part of the Hudson River Valley. This, he saw, he could use to good advantage in preparing his college Literature, and thus making the place attractive.

Mail Puzzled Postmaster

He became very enthusiastic over the matter and at once prepared an attractive bunch of circulars and used nearly every dollar he had in sending them out in great quantities all over the country, advertising his school in Poughkeepsie, a place which to this time he had never visited. A man by the name of Pelham was then postmaster at Poughkeepsie. In response to the multitudes of circulars through some postoffice in western New York advertising the E. N. B. C. of Poughkeepsie, the mail began to pour into the Poughkeepsie postoffice addressed, of course, to Eastman Business College.

This was a puzzler to the postmaster, as he had never heard of the man or his school. Postmaster Pelham wrote the postmaster in New York, but got no light on the subject. Then he wrote the authorities at Washington with the same result, and then made a trip to Albany to consult with the postmaster there and no one knew any such party.

Finally, one day, a long, lean, lank looking individual with a broad-brimmed light-colored hat, stuck his head into the general delivery window and cried in a sharp, shrill voice, "Is there any mail here for Eastman Business College?" The answer was, "Yes, are you the proprietor?" To which Eastman replied, "Yes."

"Then you are the man we have been looking for; you have made us a lot of trouble and explained matters to us." Mr. E. promptly stepped inside and gave a satisfactory explanation. The next thing was to find a place for the school. He had but very little money left and was not looking for very elaborate or expensive quarters. He soon found a room in what was known as the Pine Hall building.

Credit that Meant $10,000

Josh Billings, (Henry G. Shaw) was then in the real estate business in Poughkeepsie, and Eastman rented his school room from him with the understanding he must pay his rent promptly, every month in advance. Having complied with his request for the first month he was broke financially. The difficulty his trainer could not devise how to procure the necessary furniture for his school room, and while he was pondering over this he called at Mallory’s Furniture store and asked advanced him funds without security. It had been noise around that a queer looking stranger was in town, and Eastman as a character or a brack-brained crank, and people had better look out for him. One time when Eastman was telling this story to the school, Mr. Mallory sat in the college auditorium and said he would vouch for every word of that little story, and further that the little sale of cheap tables referred to, had resulted in more than ten thousand dollars worth of business with Mr. E.

1,000 Students a Month

Mr. Eastman landed in Poughkeepsie on a Wednesday morning. He was aided by a number of high country officials who took a fancy to his style and earnestness and saw he had youth, health, address and "go," and he was able to advance his funds without security. The public soon after took stock in his enthusiasm, enterprise and public spirit. His first three students entered Nov. 3, 1859. His college opened on the 1st of December, rented a room with Mr. Billings, hired a janitor and stationer. His patronage at first was so small that only by pluck and close management by himself that he continued the college the first two years. During the third year the college increased wonderfully, and from the college’s beginning’s record as a business college promoter has never been equalled.

Classes were graduated weekly and at one of these graduations sixty diplomas were granted. His bold advertising with circulars full of enthusiastic inspiration to young men, were scattered broadcast and through the mails by the million, and his results and achievements in the newspapers were startling. He would sometimes take a page in the New York Herald or Tribune, and often in the New York Times in insertion. He was always ready and eager to do anything to make a noise in the world and attract to his business general attention. At the close of the Civil War, when the soldiers were discharged, he distributed many thousands of his circulars, and hundreds of soldiers, with their salaries and bounty money, went direct to his school. Mr. Eastman dressed fantastically to attract personal attention, with blue coat, brass buttons, red vest, and broadbrim hat. At one time a picture showed him dressed in his gorgeous attire, mounted on a
The morning that the first dispatches were sent north announcing the surrender of Lee, Eastman requested the boys to come out on parade that afternoon, and told them that each must have something to make a noise with, and they obeyed. The boys, some of them, were all equipped with such bedlam gongs and fish horns and bells, large and small, were utilized. It was almost impossible to hear the band which headed the line.

HENDERSHOT THE HORSE OF '65

Although the war was now over, the patriotic fervor was still at a high mark. Mr. Eastman, realizing that the young Hendershot, who was nearly twelve, would be a taking card, and secured him for the trip through the West. His judgment seemed to be right in the choice of the little hostler. (which of course was thoroughly well advertised in advance) mothers, who had lost sons in the service, and wives who had lost young husbands, and others who would lose their brothers, would invariably call for young Hendershot, who, (by the way, always gave the tenor drum solo at the concerts), tender hearted people would open the window to him, telling how he reminded them of the one they lost in the war. This young man had letters of commendation from Generals Burnside, Banks, Grant and Phillip, whose, of course, were published and distributed throughout the trip. He is now the leader of an organization which has entertainments throughout the country, and has his home in the West.

FROM Poughkeepsie to Elgin and Return

In September, 1865, when Eastman’s band started out, the organization consisted of about thirty men besides a reporter from the Poughkeepsie Daily News, whose object of the trip was to advertise the opening of a new Eastman school in Chicago, as well as to make the Poughkeepsie school better known to the world. Colonel Schofield, the major general, was made drum major of the band, and a more gorgeously equipped organization never traveled the country. The Eastman College Band stopped at the very best hotels, and gave a concert every week day and night, from the banks of the Hudson to Elgin, Ill., and back to Poughkeepsie. New York. This took a little over two months. In the organization was a young man by the name of Hendershot, (the lion of the occasion). This young man had quite a history of his own since he left the ranks. Eastman, the band, was second in the army. He ran away to get into the service, and was with Burnside’s Corps when he crossed the Rappahannock. His troops lay along the river when they were much annoyed by a rebel battery on the heights on the opposite side. General Burnside had asked for volunteers to cross the river and silence the battery, and Eastman was the first one to respond, but the general thought he was hardly a fair specimen, and told him he had better go back to his quarters. The natural result of the man was a desperate undertaking, and seemed to be certain death to those who might undertake the task. The boy asked permission to

follow the men to the river, which was granted, and after the men had entered the boats, young Hendershot made his descent in a boat of them into the stream, and, instead of letting go, hung on to the end of the boat, and was dragged across the river. This act was the cause of the hill, the battery was captured and a number of prisoners taken. The northern papers gave a very glowing account of the affair, especially the part taken by the boy. The New York Tribune Association, after the war was over, found young Hendershot and presented him with a silver shelled drum for his bravery and his spirit of patriotism manifested on that occasion.

The faculty of the school, about sixty teachers, were made up of men, from its earliest inception, who were capable in their special branches, many of the members of the school having been teachers, and several of them were among the first of the profession. The school was free to all who could pay, and was open to all who might be called expert. G. F. Davis had no superior then as an all-round penman and teacher. Professor Hutchings, a gentleman of superior scholarly ability, conducted the correspondence, assisted by Prof. A. J. Newby, Mr. C. A. Wilbur, a man of rare general ability attended to looking after the affairs of the internal working of the school. D. K. Allen, since secretary, the son of the late Dr. Geo. W. Allen of Chicago, and later became a celebrated railroad man; also E. W. Mason, a man of wonderful memory, and versatile ability; Prof. Wear, a man of great ability, and an absolutely competent accountant; Richard E. Taylor, superintendent of boarding houses and general office work; E. P. Eastman, teacher of the Theory of Acoustics (the only brother). He was a man whom to know was to love and respect, a more congenial, companionable gentleman not to be found. He was President of the Eastman Chicago School, D. K. Allen was secretary, and E. W. Mason, principal. F. L. Bardeen was principal of penmanship department in Chicago. Mr. Fielding Schofield, all taken from the Poughkeepsie school, E. E. Mellinger, assistant to A. R. E., (H. G. Mason’s nephew), was an expert arithme-
tician, R. E. Mis, a man whom to know was to respect, and to call Mr. Mis was another brilliant member of the staff, who gave the college the lightning method of figuring interest and averaging accounts. Mr. Eastman was a good judge of human nature and selected good and competent lieutenants to execute the work he wanted done. Mr. Eastman spent a fortune on what is now called Eastman Place. He beat a fine row of brick houses, ten in number, all finished in fancy wood, not a brush of paint inside of them, never did things by halves, and never counted the expense when he started out. He was asked the reason of his ability to win in whatever he undertook could not be shaken after he once got started. Eastman used to furnish a quite a good course of lectures during the winter season, having such men as Wendell Phillips, Horace Greeley, Garret Smith, Dr. Burchard, Mark Wilbur, John B. Geers, Bulletin of the Illinois Gen. Banks, etc., etc. But two societies were organized in the latter ’60’s among the students, and they took the lecture business off Mr. Eastman’s hands. The member of the members created a fund sufficient to pay the lectures. This was quite a saving to Mr. Eastman and proved to be very popular, besides giving great prestige to the school.

Eastman a Revivalist

Mr. Eastman was largely magnetic, and his frequent lectures, glowing with the possibilities before young men of will and push, he so irradiated them with self confidence in their powers and ambition to meet the world and win success, that most of

Lessons in Business Writing.

BY

THE SADLER, BRYANT

AND STRATTON

BUSINESS COLLEGE,

BALTIMORE, MD.

Plate 17.

The copies in plate seventeen are designed to give practice in making the lower loop letters. At least four writing periods should be spent on these copies. The work of each period should begin with a few minutes' drill on copy number two and the last half of copy number four in Plate 1, of the January issue. These two exercises prepare the arm for making these loops. Lower loops should be made entirely with the forearm movement. First take the single J and practice until it can be formed well with a free movement. Make a decided turn at the bottom and aim to have the crossing in the loop at the base line. Then practice joining three or more with an easy continuous movement. When this becomes fairly easy, and the easier the better, take the word jump, and try to equal the copy in number three.

Take up the g, r, and z in like manner, after which, practice the words in copies 1, 5, and 6 of this plate. Be careful to close up the little oval in the top of the g, which is just like the small a and figure 9 previously practiced. Watch the little double-turn stroke in the first part of the r. Most students find that difficult to get just right, especially when the r follows another letter. Many good writers like the abbreviated initial stroke in r when it is the first letter of a word, as you will see in lines 1 and 2. Begin the z exactly like the first stroke of m. Be careful to make it short and let the little angle or point rest on the blue line. These words: Jump, game, gazing your, youth, and zouave, will give excellent practice on the little intricate joinings between the various letters contained in them. For instance, just examine carefully the joinings between the letters in the word zouave.

Plate 18.

Business capitals should be made with pure fore-arm movement. The best capitals to begin with are the round ones, those based on the circular exercises. Before O's, C's, E's, A's, and D's can be made nicely, the student must practice on the oval until it can be made freely and accurately without the least hesitation or friction in the movement. Copy number 1 shows the kind of work to develop this ability. Next try to make well-formed ovals with a single sweep of the pen, as illustrated in number 2. Move along quickly, about like you would count 123456etc. The complete O should have a small loop in the top before turning to the right, although the plain form, as in number 2 is a good practical O. The C begins with a small loop pointing downward on the same slant as the letter, and should come down about half the height of the letters. Be sure to make the C circular.
Exercises 1 and 2 are excellent to develop the C. In learning to make this letter, the student is inclined to get a kind of whirlwind sweep around to the finishing point, and consequently he finds it difficult to control the hand so as to join to the first small letter following. Practicing making C's without lifting the pen until it is complete will tend to overcome this.

Students usually have difficulty in learning to round the left side of the E nicely. It is often flat. Liberal practice on copy number 5 will help to remedy this. It will be found rather difficult at first. But it is only an oval with a loop in the left side. Begin the E with a period made with a slight pressure of the pen and finish with two circular swings. Make the little loop about half its height. Carry the bottom of the E farther to the left than the top.

The A is practically an enlarged form of the small a. It is a combination of the straight line and the oval. The exercises in copy number 1 will be found good to prepare the arm for making A's. Close it up rather close at the top. Many good writers close it entirely. The first exercise in copy number 3 may be practiced to advantage before using the A in a word.

Begin D with a straight line, slanting slightly, form a flat loop on the blue line and finish just like the capital O. Copy number 5 will be found a delightful movement exercise. In writing the sentence—number 6, give special attention to the space between words.
The first principle in copy number I, of this plate, will be used as the initial stroke of several of the capitals to follow. Make a small loop—some prefer just a period, then a well-rounded turn at the top and make a full stop at the blue line before lifting the pen. This line should not curve much after the turn at the top is made. The exercise in the latter part of copy number I, will be found good to develop the Y and X. It is a good plan to make a slight pause when the pen comes to the line the first time, then without lifting the pen continue to repeat the up and down strokes with a fairly rapid movement. Aim to make a turn at the top every time, and to get the down strokes on a uniform slant. When this becomes easy, there will be little difficulty in making good strong N's and X's. After practicing the various capitals, be sure to practice faithfully on the words given in connection with them.

Plate 22.

As will be seen, the W and Z begin with the same initial stroke as the Y and X. Since the W is all angles at top and bottom, and should be made with a perfectly free movement of the hand forward and back, the exercise in copy number I, will be found very good to develop the W. Bring the pen to a full stop at the blue line, then with a fairly quick movement repeat the forward and back movement eight or ten times. Make the point in the top of the W the full height of the letter and use judgment as to the distance between the points that rest on the blue line. Some make them too wide apart and others too close together.

Two-styles of Z are given. As will be seen, the difference is in the upper part of the letter. The latter is certainly a practical one. It begins quite like the printed form of Z. and is also quite like a figure 7. Cultivate the habit of making small capitals. They are the nextest. One who can make neat, small capitals can usually make good large capitals, if they are necessary, but the reverse is not so true of the one who always practices large capitals.

Lessons in Practical Business Writing

By

Nina Pearl Hudson

NEW BRITAIN, CONNECTICUT.

Students practice collected in these columns free of charge. Specimens should be sent to Miss Hudson, New Britain, Conn., by the fifth of each month.

Lesson One.

"Come, my friends,
'Tis not too late to seek a newer world."—Tennyson.

The author is very desirous that this series of lessons may prove helpful to all who follow them, but cannot guarantee progress on the part of any one unless each lesson is practiced and practiced again, and that means writing and rewriting many times, criticizing each stroke. Mr. Zaner says: "Be sure you see definitely, then practice systematically, persistently, intelligently." In other words, be sure you see right, then go ahead with all the courage, patience, and stick-toitive-ness you can muster. Do not feel discouraged if success does not attend your first efforts. No one ever found success in the beginning of any work, but with directions given you will be able to make a start and practice will give facility.

BY WAY OF ENCOURAGEMENT.

As an inducement for the home pupils following these lessons, to do faithful practice, the author will furnish a series of ten pen written lessons to the one making the most improvement. Those intending to pursue them, will kindly send with their name and address to Miss Nina P. Hudson, No. Arch St., New Britain Conn., the following:

This is a specimen of my penmanship before beginning your lessons.

Then, write the capital and small alphabet.

MATERIALS.

Be sure to have smooth paper, good quality, so that the pen will not catch in its surface. At the beginning, it is decidedly the best plan to have it ruled.

For ink: I know of no better than Arnold's Japan, though any non-corrosive black ink will do.

Pens should be rather coarse than fine for beginners. Zanerian Business Pen, Gillott's 601 E. F., 601 E. F., or 105 are very good. For a finer pen, Zanerian Ideal or Gillott's 801 E. F.

Cork grip penholders are preferable.

Blotters must always be used under the hands, rough side or the side without the advertising if they have such, next to the hand.

POSITION.

Body. Sit squarely in front of the table, both feet flat on the floor. Bend from the hips and not from the shoulders. Those who are nearsighted will find they can improve their eyesight if they can cultivate the habit of not getting too close to their work. Thow
the weight upon the left arm so that the sight is perfectly free, which should rest upon the table nearly to the elbow, perhaps two inches from the elbow and diagonally to the body.

**Paper.** Parallel to the forearm.

**Hands:** Let the left hand hold the paper just above the line of writing. Place penholder between thumb and first finger of the right hand, grasping it at the cork grip not too near the pen, allowing the cork to rest against the second finger, a little below the first joint. This should point as nearly over the right shoulder as possible, dropping a little below the third joint of first finger. Hand should rest easily on the third and fourth fingers. If your fingers are short, rest on the tips; otherwise, bend fingers at the first joint but not enough to turn the hand so far to the right that it slides on the side of fourth finger and hand.

**Wrist.** Keep wrist free from the table. Notice that we have a double rest in the muscles of the forearm and "little finger rest." This second helps to control the great speed which would otherwise lead to illegibility.

**Plate 1.** With the dry pen, hand in correct position, push the arm in and out of the sleeve, moving on the muscle, keeping thumb, first and second fingers perfectly still. Do not notice what you are making so much as how. Continue this for several minutes till your muscles are entirely free and relaxed. Now, dip the pen and, with this same movement, practice No. 1, not dragging the work out slowly, but two strokes to every tick of the clock. Make it twice the size, then cut it down each time. 3. Given that you may think of form as well as movement. 4. Made with no finger movement.

**Plate 2.** 1. The retracing oval is made with a rolling rather than an in-and-out motion. Retrace five or ten times. 2. The running oval, a good exercise to aid one in moving with ease across the paper, still keeping the motion of 1. 4. Do not lift the pen but make a slight stop at the right, retrace to the left and stop. Repeat five times. 5. Learn to roll the muscle of the arm over a small compass without finger action in the hand.

**Plate 3.**
Plate 3. 1. Running oval with wider spacing than plate 2. After making tracing oval 2, try single oval 3, closing at the top. Keep close watch of thumb and fingers; 1 is 2 with an ending stroke which should be made with a quick motion, arm sliding back into the sleeve. Keep your lines light; do not bear on as though marking on stone. If you find you are grasping pen firmly and cords of wrist and hand are strung tightly, drop your arm to the side till all muscles and cords are relaxed and begin over again. Make strokes of O quick and clear cut, not shaky and drawn out with fingers.

Plate 4. 1. Is made with a gliding upward motion, left to right, changing immediately to a downward movement, stopping at the base line. 2. Make a decided rest at the top of up-stroke and a slight one at the bottom of down-stroke. Keep all down-strokes parallel and straight; have good curve in up-strokes. If you have up-strokes well curved, down-strokes will come naturally the proper slant and straight. 3. Narrower spacing than 2. In 4, notice that two strokes are more narrowly spaced than 2nd and 3rd. 5. Notice the angle at the top of letter, good curve at bottom, especially in u, one-fourth space in height.

Supplementary Lessons in Business Writing, By H. O. Keesling,
CANNON'S BUSINESS COLLEGE, LAWRENCE, MASS.
There is one man at least, whose achievements with the pen have commanded the admiration of all lovers of beautiful penmanship throughout the civilized world. All penmen pay to Pratt R. Spencer, "Father Spencer," as he is generally known, whose home was near Geneva, Ohio, as that man. The history of him and his achievements would be superfluous, as they are more or less familiar to even the school children of the present time.

About ten years ago a move was made toward erecting a Memorial Library in honor of Mr. Spencer at his old home, Geneva, Ohio, near where he taught penmanship in his Log Seminary. The sum of $5,000 and about 3,000 volumes of books are now in charge of a Board of Trustees at the above place, where the ground on which the library is to be built has been donated. The drawings, calling for a structure of $30,000, have also been made.

At the meeting of the Federation of Commercial Teachers, held at Milwaukee in December last, this matter was revived, and a committee was appointed to devise means to carry out this enterprise and report at the next meeting, to be held in Cincinnati next December.

I look upon this as a glorious opportunity and a privilege for every lover of true greatness in man, and every lover of beautiful penmanship, in public or private school, to have an interest in a beautiful Memorial Library to be erected to keep green the memory of the noble founder of Spencerian penmanship.

The first problem to be solved is how to arrange a plan whereby the public—the friends of this cause, can participate in raising this fund. The purpose of this article is to put the matter before the readers of this paper, and invite suggestions along this line.

I would be glad to hear from you either through this paper or personally.

Mr. Rohrbough Explains.
OSCAR, NEW, Feb. 13, 1892.
THE BUSINESS EDUCATOR,
Columbus, Ohio.

DEAR SIRs: In the February number of the Business Educator, Mr. Gregg, in making his report of the Private Commercial School Managers' Association, criticizes me by my books and records as to the teaching of Mme. Busk in time for the first meeting of the Association. While this is true, I am not to be censured for it, because they were sent four days ahead of time, and therefore, would have reached their destination two days prior to the meeting, had they not been lost in transit. The rush of Christmas business has been given to me by the express company as the reason for this delay.

A letter of explanation was sent, and as far as I have been able to determine every member of the Association except Mr. Gregg had enough charity to attribute the delay to the express company, and to the rush of business, rather than to any fault of mine.

Yours very respectfully,
M. G. ROHRBOUGH,
Sec. Private Com. School Managers' Assn. for 1892.

[Wisconsin is "IWI", "Coo.
FOND DU LAC, Wis., Feb. 20, 1892.
ZANER & BLOSER,
Columbus, Ohio.

DEAR SIRS: The Wisconsin Business College Association is an incorporated organization, whose existence dates back to the 1st of this month. The Association is organized for the purpose of protecting the reputable schools in this state, to stimulate and maintain a high standard in education, to establish uniformity in requirements for graduation, and uniformity in tuition charges.

So far our membership to the Association is, The Fountain City Business College, Fond du Lac Wis.; The Green Bay Business College, Green Bay, Wis.; The Watertown Business College, Watertown, Wis.; and six other institutions, whose applications are with us for consideration. No school is admitted to membership, whose course of study, requirements for graduation, rate of tuition and general business management, is not passed upon favorably by the examining committee of the Association.

The officers are: President, David E. Johnson, Fond du Lac, Wis.; Vice-President, C. H. Potter, Green Bay, Wis.; Treasurer, E. F. Quintal, Green Bay, Wis.

Yours respectfully,

Mr. Olson Speaks and Acts.

"I have been reading the last issue of THE BUSINESS EDUCATOR with much pleasure. I consider it one of the best magazines published on business education; and it is certainly worth many times the subscription price. I enclose $1.00 for which please put on your regular subscription list."

J. C. OLSON,
Pres. Parsons Bus. College,
Parsons, Kans.
Mr. & Mrs. Benjamin M. Winkleman
8 Church Street, Hartford, Conn.

Miss Emma Tibbets, the well-known commercial teacher in the Salem, Mass. High School, has suffered with pneumonia at this writing, March 3rd.

H. T. Loomis, the manager of the Practical Text Book Co., spent February in the South, and on the 31st of December he and two sons. The older son was taken sick at Columbia University, and his young brother moved him fortunately before he developed a case of the terrible typhoid that has been ravaging the city.

The changes effected by the sale of the Fall River School of Business established five years ago by M. J. Shoeemaker and C. S. Clark, are now completed. F. S. Stone came from the Spencerian Commercial School in Cleveland, Ohio, and W. S. Rogers came from the Sandusky Business College, Feb. 16th. Mr. Shoeemaker, who has charge of the shorthand work, in the Fall River School, took Mr. Rogers' place in the Sandusky School February 1st. Mr. Shoeemaker went to Rochester, N. Y., to join Mr. C. S. Clark, who had established the Commercial Correspondence Schools, an enterprise that we understand has proved to be very profitable.

President C. C. Gaines, of Eastman, Poughkeepsie, recently wrote a very thoughtful and able article on the economic outlook, setting forth what in his judgment the public interest is for and against for their pupils as a preparation for life. Mr. Gaines has promised us an article for an early number of the Commercial Educator.

Algermon Goodwin, a member of the '82 commercial class of the Beverly, Mass. High School, recently made a verbatim report of the examinations in shorthand, phonography, and the Guilly Oil Company, of Texas, to the Beverly Board of Trade, for the purpose of having a seat in that city. Mr. Goodwin's work was entirely satisfactory, both to the committee and the companies.

Mr. Goodwin's work was entirely satisfactory, both to the committee and the companies.

Mr. F. H. Runyon, of the Philomath Business College, Philomath, Ore., has purchased the Globe Business College, and is assuming control about April 1st. Mr. Hurd, who has been the principal and the instructor of the college, has accepted this offer.

A badge button and an aluminum card were received from the Globe Business College, St. Paul, Minn. The aluminum card has a calendar for '90 printed on the back. Thanks, Brother Goldie. We shall know when we shall be in for a year, as we shall all have your little card in our vest pocket.

Mr. E. W. Stickney, of the Ohio State Normal School, who has been a prominent figure in the commercial work of Ohio, has been elected a member of the Board of Trustees of the Ohio State Normal School.

Professor Bookwalter, of Versailles, Ohio, has been appointed to the Business Department of the University of Illinois. He will take charge of the business courses in the University of Illinois.

Professor Bookwalter, of Versailles, Ohio, has been appointed to the Business Department of the University of Illinois. He will take charge of the business courses in the University of Illinois.

"Opportunities," is the title of a very interesting pamphlet which sets forth the advantages of business education. It is published in Shorthand in Shorthand, conducted by Patrick Sweeney, editor of "Chat," New York.

Washington's Birthday was remembered in anticipation, by the C. C. C., Des Moines, by a holiday observance, a feature of which was a hike out of town, the afternoon on the blade, was a picture of Washington; on the inside of the program was a program of the school, which consisted of a piece of pasteboard folded and cut to represent a hatchet. On the outside of the program was the program. These Hawkeyes are delightfully original and aggressive. They have practically taken over the care and keeping of Washington's Birthday, by establishing "Secretaries Shaw and Wilson: Senators Allison and Dolliver: and Congressmen Hurst and Beam," in the very personation of the retiring Speaker of the House.

In the Eastman Journal, we note a vital article from the pen of President Gaines, on, "Help to Our Boys in the Eastman," a reference to the recent death of one of W. V. Kinsley, who has charge of the work in Eastman, the graduates will be well satisfied with the satisfaction to those who employ them.

W. T. Williams, who has charge of the commercial work in Lawrence University, must have some lively boys to work with for a recent news note says that twelve of the students, all of whom have smoking some sophomores out of the doors of the administration building with sulphur. The monograph is coming to have a wide use for instruction purposes. It has just been issued by the United States Naval Academy for the teaching of languages. It is thought that the students in this school will have a great advantage in spoken pronunciation than in any other way.

The first American college man to obtain a patent for the phonograph was Cecil Rhodes, a Yale graduate of last year's class.

The Worcester Massachusetts Daily Telegram of Monday, March 12th, contained a column article from the pen of the veteran and accomplished penman, A. H. Hiram, and which was written to "Penman." It was not necessary to say to those who are interested in penmanship that he sees anything but good in the vertical. With the exception of Mr. Hiram's penmanship, which has been the standard for twelve years, the most important news is that the students will have the opportunity to practice their penmanship in a new and practical way.

A badge button and an aluminum card were received from the Globe Business College, St. Paul, Minn. The aluminum card has a calendar for '90 printed on the back. Thanks, Brother Goldie. We shall know when we shall be in for a year, as we shall all have your little card in our vest pocket.

The Future of Penmanship.

BY E. K. ISAACS.

The very subject implies prophecy. Prophecy implies a prophet. A prophet is one who is inspired. With few exceptions all inspired people of the past have expired. Can it be that those who assigned me this subject had designs on my life? I suppose a person ought to consider it a compliment to be considered inspired, even though he expires in the attempt to prophesy the future of penmanship. The art of writing is a matter of evolution. And the question is, does the process of evolution tend toward simplicity or toward complexity? Is civilization more simple, or is it more complex, than primitive life? Which is more complex, nomad or man, miiiler or Milwaukeean, pelican or penman? We have heard much during the past twenty-five years concerning simplifying penmanship. But the fact is, that barring the vertical innovation of the past few years, the script forms are practically where Father Spender left them. True, there has been more or less lopping off of superfluous lines in capitals. But what does that amount to? Not very much. What does the vertical innovation amount to? Very little. Take as an example the old standard Spenderian capital T. It was made with five strokes—two for the stem and three for the cap. Some of the later simplified forms are made with three strokes—one for the stem and two for the cap. But the fact that some lines are omitted in the finished product does not necessarily lessen the labor or difficulty in executing the form. I am not arguing for five-stroke letters in preference to three strokes. Simple forms are more practical than complex and elaborate ones. And here is a strange thing. Reference has been made in the foregoing to evolution. In some of its phases evolution seems to tend toward complexity. As instances we may notice the marvelous "systems" that are incident to modern civilization, such as transportation systems, political systems, educational systems, theological systems. And last, but not least, that marvelous wonderful systems of systematic guess work called medicine.

Another strange thing is that when a "system" gets too complex and cumbersome it falls to pieces. From amoeba to Melba is a great distance. The amoeba falls to pieces, not because it is simple, but because it does not know enough to preserve itself. If Melba should ever disintegrate, it would not be because she is a wonderfully complex piece of creation, but because she does not know enough to keep herself intact. When a great "system" fails and falls, it is because the conditions that called it into existence have changed. Change is the law of nature.

The "system" or the individual, to experience perpetual existence, must change constantly, so as to harmonize with environment.

A Fundamental Truth:

WHATEVER IS IT RIGHT.

Formers and reformers may go into hysteries about the defects and inconsistencies in the present order of things, but the truth still remains that, in its day and generation, whatever is is right.

Our present method or system of longhand writing is ridiculously cumbersome.

As an example, take any ordinary word, say the monosyllable "through." This word spoken, requires but one "impulse of the voice." The word "through," written in longhand requires twenty-six strokes of the pen. The same word, written in shorthand, requires two strokes of the pen. What tools these mortals be.

Shakespeare was everlasting right. And, too, Pope was everlasting right. Whatever is is right. Just think of the amount of time and energy spent by the humanity of the world in writing longhand—in executing twenty-six strokes to represent three sounds, or to take the place of one vocalized breath. It is hard to see through "through," either orthographically or chronographically. Orthographically, why should it take seven characters to represent three sounds? But it does, hence the spelling reform agitation. Spelling reformers, like all other reformers, have a hard row to hoe. And so, those of us who have been tinkering with longhand simplification during the past twenty-five years, what have we accomplished? We have lopped off a few superflous lines in the capitals. We have changed some of the capitals from the stem group to the oval family. We have dropped the beginning and terminating lines in a few of the small letters. That is about all. And again, I say these changes amount to very little when compared with the glaring absurdity of long-hand writing as a system of recording or communicating thought. We are referring to existing longhand writing as a glaring absurdity. I am doing so from the standpoint of the idealist—the prophet, if you please—and not from the view-point of the crank or the soured reformer. From the ordinary view-point, of course, longhand writing is wonderful enough. So is a flower and a felon. It is all right to be an idealist for purposes of private meditation and for purposes of prophecy. To attempt to be an idealist in practice as long as one "lives in Rome," is not an ideal occupation.

Since the subject assigned me implies prophecy, I shall now speak from the standpoint of the prophet: The future of penmanship? There will be no penmanship in the future; or rather, there will be a future time when there will be no penmanship. Even as mortality is destined to be swallowed up in immortality, so is chronography destined to be swallowed up in telepathy.

This is the age of electricity, and a marvelous thing is electricity. Franklin gathered it from the skies by means of a kite—a childhood way of doing it.

We now "generate" it in huge dynamos—and we think we are at the very zenith of scientific attainments. Yes, we "generate" electricity. But we have been on the plane of genera-
tion for ages. Regeneration is next. Even as regeneration is destined to replace generation, so will electricity be replaced by still finer forces.

The coming storage battery is but a suggestion of the “kingdom within.”

The immediate future of penmanship?

As long as the English orthography remains what it is, longhand writing will remain practically as it is now.

There will be a time on this earth when all its people will speak one language.

The orthography of that universal language will be simple and consistent.

The penmanship of that era will correspond in simplicity and consistency with the language.

This century will be a shorthand era.

Shorthand will form a part of the public school curriculum.

Shorthand will eventually take the place of longhand for correspondence and private memoranda.

Longhand will continue for public and private records, legal and official documents.

But there will be a time when records and documents will not be needed.

There will be no divorce records, for there will be no marriages.

There will be no court records, for there will be no law suits.

There will be no bookkeeping records, for there will be no accounting.

There will be no way bills, or bills of lading to make out, for railroad-

ing, navigation, and airshipping will have ceased.

The commerce of the future will require neither railroads, ships, airships or records.

There will be no prescriptions or medical essays to write, for the present stupendously complex system of “medicine” will fall to pieces of its own weight.

The present system of therapeutics requiring its hundreds of medical colleges and numbering its practitioners by the thousand, its victims by the million, and its records by the ton, will be reduced to a single affirmation of three words, namely:

I AM HEALTH.

There will be no sermons or theological discourses to write, for there will be no preachers or theologicians.

The theological libraries of the world will consist of three words written in the intelligent consciousness of each individual, namely:

I AM SAVED.

All that has been said in the foregoing refers to conditions that will obtain on this planet.

And here endeth the prophecy.

If the future of penmanship is not now clear, it must be because penmen are not yet far enough in the future.

It has been maintained that where there is no ear there is no sound.

It has also been said that a prophet is not without honor save in his own country.

In conclusion, I would suggest that “The Future of Penmen” might make a good topic for discussion.

LOS ANGELES, CALIFORNIA.

BY C. C. CANAN, DUKE CENTER, PA.

WANTED A position as penman and commercial teacher with a good substantial school. Experienced, competent. Fine Penman. Address EXPERIENCED, Care Business Educator.

SPENCER'S Business College

KINGSTON, N. Y., Feb. 2, 1903.

MR. L. MADARAZS,

Dear Sir: Before taking your course last summer, I was a doubter. After the first lesson I was a convert, and now I

am your most enthusiastic supporter. Your manner of presenting the subject, together with the relation of each letter to some other part of the work, was of value to me, and I unhesitatingly recommend your course to any one who wishes to teach or learn business writing. The ornamental part of the course cannot be beaten by any other penman. Very truly,

L. E. STACY.

This is the verdict rendered by a LIVE PENMAN to the work of a supposed DEAD ONE; an appellation accorded Madarasz by a person whose standing in the penman’s profession is represented by an engraved signature trued up by a skillful engraver.

I have a circular that tells about the MADARAZS METHOD of teaching writing; it will be sent to you for a stamp, and if you’ve any questions to ask, write freely to

Madarasz.

1281 Third Ave., New York.
was elected chairman, with Miss Helen L. Follansbee, of Somerville, Mass., secretary.

A free expression of opinion was then given as to the purpose and value of the proposed association. Messrs. Lakey, Gaylord, Ellis, the chairman, Mrs. Toman, and Read; and Mrs. Chandler of Boston, and Mrs. Hecker of New Britain, Conn., speaking. The speakers expressly disclaimed any intention of antagonizing any other section of the Association. It specifi-
cally that if they believed that such a purpose were entertained, they would have nothing to do with a new organization.

On motion of C. D. Ellis, of Springfield, Mass., the Committee on Constitution and By-Laws, Messrs. F. H. Read, Auburn, R. L. C. B. Ellis, Springfield, and A. T. Swift, Providence, was appointed on the Constitution in July, to complete the organization by the adoption of a Constitution and By-Laws.

On motion of E. S. Colton, of Lowell, the Committee on Constitution was instructed that regular teachers of the distinctly commercial subjects should be eligible to membership.

It was also decided that the dues should be fixed at seventy-five cents annually.

The following officers were then elected: President, H. G. Greene, Melrose, Mass.; Vice President, F. E. Lakey, Providence; Secretary, Helen I. Toman, Melrose, Mass.; Treasurer, F. H. Read, Providence. It was voted that the organization adopt the name under which this report is written.

It was decided to leave the charter open until after the regular meeting which will be held during the fall, the exact time— as well as the place— to be decided at the ad-

journed meeting in July. President Greene was instructed to appoint an Executive Committee for the purpose of making a liberal collection to defray accrued expenses, the usual votes of thanks were passed, and the meeting adjourned.

The meeting was full of snap and fire from the beginning to the end. An unex-
ectedly lively interest was manifested by the sixty teachers present. The need of such an organization for the comparison of methods, and the improvement of courses of study, the approximating of uni-
formity in commercial teaching, the cultivation of a friendly spirit on the part of school authorities, and the building up of a professional body, was emphasized.

There is a bright future of useful work be-

fore this latest manifestation of the com-

mercial element in education.

Open Letter

TO THE PROPRIETORS OF THE PRIVATE COMMERCIAL SCHOOL IN NEW YORK CITY AND CANADA:

What are you doing to promote and advance your commercial and educational work? Are you a member of the Private Commercial School Managers' Association of the Federation of Commercial Teachers? If not, why not? If you are a member, have you ever taken part in some way or other in the work of the Association? Is your school a member of the Association?

The object of this letter is to make you realize that the Association is the logical extension of the work of the commercial school. The Association is not a body for self-interest. It is not a body to advance your personal interests. It is a body to advance the interests of the entire profession of commercial teachers. It is a body to promote the advancement of the commercial school in the city and the country. It is a body to advance the interests of the commercial school in the education of the youth of the city and the country.

You are a member of the Association. You are a member of the Federation of Commercial Teachers. You are a member of the Commercial School Managers' Association. You are a member of the Commercial School.

Thank you for your time and attention. Please consider this letter as a request for your support and cooperation. Thank you.

E. NOS SPENCER

Pres., Com., School Managers' Ass'n.

Address, Louisville, Ky.

It's O.K. Now.

In the program of the Eastern Commercial Teachers' Association as printed in the professional papers, there was no provision made for a discussion of the program, but since the publication of the same the official program has come to hand in which we find that pennmanship has had recognition.

The day afternoon Mr. H. G. Healey, editor of the Pennam's Art Journal, of New York city, will touch upon the subject as follows:

"Quintyne: "What Effect, if Any, Has Vertically Pennmanship Had Upon Practical Business Writing, and What Effect Will It Have in the Future?" Furthermore, the subject is expected to receive attention in the general free-for-all meetings entitled, My Hobby."
the students left the college within three months eager to go out into the business world, and some of them are making good. Mr. Eastman's success lay in the confidence he inspired in others to will and do for themselves. Luck he called a fool, but pluck a hero, and his exertions would be folowed thousands of his students to resolve to make the most of their possibilities in life and to attain the highest success within their powers. By thus instructing him, he filled the fire of ambition in the minds of thousands who, by ever keeping alive the flame, have achieved wonderful success, though starting with but a limited capital. Thus, by winning the admiration and love of his students, they not only became enthusiastic advertisers of the college, but in the effect of his magnetic personality, they retained the inspiration awakened by his influence through all their after lives. In a sense Mr. Eastman was a revising agent for the ability to arouse young men to a belief in themselves and their slumbering powers, which set them on their feet, inspired with self confidence that earned and retained them to be followed by honorable achievement. In the '60's he showed a friend $80,000 in bonds. He bought the site on which the college building now stands, the Eastman in such a way as to build a beautiful home, and ornamented the grounds at great expense.

In politics he was elected Mayor three times and twice to the Legislature, where he was one of its broadest minded, far seeing members. Through his efforts was built the great Poughkeepsie bridge across the Hudson, and he was made chairman of the board of charities of the city of New York.

NOTHING BUT LEGS AND BRAINS

In an address delivered before the officers of the New York Central R. R. at their thirty-seventh anniversary, Hon. Chauncey M. Depew said:

"I know Eastman intimately, knew him for years. Eastman was a magnificent specimen. No man did the work he had to do with more intelligence, more energy and more resolution or power than Eastman. No man went into fun and sport with more vigor and enjoyment than Eastman. No man had so much time in Poughkeepsie for the public work of Poughkeepsie, or in Albany for the public work of the state, as Eastman. No man could drop into a seat alongside of you in a railroad car and make life as enjoyable between Albany and Poughkeepsie, or Poughkeepsie and Albany, as Eastman. Eastman could absolutely make a beautiful day out of any Poughkeepsie. Ordinarily when you are travelling in a railroad car and a man is alongside of you, in fifteen minutes at the latest you would commit suicide or murder him; but with Eastman you were sorry when the journey was over. Eastman started to build the Poughkeepsie bridge. He built it. Nobody can tell what he would have accomplished if he had lived. No human being but Eastman could have diverted traffic to the bridge, created new conditions in the relations between the East and the West, except a man of the energy, creative power and terrific force of our friend. He had no great ancestor behind him; he had no aids of fortune; he had nothing but legs and brains, and he used them both all the time."

SET A FACE UNEQUAL

The fame of Eastman's College was so great that it was known in all parts of the United States as the largest school of its kind, and was therefore chosen by them to be the best; for they estimated its worth by its success. Students from all sections of the country would pass by their local business schools to go to Eastman's. Thiserged. Then by a jealous feeling among business school men, which caused many managers to condemn Eastman's College. This was especially so with Messrs. Bryant & Stratton, an arm with a chain of schools who were ambitious to monopolize commercial teaching. This bitterness of feeling on the part of Bryant & Stratton and of some of the Principals, was so great that an attempt was made, in about 1861, by Bryant & Stratton, to open a competing school at Poughkeepsie, if possible, to defeat the Eastman College. They employed Henry Spencer, John D. Williams, C. C. Curtis, and other famous teachers, yet failed to check the flow to Eastman's College. Mr. Eastman, for fun and business, returned the compliment by going to Chicago, and in Metropolitan Hall and other buildings, opened a Chicago branch of his College. Thiserged. Then by advertising boldly, far surpassing that of Mr. Bryant, of Chicago, Eastman College enrolled about five hundred pupils. Mr. Bryant, after several years of strong competition, was glad to approach Mr. Eastman with the proposition, which he accepted, to close the Bryant & Stratton College of Poughkeepsie, and purchase the interests of Mr. Eastman, in Chicago. Mr. Eastman's bold, successful methods were in many ways copied by other active men who were on the same road of achieving success. As the custom of employing celebrated lecturers began with Mr. Eastman, numerous schools then and since adopted the same method with good results.

In originality and boldness of methods, Mr. Eastman set a pace which no schools of his time or since have been able to keep up. All this he gave an object lesson to the business educators of the country which has been of value to many. His plans were bright and clever; with push and money, he won patronage and success by startling methods which attracted attention, and secured to him the confidence of the students. In broadly advertising commercial education and bringing it in its early days before the public in all parts of the country, Mr. Eastman did more than has been accomplished by any other one individual.

DRAWING TEACHERS

During the summer months the wise drawing teacher plans his work for the coming year. Order a set of our Colored Ceramic Art Models, 10 pieces and twelve colors, use them during this coming spring term, and the question of art supplies for the coming year will be settled. You can't be beat. Just the thing you are looking for in the art department of a summer school.

School Model and Supply Co., Box 606, ZANESVILLE, OHIO.
The work of the writing master is always a mark of excellence and progress in our public and private schools, and the great importance of this office is beyond doubt or question. Writing should receive extraordinary attention in our schools and no one should feel satisfied short of the best that can be had for improvement in writing. Under the supervision of a competent writing master, and the aid teachers are always ready and willing to give, it would indeed be hard to find a better method for the highest and best results in the advancement of good writing; but leave the teachers without a supervisor and you will have a ship without sail or rudder, an army without a general, or an orchestra without a leader. The writing master is always a welcome visitor to the pupils and teachers alike, and his kind words of encouragement and his skillful methods of teaching are a never-to-be-forgotten inspiration to all. Under the supervision of the writing master the teachers are taught how to teach the pupils, and the pupils are taught how to write in a most satisfactory manner.

WRITING FORCED TO THE WALL.

The chief qualification of the school master of less than fifty years ago was the ability to write well. In the early history of our public schools writing was considered one of the most important subjects, and while many new subjects have been added to the curriculum it still remains one of the most important branches of modern accomplishments. The addition of many new subjects and the thoroughness in which they are taught has forced writing to the wall (not the blackboard) and is looked upon by some as a bit of ancient history and art. The inability of the common school teachers of today to write well is not altogether their fault. Room had to be made for new subjects as well as for modern methods, and they find little or no time to qualify to teach penmanship successfully.

FEW HAVE PROFESSIONAL TRAINING.

The public school teachers today make no pretensions at being at all prepared to teach penmanship as it should be taught, but they willingly yield to the instructions of the writing master for their own good as well as for the good of the school. The State schools and universities, from which our public school teachers are selected, are busily engaged in preparing students to teach a large course of studies without giving much, if any thought, to penmanship, consequently but few public school teachers have any professional training in penmanship, and therefore cannot be expected to teach penmanship scientifically nor have they acquired as much as a good hand. Fully eighty per cent. of our public school teachers are poor writers, and cannot inspire students to reach anything but humble efforts, and about all they can do is to tell the pupil what should be done, which alone falls short of accomplishing very much. It has been proven time and time again that writing done under the close supervision of the writing master who has had time and opportunity to prove his worth, is far superior in legibility, rapidity and beauty.

H. B. LEHMAN.

Business men are not at all satisfied with what is generally termed a school hand. Writing which is legible, rapidly written and beautiful, has the winning merits, and anything short of this qualification will not win the approval of business men. The fore-arm movement, about which the average school teacher knows but little, is the source of true success in mastering a lasting handwriting. The writing master who is familiar with the latest and best methods of teaching writing, and who is skillful in handling pen or chalk can inspire pupils to higher and nobler efforts than can possibly be reached in any other way. To give pupils a copy to imitate, unaccompanied by instructions in movement drills, position for holding the pen, sitting at the desk, etc., is not teaching writing.

H. B. LEHMAN.

The Gloversville, N. Y., Business School, Patterson & Burr, proprietors, issues a very creditable catalogue; above the average in many respects, having received many new students, and whose own school building, being a beautiful and pretentious one, is in excellent condition. The school is well situated, being within a stone's throw of beautiful surroundings, tennis garden, etc., in the residence section of the city, the first floor of which is devoted to office and residence purposes, the second floor to short courses in penmanship for business men and the entire building to business. This certainly gives the school a certain prominence which we should therefore judge that they have no difficulty in interesting the best class of customers.

Friday morning programs keep dropping in from the Capital City Commercial College, Des Moines, 1a., indicating a weekly exercise that is energetic, entertaining and inspiring. Prominent speakers are engaged for these exercises, and we know of nothing else that is doing so much for commercial education, especially in a secondary way, as work of the kind.

Northwestern Business College, Madison, Wisc., is sending out a neat little souvenir of recent work from the pen of Mr. G. E. Spohn.

The Normal Bulletin, Shenandoah, 1a., published in the interests of the Western Normal College, reaches our desk and receives attention not accorded to all papers of this class. It is clear that prosperity has been smiling upon this worthy institution, as it is now free from all debt. A $10,000 Carnegie Library has been secured for the city, which will be free of access to all students, and the college has also been accredited by the State Board of Examiners for the State of Iowa, which enables their graduates to secure a state certificate. This is gratifying not only to the president, Prof. House, but to the friends of the institution.

"The Commercial College Reflector" published bi-monthly by the South Bend, Ind., Commercial College, reaches our desk regularly. It conveys the impression of a successful school. Mr. F. E. Belliss, a former Zanerian boy, is secretary, and is a gemmum of more than average ability.

A circular entitled, "A few words in regard to school literature," is received, and at the bottom is the graceful, forceful signature of C. C. Keenick, School Advertising Specialist of the firm of Keenick, Chicago. This means that Mr. Keenick is one of the first, if not the first, experienced school man who has taken up school advertising as a specialist, and from what we know of him we have every reason to believe that he will make a success of it. Mr. Keenick is president of the Standard Advertising Association, with offices in New York, Chicago and Denver. We wish him great success.

The summer school of the Nebraska State Normal School, Peru, Nebr., is issuing a very neat booklet of twenty-four pages, advertising the work and worth of the institution.

Mr. S. L. Caldwell, the well-known penman, has charge of the penmanship and drawing in this school. From the number of persons he has interested in these special subjects we would conclude his success as a teacher is above the ordinary.

The "Official Program" of the Eastern Commercial Teachers' Association, which is to be held in Brooklyn April 9th, 10th and 11th, 1893, is received, and it is a handsome and interesting one. We should strongly recommend the same society (and who is not interested?) to tender the same favor to President Chas. M. Miller, No. 135 Broadway, New York City.

Lettering Curves

For drawing simple or compound curves for lines of lettering. Once used no person who does it will do without. More than twenty years' constant and in 'our office has demonstrated their great value. A set of ten curves 25c.

H. W. KIBBE, 181 Tremont St., Boston, Mass.
Lock Haven, Pa., May 1, 1902.

Zane B. Bower,
Columbus, Ohio.

Gentlemen: A specimen of the Simplified Penmanship for General Business purposes. This is practical and neat enough to suit any one with an eye to utility. Consider it a splendid style to learn, as it is a help to ornamental penmanship, giving strength and sureness to it. A fair trial will convince you.

Yours very truly,

John G. Christ

---

Mr. Will X. L. Others,
Dear Friend:

Upon investigation, you will find that the only system of Short-hand that does not need position, word-signs, prefixes, affixes, or other abbreviations, with a simple vocabulary of 24,300 words, that improves the spelling, exercises and develops the reasoning faculties, thus awakening the dormant minds, facilitates articulation in foreign languages and leads the Short-hand world in brevity of outline, flow of movement, ease of learning, clearness to read or legibility, capacity and speed of it, and capable of applying every means of abbreviation resorting to other systems, is Clark's Tangible Short-hand.

Send $2.00 for self instructor in this purely connective vowel system.

Fraternal yours,

Frank Clark

323 College Street,
Springfield, Mo.

Reforms and Reformers in Writing

Part Five—Movement and Speed.

History discloses the fact that when the world demanded faster writing reformers endeavored to meet the demand, not by trying to train people to write the old forms faster, but by creating such forms as were more rapid in construction and simple in execution. Speed was thus increased, not by increasing human activity; by abridging and simplifying form. For a quarter of a century following 1850, the Spencerian system was well nigh universally taught and used, and until within a few years it was used more than any, and perhaps all, others in public schools.

About a quarter of a century ago business people and business colleges began to realize that writing, as it was then being taught, was not as business like as it should be. Gaskell began the cry of movement as a panacea for the shortcomings of writing. He emphasized the need of more freedom in the practice of writing by means of exercises, the purpose of which was to train the arm rather than the hand. He saw that the fingers were doing more than their share of the work, and, as a means of counterbalancing excessive finger movement, he, and contemporary workers, advocated the so-called muscular movement. Many of his followers assumed that finger movement of any sort was an evil, and as a consequence, the "sinon-pure muscular movement" theory as an end, instead as a means, was born.

About this time Michael began to advocate speed as a means of developing practical writers. His cry was "sacrifice form for speed," but in due time people learned that a thing sacrificed could not be regained. Many who passed, now sacrifice form for movement would do well to profit by others' experience. These two reformers possessed energy and enterprise, but they lacked originality. Both appropriated the Spencerian forms and at the same time denounced the system as being slow. This was inconsistency, for few at the time detected it. While nothing was thus added of real and lasting value to the penmanship world during the century, yet there was an immense interest awakened and the people practiced penmanship as they had never practiced before.

Through these agitators and their followers, arm movement and speed were overestimated and legibility and finger cooperation were underestimated. The Spencerian system was slow and unbusiness like because of the beauty, delicacy and intricacy of its forms. The reformers thought it was slow because people had not been taught to write rapidly and without the aid of the fingers. It was simply a case of wrong diagnosis. Then, too, it was a case of people endeavoring to revolutionize the art of writing without changing or improving the forms. To attempt to make the beautiful letters faster than they were intended meant the same thing as the reader as if by the one who raked and bound the grain that was thrown from the cradle of one who swung it faster than he could swing it well.

---

"GEMS"

Worth its weight in gold to any one desiring to learn or improve his penmanship. Hand positions fully illustrated; in this, it has no rival.

Teachers

You cannot afford to be without it.

Students

It will help you greatly to put your time to the best use.

All that we call evil in the material and spiritual world is good so long as we hold it in subjection as servants to the spirit; and only becomes evil when we succumb. All evil consists in the dominance of the lower over the higher; all good in the rational use of the lower by the higher.

If we cannot practice the higher virtue of temperance in all things, we must even try the lower virtue of total abstinence in some things.
Lettering and Designing

Number Twenty-two
BY F. L. BROWN, ROCKLAND, MAINE.

Modern engraving embodies the greatest variety, drawing and designing, including brush work, linoleum and color illumination, and the successful engraver must not only be able to write the shaded rounded hand well, and execute the rapid text letters with accuracy, but he must be proficient in designing as well. The subject given herein will bear out this statement.

OUTFIT. The outfit should at least include the following articles: Drawing board, T-square, dividers with pen and pencil points, ruling pen, and a set of the regular outfit of pencils, holders, pens, etc. In addition, the practical engraver must have a variety of colors, and for the benefit of those who may take up the art, I will name the following colors: Light red, Antwerp blue, cobalt, warm sepia, yellow ochre, rose madder, crimson lake, brown madder, yamdyke brown, Hooker's green, No. 2, Payne's grey, black, lemon yellow, cadmium yellow, Chinese white, vermilion and burnt sienna.

BRUSHES. Two No. 7 brushes will answer for many purposes, one for the color and the other for use in fluid purposes. The best brushes for use are deer or moose, and are made by the best engravers. The brush should be kept clean, and washed when wet. The brush dry by pressing the finger tips several times across the point, and if it still retains some of its pointed form it is doubtless good. If it becomes brittle, it is useless. A fine pencil point is necessary for the best results in all classes of work.

INSTRUCTIONS AND SUGGESTIONS. The elaborateness of a set of resolutions is governed by the size of the piece. A good rule is to choose a type of line grade to suit the size of the piece. The lettering is used for prominent headlines on the cheaper pieces, while the more elaborate and intricate styles of lettering, decoration and design on the more expensive ones. It should be remembered that to do work is not always artistic and pleasing, and beginners should be careful to justify display, and keep in mind the principles of simplicity and harmony. Each detail should be worked out in such a manner as to produce an artistic combination.

The design given herewith was reproduced from pen and brush work, and is presented as a specimen of High grade up to date engraving. The decorative matters in this design are confined almost wholly to the second word "Whereas," and perhaps the word and its ornaments were given more thought and study than any other part of the design. Note the arrangement of the solid and shaded face letters, and the artistic and dignified effect obtained.

The original of this design was executed on toned and toned paper. The tone is the same as the paper, or the ground. It will profit the student to observe the following measurements: Length of line of "The Taconnet Club."... (Further details are provided.)

In laying off the design first draw vertical center line and with the dividers strike curve for "The Taconnet Club," reversing the curve at the ends. Roughly suggest the cartouche and laurel in pencil and the word "Whereas," following with the line "Hollingsworth & Whitney Co." text, etc. Pencil in the text, and ascertain as near as possible the exact space it is to occupy. It requires no little experience to size up a set of resolutions, and see at a glance how the prominent headlines should be arranged, and elaborated to produce the best effect, also the space the set should occupy to show up to the best advantage. Much careful attention should be given the elaborated ornaments, and the design should be carefully pencilled. The ornaments should be free and graceful, and the pose of the female figure spirited and lifelike. Use waterproof ink in filling in all the lettering, ornaments, etc., that are to be shaded in wash. The script and engraving text may be added in ordinary India ink diluted with water to the proper consistency, after the washes have been applied. The color washes should be kept to a height of 10.5. Where any dividers are used it is best to keep them within the line, as far as possible.

Henry Replies to Peirce.

Kansas City, Mo., Feb. 28, 93.
Editor Business Educator.

I should like to answer the question, "How Shall the Pen be Held," by Mr. C. H. Peirce in the last issue of The Business Educator. Mr. Peirce may have answered the question according to the position he uses in writing, but it seems as though he has been a little narrow and somewhat positive in his statements. The position of the hand and fingers depend entirely upon the individual, and no iron rule can be laid down that will fit every hand. I agree with Mr. Peirce upon the position of the thumb and the first and second fingers, but I do not agree with him on the position of the third and fourth fingers. Nordo I agree with him on the position of the penholder.

If Mr. Peirce will study the anatomy of the forearm he will find that the thick muscular part of the arm rests more fully on the desk when the hand is lying flat upon the table. If the hand is turned over on the side the arm rests on the bony part, and the movement is therefore changed. Therefore, the position of the penholder should be pointing toward the right shoulder, although not directly over the shoulder. The student must hold his pen in such a position that he can get the hand movement, and that position is with the elbow pointing toward and nearly over the right shoulder. The exact angle of the pen depends upon the arm of the individual and cannot be determined by any other than the person who is holding it. I contend that "half way between the vertical and horizontal" is too far over on the side. The normal position is one where the arm is held in a horizontal position the more freedom the writer will get.

I would like to ask Mr. Peirce what becomes of the third finger? According to his explanation we may as well cut it off as far as use in writing is concerned. Here again the individual decides. I believe that the third finger should also rest on the paper in order that the hand may have a better support. It is true, I presume, that some penmen use the hand in Mr. Peirce's position, but I believe the most of them use the position I have described with the third and fourth fingers resting on the paper.

I suppose I have committed an "atrocity crime" by advocating the position that I, and some penmen use the hand in Mr. Peirce's position, but I believe that this position will stand the punishment without a complaint. The tendency of the penmen of today seems to be a radical departure from anything that has ever been used before. There are two methods of teaching, position, analysis, speed, slant or no slant, simplified penmanship, with numerous valuable hints to the teacher and student. It unravels numerous knotty problems, convincing illustrations being used, and opens many new avenues for thought and investigation.

There are some persons who can write quite well, but are not good teachers. They give the book the best endorsement. The chapter on the "Duty of Supervisors of Penmanship in Public Schools" is alone worth the price of the book. Zanerian Theory of Penmanship has received the strongest endorsements from penmen and educators generally, and deserves the highest rank.

Many competent judges have pronounced it by far the greatest book on penmanship ever published containing the deepest, clearest thought yet contributed to this subject.

Some have pronounced it the "Shakespeare of Penmanship Literature."

It goes into the depths of the subjects discussed, and is written in the language of the teachers who are using scientific educational principles of penmanship.

It has provoked much discussion, and surely no teacher can read it without feeling better prepared for his work, and no student can study it without receiving great aid.

It contains 124 pages, 6x9 inches, and is bound in cloth. Price $1.00 post-paid.

Sketching Nature

For Home, Class, and Reference

This book is for those who desire to learn to sketch direct from nature with pen and pencil.

Many persons go through life unconscious of the marvelous beauty in nature all around them. To be capable of fully appreciating it means to doubly enjoy life.

This book will arouse interest in both art and nature, and teach you to know, appreciate and produce good art.

Learning to sketch is as easy as anything else if you go about it correctly. "The Road to Sketching from Nature" tells you how, giving all the essentials of the art.

The instructions are interesting, attractive, enthusiastic and enjoyable. It discusses location, proportion, light and shade, reflection, treatment, composition, and suggestion.

The work contains 82 pages, over 50 illustrations made direct from nature, is printed on the finest plate paper, 6x9 inches, and is bound in flexible art linen.

It is graded from the simplest outline sketch to the most artistic pen and pencil pictures.

If you get this book you will certainly go out and learn to sketch and appreciate nature.

The cost is little—only $1.00 post-paid.

Zaner & Bloser, Publishers, Columbus, Ohio

We publish other books, too.
Write for our complete list.
These birds are called eagles. To penmen, it is not necessary to name them, but to many who haven't been initiated into the mysteries of the penman's art—off-hand flourishing, such creations are simply a confusion of tangled up lines and curves. To make with an off-hand continuous flourish a design having the semblance of an eagle, and have the strokes all graceful and harmonious, is of course a work of skill, though an artist might say there is not much art in it. But for cultivating boldness, confidence and freedom of movement the penman who wishes to do something beside plain writing will find this a first rate exercise. Those who have practiced the Swan design considerably will see at once the same elements in the eagle: the main lines that form the body, the wing strokes and the tail are very similar. So if you can flourish one you will have very little trouble with the other.

But little can be said as to how it is done, the main thing is a very free movement of the whole arm, at the same time aiming to place the strokes in such a position as to resemble something. Loose, free curves may be well executed, but they must form something or there is very little meaning to them. There is no doubt but this kind of practice greatly facilitates the hand for other artistic or skilful work, so it may not be altogether a waste of time to practice these designs.

If you want to learn an art that is both profitable and interesting, try Automatic Pen Lettering.

THE GREATEST OFFER EVER MADE

COMPLETE LEARNER'S OUTFIT FOR $2.00

(WE DO IT TO INTRODUCE TO YOU OUR GOODS.)

COPY OF FAUST'S COMPREHENSIVE AND DESIGNS.

Brush Lettering.

NUMERO EIGHT.

If you have practiced faithfully on the alphabet given in October number, you will now be able to master this alphabet very readily. In this style of alphabet outline a letter complete with No. 1 lettering pencil before filling in. Be careful not to get the light lines or joinings too heavy, as this will have a tendency to make your work appear heavy and clumsy. Note the form and make up of open letters in upper illustration. The small figures show the order in which each letter is made. Make the upper part of B smaller than the bottom, the bottom stem of E a little larger than the top stem. First stroke of G the same as C, but a little wider, so as to allow for G finish. Make the bottom part of K as wide as bottom of A. Let the slant line of K that forms the lap strike the perpendicular stroke a little below the center. First stroke of X and figure d should slant more to the left than the first stroke of either I or W.

For general proportion of letters read Number Two, (October issue). Always have your lettering pencils or brushes in good working order before charging with color. Aim at all times to practice thoughtfully and with a view of improving each and every form. The small or lower case letters should be about two-thirds the height of large letters, and the extended letters as in b, d, f, h, k, l, to run as high as the capitals. The size of letters in this alphabet may be varied for any kind of work, and look well when in proportion.

A letter and some cards from Mr. R. A. McDevitt, penman in the Easton School of Business, inclosed specimens of ornamental penmanship and card writing which are above the average received at this office, which means considerable.

Mr. McDevitt is not only a successful penman, but a fine young man and a practical teacher of a practical writing.

E. F. Whitmore of Easton, Pa., penman in the Easton School of Business, inclosed specimens of ornamental penmanship and card writing which are above the average received at this office, which means considerable.

Mr. Whitmore also inclosed a batch of specimens of business writing from students under his tuition, which reveal the fact that he is not only teaching good writing and easy writing, but rapid writing as well. A set of capitals by Mr. Frank Fitts made in twenty-nine seconds is something exceptionally good. One hundred and ten capital O's made by Miss Maud Sexton in a minute are exceptionally fine.

Mr. A. A. Henry, penman in the Central College of Business and Industry, Kansas City, Mo., sent specimens of business writing by students under his instruction, which indicate that he is giving them a free, easy, rapid, legible style of writing, which is in demand in the business world today.

Mr. B. B. Baker, Principal of the Buckeye Business College, Sidney, O., favored us with quite a large batch of specimens of business writing from students of that institution. The same indicate that Mr. Baker is teaching practical writing, and a number of them indicate a flourishing school.

Mr. A. A. Reim of Philadelphia, Pa., recently favored us with a sheet of monograms of the style used by jewelers and engravers, which indicate more than usual ability, as some of them were quite intricate and elaborate.

E. K. Knapp, pen artist with Rothschild & Co., Chicago, sent us a lot of cards written in ornamental style, such as he is turning out every day in large quantities.

Mr. Knapp is an enthusiastic friend of the Zanerian College, and advises all young men and women who think of taking up this work to come this way.

A number of well executed signatures, ornamental style, have been received from P. B. McElroy, penman in the Howard Payne College, Brownwood, Texas. Mr. McElroy sways a pen that is quite professional indeed.

Some unusually bold and graceful penmanship has been received from Mr. J. G. Christ of Lock Haven, Pa. Mr. Christ not only writes well an ornamental hand, but when it comes to holding a letter, he is stepping into the front ranks, being an ardent believer in and supporter of that style.

Mr. E. W. Stein, penman in the Iron City College, Pittsburgh, Pa., sent a package of specimens of actual business writing from the students under his instruction, which show a practical proficiency not frequently acquired. Much individuality as concerns slant, angularity, rotundity, etc., is shown. Each pupil seems to be endeavoring to solve his own handwriting problems, and is doing it, as is evidenced by the specimens.

Among the very best might be mentioned those of James Davis, Wm. E. A. Mooney, Marie Tegethoff and Nellie E.annon.

CARDS! CARDS!

Your name written on 1 doz. cards, can’t be beat, only 1.50. Colored Blank Cards, 9 colors, 18 by mail, 25¢ by express, $1.35, 100 by express, $17.50. NOW READY.

Isaac Pitman’s Shorthand Teachers’ Handbook,

by Isaac Pitman & Sons, 31 Union Sq., N. Y.

The object of this work is to provide intending teachers of Pitman’s Shorthand with reliable information in the work they desire to take up, and, at the same time, to assist those who are already engaged in teaching the subject to obtain better results. It is a work of which no progressor in this line can afford to be without. Chotlu, 12th edition, 111 pages.

ISAAC PITMAN & SONS, 31 Union Sq., N. Y.
faction out of your smartness. A busy man has no time to bother with it. He can always find plenty of old women in skirts or trousers to spend their days worrying over their own troubles and to sit up nights waking his.

ABOUT MONEY AND MARRIAGE.

Money ought never to be the consideration in marriage, but it always ought to be a consideration. When a boy and a girl don't think enough about money before the ceremony, they're going to have to think altogether too much about it; and when a man's doing sums at home evenings, it comes kind of awkward for him to hold his wife on his lap.

A good wife doubles a man's expenses and doubles his happiness, and that's a pretty good investment if a fellow's got the money to invest.

There's a point where economy becomes a vice, and that's when a man leaves it to practice to his wife. The least trouble with a lot of these fellows is that they're "made land," and if you dig down a few feet you strike ooze and ooze under the layer of dollars that their daddies dumped in on top.

I always feel that there's more hope for a fellow who's an out-and-out cuss than one who's simply made up of a lot of little trifling meannesses.

The Iowa Commercial Teachers' Association

Program of

Des Moines, Iowa.

Friday, May 15, 1915.

Capital City Commercial College. 1:30 p.m., enrolling.
Committee: Miss Carrie Clark, Des Moines, B. C. Cummins, Cedar Falls.

THURSTON TEACHERS' AGENCY

Anna M. Thurstin, Mrc., 378 Wabash Ave., Chicago

"One Touch of Nature Makes the Whole World Grin."

Is the way a humorist parodied a well-known saying. It is that natural touch that makes us all love Mark Twain. He likes to be comfortable; he wants to take things easy. He dislikes to be "fixed up." He very much prefers to spend the day in his pajamas, it is said, to dressing for dinner. Of course everyone knows that his home for many years was a Hartford, Conn., not a long way from the excellent school of E. H. Huntsinger. Near him lived Mrs. Harriet Beecher Stowe, on whom he called one day. On his return his watchful wife saw that he had worn no necktie, and she lectured him roundly for his inexcusable disregard of the commonest proprieties in the matter of dress. She finally succeeded in reducing the poor man to a very abject state of mind. It appeared to him that he could do no less than to apologize, and so he wrote to Mrs. Stowe a very humble letter of explanation and apology, and enclosed the necktie to complete the call.

And this reminds us that some of the good people, who for many years used our Practical Letter Writing, thought that it lacked something, and so to be up with the fashions of the day, we prepared a little companion book of lessons in the writing of letters, and exercises in the correct use of words and in intelligent punctuation. It has proved to be the "necktie" and more. A postal card will bring you our special circular, which not only describes these books and gives sample pages of them, but which also contains scores of letters from well-known teachers in all parts of this country and Canada, telling why they think these incomparably the best books for school use on the subject of Correspondence.

We carry a full line of the most popular commercial text-books.

THE PRACTICAL TEXT BOOK CO., 479 Euclid Avenue, Cleveland, Ohio.
REUNION OF ZANERIANS.

In 1888 the Zanerian Art College was organized. Since that time upwards of a thousand pupils have been in attendance. At the earnest solicitation of many of these from time to time to hold a reunion so that as many as possible could meet and renew friendships, it has been finally arranged to do so.

Time. After carefully considering a few, the date finally decided upon is June 22-26, inclusive, 1903. During that week the Zanerian will keep “open house” as never before. It is now located at the corner of High and Long Streets, where all students of the institution will be doubly welcome.

Program. A program of unusual interest and helpfulness will be arranged to meet the needs and wishes of the hand, the head, and the heart. This will consist of Lessons by the leading lights of the Profession, and Lectures by Men and Women who have won and are still winning, success. It will be a real reunion of the G. A. P. (Grand Army of Penmen.

Convention. It will be a veritable penman’s, artist’s and teacher’s Convention. Institute and Love Feast all combined by Knights and Ladies of the Quill. The Past, the Present and the Future of the Zanerian, of its Students and of Penmanship, will all be presented by those competent to speak and whom you cannot afford to fail to hear.

Banquet. A Banquet will be given by the Zanerian at the finest hotel in the city for to all who journey to Columbus, on Wednesday evening, June 24, 1903.

Visits to parks, a picnic, sketching expedition, interurban ride, etc., etc., will all be in order from day to day.

Mid-Summer Day-dreams of Zanerians from far and near—all dear to the hearts of the faithful, will be doled out to those who do things and win. There will be cheer without beer, joy without jag, and a heartfelt farewell.

Gold Medal. The winner of the Zanerian Gold Medal will be made known at this time, and we sincerely hope that the giver, Mr. Ganske, can be present to make the announcement and presentation.

Welcome. To all Zanerians we say Come. Accommodations at private residences and hotels will be arranged for at special prices so that board and room need cost no more than at home, unless otherwise desired.

Information Wanted. Let us know immediately whether you will be on hand and at what time (whether the whole week or but part) so that arrangements can be completed and notifications sent accordingly. It is really necessary that we hear from each one at once, whether you can come or not. Please to decide early and notify without delay, and thereby contribute to the success of the gathering, as the time is now limited.

Such a Gathering of Penmen, Artists, and Teachers cannot fail to be most beneficial. Indeed, it will be worth more than a month’s schooling, as it will be the means of giving and getting invaluable information and inspiration.

Parliament. The Zanerian Parliament, which meets every Friday morning, may arrange a debate between the intellectual giants of our beloved family.

New Students. Persons who intend to attend the Summer Term of the Zanerian, beginning July 6, will do well to come in time to attend the greatest gathering of the kind ever held.

DoublHess such men as Weaver, the Comic; Wise, the Wit; Faust, the Entertainer; Fahnestock, the Substantial; Crane, the Orator; Cole, the First Canadian; Donovan, the Skillful; Laird, the Progressive; Pound, the Artist; Canan, the Artist-Penman; Ware, the Author; Witter, the Publisher; Miss Hood, the Art Teacher; Whitmore, the Rustler; Utterback, the Aggressive; Wessel, the Worthy; Barnhart, the Brilliant; Harris, the Reserved; Hummel, the Humorist; Harman, the Handsome; Hayward, the Hustler; Holt, the Gentle; Gilmore, the Great; and a host of others quite as entertaining, will all be on hand.

Come. We bid you a heartier welcome than when we relieved you of your money upon your maiden trip to Columbus. Come.

Cordially,

Zanerian.

ABOUT FIFTEEN HUNDRED COMMERCIAL SCHOOLS,

Employing about 5,000 teachers and instructing about 200,000 students annually, are conducted in the United States.

Over 1100 of these schools are on our books as customers and use one or more of our commercial publications.

The hundreds of public schools using our books are not included in this list. This statement indicates the very great popularity of the

SADLER-ROWE COMPANY'S COMMERCIAL PUBLICATIONS,

and the fact that they are used in a large majority of the commercial schools.

We have frequently asserted in our advertisements that our books contain many practical, up-to-date features not found in any other books. As an illustration in bookkeeping we present the following as an example of a supplementary drill in preparing a statement of a merchandise account in the form now required in up-to-date business houses.

Where can you find a similar example outside the Budget Systems?

Notice the fine distribution of the subordinate accounts.

WE WILL SEND A BEAUTIFUL ALUMINUM PEN-TRAY

to every bookkeeping student or teacher, in schools not using either "Business Bookkeeping and Practice," or "Commercial and Industrial Bookkeeping," who will send us a correct solution of this problem in accordance with the requirements given.

Example: Dean, Grace & Co.'s ledger shows the following:

- Mdse. Pchs. a/c $216,584.93;
- Mdse. Sales a/c $198,313.33;
- Goods Returned a/c Dr. $7,338.87;
- Mdse. Disc. a/c Dr. $5,741.20, Cr. $5,838.50;
- Freight and Express a/c Dr. $1,835.41;
- Drayage a/c Dr. (for goods delivered to carriers) $7,295.
- Booking and Packing a/c Dr. $1,200.12;
- Salerno's Salaries and Expense a/c Dr. $9,072;
- Insurance a/c Dr. $1,300;
- Advertising a/c Dr. $650.
- The Inventory is $71,522.80.

Required ledger specifications showing the Mdse. Purchases and Mdse. Sales accounts after the subordinate accounts are closed into them; also the Merchandise account after the Purchases and Sales accounts are closed into it; a statement of the Merchandise account showing the cost of purhase, the returns from sales, the gain and the gain per cent on merchandise.

Solutions of the above problem must be accompanied by the name of the school with which the student or teacher is connected.

Scores of similar problems are handled without difficulty by students who are using the Budget Systems.

A Self Instructor in Roundhand Lettering, Engrossing and Designing.

By C. P. ZANER

A WORK FOR THE LEARNER AND PRACTITIONER

This book was prepared to meet urgent demands for a work on lettering that would instruct the learner, furnish inspiring models for the professional, and preserve permanently the practical and artistic forms used by the best engrossing artists, designers, architects, sign writers, etc.

It contains 100 complete alphabets, varying from the simplest and most practical to the most artistic and elaborate. While the standard alphabets, such as roundhand or engrosser's script, Old English, German Text, etc., are the very finest examples of these styles, it also presents many new alphabets never before published.

The work is thoroughly modern, favoring legibility, speed, and the beauty of simplicity, rather than too much elaborateness and antiquity. It unquestionably contains a greater variety of practical styles of lettering and engrossing alphabets than any similar work, regardless of size or price.

In addition to the numerous alphabets, with hundreds of modifications and styles of finish, suggesting many more, it also contains illustrations of resolutions, diplomas, certificates, title pages, display headings, brush and pen designs, etc., giving the correct applications of the alphabets, as well as the best models of these forms.

The instructions from beginning to end are all that could be desired, as they are most painstaking and complete, covering every detail. The information regarding paper, pens, ink and other materials is also very helpful.

It is just the book you need if you wish to do pen lettering, such as filling or making diplomas, engrossing resolutions, designing attractive advertisements, etc. It instructs and illustrates how to do the work that commands big prices, and for which there is an increasing demand. Ideas and secrets as to processes employed in engrossing are here given to the public for the first time.

To the aspiring engrossing artist, these alone are worth $80. Designing, engrossing, etc., are very profitable lines of work, and no one will have occasion to regret having mastered them. Many persons make good sums simply filling diplomas, certificates, etc., aside from their regular work, as there are thousands to be filled in every community. This is without doubt the most valuable book of the kind ever published, and in the hands of any pen worker it is certainly a money maker. It contains one hundred and fifty-one pages, and is beautifully and strongly bound in cloth with gold stamp. The price is but $1.50 postpaid.

ZANER & BLOSER, Pub., COLUMBUS, OHIO.
"He had talents equal to business, and aspired to no higher things."—Tacitus.

Probably because he had received a good business education and was content to make good use of it.

When a boy leaves school, he must chose an occupation, and he begins at once a search for a "job." If his studies at school included the elements of a business education, and he has acquired some clear ideas of commercial affairs, his entry into the business world will be greatly facilitated.

The basis of all trade and industry in material things, is the relation of natural resources, and manufactured products of the world to human needs.

Commercial Geography treats of those fundamental conditions that create human activities and of the physical conditions that are the source of man's prosperity and happiness.

With Adams's Elementary Commercial Geography, the boy can begin early the study of this important subject. The book is not an abridgement of the author's larger work, but is rewritten to better adapt it to pupils in the grammar schools.

As a great majority of school children never get beyond the grammar school, the value of such a text book cannot be questioned. It Americanizes a boy and provides him with just the equipment essential for success in a business country. It brings out the commercial powers of the United States in a way that is entirely within the realization and intelligence of grammar-school maturity.

The higher book on this subject, A Text Book of Commercial Geography, marked a new era in commercial education. For the first time the teachers of the country are supplied with a treatise in which all three of the following essentials are present: A scientific discussion of the laws of the subject; the practical application of these to the phenomena of universal commerce; a clear statement in accordance with the rigorous demands of modern pedagogy. The signal success of the book before it was three months old and the lavish praise it has brought from the leaders of commercial education are sufficient testimonials to its extraordinary merit.

The next subject of importance in commercial relations is the law and equities governing business transactions. This is fully expounded in a clear and concise manner in Burdick's Essentials of Business Law. It is presented in such a concrete form that the dullest fifteen year old high school boy can understand it. Read for instance the chapter on Contracts or Agency. The book is not written for the law student, but for the ordinary business man, to show him when professional services are necessary or advisable. It is a book that every business man should have as well as every student preparing for a business career. It would often save many times its price in lawyer's fees. It is a guide for the merchant as well as a text book for the school student.

Among other volumes in the Series of Twentieth Century Text Books of Commerce in preparation are History of Commerce and Industry, by Worthington C. Ford, Money and Banking, by Professor F. M. Taylor of the University of Michigan, and Transportation, by Professor E. R. Johnson of the University of Pennsylvania. All of these are of interest and value to the business man as well as to the student in a school of business.

Supplementary to the Twentieth Century Text Books, for reading and reference is Appleton's Business Series, including the following volumes now ready: Funds and Their Uses, a treatise on Instruments, Methods, and Institutions in Modern Finance, by Dr. F. A. Cleveland of the Wharton School of Finance, University of Pennsylvania, The Work of Wall Street, by Sereno S. Pratt, Trust Finance, by Dr. E. S. Meade, of the Wharton School of Finance. Other volumes of the Series in preparation are: The Modern Bank—The Trust Company—The Insurance Company—Credit—Modern Accounting.

A higher standard of efficiency in the same length of time

Gregg Shorthand

Founded on natural principles, Gregg Shorthand has been adopted by progressive business schools everywhere, and is to-day

The Leading Shorthand

of America

All the schools using it have largely increased their attendance through the results accomplished—which, after all, is the "secret" of its phenomenal success.

Rational Typewriting

By Rupert P. Sorrelle and Ida McLenan Cutler

This remarkable book meets with the immediate approval of every experienced teacher. Although issued late in the season, it has been adopted by a large number of schools, and we confidently predict that it will soon be the most popular typewriting manual on the market. In addition to the instruction, it contains "a mine of information" on typewriting and correspondence. Ask for sample pages.

Send for booklet, "ABOUT GREGG SHORT-HAND." It is free. If you are a teacher, ask for "SPECIAL OFFER TO TEACHERS."

THE GREGG PUBLISHING CO.

CHICAGO.
The Banquet.

The seventh annual banquet of the E. C. T. A. was one of the most successful, and altogether delightful affairs of the kind that the organization has ever enjoyed. High credit is due to Mr. J. E. King and Mr. G. W. Harmon, the Banquet Committee, for their enterprise and skill in bringing together 210 banqueters to listen to such a man as Mr. Lewis Nixon, president of the United States Ship Building Company, the great ship building trust of this country, employing 25,000 men.

Mr. Nixon spoke in favor of an enlarged navy, an American merchant marine and governmental encouragement. He said that in writing for a New York paper recently on the subject of success for young men, his first rule was, "Take a year's work in a first-class commercial school."

The speech, though excellent, was no more than can be read any day in any of our good magazines, but to meet and listen to such men is a part— and no small part, either—of a liberal education. Mr. C. W. D. Collin is entitled to the distinctive honor of having secured Mr. Nixon's consent to speak.

Assistant Superintendent Henry W. Jameson, of the New York High and Training Schools, paid a high compliment to commercial schools, saying that "the new movement in favor of commercial education is to be credited to the efficient work of private commercial schools." Mr. Jameson was once a commercial school teacher in St. Louis, and he induced his own son to take a one-year course in a good business college before entering Yale.

Mr. A. L. Osborn, of Rochester, N. Y., chose to speak on "Opportunity." His remarks were listened to with the close attention and the sympathetic interest that this high-minded gentleman and teacher always commands when he rises to speak. He strongly recommended that every commercial student read "The Letters of a Self-Made Merchant to His Son."

The last speaker was Creswell MacLaughlin, editor of The School Master, Cornwall-on-Hudson, N. Y. He was introduced as the Mark Twain, of the Hudson, and he richly deserves the title. At last we have found in the East, a match for our own J. W. Warr, president of the National Federation of Commercial Teachers. Mr. MacLaughlin has an extravagantly woful countenance while he, with apparent hesitation, perpetrates the most delightful pleasantries. His plea for an education that would fit for more than mere money getting was earnest, and his finale was the most artistic touch we have ever heard.

Mr. N. P. Heffley presided with ease and readiness, and he was commendably brief and to the point in his introductions. The music was well rendered; the menu was tasteful, and the viands satisfactorily served. The large company broke up at the seasonable hour of eleven o'clock, apparently delighted with the evening's entertainment.

General Sessions of the Convention

E. B. Fisher, Burdett College, Boston

At 10:30 A. M. April 9th, the convention was called to order by President Charles M. Miller, there being about 125 delegates present.

The address of welcome, a scholarly production, by N. P. Heffley, gave to all the assurance that we were thrice welcome at the headquarters of this splendid school, and that the opportunities and advantages in seeing the educational and historic places while sojourning here, were quite as numerous as in other cities previously visited.

The President's address was full of good thought and recommendations for the future advancement of the Association, chief of which were recommendations to appoint a committee to amalgamate the forces of the lately organized New England
High School Commercial Teachers' Association—and our own—the Eastern Commercial Teachers' Association; and another committee to draw up resolutions against the short term, fake schools.

The first paper of the day was by Edward M. Hull, Principal of the Home Correspondence School, Springfield, Mass. It was entitled: "Commercial Education by Correspondence." Mr. Hull made plain the main objects of the correspondence schools, in a manner that cleared up, in the minds of many, points that needed light. "The Correspondence School," he says, "is not to take the place of resident schools, but is intended to supplement them, and eventually will be conducted by the resident schools."

To show that Correspondence Instruction is not without able advocates he quotes such men as Dr. Harper, of Chicago University.

"One of the chief values of correspondence instruction is the development of self-reliance, which the student acquires when studying alone. He does not rely so much on being told. Such students become more self-reliant, more confident, because, through necessity, they read more intelligently, think more clearly and meet emergencies as they come."

"The work done by correspondence," says Dr. Harper, "is even better than that done in the class room. He does it in writing and does twenty times as much writing as much reciting as he would in a class of twenty persons. He works out the difficulties himself and the results stay with him." Mr. Hull places first in a list of representative correspondence schools the Correspondence Department of Chicago University; second, American School of Correspondence affiliated with The Armour Institute of Technology; and third, The International Schools of Correspondence.

Edward Everett Hale says: "After the general system of public school instruction this system is the next most important organized system of education I ever looked up to it for the accomplishment of John Adams' hope—that every man and every woman in the nation might receive a liberal preparation for the business of life."

"A Contribution to the History of Commercial Education," by Edgar M. Barber, Supervising Accountant in the Appraiser's Office, Port of New York, was one of the able articles ever contributed to the cause of Commercial Education, and has already been termed a classic in its line. A unanimous vote of thanks was extended to Mr. Barber, and it was also voted by the body to have the article published in pamphlet form for distribution among its members.

This paper will be found in full in the number of THE BUSINESS EDUCATOR.

"Office Economy in Commercial Education, Particularly Filing Methods and Labor Saving Devices," illustrated by lantern slides and exhibits, by Geo. Harvey Seward, Ph. B., Lecturer on Office Appliances, New York School of Commerce, Accepted. Mr. Wright, of Brooklyn, did not respond to his article, "Positions for Graduates; How I Get Them," explaining that he had refused to speak on that subject, but did read a most commendable article on "Opportunity," placing in the following order these three requisites to success: 1. Health. 2. Appearance. 3. Education.

BUSINESS MEETING

The business meeting was called to order promptly by President Miller, Saturday afternoon at two o'clock.

The report of the committee appointed to draw up a resolution in regard to schools that guarantee positions was discussed freely. Messrs. Harmon, Himan and Cobb, favoring the guaranteeing of positions under what they considered appropriate restrictions, while Messrs. Blackman, Coleman, Norman, Spence, Platt, Bussard, Merville, and Court F. Wood were opposed to guaranteeing positions. It was resolved that the Association condemn the practice of guaranteeing positions.

The Membership Committee presented 109 new names, which were accepted.

The Committee on Resolutions presented the usual resolutions of thanks, and these were adopted.

Enos Spencer urged interest in the Commercial School Exhibit at St. Louis, and in the Private School Managers' Association, speaking vigorously in advocacy of the Boston meeting of the N. E. A.

Treasurer M. D. Fulton read an interesting and encouraging report which showed a balance of $198.88 on hand April 1, 1903, with a net increase of about $100 at this meeting. The report was adopted with applause, and, on motion of J. E. King, it was decided by a unanimous rising vote to pay Mr. Fulton $50 in recognition of his self-denying usefulness.

The Nominating Committee brought in the list of candidates named at the beginning of this report, and the Secretary was ordered to cast one ballot for all.

But one invitation was received for next year's meeting place. This was from Acting-Dean James F. Johnson, of the School of Commerce, Accounts and Finance, of the University of New York. The invitation was unanimously accepted, and the meeting adjourned.
Meetings of Business Teachers’ Section

C. E. Fisher

Thursday afternoon, Vice-President W. H. Sadler called the meeting to order, and R. J. Maclean, of Goldey College, Wilmington, Delaware, in speaking from the Business Manager’s point of view, talked, not from a prepared paper, but extemporaneously. He said: “It is not what I think of you, not what you think of me, but it is what the business man thinks of us, that must interest us.” We pay too much attention to the trimmings of business education, and not enough to the body of the garment; we must give more heed to rapid calculations, legible, rapid penmanship, and business correspondence.

This talk was one of much interest and profit to the convention, and was prepared after much labor and research for facts. Many members were on time, ready to say something regarding it, when the time came for discussion. They denied this privilege, however, and are still waiting for a chance to talk. “Can Books of Original Entry in Bookkeeping Be Used Successfully From the Start, and to What Extent?” was answered by George P. Lord in the affirmative. This talk brought out the two contrasting ideas as to which method shall we use in starting a student, Journalizing or the Skeleton Ledger.

Mr. Lord and Mr. Rowe held to the former method, while Mr. Marshall and Mr. Osborn insisted on the latter.

Horace G. Healey, of the Penman’s Art Journal, opened the subject of “Vertical Penmanship and Its Effect On Business Writing.” This subject brought the “Penmanistic” delegates to their task in goodly numbers, and the discussion was participated in by Messrs. Harmon, Rowe, Reed, Fulton, Gaylord, and others. Practically they were of one voice and mind, agreeing that vertical penmanship is a habit, and has done much to hinder the progress of teaching the subject, in our public and private schools.

The interest in penmanship was so marked, that over that of previous subjects for discussion, that the chair promised the penman an extra session later in the week.

Friday afternoon, the first speaker on the program was W. Payson Richardson, Dean of Brooklyn Law School, who spoke to the subject “Commercial Law for Commercial Schools, Its Content and How It Should Be Taught.” During his very able and elaborate discussion of this subject he suggested among other things, the following: Leave out of your courses such subjects as Real Estate, Corporations and others that are seldom handled in the first year work of regular law schools, because they are so difficult to grasp by the beginner.

Teach law as you teach Arithmetic, Bookkeeping, or any of the regular branches, by the Recitation, not by the Lecture Method, the lecture method, even in our best law schools, being a thing of the past.

Teach law as it is, as it has been, teach it according to the statutes of your own State, applying the home State law to your regular class work, and being satisfied to let go untaught the laws applicable to other States than your own.

Discussions followed in lively order by Messrs. Norman and Dorney, showing that there was much interest in this subject.

“How the Providence English High School Secured its Collection of Commercial Products,” was the subject of a most excellent and carefully prepared paper, written by Miss Nora G. Wright, and read by Mr. F. H. Read. A future number of The Educator will contain this paper in full.

How I Conduct Business Practice,” by J. H. Easterday, of the Sadler B. & S. College, Baltimore, was an off-hand talk, filled with vim and enthusiasm. He illustrated quite fully his method of conducting exchange among his own students as well as that of intercommunication.

About 10:30 Saturday morning, April II, the business section was called to order by Vice President W. H. Sadler, who announced that the subject, “My Hobbies,” would be postponed until after the special session of the penmen.

This meeting was doubtless the most spiritual of the entire convention.

C. C. Lister, M. K. Bussard, R. S. Collins, L. M. Thornburgh, and A. H. Hinman, spoke at some length in regard to their methods of teaching, illustrating, meanwhile, at the board. Mr. Hinman’s work was of an ornamental character. The other teachers devoted their attention to business writing, and much helpful, practical information was given. This meeting attracted a large attendance.

It seems as though the interest manifested in this session should have made sufficient impression on the Executive Committee, to insure provision for adequate treatment of the subject of penmanship at the next meeting.

The meeting for the discussion of “Hobbies” was called to order immediately after the adjournment of the penmen. Although advertised to be a free discussion, by everyone willing to speak, it turned out that a list of speakers had been prepared, and these were called on. The hour was late, comparatively little interest was shown, and the meeting was soon adjourned.
Meetings of the Shorthand Teachers.

William Hope, Harlem Business Institute, New York City.

On Thursday afternoon we were half an hour late in being called to order at general session, and this made us twenty-five minutes late in being sent to lunch, which may be the excuse for commencing the Shorthand Section work at 1:45 instead of one o'clock as scheduled. O, Punctuality, thou art the thief of time in all our business meetings, associations and conventions! The genial presiding officer, Mr. Archibald Cobb, of Philadelphia, was ill at ease on account of the exasperating delay, but he could not help it. We had been a hungry crowd and now we were a satisfied, good-natured, happy lot, and cared little whether "school kept" or not.

The First Paper.

As the first speaker, Mr. J. E. Gill, Trenton, N. J., was called to the platform, a good Methodist brother near me whispered, "Wherever two or three are gathered together in my name, there am I in the midst of them, to bless them and to do them good." The audience was not large, but it was jolly and considered itself the soul of the association, if not of the earth.

The subject was, "What Proportion of Time Should be Given to Each Subject in a Well Balanced Stenographic Course," Brother Gill stuck to his text, and if 99 per cent. of those we interviewed afterward, knew neither beginning, middle, nor end of what was read, it was their misfortune and not J. E.'s fault. It was a good paper, vigorously read, scintillating, illuminating sparks as if the motive power behind the language was electricity. If I read my notes correctly the course of a first-class short-hand school should not be less than eight months. All others are "get-rich-quick concerns." There should be at least an A and B spelling and an A and B grammar class with first week examinations, to determine the student's standing in English. Little time should be given to letter writing, but every transcript should be treated by the teacher as a lesson in punctuation and mechanical arrangement. Syntax and one or more paragraphs of composition should be included. A class beginning shorthand should have 45 minutes of daily class-work, 20 minutes of grammar, 20 minutes of spelling, 10 minutes of typing, 10 minutes of practical writing. The remaining 20 minutes, it is presumed, are for corrections. The time and work arrangements appear workable and are followed generally by business schools. The two weeks of practical office work is wholly inadequate to meet the demands of New York business men, but it is better than those—every so-called "good schools"—that have no practical work whatever.

The discussions—warm, hot, at times comical—showed that not a soul understood the text, much less the subject, because several members, led by Brothers Huntsinger of Hartford, and Blackman, of Allentown, paved, chawed, stamped upon and kicked the in penman's chest because he had not told them how he "Taught Spelling." Brother Gill vainly protested that he was not teaching, preaching, or exhorting on the subject, it was his duty to do so. Evidently not knowing what the subject read was, they continued to wipe the floor with Brother Gill with the spelling mop. This continued with "fun and frolic" until the referee called "time."

How I Teach Punctuation.

It was now the turn of Dr. J. S. Burton, Eagan School, Hoboken, N. J., to "say his piece" on "How I Teach English." Faultless in dictation, polished to please the most fastidious, we felt as if the thesis deserved a better fate. It was too good, too valuable, for the group of teachers gathered into the Shorthand Section. It was like "casting pearls before swine," and the writer was one of the swine. It provoked no discussion. Too bad, cruelly bad. "A shame, a measly shame."

How I Teach Punctuation.

F. A. Spence, Salem, Mass., bravely came to time, confident he had a hidden secret to reveal. A Salem pupil could doubtless follow him intelligently, but some New York teachers could not. The end of the paper was not the finish of Punctuation, although the discussion came near to being the ending of Brother Spence. Brothers Huntsinger, Blackman, Walworth, and others, edited the sample letters, not with pen or blue pencil, but with tongues dipped in wit, humor, drollery, sarcasm and vitriol. Despite Brother Spence's earnest protests, the active members held him responsible for the English of the letters, instead of for the punctuation. Every one had a good time, but they left not any wiser as to "How I Teach Punctuation." No synopsis can do these papers justice. They are excellent contributions in their respective lines and should be printed in full.

Friday afternoon, Mr. Cobb, presiding officer, had the sympathy of business men, if not of the teachers, because from one o'clock to 1:45 he could not get an audience sufficient to begin work.

How I Instruct in Shorthand.

A sea of smiling faces welcomed the leaders this afternoon. As the strange preacher said to the large afternoon congregation, "In the name of the Lord Jesus, where were you all in the morning?" So said we, "Where were you all yesterday afternoon?" If it was not a "Model Class" as the program called for, we are certain Brother Chas. T. Platt, Eagan School, Hoboken, N. J., proved to be a "Model Teacher," and no mistake. In an introduction, couched in words as sweet and tender as the dawn, he wooed his magnificent audience to earnest, expressive sympathy. He handled an average class of young men and women, in what may be termed the intermediate division. He did it in a business way, easily, earnestly, naturally, and with most desirable results. Three phases of the work were illustrated:

Dr. J. S. Burton, Hoboken.

William Hope, New York.

John E. Gill, Trenton.
1. Home preparation for next day's class work. The recitation consisted in one or more taking positions at the blackboard. While they wrote from dictation, the board, the others wrote in their note-books. The chalk outlines were read and corrected and uncommon words were defined and the subject matter discussed e. a. d. s.

2. New matter was dictated, written on the board and in books, then read and the outlines, words, phrases, clauses, and subject matter criticised ad libitum.

3. New matter in correct shorthand is put on the board and a reading class is conducted, and so on ad infinitum.

There was no playing to the "gods in the galleries," nothing but honest, faithful, earnest, intelligent, hard work. An injustice was done Mr. Platt, and a more grievous one to the attending teachers, by cutting the work off and preventing discussion, on account of the management having commenced at a quarter past three late. The writer of this desires to say, and the editor may cut it out if he pleases, that he has conducted his shorthand classes according to Mr. Platt's plans, with some modifications, for over twenty-five years, and has been unable to find a better. It should also be understood that not one teacher admits that system that would get the results Mr. Platt did. He has brains, experience, education, tact, and a hundred other essentials, and knows how to apply them all.

HOW I INSTRUCT IN TOUCH TYPEWRITING

Without any abatement in the interest, Miss Stella Smith, Eagan School, Hoboken, commenced her paper and illustrated her method of teaching typewriting through the medium of a "Model Class." Her many friends enjoyed her introduction and were delighted with the many letters she had received from past graduates testifying to the countless advantages they had received through the acquirement of touch typewriting. She had no process and no prize recipe; sell or give away. All she did was simply to teach, TEACH, TEACH. The standard of measurement of success or failure was the teacher. Show her a failure, she prudently admits failures, and the cause is the teacher. If the model class fell short of the wishes of the teacher or the expectations of her many friends, do not blame the operators, because "old timers" could not do average work under such surroundings. Somebody is to blame—certainly not Miss Smith, nor her Model Class. The effort was superior to the fraud at Detroit, an improvement on the farce at Providence, and will be much better at succeeding conventions. Questions and discussions being shut out caused general dissatisfaction, engendered bitter feeling, and rendered the advocates of touch typewriting liable to the suspicion that they were afraid of the searchlight of truth and experience. Such suggestions would be an outrage; the blame lies elsewhere.

TAILFILING AND BILLING

John F. Soby, of the Remington Typewriter Co., read a paper entitled "A Rational Plan for Six to Ten Weeks' Instruction in the Use of Tabulating and Billing Typewriters." The fact that the paper elucidated to the average mind no "plan" at all, but was a well prepared plea for the use of certain makes of typewriters was no excuse for the rudeness displayed by so many leaving the room during its delivery. The Executive Committee secured the services of Mr. Soby and doubtless named the subject and he was entitled to a larger audience and a more respectful attention. The concluding session of the Shorthand Teachers, Saturday morning, was designated on the program as a "Round Table Discussion" on "My Hobby." Each speaker was limited to five minutes and discussions to two minutes. We again record our regret and disappointment at having fifty minutes cut off the privileges of members of our profession. A business concern would have discharged every "man and mother's son of us" if we had attended to business for it in such a manner. Sauls, are teachers of business not doers of it, and we are all away from home on a bright Easter holiday, and the spirit of good fellowship, more than rigid money-making principles dominate us.

The "Hobby" discussion was a new feature this year, and in this section was a grand outlet for pent up eloquence and glorification. Its success was not in what was said, perhaps, but in the large number who were permitted to say them. Many persons, many minds and many thoughts and many diversities—tools enjoy them. It is impossible for men and women with zeal, earnestness and good nature like Smith, Platt, Kennedy, Greggs, Bridges, Hicks, Cobb and others, to talk five minutes without being entertained. It was a grand good session and all were sorry when the presiding officer, Mr. Cobb, announced that we were thirty minutes late for luncheon.

TYPEWRITERS REPRESENTED

All the standard typewriters and others aspiring to become entitled to a place on the "Standard" list, were well represented. Commercial teachers and private school proprietors have proved themselves good friends of the machine companies. It is therefore courteous good business for them to place the machines and their operators at the service of visiting teachers. The gentlemen and ladies in charge of the exhibit rooms and machines have certainly, from all points of view, been well chosen. They were obliging, affable and considerate in a high degree. They were a valuable adjunct to the success of the convention.
The many friends of T. E. Stowell, of Providence, were glad to see his sunny smile in convention again. It will be a long while before his ideal hospitality during the Providence meeting will be forgotten.

A. H. Hinman's sketch on the blackboard was much in evidence and was the subject of general admiration.

E. M. Barber demonstrated, in his able paper, that he is a worthy alumnus of Valparaiso College. When he goes on a tour of investigation, he generally gets to the lower stratum of facts, be the subject Japanese Silk Frauds or Early Commercial Education in America. Enough praise was bestowed on Mr. Barber to have turned the head of an average man, but he is so far above that plane that praise does not spoil him.

Healey, Keecover, and Gaylord were found among the barn swallows of the sky parlor of the Casino theater, looking intently at "A Chinese Honeymoon." Carl C. Marshall declared that Mr. Gaylord's unconscious attitude reminded him of a methodist deacon in a Mission prayer meeting. Enos Spencer was deeply impressed with the novelties of the Casino, until it was explained to him that the liquid on tap was Vichy water. That was too much for a loyal Kentuckian, and in a plaintive, I'm-so-far-from-home tone, he ejaculated "WATER!"

Marshall got his trousers pressed, so he put his valuables into his dressing case. Next morning, donning his properly-creased nether garments, he boldly launched into the turbulent sea of Broadway, and entering a good restaurant, ordered an excellent meal. Full of satisfaction and breakfast, he approached the cashier's desk and found his empty pockets. His badge and his face saved him. He said he found out that while it is disagreeable "to feel like thirty cents," it is worse to feel for thirty cents and not find it. The editor can sympathize with Mr. Marshall for he made a monumental donkey of himself by walking away from his steamer, and leaving his pocket book in his steamer, under his pillow, where some enterprising employe found the result of a few days of toil. We wish him well.

Everyone was glad to see Doctor C. A. Herrick, of Philadelphia, who is editor-in-chief of the new series of commercial textbooks about to be brought out by MacMillan's.

Guaranteeing positions is distinctly frowned on by the E. C. T. A.

J. CLIFFORD KENNEDY, SALEM, MASS.

M. B. FULTON, AUBURN, R. I.

ENOS SPENCER, LOUISVILLE.

Heard on the Floor of the Convention

BY WILLIAM HOPPE.

The reception of visitors at Heffley's School gave universal satisfaction.

The arduous duties of President Miller were greatly lightened by his able, energetic assistants.

Communicating work about an hour after the announced time is a bad advertisement of our executive ability.

The admission of 109 new members was no doubt the most delightful features of the convention.

Many did not vote for the adoption of the "Guarantee" resolution because they did not think it right to interfere with a neighbor's manner of doing business.

While all papers were good the "Model Classes" by Platt and Smith were by far the most popular and profitable. A hint here for the new officers.

The paper ordered to be printed and distributed was a good one, but selecting it from among others equally as good in their respective departments engendered—well—engendered. Guess the rest.

Brother Blackman may not be always judicious and opportune in his remarks, but he is always lively and entertaining.

The subject of "prayerful consideration" in the Ann Arbor was "May the old timers and self-conceived school proprietors go way back and sit down next year and let the teachers and young men and women have a lead on the program." May the petition be granted next year.

If ten o'clock is an hour too early to commence program work, for suffering punctuality's sake, make it eleven a.m. If the president and officers cannot cure this reprehensible habit, the Association will never be able to either kill or cure "Fake Schools."

Some disloyal private talk was carried on out of session. It's a mistake, brethren. Assert your right to have your say and speak your piece during the session and ever after hold your peace or uphold and defend your Association.

Problem: Is there a difference and what, between guaranteeing positions to prospective students, and telling them we do not guarantee positions, but we have always obtained positions for all graduates and have vacancies left over?

Problem: Has a school proprietor any moral or other right to say that others shall not and cannot guarantee positions because he cannot?

Question: Is it wise for the E. C. T. Association to pass any resolutions in restraint of the methods of any school, which it cannot carry out?
A Contribution to the History of Commercial Education

By Edgar M. Barber, B. Sc., C. P. A.

[A paper read before the Eastern Commercial Teachers’ Association at the Heffley School, Brooklyn, April 10, 1903.]

Ancient Accountants and the Origin of Double Entry Bookkeeping, 1494.

A recent writer on the history of early business education in America, states as follows:

The science of double entry bookkeeping as known and used today was not known in 1494. An earnest young man then living in Philadelphia, wishing to learn bookkeeping applied to many merchants, but none would teach him or accept him as a bookkeeper without experience. He went to New York and found no one there to employ him or teach him bookkeeping, as each merchant had his own way of keeping accounts.

Bookkeeping was not then as it is now, a system. It had no well defined rules and was not taught save under the eye of business men themselves.

About 1494, the first business school in New York was opened by an Italian, Thomas Fossor, a native of England, and the instruction given was in penmanship and bookkeeping.

The date quoted, it will be observed, is 1494. Now, these statements come into collision with the truth at so many points as to remind one of the famous Academician who defined a crab to be “a small red fish that walks backwards,” a definition which proved to be true excepting in three particulars: it was not red; it was not a fish, and it did not walk backwards.

Prompted by curiosity, some weeks ago, I attempted to ascertain, if possible, why the city of New York, foremost in commerce and finance, should have been ignorant of double entry bookkeeping and deprived of commercial education, a considerable number of years before most of us were born.

It is generally accepted that the first writer on double entry bookkeeping was Luca Pacioli, an Italian mathematician and professor of sacred theology, whose “Summa de Arithmetica” was published in 1494. He was the creator of the system, however, for elegant attempts to have given way to double entry gradually in Venice, beginning about the year 1400, and was known to Padoci as the Vedol.

Being founded upon the equation, bookkeeping in those days was considered as a branch of mathematics co-ordinate with algebra, and the public accountant, therefore, was primarily a mathematician. It may be interesting to note also in this connection the coincidence between the development of bookkeeping and of banking. The Bank of Venice was founded in 1171; the Bank of England in 1694, and the Bank of New York in 1784. These periods correspond, loosely speaking, with the growth of accounting in the countries specified.

A college of accountants was established in Venice in 1581, and works bearing upon this theme almost with an out number, have since been written.

In 1580, Dr. Kelly states that Iserl, of Brussels, compiled a list of 130 writers on bookkeeping, of whom seven were in Germany, twenty-five in France, seven in Holland, three in Italy, and thirty in England.

Without going into the bibliography of these works, let us go down a few of these chronologically:

1494, Luca Pacioli, Italy.
1531, Johann Gottlieb, Germany.
1543, James Pecel, England.
1736, John Mair, England.
1757, Haeastock Stephens, Ireland.
1760, Michael Dugard, Holland.
1780, Benjamin Booth, England.

Patrick Kelly, LL. D., to whom reference has been made, was born in 1756 and died in 1842. He was Master of the Flinsbury Square Academy and Mathematical Examiner to the Prince Henry, the University of Glasgow conferred on him the degree of doctor of laws and his school, which was remarkably successful, was popularly known as the “Mercantile School.” He published “The Elements of Bookkeeping,” in 1802, a book of 240 pages, the material being largely adapted to school purposes from the text of Benjamin Booth. Nine editions of Dr. Kelly’s book had been issued in 1828. It contains Invoice, Sales, and Bill Books, Account Sales, Journals, and a large variety of forms, gathered from much valuable material relating to foreign exchange, and an excellent description of banking, there being over 1000 books in England at that time, a line of business in which the accounting methods have changed little in centuries. It concludes with “A Short Explanation of Commercial Terms” which, revamped, is familiar to you through other sources. Dr. Kelly also wrote “The Universal Cambist,” “Nautical Astronomy,” and other scientific books; all of which transpired during the first quarter of the last century and London, therefore, led New York in the founding of a commercial school of the first order.

New York in Early Business Education.

Passing on with simply a reference to the excellent works of Cronhelm, Mair, and Warden, in New York and in the dictionary for 1818 we first find the name of James Bennett, Accountant. His name will be found there until 1836. March 27th, 1824, the “New York System of Practical Bookkeeping,” was copyrighted by Jas. Bennett, A. & M. Professor to the Accountants Society of New York, late Professor of the Accountants So-
Xylophonic and mathematical instruments are supplied and students will have access to a choice library.

In 1824, he made an excellent telescope mounted for observing the satellites of Jupiter and for other astronomical purposes.

I do not know what sign swung from Bennett's institution, but I submit that "School of Commerce and Navigation" would not have been inappropriate.

In 1824 it required astronomy to sail a ship across the sea, and today another has said that it requires astronomy. The schools and those located are likely to be found near the fifth decimal place. Bennett trained for both objects. He should hardly be forgiven for inventing the $150 fund he judged a perpetual scholarship idea, but I am sure the foregoing conclusively shows that Mr. Bartlett was mistaken when he said, speaking of New York, Philadelphia and other cities. I found they were all alike. In none of these large cities was there any chance for a poor boy to less become a bookkeeper.

But there was another Bennett in New York at this time; hence, I am privileged to present:

JAMES GORDON BENNETT'S COMMERCIAL SCHOOL PROSPECTUS, 1824.

In October, 1824, there was issued this announcement, which I have copied verbatim:

PERMANENT COMMERCIAL SCHOOL.

The subscriber, encouraged by several eminent merchants, proposes to open a business school for the instruction of young gentlemen intended for mercantile pursuits. Instruction will be given in the following branches:

Reading, elocution, penmanship and arithmetic; algebra, astronomy, history and geography; moral philosophy, commercial law and political economy; English, French, Spanish and classical languages by native instructors.

Bookkeeping and merchant's accounts will be taught in the most approved and systematic manner.

The school will be conducted, in all the branches of the instruction, in the most systematic and comprehensive method of instruction, and particularly so in arithmetic, geography and English.

It will commence about the first of November.

References—J. S. Bartlett, M. D., Albion Office, No. 127 Pearl Street; Mr. Henry T. Magarey, Broadway; Mr. P. Whiting, Jr., Maiden Lane.

J. GORDON BENNETT.

"X.B.—Application may be made to J. B. Huntington, 148 Fulton Street."

This proposal is chiefly interesting today as showing what James Gordon Bennett began in a first-class commercial school. He came to New York in 1822, from Halifax, where he had taught bookkeeping, French and Spanish. He spent a year in Charleston, as translator for the "Courier" but returned in 1824 and projected this school. The proposed school, if ever formed, he accepted, but he delivered lectures on political economy in the vestry of the old Dutch church on Ann Street. In 1825 he returned to newspaper work, and, after various experiences, in 1835, founded The New York Herald, which has become a more successful school, perhaps, than would have proved true of the one he originally planned.

If New York's claim to priority were otherwise jeopardized, I could contend that this was the first commercial school founded in America. Curiously, that honor belongs, I believe, to another man by the same name, James Bennett. James Bartlett, however, did have his able to withstand the James Bennett competition, and probably this had something to do with the abandonment of the pro-pup to commercial school.

I will remark here, in passing, that I find in J. C. Col's bookkeeping of 1837, "The Grand Balance Sheet.,." so great an advantage in the cases. In September, however, chides other popular authors preceding him for omitting it and I therefore conclude that this over-worked, but disappearing "exercise," is that which the earlier writers than is generally supposed. The words "To," and "By" as well as useless explanations in the ledger, were often omitted, I find, prior to this date.

THOMAS JONES AND THE NEW YORK COMMERCIAL ACADEMY, MANY YEARS PRIOR TO THE BOOKKEEPING SCHOOLS.

Now in 1840, if the young man from Philadelphia, referred to at the beginning of this paper, had landed in New York and proceeded up Broadway to No. 183, he would have found the New York Commercial Academy, with Mr. James Jones as Principal, where he had been for a number of years. Here, the young man could have secured as sound instruction in bookkeeping as can be obtained anywhere else.

On January 1, 1841, Thomas Jones published "The Principles and Practice of Bookkeeping. Incororporated in the book is the following notice:

JONES'S COMMERCIAL ACADEMY, No. 183 Broadway, Over the Drug Store.

"The design of this institution is to afford genuine advantages in bookkeeping-room, and particularly merchants' clerks, trading in the various intermediate branches of the New York Commercial Academy, many years prior to the bookkeeping schools.

The arrangements are such as to permit students to attend the school during the day or evening that may suit their convenience, as they have been left unaltered for the accommodation of those who may desire to attend privately.

This practice is performed entirely by the student himself, as a test of study, the examinations being answers to a reasonable stipulated work of busines will be taught in the most approved and systematic manner.

The subsidiary books used in business, as well as all the various forms of accounts and books used in business, will be taught in the usual exercise of the student.

In conclusion, we take pleasure in embracing the most ready business calculations of interest, Exchange, and the橡胶, etc., constitute the special aspect of the instruction.

Mr. Jones has bestowed much pains on the inquiry into the various cases which occasion bad writing, and he has endeavored to render the subject accessible by the empirical pretensions so common in the profession. He has brought together the necessary data and can offer his services with the fullest confidence of being able to afford them complete satisfaction.

A select class of young gentlemen prefer following for the counting-room are to be given, for a daily session of four hours, to which, during that time, Mr. Jones devotes his exclusive attention.

ANSWERS TO QUESTIONS IN LAST ISSUE.

1. The services of a coachman being necessary to this minor, he is bound to pay a reasonable sum for the one month's services actually rendered him. A minor is bound to pay for a reasonable price for "necessaries" furnished him.

2. A minor is not bound by his contract for necessaries, if he lives with his parents, even though he is not properly provided for. The dealer has no power to take the place of the parent under such circumstances, but should complain to the proper authorities.

3. The supposed minor is entitled to avoid his contract must return what he obtained under the contract. However, "the law assists minors" and while the minor must return the articles if he parted with them, he may still avoid paying for it. This is because the law seeks to protect minors from the results of such improvident contracts.

4. Brown should prove that he was not of age when he entered into the agreement. It is not enough to allege minority. The allegation must be proved. Anyone could simply say that he was incompetent. (See rule given in last issue.)

5. The statutes of some states provide for such contracts, declaring them binding upon a minor. Some courts have held learning to drive to be "necessary." Of course it is always "necessary" where the statute makes it so.

6. It could be shown that, all things considered, the circumstances were such that this outfit was "necessary" to this particular minor, he could not avoid his contract in any case. If it was not necessary, he could have avoided the contract by returning the purchase within a reasonable time after attaining his majority. Is a year a reasonable time? Probably not. Then he is bound, for he has ratified his contract by his conduct. It must be remembered that no definite time can be given as "reasonable time." What is only reasonable in one case might be highly unreasonable in another. It is not a question of law but of fact. Suppose, in the above case, A can show that he returned the purchase at the first opportunity—then a year is a reasonable time.

7. Although A had a right to avoid this contract on the ground of complete intoxication, yet it would seem that by subsequent conduct, when in his right mind, he bound himself.

8. In this case B was "incompetent," but if the service rendered by C was necessary to B, he would be bound to pay C a reasonable sum. Generally such care would be necessary, but suppose B was in his own house and was already supplied with skilled and able domestic services would probably not be necessary.

9. X cannot avoid his contract. Nothing short of intoxication so complete as to dethrone reason will render a contract incompetent.

10. Duress is not the cause for the avoidance of a contract, but there was no fear of B which prevented A from acting at his own pleasure. Therefore duress did not exist. A is bound.

11. If this is a matter which I have power to settle with B, then he will be bound on the note unless I have taken unfair means to obtain his consent. Whether or not there is undue influence exercised in any given case is a question of fact.

12. If it can be shown that the father has unduly influenced the deed will not hold. Neither the father's age nor the amount of the consideration (price) will invalidate the deed, but they would be factors in proving undue influence. Whether or not there is undue influence exercised in any given case is a question of fact.

13. The courts look with suspicion on such contracts as this. It is, of course, allowable for a client to sell property to his attorney, and the price need not equal the real value of the property sold. Old age is no bar to making contracts. And yet these facts taken together would perhaps go a long way toward establishing undue influence. If, as a matter of fact, there was an exertion of undue influence, the sale is void.

14. The claim could not be prosecuted while the war lasted, but the action would revive when peace was restored.

15. Under the common law, a married woman could not contract in her own name, but in general the statute of the different states provide that married women may hold property and make contracts in her own name.

16. An insane person is not bound by his acts. However, as this contract is reasonable and Y acted in good faith if X has never been adjudged insane and Y has so far performed his part of the contract that he cannot be put in statu quo (in the same state or position as he was before he began performance), Y would probably be bound. If Y had not so far completed his part that he could not be put in statu quo, X would not be bound.

17. A has been adjudged insane, which is sufficient notice to all. A is not bound.

18. C can make any contract which does not concern the subject on which he is insane, provided, of course, that he has not been adjudged insane.

19. The reason why an insane person is not bound by his contracts generally is that he cannot give his consent. Here D makes the agreement with him, being perfectly sane and capable of giving intelligent consent. Therefore the contract is binding on him.

20. Legally, X is insane until such time as the guardian is removed, whether he is in fact insane or not. Under such conditions he cannot make a contract which will be binding on him.

In considering questions touching the incompetency of parties, it is well to remember that on some points different courts have decided differently. In such cases, the student may determine which of two conflicting opinions is backed up by "the weight of authority." However, it is more important that one should know and remember on just what questions the courts differ than that he should know where the weight of authority rests. The knowledge that a certain ground is dangerous will enable the student to keep off, or, if he must cross, it will enable him to see the necessity of securing a reliable lawyer as an escort. The decisions of courts are more or less affected by the statutes of their respective states. No student who means business should fail to acquaint himself with those portions of the statutes of his own state, which deal with questions of commercial law.

Gentlemen:

I write to urge you that I have met with recently in the Penman's papers is so intensely interesting to me as Professor Hinman's biographies of the old war horses of the profession, most of whom have met and with some of whom I have had more than a passing acquaintance. The late Harvey G. Eastman was one.

In the latter part of June, 1875, I was in a room within a block of where I am now writing, where I had just finished a writing class and was removing the furniture, when I received a call from a tall young man, wearing a blue coat, with brass buttons, a broad brimmed hat and a make-up which would attract attention anywhere. He announced himself as Harvey G. Eastman, nephew of George W. Eastman, of Rochester, with whom I had long been acquainted, and said he was on the way to Niagara Falls where he expected to locate and write cards at one of the hotels for the summer. I told him that I was going to the Falls for the same purpose the next day, and as the business would be confined largely to the hotel guests, there would be no conflict of interests.

We agreed to meet the next day and lay out a plan which should be mutually satisfactory and as he had one day the start he was to have the choice of locations. We met as agreed. He said: "There is nothing in it for us. We will have to board at the hotel at $2.50 per day (equivalent to $1.00, now), and the hotels are not half full."

I said, "I can stand it a week any way, and I am going to take my chances."

He urged me very hard to leave with him and I did so, only to return ten days later, and for nine successive seasons I was at the International hotel, card writing, during the months of July and August. Even after I had engagements by the year, those two months were reserved for my vacation, and I have never looked

HIGHER ACCOUNTING

By R. J. Bennett, C. A., Peirce School, Philadelphia.

The following proposition is taken from the New York State C. P. A. examination questions. The writer has made several changes and modifications in the original question in order to illustrate more clearly the method of handling the different points that are likely to come up in preparing such statements.

QUESTION.

The directors of the City Manufacturing Company, before closing the books for the year ending December 31, 1902, declare out of the net earnings of the company, a dividend for the year of 8% on the common stock and 7% on the preferred stock, payable January 15, 1903. They also desire to carry to the surplus fund $10,000, and the balance of profits to the undivided profits account. There has been brought forward from last year an undivided balance of $8,000, and after the audit of the books the trial balance is found to be as follows:

TRIAL BALANCE, DECEMBER 31, 1902.

In 1888, Mr. B. F. Foster published "The Merchants' Manual," a work of 252 pages, containing able chapters on Credit, Speculation, Banking, Bookkeeping, and Accountancy. This is the book that Benjamin Foster referred to as having founded the first business school in New York in 1845. Now, as summarizing quite compactly the achievements of Thomas Jones as an author, I submit the following letter from Mr. Foster:

"NEW YORK, August 1, 1888.

Mr. Thomas Jones,

Sir: The principal features of what I understand to be your plan of teaching bookkeeping and accountancy are entirely novel, and you are entitled to the merit of having originated them. Beginning your explanation of the theory with the: ledger.

2. To simplify the scheme of each separate account and showing its use.
3. To allow for double entry; each account two statements of the merchants' affairs showing how much he is worth.
4. That each book of accounts by double entry contains two sets of accounts, which can be tested; one of the primary accounts and the secondary accounts constituting the balance of the book.

5. To complete a knowledge of this by exercising the pupil on a series of skeleton ledgers from which he learns to deduce the results of any ledger.
6. Requiring the pupil to fill up the columns of his ledger, and to perform the actions by which he learns to make a ledger complete and accurate.

So far as my knowledge extends this peculiar method of teaching the science of double entry, it is the result of merit of insisting upon its utility and importance.

I have availed myself of the information derived from the ledgers in the completion of my recent work entitled "The Merchant's Manual," so far as it relates to the elementary bookkeeping, and I have endeavored to refute the princi- ples, and then using facts to illustrate the facts in such a way that the pupil appears to advance to the principle and by his own experience to discover it. If these facts may in the future be employed with advantage to the young student, I would say that they are the way in which nature teaches, but for the pupil's good mind it is tedious and appears childish.

But principles must be the constant aim of the student, and particularly so when what part of the subject he has put into the mind he does not take the powers of the latter, he must know what question he is able to deal with. This contains a great deal of impossibility to pass false instruction, except general education, and trained as a teacher, no matter how the subject to him, as to pass a counterfeited bookkeeping school, or as to pass a counterfeited school of bookkeeping.

There are certain fundamental doctrines which are inapplicable to the subject of bookkeeping, and these are elementary treatises recognized as sound and satisfactory. But those principles upon a subject is to teach or impart a knowledge of its principles.

2. The principles of the general truths which by analysis are found to explain the whole, or in other words to contest the aforesaid principles of a score or fewer cases, these general truths can be made the more perfect by conscious, and the more simple the explanation.

A man capable of doing such thinking as the foregoing extracts indicate, had been modestly and honestly conducting the New York Commercial Academy for a quarter of a century, when, in 1888, the Bryant and Stratton "chain" of "colleges" was uncoiled on Manhattan Island. One of its links came in contact with Thomas Jones, and by his powers of invention, created an electric spark, and a thunder-bolt shot forth from Jones's pen in the form of a pamphlet entitled "Paradoxes of Debts and Credits Demolished," or the "small change" to which I think the bombastic prospectus of the six-to-ten-weeks "College" course was attacked therein under the title "Effects of Quackery on Education," which, read today in the light of what has transpired during the past 43 years, is, to say the least, essentially fallacious.

The limits of this paper forbid a review of this work, which will be reserved for a future time. Mr. Jones's course was a "collegiate" but a rather ten weeks' course was an educational debauch, and he contends that an educational debauch was no better than any other kind of debauch. Expressive of this view, he said:

"Admitting, however, that it is desirable to organize a special course of studies, and a mercantile course, and that this course is the course to be given to this institution, we cannot think of less than three years as the time to be occupied. And what antecedent qualifications should we look for in the head of such an institution? Should we bring forward a writing master or bookkeeping teacher, or ask some speculative in half-dozen writing shops to send us his deputy and thus incur the just derision of the whole enlightened world? Or should we bring forward a man of excellent views and unquestioned reputation, for the highest and most responsible position?"

The University courses of commerce, the commercial high schools, and the larger and broader courses in our best business schools of today, are tardy responses to Thomas Jones's criticism of half a century ago.

A man 60 years old said to me a few days ago, "When I was a boy, in school—the New York City public schools, and Mr. Jones's Bookkeeping, I don't suppose you ever hear of that book now?"

No, I confess we do not; but Jones's methods still go marching on, and the public, even in Eastman's day, did not take the responsibility of saying, however, that Thomas Jones wrote the soundest and most original text-book on elementary bookkeeping, and that the practice of not allowing college right has long since expired, and no collision with publishers of today can possibly follow this statement.

As a former commercial teacher and author, I have been in favor of a rational method of teaching bookkeeping, I pay this willing tribute to Mr. Thomas Jones—Teacher, Author and Public Accountant.

(Shattuck-Eastman, from page 19.)

back with regret to those nine summers.

Mr. Hinman makes no note of the fact that Mr. Eastman published a series of copy books, t, that have only been mentioned in the text of this article. There is no copyright date or any other date to tell when they were published. He also had what he called "bally-ho" from all the bookkeeping schools and bookkeeping companies, for the book-keeping schools, he was prepared more for the wants of commercial than public schools.

I used to meet Eastman occasionally, in New York, and he spoke very freely, but not boastingly, of what he considered the good points of his books. From what I saw in these
Simplified Penmanship

means plainer writing, easier writing, swifter
writing, neater writing, better every-day writing.

Then why delay adopting it, and using it?
It is winning, and is bound to win. Be not the
last to experience its benefits.

occasional meetings, there was nothing
to suggest our spirited enthusiasm or to indicate the tremendous
energy stored in that not over vigorous
appearing form.

With Mr. Hinman's statement of
what he accomplished in two score
and four years, deducting from that
one score as a period of preparation,
what would he have done had he
lived the allotted time of three score
and ten years?

GEO. H. SHATTUCK.

LOUISVILLE, KY., April 21, 1880.

TO THE PROPRIETORS OF PRIVATE
BUSINESS COLLEGES:

I take this pleasure in informing you
that our committees are actively at work
preparing matters for the Boston meeting and
everything points to a successful gathering
of the Proprietors of Private Business
Schools.

The St. Louis Fair Committee has secured
ample space and it is necessary that they
know at once how many schools are willing
to make exhibits. I urgently request every
school to write at once to Mr. E. H. Fitch,
800 Olive St., St. Louis, Chairman of the
World's Fair Committee, informing him
whether or not you will make an exhibit.
The exhibit will be collective and the ex-
penses will not be great. Every school
exhibiting will have its own space, desk,
bookcase or case as may be determined.

We want actual school work, such as will
represent the results accomplished by the
students of our respective schools. We owe
it to ourselves and our country to make a full and creditable
display of Business education at this great
exposition, which will likely be on a more
magnificent scale than any other exposition
ever held.

Respectfully,
ENOS SPENCER,
Pres. Private Commercial School
Managers' Association.

New School in Lincoln

LINCOLN, NEBR., April 21, 1880.

EDITOR BUSINESS EDUCATOR: The first
of May Mr. J. L. Stevens, president of our
school, will retire from the Lincoln Busi-
ness College and start a school in this city
known as the Modern Commercial School.
He has sold his entire interest to Mr. E. C.
Bishop, county superintendent of York Co.,
Nebr., and to Mr. W. X. Watson, principal
of our shorthand department. The new
proprietors of the Lincoln Business College
are as follows: W. G. Bishop, president;
E. C. Bishop, vice-president; E. C. Bigger,
secretary; and W. X. Watson, treasurer.

Yours very truly,
W. G. BISHOP.
Throughout this series of lessons the aim has been to group the various letters so that those having some difficult principle or stroke in common would be practiced in succession. In this way the student continues to dwell upon some particular feature long enough to master it.

In the first three letters this month, T', Y, and U', the difficult thing to do is to begin with a small loop, or dot, if preferred, make a broad turn at the top and nicely rounded short turn at the bottom. If the student will practice Exercise No. 1 in Plate 23 until it can be made well with a free movement of the hand, he will have prepared himself to make good T's, Y's and U's, with but little effort. It will be found excellent to develop grace and ease and will help to overcome any tendencies toward too much angularity in writing. Keep the T' narrow. Be sure to make a turn at the blue line and try to curve the final stroke to the right. Do not carry the finishing stroke up higher than the first part of the letter. Aim to make the two downward strokes of Y on the same slant. Make a turn at the blue line, carry the point up well toward the top of the letter. Make a broad turn at the bottom of the loop which should be shorter than the part of the Y above the line. The U is the Y with the loop omitted. It is well for the student to finish the U both ways as indicated in Copy No. 1, Plate 24. The exercise in the middle of line No. 1, Plate 24, is good practice to make the finishing turn of the U just right.
The first part of $H$ and $K$ should be made the same. Copy No. 3, Plate 24, if practiced liberally will enable the student to make the first part of these two letters well. The upward stroke should curve well. Begin with a short, well-curved stroke and swing back to the beginning stroke, then repeat about five times on each exercise. Let the finger-rest move while making this exercise. Keep the space between the upward and downward strokes narrow. The first part of these letters is quite like the small $s$. Always make a period at the stopping point. Begin the last part of $H$ somewhat higher than the first part, curve it slightly and be sure to form an angle—not a loop—at the blue line before joining the two parts of the letter. Notice the two styles of joinings in $H$ as shown in line No. 6, Plate 21. The last part of $K$, while graceful when well made, requires considerable practice to get it just right. Study well the curvature of line both above and below where it is joined to the first part of the letter.

Before attempting to make the $J$ the student should practice freely on a long, narrow oval extending across two ruled spaces as indicated in copy No. 3, Plate 25. Study the $J$ as given in line No. 4, this plate. Make turns at the top and bottom. All lines should curve. The top should be a little larger than the bottom. The retracing exercise at the beginning of line 4 and exercise No. 5, Plate 25, are good practice to give strength of movement in forming the $J$. The top of $I$ should be slightly smaller than that of $J$, and should lean to the right. Keep the crossing of lines close to the blue line. First learn to stop with a period and then learn to swing through the bottom of the letter like No. 2, Plate 34.

Begin the $S$ with a well-curved line and form a loop quite like the small $I$ and make a bold curve after crossing the upward stroke at about half the height of the letter. The copy No. 5, Plate 25, is a good exercise to combine the $S$ and a movement exercise. Learn to make a period as the finishing point of $S$. This prevents the tendency to make a straggly-looking finishing stroke.
The style of C given in line No. 1, Plate 27, is a popular one and is one which is easy to make with a free circular movement. It begins with a short loop and is finished very much like a large figure 6. It should be well-rounded at the bottom. The exercise at the beginning of line No. 1, Plate 27, is good to develop this letter.

The G begins like C. Be sure to make a broad turn a little below half the height of the letter. Make the sharp point just half the height of the letter and swing back and finish with a period just like in the S. Copy No. 6 is excellent to develop good movement and control. Practice it a great deal.

Now, nothing has been said in these instructions about the work and sentence practice. But after practicing each letter until it can be made easily and well, it should be practiced in connection with the word or words given. A great deal of practice on these words and sentences is necessary. Always place on each line exactly what is in the copy. This is particularly true of the sentences given in last line of Plate 27 and all of Plate 28. If, as you write it, it does not fill the line, make a little wider spacing between letters and words. If it does not all go on one line write smaller and reduce the spacing. Write full pages of each sentence. Try to get your writing uniform in size, spacing and slant.

Never scribble—always write carefully. Make every stroke count. Use rapid enough movement to give strength and smoothness to the writing.

Lessons in Practical Business Writing

By

Nina Pearl Hudson

NEW BRITAIN, CONNECTICUT.

Students practice outlined in these columns free of charge. Specimen should be sent to Miss Hudson, New Britain, Conn., by the fifth of each month.

LESSON 2.

"It was a difficult thing to do, but there was a will, and, of course, a way."—Alice of Old Vineyards—Maurice Thompson.

PLATE 5. No. 1. Begin with tracing oval; change to running, and, "with ease, rolling motion, feet firmly on the floor," as one professor used to say; glide into wider spacing and smaller loops. No. 2. Keep backs nearly straight, tops well curved. No. 3. c is an f with a tiny curve at top. A slight pressure of the pen before curving to the left. No. 4. Keep in mind speed, slant and spacing, when writing words.
Plate 5.

1. Make tracing oval with ending stroke. Retrace small ovals, make a wide curve to the left. No. 3. Keep loop nearly in the centre of large oval. Have a rapid, easy motion. Notice, no straight lines—all curves. It is said the secret of the beauty of Nature is in its curves; so it is with these letters. No. 3. Notice upper and lower ovals, about the same size. Make a slight pressure to begin with and then curve quickly back, with no stopping, as 1—2—3, 1—2—3. Small loop points downward. Have good opening between the ovals in the back of E. No. 4—5. Control the motion as you change from E to e and C to i.

Plate 6.

1. Same as No. 1 in Plate 5 except that the curves are upward rather than downward. No. 3. Keep letters themselves compact; have wide spacing between the letters. Keep down strokes parallel. No. 4. Make important rests at bottom of down strokes, just opposite to Plate 4. No. 5. Use no finger movement on down strokes; simply a “pulling in” motion of the arm into the sleeve. Notice the slight retracing at the bottom of the m’s.

The Business Educator

Vol. VIII. No. 9.
COLUMBUS, OHIO, MAY, 1903.

SUBSCRIPTION PRICE, $1.00 A YEAR. IOC. A COPY.

Change of Address—If you change your address be sure to notify us promptly (in advance if possible) and carefully to give the old as well as the new one. We lose many papers each issue through negligence on the part of subscribers.

Rates to Agents and Club Raisers

Sent upon application. Whether you are in a position to send a few or many subscriptions, let us know, so that we can figure you with the best possible terms and a few sample copies.

Considerable has been said in recent partial or cheap editions; that our journal is high grade in every particular; that the color feature of the cover alone costs hundreds of dollars; that "lessons that teach" are a distinctive feature of our magazine; that the art presented is the best ever given in a journal of this nature; and that the department of business education is upon a more comprehensive and representative plan than ever before attempted; you will readily see that the Business Educator is not only the best but the cheapest, because the best is always the cheapest.

The Best Advertising Medium of Its Class

The Business Educator being the most popular and widely read journal of its kind, it follows that it is also the best advertising medium.

It reaches practically all persons interested in commercial education and in business life, in both this country and in Canada. It covers the commercial school field completely, going as it does to the heads of Commercial Colleges, Commercial High Schools, Commercial Departments in Normal and Universities, as well as a large number of office workers, public school teachers, home students, etc. Then it is preserved as the leading journal of the profession, having it bound in book form. Our rates for space are lower than any other journal, for any amount of any other high class journal published. Wide-awake advertisers will find our column money makers. Write at once for rates.

Some Hot Shot from the Quiet Observer in the "Practical Age"

"I have a great deal of sympathy with the fellow who cannot enter into the esthetic enthusiasm of the penmanship teacher. A good hand writing is a fine accomplishment, and the intelligent teaching of penmanship is of the greatest importance, not only in the commercial school, but in the grammar and high school as well, but just here lies the trouble: nine-tenths of the teaching is not intelligent teaching. I know of no other school subject that has been overburdened with over-strict rules, and a perfectly useless expenditure of nonsensical talk and misdirected effort. Ignorant enthusiasts have attempted to elevate the dignity of a fine art, what is nothing but a practice.

"Some day, and that day is not far distant, people will discover that we have so many poor writers today, because the whole subject has been clouded and made difficult for the learner, instead of being made natural and easy for him."

In my judgment the greatest of all difficulties placed in the way of securing a nation of good writers is the idea that all learners must conform to one standard, instead of all standards being made to conform to the individuality of each learner.

"The 'Spencerian' teacher believes that every pupil should write a Spencerian hand; so the "vertical hand," writer, the "round hand," writer, the "angular" writer, all advocate his particular style, and the result is that the poor pupil is compelled to waste his energies in trying to bring his writing within the strict requirements of a particular slant, of a particular movement, or of some other particular thing that is the particular hobby of the teacher, while the writer to whom he is unfortunately placed for instruction.

"The idea has been maintained for years in the face of the fact that no two persons are exactly alike, and that no one person always writes exactly the same hand. Ye gods! when will the microbes of common sense penetrate through the thick skin into the life blood of the writing teacher."

"The above is doubtless a little severe on penmen, but much of it is true, even though penmen generally may not recognize it. The one way for all, as concerns form and movement is being delegated to the past, and the one way for each is rapidly taking its place. The modern teacher must fit writing to the individual and not the other way about. At least the two should meet upon neutral grounds so that the individual need not do all the bending. The touchless writing must be many-sided, and able to write more than one hand. He must be observant, sympathetic, able to diagnose the writer's chief faults and prescribe a remedy. The all and in a few brief sentences, their going, and will soon have gone.—

EDITORS.

EDITOR BUSINESS EDUCATOR:

I have just received your letter concerning the Ohio Commercial and Special Teachers' Association regarding announcements that should be made concerning our meeting at Put-in-Bay, June 28-30. This meeting is to be held on the same time and place as the Ohio State Teachers' Association. They begin their meetings on the thirtieth, but by beginning ours a day earlier we avoid serious overlapping, thus giving a student more time to attend meetings. The same hotel and railroad rates are secured for the Ohio Commercial and Special Teachers' Association as for the State Teachers' Association, by paying a membership fee of one dollar into the latter association.

It is my desire that all Commercial and Special Teachers in Ohio contribute informally to these meetings, so that their ideas, impressions, convictions and experiences regarding any one of the subjects named in the list mailed herewith, to be considered at our next meeting, also submit

the same to a proper committee directed through me, so that a symposium may be added at various meetings of the representative magazines. I make no apology for asking every teacher and publisher interested in said subjects to do something along this line as I believe all will be gained by listing a variety of essays on commercial papers, and it is evident that the general needs of teachers and school proprietors can be more fully arrived at through a symposium containing the expressions of many teachers than by only the ideas of the individuals. "In union there is strength."

Hoping that you will kindly assist in the proposed plan, and agreeing to announce a more definite program later.

Fraternally yours,

L. W. STEINH.

Chairman Executive Committee.

A partial list of questions proposed. Please submit others.

1. What kind of teachers to employ. 2. Systems and methods to be introduced. 3. How to teach business students their duties. 4. How to be devoted to each branch. 5. The wants of the average student as prescribed by English department pay. 6. The art of business and social correctness. 7. Who should have the privilege of teaching business schools. 8. Requirements for entrance to business schools. 9. The probable requirements for average business students. 10. Artificial languages. 11. Main trouble with beginners; how to interest them. 12. Arrangement of supply of services. 13. Procurement of competency of teachers and the school, etc., etc. 14. Rules, and how to execute them. 15. How to express credits, etc. 16. Phonography, mimeograph, metronome. 17. The way to solicit employment. 18. Business writing. 19. How to keep a business file. 20. Check system in teaching bookkeeping. 21. How to handle the subject of commercial business. 22. Best results secured. 23. How to secure the keeping of the college accounts. 24. Office check-systems. 25. National office practices. 26. Actual business, intercommunication office practice. 27. Speed requirements in shorthand and typewriting examinations, etc. 28. Contracts. 29. Guaranteeing positions, inducements, etc. 30. The great subject of advertising. 31. Systems of shorthand and methods of teaching the same. 32. Systems of teaching the same. 33. Systems of shorthand and methods of teaching the same. 34. Systems of shorthand and methods of teaching the same. 35. A closer union between public schools, private schools and business colleges.

Bats.

During the reconstruction of the building partially destroyed by fire in which is located Sadler's Bryant & Stratton Business College, No. 67 S. Charles St., Balti-

more, Md., the workmen discovered two bats, one alive and one dead, which had been entombed in the wall that was built thirty-two years ago, they having been enclosed in a hole, without any outlet what-

ever. They are three inches in length, a remarkable thing about it is that the one bat was still alive and flew as soon as liberated, though very weakly.

This is the biggest bat story we have ever heard. There seems to have been a number of workmen who cannot testify to the facts on which this story is based. Sad to say, they got as near the bats as possible for a bat, or any other creature, to live so long without entrance other than possible by its own.
to draw up a working plan for a Bank Clerks' Institute, to promote the interests of ambitious bank clerks who desire to learn the trade of a business man and wished to learn, and to assure them that if possible to learn at first hand in a bank, act as a demonstration of the practical ability of the individual, and present the executive with a bank clerks' institute which to such an extent as he was made the first secretary of the organization.

The President of the Miami Business University, of Dayton, Ohio, under the management of Mr. Kittredge, was always a very effective private of technical education, and his zeal was expressed in the author of the structure, his encouragement, and his desire and interest in the education of the youth of his time. There is no doubt that his efforts and interest in this work, and his encouragement of this work, has been expressed in the author of the structure, his encouragement, and his desire and interest in the education of the youth of his time.

Mr. Kittredge, according to the Miami Business University, of Dayton, Ohio, under the management of Mr. Kittredge, was always a very effective private of technical education, and his zeal was expressed in the author of the structure, his encouragement, and his desire and interest in the education of the youth of his time. There is no doubt that his efforts and interest in this work, and his encouragement of this work, has been expressed in the author of the structure, his encouragement, and his desire and interest in the education of the youth of his time.

Mr. Kittredge was in the confidence of the American Bankers' Association to such an extent that he was given the commission to the Business Education Council held its regular monthly meeting in the rooms of Dakin's Business College.

A History of Penmen, Early Business Education and Educators in America.

A. R. Dunton

One of the most skillful and widely known penmen of his time was A. R. Dunton, who was born at Hope, Maine, in 1812, and at the age of sixty, he was at the age of eighty years.

At the age of thirteen, while at school, he showed such skill in penmanship, that his teacher had him write the copy and make quill pens for the school.

Beginning at the age of twenty, his first writing school at Hales Mills, near Lowell, he taught writing in nearly every state in the Union—also conducted writing academies in Boston, New York, Philadelphia and New Orleans. For a number of years he issued a challenge to the world as a penman. In 1849, Barstow, a penman, came from England to compete with Dunton at the Boston Mechanics Fair. Barstow claimed that Dunton's specimens were engraved, and that no living man could do such work with a pen; but Dunton, with a pen, before the eyes of the judges, convinced them otherwise, and won the medal. In 1841, Mr. Dunton wrote fifty cards each in a different style of writing, and presented them to Mr. Charles Dickens, the English author, then in Boston; and in return received the following letter:

TREMONT HOUSE, BOSTON.
Feb. 4, 1841.

A. R. DUNTON, ESQ.,

DEAR SIR: Mr. Dickens and I are most exceedingly obliged to you for those beautiful and elegant specimens of penmanship which you have done us the favor to present to us. They are in every way equal to the finest engraving. We shall take great pleasure in showing them in our country, as specimens of Yankee genius, and hoping that you will ever prosper, you will please accept our united thanks, and believe me,

Faithfully yours,

CHARLES DICKENS.

While teaching in New Orleans, in 1842, Mr. Dunton conducted a writing academy assisted by his brother, Seldom Dunton, whom he had trained as a penman and teacher. He there published his first copy books and sold them everywhere regardless of a copyright which he failed to secure.

His brother Seldom returned to Boston, and in connection with J. W. Payson, a former pupil of A. R. Dunton, they reproduced, copyrighted and published a series of A. R. Dunton's copy books for their use in teaching. They, being the first in the East, became so popular that they were widely sought for, and sold by many public and private schools throughout the country. Later, W. W. Scribner, another A. R. Dunton pupil, united with the others, and they published, for many years Payson, Dunton and Scribner's copy books. A. R. Dunton, returning from New Orleans to Philadelphia, published a lithographed system of Duntonian writing, but with less as leading pen artists of the country, were two of Dunton's latest pupils. They did much work with and for him, and for several of his later years aided him in filling out the thousands of orders for lettering. Duntonian methods of teaching writing. Thus through his work he planted his system in the minds of thousands of teachers, which made them superior teachers of writing. As an expert in questioned hand writing, he was the leader for many years in the cities of the East in teaching. He gave many lessons for $500, then a great sum, and came under the examination of Rufus Choate, and many great lawyers of the past. In another line Mr. Dunton possessed skill, which with thousands made him as famous as for his writing. He invented a vast number of sleight of hand tricks, and his skill puzzled Signor Blitz, Herr, Aldus di Loria, and many professional at his time. They always came to see him with their friends, and without his coat on he would receive various articles and hide them before their eyes so sharply they were astonished and non-plussed.

At the first penman's convention in New York, at Packard's College in 1858, Mr. Dunton gave an entertainment that still remains a memory to all who were present. Socially, as in all other ways, Mr. Dunton had a strong personality, and in his Duntonian cottage in Camden, Maine, liked nothing better than to entertain young men, himself as young in spirit as any. He was fond of fine horses, and was esteemed so highly by the natives of Maine, that they would say that there was but one Shakespeare and but one Dunton.

"Inclosed find six subscriptions to THE BUSINESS EDUCATOR, with remittance for same. Your paper is the best of its kind. It is a rare treat to all who are interested in good writing. It has been one of my best instructors, and the principle one in my efforts along the line of ornamental writing." T. B. BRIDGES, San Francisco, Cal.

Over 50 Hours' Solid Talk is Given by

Madaraz, New York

when the teachers' course in the Madaraz Method of writing is being completed. Every important point in the subject is covered, every difficulty explained and every point of style and penmanship covered. It is not taught in the usual way, but in a style of teaching never before shown. Anyone who has had any style of handwriting, or knows how to teach it can learn to teach this new style in a very short time, and be enabled to teach it in such a way that his pupils will be written better than any in the country. They are so trained in the strong business. I've had no failures. It would take pages to mention names of the schools that have had me. Better write to me and learn more about it by close stamp to

MADARAZ, 1230 Third Ave., N.Y.

WANTED: A first-class teacher of penmanship who can also manage the commercial branches if required. Address,

BRYAN & STRATTON COLLEGE,
St. Louis, Mo.
Through the courtesy of Messrs. Holbach & Co., we have received a beautifully illustrated and uniquely covered catalogue descriptive of the Santa Clara Valley and its wonderful fruit products. To look over this catalogue is like taking glimpses of a land of paradise to be found anywhere, California is the place.

Mr. Holbach was one of our first pupils and was a penman of more than ordinary note and ability, and is one of the few who has left the profession and made a success in other lines, being engaged in real estate.

One of the best illustrated and printed catalogues received at this office came from the Rockland Commercial College, Rockland, Me., Howard & Brown. Proprietors.

From the contents of the catalogue, and from what we have heard from time to time, we should judge that this is not one of our big schools, but one of our best schools, and they are letting people know it by judicious advertising. The result is a prosperous and progressive school.

"To Prospective Students" is the greeting of a three-page letter sent out by Buck & Whitmore of the Scranton Business College, Scranton, Pa., and we must confess that it is one of the best letters of the kind we have ever seen. They have a fine school, and they are letting people know it by judicious advertising. The result is a prosperous and progressive school.

"Hills Business College" is the title of a catalogue issued by that school from Sedalia, Mo., John N. Hill, President, C. W. Ransom, Penman.

The catalogue is quite a large one of sixty-four pages, profusely illustrated with half-tone illustrations of the faculty, school rooms, and no small amount of penmanship interspersed here and there. The cover is printed with a solid green plate with white embossed script, making it one of the most attractive things of the kind we have ever seen.

The March-April number of the Gem City College Journal is exceptionally fine. The numerous attractive half-tones are far above the average half-tone work in school paper. One that is President Musselman's way of doing things. He has a great school, and should be proud of the enduring monument he has built for himself. By the way, we notice that a good many western schools are using the excellent books published by Mr. Musselman. Those in the East will find them well worth considering, along with the many other worthy publications, for bullets of which this journal is headquarters.

E. C. MILLS, Script Specialist.

195 Grand Av., Rochester, N. Y.

You should have your new work on bookkeeping correspondence, etc., illustrated with the best script models. Over seven years of almost exclusive experience in preparing copy for the photo-engraver. Read copy for estimate.

CARDS! CARDS! CARDS!

W. McBECK, 19 Snyder St., Allegheny, Pa.
Movement, Method, Style

Movement, in my opinion, is the first thing to be considered. It requires a short time to get the average student to understand how a letter should be made, but if he cannot move properly, he cannot make the letter. For beginning students, I believe in trying to get them to use as nearly pure muscular movement as possible. But after a good forearm movement is developed, I believe that a combination of the forearm, wrist, and finger movement should be taught, provided the student wishes to go beyond an ordinary business hand and become an accurate writer. The forearm movement, however, is the foundation of all good writing, and until the student has acquired that, a teacher cannot expect very flattering results. So I have learned that the way to get the best results is to make the student believe that a pure muscular movement should be used, for the majority of them will use the fingers to some extent at the best the teacher can do, and, if they are instructed to use the fingers on certain parts of letters, they will have hundreds of public and high school graduates come to us for a course in penmanship. They have been taught the vertical system, they have found that their writing has no practical value, and that they must learn the slant writing before they can perform employment in the business world.

T. B. Bridges.
San Francisco, Calif.

How to Hold the Pen.

Third Finger the Bone of Contention.

"HEW TO THE LINE, LET THE CHIPS FALL HOW THEY WILL."

Mr. Henry asks: Before reaching an adverse criticism, "What becomes of the third (3rd) finger," and at no time seeks to answer. This conveys an expression of doubt, and to differ without full and complete evidence is unjust and unlawful. If ignorance is set up for a defense, then the suggestion of "cutting off the finger" is facetiously funny. A statement based upon a difference, with doubt entertained is not convincing.

The "Old Way" of manipulating the pen (and persist in by our army of regular teachers who know no wrong, produces greater havoc than the nefarious substitute for writing of "Ye Olden Time". You may force error in the attempt at acquisition, but the evolution of swiftness and endurance will not appear till after duty's call.

Originally the outline for penmanship containing Shade, and the straight holder adjusted so that the pen would have even pressure, placed the fulcrum on both nails of the third and fourth fingers. But now that Shad is foreign to the "Get-Money-Contest," we need no longer strain a point for beauty.

Disregard for penholding can be seen in the GENERAL WRITING of lessons of all school children. The fault is with the instruction and instructors and no blame should be saddled upon the children for producing infamous hyeroglyphics. The result is seen everywhere (that special instruction is withheld) and yet the cause is a dream.

Why is the diagonal holder in skillful hands, made to surpass the results of the straight?????? Is It HELD THE SAME? If there is a difference, what does it exist? Do our most skillful penmen use the nails in their highest execution? Now, one look into the business office and see how the hand rest is carried. C. H. PEIRCE.

AN OPINION FROM MASSACHUSETTS.

L. Madison.
1281 Third Ave., New York.
My experience with the "Madison Method" has been uniformly satisfactory. Before studying under your method in my classes of high school age, I knew nothing of the proper mechanics of writing, and the methods of holding the pen were not directed, nor was there any aid to students in the matter of punctuation and the rules of grammar. I have now a class of high school age, in the Madison Method, and the results have been most gratifying. I have since had other classes, and I believe the Madison Method is the best for the purpose. I would recommend it to all schools.

Very sincerely yours,
W. H. WILSON.

ESTERBROOK'S NEW PENS

No. 702
No. 707

MODIFIED SLANT OR "MEDIAL" WRITERS.

No. 707 Elastic

MONOPEX has a demand for a pen that is adopted to the Modified Slant or "Medial" Writing, to combine increased speed with legibility of the Vertical. To meet this we present our Modified Slant Pens. These Pens are made from the highest grade steel and are finished with unusual care that has made Esterbrook Pens the Standard for nearly half a century.

THE ESTERBROOK STEEL PEN MANUFACTURING COMPANY,
26 John Street, New York.
Works, Camden, N. J.
Mr. H. B. Lehman, one of the few American censorers of Specimen well-nigh in its purity, recently favored us with a specimen which, in the hands of others, are rarely equaled. Mr. Lehman has a touch that is quite decided, combined with a movement that is quite bold. Yet with all this delicacy and boldness he also combines that rare quality, accuracy. Mr. Lehman justly ranks among the few really fine professional penmen.

Mr. Fred S. Heath, Concord, N. H., dropped into our hands a very delightful card, having a genuine Maclavon flavor.

One of the biggest as well as one of the best batches of specimens of business writing from the students of any school recently, came from W. X. Currier, penman and teacher of commercial branches in the Rider-Moore & Smart Schools of Business, Trenton, N. J. Mr. Currier is a hustler if there ever was one in the school room. He has ideas upon the subject of how writing should be taught, and does not hesitate to subordinate them to any one else's. The result is that he brings to bear upon the teaching of writing not only skill and intellectual force but common sense as well. This makes the work intensely interesting and practical. The specimens throughout are uniform in good penmanship which are excellent, none of which are poor.

Mr. J. M. Holmes, principal of the commercial department of the Bradford, Pa., public schools, has recently secured a specimen of business penmanship from the students of that department, which we need say that we have never seen anything more practical from the public schools, and rarely ever anything as practical from business schools.

Mr. Holmes is a fine penman, and one of the best men in his profession. He gets results of the most simple, serviceable kind, with as little fuss and flourish as any one who knows a thing is likely to make.

J. E. Joiner, proprietor of the Columbia Commercial University, Lancaster, Ohio, suburb of Kutztown, Pa., has sent us a specimen of business writing from the pupils of his school, and we find that they compare very favorably with those from other schools of this class. In fact, they are above the average of such specimens, being among the best received by us. They all show a clear and easy movement and more than readable forms, being fairly accurate, uniform and systematic, and are acceptable in the greater part of their writing. We heartily know him to congratulate him, Mr. Joiner or his pupils, as both deserve credit.

The students of Darling's Business College, Fergus Falls, Minn., recently presented to us a Specimen of business penmanship from pupils of this institution, with a handsome stop-watch as a testimonial of their high appreciation of his efforts in their behalf. Mr. Johnston has awakened unusual interest and developed exceptional ability along the line of rapid calculation and practical business writing. His test was the watch was the earliest date of these products.

A number of well written specimens, ornamental style, have been received from P. H. McElroy, Westford, Mass., and commercial teacher of that institution with a handsome stop-watch as a testimonial of their high appreciation of his efforts in their behalf. Mr. Johnston has awakened unusual interest and developed exceptional ability along the line of rapid calculation and practical business writing. His test was the watch was the earliest date of these products.

Mr. O. T. Johnston, penman of the Darling Business College, Fergus Falls, Minn., in closing the Specimen of business penmanship from pupils under his instruction, which disclose splendid training in armor penmanship, Mr. Johnston is an iron worker, skilled penman, and we are not surprised at the results he is securing. Excellent work was sent from a.

X. Anderson, R. M. Reim, E. W. Miller, Elmer Joes, Adolph Bee, Rhoda Halberg and others.

Mr. E. T. Zerkle, of St. Paris, O., recently favored us with a package of specimens from the students of the grammar school and High School of St. Paris. The work is uniformly of very high quality, well uniform as well as in movement. The work possesses much of the character found in the writing done in our best business schools.

Mr. W. B. Greider, supervisor of writing, drawing and bookkeeping in the public schools of Greensburg, Pa., recently submitted specimens of students' work for our decision for the awarding of prizes. The students receive but twenty minutes instruction twice a week. Considering the length of time given to this branch and the excellence of the results secured, we must say that we have never seen the work executed so uniformly well. The prize winners were: Olive Crowson, David Kilgore and Helen Turner. Mr. Greider was so uniformly excellent that we had difficulty in determining which was best. The students as well as the system in their work do not advantage any one.

The specimens are well executed, copying script, and are written by the best school. The specimens are well executed, copying script, and are written by the best school. Some well executed engrossing script has been received from Harry J. Winstan, engrosser of some of the most interesting specimens of the Massachusetts Mutual Life Insurance Co., Springfield, Mass. Mr. Winstan's work is quite professional, indeed.

A Hummer.

Your paper is certainly a "hummer," and every issue seems to surpass the previous one.

The Business Educator Arousing Interest.

W. H. Kinyon, proprietor of the Pawtucket, R. I., Commercial College, recently favored us with a good club, and with it were the following much appreciated words: "Our pupils enjoy the columns of THE BUSINESS EDUCATOR very much, and I consider it one of the best mediums that I have ever used for class work. Some of our students are very enthusiastic in regard to the magazine, and I think before the year is out you will feel the benefit of their enthusiasm."

February Numbers Wanted.

The heavy demand for the February BUSINESS EDUCATOR exhausted our entire edition before we were aware of it. If any of our friends can spare a few of that number we would thank them very much if they would mail them to the office of THE BUSINESS EDUCATOR at once.

In Anticipation.

We have on hand a very readable article on movement, methods, etc., for teaching business writing, from the pen of Mr. T. B. Bridges, of the San Francisco, Calif., Business College, which will appear in an early number of our journal.

We expect to hear from Mr. Bridges frequently in the future.

Mr. Ball Speaks.

I have just received the March number of THE BUSINESS EDUCATOR, and am so well pleased with it, and the subscribers among our students are so well pleased with it, that I must write you in congratulation of your efforts. It is one of the finest numbers I have ever seen devoted to penmanship and business education.

I think I can send you another club of subscribers within a short time, which I shall take pleasure in doing, and wishing you continued success, I am,

Very sincerely,

C. E. BALL
Mankato Commercial College,
Mankato, Minn.

Best in America.

J. C. Blanton, a skilful penman of West Point, Ga., renew his subscription to THE BUSINESS EDUCATOR, and compliments the journal in the following language: "THE BUSINESS EDUCATOR is the best paper of its kind in America."

A BUSINESS SPELLER

A comprehensive little book on Spelling. 120 pages of words most frequently seen in business correspondence. Divided into lessons of fifty words each. Several lessons of words pronounced alike, but spelled differently. Just the thing for the school room. Sample copy sent postpaid for 25 cents.

BUSINESS LETTER WRITING

Other books published are "Musselman's Practical Bookkeeping," "High School Bookkeeping," "Commercial Law," "Commercial Arithmetic."

Try a Box of Musselman's Perfection Pens—25 cents

D. L. Musselman Publishing Co.
QUINCY, ILLINOIS.
The Business Educator

This is a splendidly bound, finely printed manual of one hundred and twenty pages, prepared primarily for the teacher of shorthand and for the one preparing for teaching.

Method of teaching has heretofore been given but little attention by commercial teachers, and we are glad to note in this book a tendency to base business education on the same scientific basis as has characterized the instruction of the common branches.

This is a book that is not only of value to the teacher of Isaac Pitman Shorthand, but to the teacher of any other system or any other branch, such as penmanship and bookkeeping.

A General History of Commerce, by W. C. Webster, lecturer on Economic History in New York University. Ginn & Company, publishers. This book gives a general survey of the commercial development of the world from the earliest times to the present. It attempts to interpret the history of civilization from the commercial point of view, showing the many inter-relations between commerce and the other factors in the progress of civilization. The book has been so planned that it can be used in various ways in different schools: (1) as a text-book in secondary schools that offer regular courses in economic history: (2) as a text-book in the lower classes of colleges, and (3) as a companion back to the study of "general history," or the history of particular nations, in all schools. The book is equipped with an abundance of maps and other illustrative material, as well as with reference to the best accessible authorities. There is a growing demand in a very important field of study which no work now issued attempts to meet so adequately as Dr. Webster's scholarly and practical manual.

Elementary Commercial Geography, Cyrus C. Adams, published by D. Appleton & Co. The author of this 75-page text-book has become well known through his first book on Commercial Geography. Much of the minutiae of the larger book has been omitted without seriously impairing the efficiency of the book for schools that desire to give a short course in this subject. This is a book that is not only of value to the teacher of Isaac Pitman Shorthand, but to the teacher of any other system or any other branch, such as penmanship and bookkeeping.

The treatment of foreign countries is on broad lines. The book is excellently illustrated with half-tone diagrams and maps. This seems to be a text well adapted to commercial school work.

The Peman's Cork-Screw—The kind that uncoils spirals which delight but do not deaden, which inspire but do not intoxicate.

AMERICAN COLLEGE EXCHANGE, Cumberland, Md.

Founded 1886. Box 534.
Headings. Elaborate designs are not always the most attractive, and the student must bear this fact in mind in laying off work for headings and similar purposes where plainness and simplicity are the leading qualities. The drawing may be both decorative and illustrative or shown in the headings given herewith. The main

reading, looks, etc., at once suggest the purpose of the heading, and the design is quite complete without the lettering. Put as much meaning as possible into the drawing and let the lettering do the rest. However, if an elaborate letter is used, very little decorative ornament should be shown elsewhere in the design. In the word "Publications" we have used a letter that is plain, simple, and quite unique. In working up the heading "News Items," the plan followed was about the same as above outlined. The effect of this heading would have been enhanced if a drawing illustrating wireless telegraphy had been adapted, but Marconi's plans are not sufficiently matured for us at this time to use drawings of his invention for decorative or illustrative purposes.

Lessons in Engrossing Twenty-four—By H. W. Ribbe, 181 Tremont Street, Boston, Mass.

Sometimes the matter to be engrossed is very long. In such cases full pages may be written compactly, as in copy, or spaced to suit the engrosser's taste. Uniform spacing, shading and slope are necessary in page writing. The copy was written on lines eleven inches long and one-half inch apart. We advise the student to rule such a page and copy this lesson, and then write a second page from a printed copy or from manuscript. Rule head and base lines only as pencil guide lines.

LEARN AUTOMATIC PEN-WORK If you want to learn an art that is both profitable and interesting, try Automatic Pen Lettering. THE GREATEST OFFER EVER MADE COMPLETE LEARNER'S OUTFIT FOR $2.00 (WE DO IT TO INTRODUCE TO YOU OUR GOODS.)

COPY OF FAUST'S COMPENDIUM OF AUTOMATIC PEN LETTERING AND DESIGNS.
3 SIZES AND STYLES OF AUTOMATIC PENS.
3 COLORS OF AUTOMATIC SHADING INK.
1 BOTTLE OF ADHESIVE.
1 BOTTLE OF GOLD INK.
3 PKGS OF ORNAMENTS, METALLICS, FLOCKS, AND DIAMOND DUST WITH INSTRUCTIONS FOR USING THE SAME.

This is the most complete outfit ever offered for anything like the price, and our goods are first-class—they do the work. If you have the compendium you can get the balance of goods for $1.00, prepaid. Order it once.

AUTO PEN AND INK MFG. CO., 73 Rush St., Chicago.
Lessons in Show-Card Marking and Painting, and Automatic Lettering

By W. A. Thompson, Pontiac, Michigan

Automatic Shading Pen Lettering

Number Nine.

The Automatic Shading Pen is so constructed as to produce two colors or shades at a single stroke from one color of ink. It is a strong and perfect device for rapid and ornamental lettering of various styles, and is daily becoming better known and its field of usefulness is unbounded. This style of lettering in Show Card work being above the ordinary style of printing or writing, attracts attention to the goods advertised. Notwithstanding the many merits of these pens many have found it difficult to get good results, simply by not understanding or having a proper method of lettering, to do the pen and themselves justice.

If you have carefully followed the instruction and outlines in Marking Pen Lettering given in December, January and March numbers, you will be in good position to make a very creditable beginning in "Automatic Lettering," and in a short time you will excite the curiosity of your friends by rapidly executing new and novel designs in general lettering, also in forming combinations of colors and shades in a few minutes that can not be duplicated in as many hours by the most successful sign painter.

Outside of the practical and unique effects in this class of work by these pens, they enable the learner to acquire the proper formality, that is the beauty of styles of lettering with a greater degree of ease and accuracy than can be done in any other way.

In this lesson we present a rapid marking alphabet. You will notice the Shading Pens used are considerably wider than the Marking Pens you have been using in former lessons. Hold the Shading Pen exactly the same as Marking Pen (see Fig. 3 in December number), and be careful to keep the pen at one angle—see lettering. Study carefully the combinations of the letters, so as to have your shading uniform. This is important. See letter H in the large letters in first line of illustration. Make first stroke, then cross bar and then finish with last stroke. When making letter S always begin with bottom stroke, and build up, the top stroke being the last made. Pay particular attention to the make-up of these letters, as you proceed, and you will readily catch the idea for neat joining of the different parts, so as to bring them clear and distinct. This will help you in forming the other letters of this alphabet. In the smaller letters note carefully the curvature, length and width of each. See how the stroke l and curve of o are combined. In making d, first make small o, then add stroke J close to the right; finish h like 6.

Once more in regard to your inks. Shading ink should be a little thicker than the ink for marking pens, but in your practice work if you use ordinary manilla wrapping paper of a fairly smooth surface, the ink you have been using in former lessons will throw two shades and will work very nicely. In using paper or cardboard of a better quality, your shading ink will have to be of the proper consistency to produce two distinct shades. If your ink does not make two distinct shades, (with the Shading Pen) it is too thin. In this case add a few drops of Gum Arabic; this, when dissolved, will thicken the ink. If the ink makes broken work and does not work smooth, it is too thick; to remedy this add a few drops of water and mix. When practicing always keep glass with about half an inch of water in same on table or desk as in December lesson, so as to keep your pens in good working order.

WANTED

MANAGERS

Managers of our branch schools usually make from $300 to $600 per month salary and commission. We, perhaps, pay better salaries after teaching prove ability than any other college pays. We want teachers and managers who can raise enough stock to guarantee personal interest. Have recently organized Stock Company. Capital Stock $100,000. Dividends guaranteed by a bank. Have eight colleges established and expect to open more. A 48 page booklet entitled "A Little Talk about a Big Success" will be sent free to any one. No competitors. Not Excluded. It tells all about our plans for organizing a stock company. What our profits have been for the past few years and many of the ups and downs of the founder of Draughon's Colleges since the first one was established fifteen years ago. On wheels. Write an interesting and informative short story of self, home and background. Send for it.

Address:

...DRAUGHON'S... Practical Business College Co., NASHVILLE, TENN.
Too much arm movement and speed applied to the beautiful forms generally recognized as Spencerian, lead to illegibility in the business world. As a consequence there has been a tendency, during the past decade, on the part of practical teachers, to omit flourishes and shades, and later, to diminish the number and length of initial and final strokes.

The Business Educator was the first to recognize the fact that the hand still generally taught was constructed too much along lines of beauty and skill rather than plainness and ease, and it was the first to advocate by precept and example simplification of form as follows: Smaller, plainer, less skillful capitals; shorter and fewer loops; more rounding turns; smaller articles and fewer and shorter initial and final strokes. In a word, it advocated, and still advocates, plainer writing, simpler writing, faster writing, easier writing.

The speed and movement advocates neglected form—they grasped but a part of the whole truth. Form and movement ought to be united—the one the complement of the other. Progress in the art of writing has been brought about by modification of form, and if we wish to continue to progress, we must do so by improving the form along lines of plainness and ease. The so-called "flourisher" movement does very nicely for professional purposes; it may suit the user. Fingers were made for use and people will employ them in their writing. It is the office of teachers to see that they do not employ them to excess.

Compliment from Oklahoma.

"It is my opinion that THE BUSINESS EDUCATOR is far ahead of any periodical edited along similar lines, and you shall always have my hearty cooperation and support as long as your papers are published."—J. W. CORNELL, Eagle City, Okla.

Appreciated in Louisiana.

The Business Educator gets better every issue, I cannot find words to express my appreciation of it. The February issue is well worth the subscription price of it for twelve months. May it long live and carry on the good work it advocates.

V. R. BOYETT, Montgomery, La.

Dudley in Des Moines

From the Des Moines Daily News, April 5th, 1903, we learn that Mr. A. W. Dudley, Marshalltown, La., has purchased the Iowa Business and College Des Moines, Iowa, and added thereto the Capital City Telegraph Institute.

Mr. Dudley is a business educator of more than usual force and ability, and we therefore predict that the Iowa Business College will be a more important factor in the educational world than it has been in the past. We certainly wish him success.

Commissioner Myers

Business Educator, Columbus, O.

Dear Sir: This will inform you that I have recently been elected County School Commissioner of Henry County, Iowa. This office will not interfere with my duties as principal of the consolidated Department of our public school, and I will, in the future, continue to use your valuable publications heretofore.

With best wishes for your continued prosperity, yours, with the best wishes for commercial training, commercial departments of public schools, and business training in general. Your's respectfully,

S. C. MYERS, Shelbyville, Mo., April 16, 1903.

"The Devil Himself Doesn't Know What I Am Going to Talk About.$

A Presbyterian pastor and a Methodist deacon were arguing about the necessity and the value of making preparation for the Sunday sermon. The Presbyterian brother stoutly maintained that it was indispensable that careful preparation be made, by means of a thorough study of the principles underlying the subject to be discussed, by outline, by illustrations, and finally by applying the truth concretely. But the disciple of John Wesley held that all such labor and forethought was not only a waste of good time but that it was an irrefutable proof of a lack of faith. "For," said he, "it is written in the Bible, 'Take no thought how or what ye shall speak: for it shall be given you in that same hour what ye shall speak.' Furthermore," he continued, "it is well known that the arch enemy of mankind is ever present to turn to bad use the efforts of the good; so I make no preparation at all, and then when I get up to speak the devil himself doesn't know what I am going to talk about." Did you ever hear this preacher? Did you ever observe his brother, the teacher whose fundamental principle of pedagogy is, 'Learn to do by doing?'

This catch phrase shows the malignant power of words, for, notwithstanding the large sale of some of these actual business-from-the-start systems of bookkeeping, some private college school men, who have large interests in these publications, do not use them in their own schools. They hold that the plan of years ago—that the preparation of the sermon should precede practice application of the principles—is the best that has been evolved for the most effective teaching of bookkeeping and the use of business forms. We agree with them.

The most successful teachers of bookkeeping invariably supplement any of these actual business-from-the-start systems with a thorough drill on journalizing, posting, taking trial balances, making statements, and closing ledger accounts, before launching into the handling of business papers, which is new enough to the average student of bookkeeping to justify special treatment, apart from his study of the rules of bookkeeping. We save both teacher and student all of this bother and twisting of an author's plan, by presenting the theory first, so that a student may be thoroughly taught the underlying principles first, with two, or three sets—as the teacher chooses— in which to apply the principles, before taking up the work on business papers. But we have the business papers—Business Practice, as it is sometimes called—and they are in the most attractive and convenient form of any I know of. Besides they are not so voluminous, so connected, nor so expensive as to be prohibitive to those who desire to do only a reasonable amount of this work in a course, which may be necessarily short; although they are so elastic that they will provide all of the work that the best students can do—when our Complete Practical Bookkeeping is used—in a one year course in Bookkeeping, Business Practice, and Office Work. These books stick wherever they are given a fair trial. They save time, money, and educational waste. Let us send you descriptive circulars.

Do not overlook the fact that we stand alone in providing fully for the English work of commercial schools—Spelling, Correspondence, and Language—all prepared to meet the peculiar needs of commercial classes, in an adequate manner. These books are used and commended by the foremost commercial teachers of this country. Besides, we have text-books on all other commercial subjects, except Geography and Economics. If you are not quite satisfied with some of the books you are using, let us see what we can do for you.

The Practical Text Book Company, 479 Euclid Avenue, Cleveland, Ohio.
THE CAUSE AND CURE
OF DISEASE EXPLAINED

THE ONE CAUSE
Nature originates and destroys.
The destructive process begins with the fermentation and decay of blood corpuscles.
The cause of this fermentation is from Bacteria or microbes in the system.
The fermentation does not take place without air, heat and moisture—for the germs or microbes are living organisms, that multiply in myriads with great rapidity.
These microbes when fully developed, colonize in great numbers and attack the various vital organs of the body by feeding on the tissues thus producing inflammation which is sickness.
If there were no microbes there would be no fermentation, hence there would be no sickness; life would continue indefinitely; suffering brought about by ill-health would cease and the processes of nature would stagnate.
To this law man is no exception, and in it is the secret cause of all disease.
No sickness can come on without microbes in the blood.
The universal cause of disease is microbes which pillage and destroy.

Enlightened Science Admits that all Sickness is Caused by

GERMS OR BACTERIA
Poisoning and Wasting the Blood, the Tissues and Vital Organs.

THE ONLY UNIVERSAL REMEDY, FOUND ON THE GERM THEORY OF DISEASE, AND FULLY PROVEN BY TWENTY YEARS OF SUCCESS, IS

RADAM’S MICROBE KILLER
A PLEASANT TART DRINK; ABSOLUTELY HARMLESS.

- It Kills the Microbes of the Skin and cures ECZEMA.
- It Kills the Microbes of the Throat and cures BRONCHITIS.
- It Kills the Microbes of the Lungs and cures CONSUMPTION.
- It Kills the Microbes of the Kidneys and cures BRIGHT’S DISEASE.
- It Kills the Microbes of the Blood and-muces CATARRH, RHEUMATISM, CANCER and all other Blood and Chronic Disease

Williams's English Grammar

1. The plan of this book is such that the maximum of effort on the part of the pupil is obtained with the minimum of labor on the part of the teacher.
2. Every discussion is followed by copious exercises which the student is required to prepare as part of the assigned lesson. "Learning by Doing," receives a practical exemplification.
3. The exercises are carefully graded and so arranged as to take the student over the subject with no breaks in his progress. The rules and definitions are pointed, yet comprehensive and accurate, and each emphasize the practical side of the subject.
4. A very simple, straight line system of diagrams is employed. Any teacher, who is familiar with the so-called "Reed & Kellogg" system, will have no difficulty whatever with this book. Enough diagrams are introduced to afford the teacher a guide, leaving the amount of work to be done a matter to be determined by conditions.
5. A number of carefully planned review lessons are a strong feature of the book. The material for review is always at hand, and the teacher has only to assign the questions to know that the pupil is reviewing systematically.
6. A chapter on "Idioms" will commend itself to all thoughtful teachers.
7. A chapter on "Peculiar and Difficult Constructions," fully illustrated by means of diagrams, will be found helpful in solving those difficult problems that are constantly arising in the grammar and rhetoric classes.
8. Punctuation and capitalization are given careful attention. Very few, if any, text-books on this subject offer the comprehensive discussion of punctuation and the amount of practice work that is found in WILLIAMS'S ENGLISH GRAMMAR.
9. The proper emphasis is placed upon the practical phases of the subject. The case-forms of pronouns, the agreement of verb and subject, and of pronoun and antecedent, and the formation of plurals and possessives are given adequate space and attention.
10. WILLIAMS'S ENGLISH GRAMMAR is complete. It does not undertake to discuss orthography, nor does it trespass upon the field of rhetoric, but it covers the subject of grammar thoroughly.

IT IS THE IDEAL GRAMMAR FOR THE COMMERCIAL OR SHORTHAND STUDENT.

HOW TO GET A COPY

We should be glad to give a copy of this book to every teacher who is really interested in the subject and would be willing to recognize and adopt a book better than the one he is using, but it is impossible for publishers to undertake to make a gratuitous distribution of their books among all who may apply to them. Therefore, we make the following offer which will appeal to all teachers as eminently fair.

Send us 50 cents for a copy of the book. The money will be returned in case your school adopts, or you may return the book at our expense after you have examined it, and the purchase price will be refunded. Very liberal introduction terms will be made to teachers or to school boards. WRITE US TODAY.

OUR SPELLING BOOK IS USED IN HUNDREDS OF SCHOOLS.

Answers Are Coming In

We hope to receive hundreds of solutions to the merchandise problem submitted in the March issue of the Educator. We regret to state, however, that so far very few correct answers have been received. They do not show THE CORRECT COST OF THE MERCHANDISE PURCHASED, because only the Budget Systems of book keeping explain the correct method of keeping the Merchandise accounts. Of course others will quickly follow our lead, but it was ever thus. The correct solution with statements will be published in a later issue of the Educator. Watch for it!

COMMERCIAL AND INDUSTRIAL BOOK-KEEPING

supplies a complete course of instruction contained in five separate sets, each illustrating an important system of accounting as adjusted to meet the requirements of special lines of business.

BUSINESS BOOK-KEEPING AND PRACTICE

also supplies a complete course of study, being divided into five sets differing somewhat from the Commercial and Industrial Book-keeping course, but covering the same general ground. Both these publications, known as the Budget Systems, possess so many unique and distinctive features that they cannot be classed with any other similar publications intended for school use. They both employ the ILLUSTRATIVE method from the start, using all the business papers because that is the only method that presents the history of the business in the form it will come to the practicing book-keeper.

Sadler’s Commercial Arithmetic & Essentials of Business Arithmetic

are showing largely increased sales over any previous year. That is because they possess superior teaching qualities and reflect the practical operations of the counting room much more completely and accurately than any of the hundreds of arithmetical publications that are continually being exploited as “something new;” and “something superior,” etc.

A Copy of LISTER’S BUDGET OF WRITING LESSONS THAT TEACH

in the hands of the pupil will give him more and better instruction in learning how to write than all the penman’s journals in the world combined and condensed, and the budget of writing lessons does not cost nearly as much, either. The sale of this budget of writing lessons this year has been four times as large as any previous year since its publication.

BILLINGS’ SYNTHETIC SHORTHAND

is based upon the Graham-Pitmanic principles. The thousands of teachers who still stick to the old and reliable Pitman basis will find this book to be worthy of their careful consideration. Month by month new schools are teaching it and it is gradually being introduced by the best teachers into the best schools. A new edition has just been received from press. Send for a circular describing special features.

RICHARDSON’S COMMERCIAL LAW

is the biggest seller on the market.

EARNEST’S ENGLISH-CORRESPONDENCE

is not a picture book. It is just a plain, honest, effective instrument in the hands of teacher and pupil on the subject of English and correspondence.

We desire to receive communications only from teachers or school officers. State your wants fully in writing for information.

FOUR GRAND GOOD BOOKS

For the Consideration of Progressive, Thoughtful Teachers of Commercial Branches

LYONS' COMMERCIAL LAW

This book is teachable as you have found no other book to be. It is admirably arranged and your pupils will not find its study dry and uninteresting. By far the most widely used book published on the subject.

OFFICE METHODS AND PRACTICAL BOOKKEEPING

Contains all the good features of other publications and many new ones. It never fails to interest the student. The advanced part of this work comes nearer to portraying actual office conditions as adapted to the school room than has any other work.

MODERN BUSINESS SPINNER

This book is not a mere list of words—it contains features you have never before seen in a speller. Though only a year on the market it is already the leading business and high school speller. Write for a sample lesson from it.

OUTLINE OF COMMERCIAL GEOGRAPHY

The high schools that are looking for a work on this subject, that is truly educational, that will lead the pupil to results that are positive and valuable, will be delighted with this work.

We will send you further and more explicit information concerning these as well as such other of our books as may interest you. Superintendents, Principals and Commercial Teachers are invited to write us of their needs for such books.

1133 Broadway, New York 24 Adams St., Chicago 723 Market St., San Francisco
OUR GREATEST DIFFICULTY

For three years we have been unable to supply the demand for well qualified teachers of Gregg Shorthand. Next September more commercial schools will adopt Gregg Shorthand than at any previous time in its history—IF WE CAN FURNISH THEM WITH TEACHERS.

A Brief Explanation

Let us explain the conditions confronting us:—

The demand for our system has been created, and in many sections of the country intending students of shorthand positively demand the Gregg system. The school naturally desires to secure these students, and the introduction of Gregg Shorthand follows as a matter of course. It is impossible, however, for a commercial school to change systems suddenly, as the course of instruction in the old system must be completed with students already enrolled while new students are started on the Gregg. For this reason we are bombarded each year with urgent requests for teachers of Gregg Shorthand who are also competent to give instruction in some other system—Graham, Pitman, Munson, Dement, Cross, or whatever the system may be which has previously been taught. As the adoption of our system by an important school often depends upon our being able to supply such a teacher, it is naturally very disappointing to us when we cannot do so. This has happened at least a dozen times in the past six months—several of the positions offering salaries of from one thousand to fifteen hundred dollars a year.

A Great Offer to Teachers

We must provide teachers or lose business. To meet the demand we are going to give

Free Instruction in Gregg Shorthand

by Mail to One Hundred Teachers

This course of instruction will be conducted under the direction of the author of Gregg Shorthand, and will consist of the splendid course of lessons and exercises prepared for the use of schools and teachers desiring to develop a mail instruction business. Many teachers have already taken the course, paying the regular tuition rates, for the purpose of learning our methods of giving mail instruction.

There will be absolutely no obligation on anyone to adopt Gregg Shorthand at the end of the course unless he desires to do so. Our sole object is to provide teachers to meet the demand next season. The merits of the system, and results accomplished, will do the rest.

If you desire to avail yourself of this offer, write us promptly, as the instruction must begin immediately in order that the teachers be ready for next season.

THE GREGG PUBLISHING CO.

CHICAGO
NEW YORK, MAY 5, 1903.

Gentlemen: Kindly enter our order for one thousand (1000) copies of the Isaac Pitman complete "Shorthand Instructor"; five hundred (500) copies of the Van Sant System of Touch Typewriting (pamphlet form), and one each of every book in the Isaac Pitman System for our school library. We take this opportunity to congratulate you on the marvelous growth of the Isaac Pitman Shorthand throughout the country, and especially in and around New York City. We would further say, that we are satisfied the results we are getting in our teaching are largely due to the excellence of the system we have adopted. We are.

Yours very truly,

ESTEY, MCREE & GARDNER.

SUCCESSFUL BOOKS.

Send for 24-page Catalogue and "Reasons Why."

Isaac Pitman & Sons, 31 Union Square, New York.

GOOD TEXT BOOKS

THAT ARE ESSENTIAL TO A THOROUGH COMMERCIAL COURSE

THE BOBBS-MERRILL COMPANY Publishers
Indianapolis USA

Spencer's Elements of Commercial Law

Treats the subject from the standpoint of the business man. Uses language clear, simple and free from technicalities. Points out the legal errors that business men are apt to fall into and tells how to avoid and correct them.

Nelson's Commercial Arithmetic

A thoroughly practical business arithmetic for commercial schools. Treatment of the various mercantile subjects according to the best business practice of to-day. The book is the right size for a thorough course, neither too large nor too small.

CORRESPONDENCE INVITED
St. Louis World's Fair Exhibit Committee
of the National Commercial Teachers' Federation

ST. LOUIS, MO., 1903.

At a meeting of the Private Commercial School Managers' Section of the National Commercial Teachers' Federation, held in Milwaukee, last December, a committee was appointed to arrange for an exhibit of the Private Commercial Schools at the World's Fair to be held in St. Louis in 1904, from May to November. The chairman of this committee has had several conferences with the chief of the Educational Department of the World's Fair. He so esteems and values the importance of the branch of education represented by the Private Commercial Schools, that a floor space of 10,000 square feet, in the Educational Building, has been promised for a collective exhibit, provided that said space be properly utilized.

The chief of the Educational Department desires this committee to inform him at once how many schools will join in a collective display. We must, therefore, immediately ascertain the exact number of schools that will participate.

The manner of display will be attractive, and in line with other educational exhibits. The name and location of each school will be with its own exhibit. It has also been suggested that we publish for free distribution in pamphlet form, a treatise on Private Commercial College work, relative to methods of instruction, modern settings, etc., with illustrative cuts. This pamphlet is also to contain the names and locations of schools represented by the collective exhibit. There is no question but that the right kind of an exhibit with a generous distribution of the proposed publication, or something along this line, will result in great benefit to every school joining in the display. This is the chance of a life time to give prestige to the good work accomplished by commercial schools.

The space allotted will be flat floor space and the arrangement of exhibits, as well as the layout for same, will fall upon the exhibitors.

The Committee have arranged for 60-inch quarter sawed high roll-top desks as units of exhibit.

That we may have funds on hand with which to operate, it has been decided to require every school, college, or publisher desiring to make an exhibit to pay an entrance fee of $25.00 which will be placed in the hands of the secretary and treasurer of this association, Mr. George P. Lord, Salem, Mass., and be used towards paying expenses of the collective exhibit.

A school or publisher can use one or more desks, but the entrance fee on each will be $50.00 and the additional expense for each desk will be prorated among all the exhibitors. The total expense should not exceed $90.00 per desk, and if a large number join, it may be made less. Schools or publishers desiring two or more spaces will be supplied with one high roll top typewriter cabinet suitable for the make of machine they desire to place with the shorthand exhibit. Any school desiring to do so will be allowed to have an operator at the machine during the open hours of the Exposition. At the close of the Exposition, the exhibits will be packed and shipped to the exhibitors. Any one so desiring can have the desks at cost and all desks not taken by exhibitors will be sold and the money prorated among the exhibitors.

If you are willing to lend us your influence and cooperation in making an exhibit, and thus advance the best interests of business education in America, let us hear from you at once.

Respectfully,

E. H. FRITCH, Chairman

S. VAN VEET.

L. A. ARNDT.

Central Business College, Denver, Colorado.

Committee.

Fifty Thousand Dollars for an Exhibit of Business Education at the World's Fair

A meeting of leading business educators, including J. W. Warr, President of the National Commercial Teachers' Federation, and Enos Spencer, President of the Private Commercial School Managers' Association, was recently held at St. Louis, at which nearly all the local schools were represented. After a careful consideration of the plans proposed, it was decided to make an exhibit in every way worthy of the name, and to this end the World's Fair Exhibit Committee was empowered to correspond with all the Private Commercial Schools in the United States and Canada for the purpose of enlisting their cooperation. As there are about two thousand of these schools in existence, it was considered not impracticable to attempt to raise Fifty Thousand Dollars for the purpose of making an exhibit that will be in every way creditable to the cause of business education.

The World's Fair Committee, of which E. H. Fritch of St. Louis is chairman, will be glad to supply full information regarding the exhibit and invites correspondence and suggestions.

E. H. FRITCH, Chairman

St. Louis World's Fair Committee of the Private Commercial School Managers' Association.

50 Olive Street, St. Louis, Mo.

Dear Sir:—

Enclosed find exchange for $......................, payable to Geo. P. Lord, Secretary and Treasurer, as Entrance Fee for Exhibit Desk..... and space in the PRIVATE COMMERCIAL SCHOOLS' COLLECTIVE EXHIBIT at the St. Louis World's Fair, 1904. We agree to pay when asked to do so, our pro rata share of the additional expense of the exhibit and to furnish before April 15, 1904, the material we wish placed in our exhibit.

Respectfully,

For.............................................................College.
The Boston Convention of the National Educational Association will undoubtedly bring together the largest attendance that has ever been recorded in the history of this mammoth organization. A list has been compiled that from 20,000 to 25,000 teachers and tourists will take advantage of the reduced rates and the special excursions, locally arranged, to the places of historic interest and natural interest in and near by Boston. There is a wealth of interest attaching to the eastern shore of New England, and its attractions can nearly all be enjoyed during a visit from one to five hours (including the trip to the White Mountains), by rail or on the ocean, at slight expense. So much is said about the educational features of a trip to eastern New England that many do not realize that it is a country of surpassing natural beauty. We have seen the most picturesque scenes in this great country, but, for a delightful combination and variety of beautiful scenery, we have not seen anything more pleasing than can be found in New England.

The meeting this year of the Business Educators’ Section of the N. E. A. will be unusually interesting, and the meeting, at the same time, of the recently organized New England High School Commercial Teachers’ Association, will afford all high school commercial teachers an opportunity to observe the final steps in the organization of the last Association of this kind. Besides, the National Private School Managers’ Association will meet in Boston during the N. E. A. Convention. They will need an opportunity to take a needed vacation and to combine with it the enjoyment of one of the most practical and effective forms of educational travel. We hope to greet scores of our friends at this great gathering.

Visiting teachers should write at once to Edward R. Warren, Chairman of the Local Arrangements Committee of the N. E. A., Boston, engaging rooms, if they desire to obtain rooms in a private family. We advise that teachers who do not feel like spending a month’s salary for a week’s entertainment, plan to take rooms and breakfast in a private family in Somerville, Cambridge, Dorchester, Roxbury, Braintree, Malden, Melrose, Newton, Hyde Park, or some of the other pretty suburban cities, any one of which is practically Boston, because of the excellent connections by steam and electric cars, at from five cents to twenty-five cents fare. Of course there are many entirely satisfactory private houses available in the city of Boston, and among them is not exactly a Bar Harbor for refreshing breezes during the month of July.

Marston’s will be found one of the best inexpensive restaurants.

Hotels in Boston are nearly all on the European plan, and the hotels that teachers would want to go to are high priced, from the point of view of the average commercial teacher. We recommend the Touraine, Belle- vue, Parker House, Adams, Reynolds Thorndyke, Somerset, or Brunswick, in which rooms without bath will cost from $1.50 a day for the poorest to $3.00 for the best; and the rooms with bath will cost from $3.50 to $8.00, the latter being the price for the best rooms at the Touraine. The Tou- raine is the Waldorf-Astoria of Boston, a magnificent hotel. No room costs less than $3.00. The Parker House is a favorite with commercial travelers, although its prices, considering the comforts, are probably the highest. The Reynolds and the Adams are in a noisy part of the city and are not so satisfactory for ladies as the others might be. The Somer- set and the Brunswick are in the nature of fashionable family hotels, near to the meeting places of the various sections of the Association, although none of these hotels is very far away. The Thorndyke is a pleasant, rather quiet hotel looking over the beautiful public gardens. Its rates are moderate. We prefer the Belle- vue, a high-class place, within a few steps of the State House, on a quiet street—famous Beacon Street—but a stone’s throw from Boston Common, and close to the principal transfer station of the subway cars. Its rates are from $2.00 to $6.00.

The following are good hotels, in the business district of the city, at prices somewhat less than the foregoing: United States, Young’s, American House and Quincy House.

We do not mention the Westminster, one of the most desirable in the city, because it has been entirely reserved for two state delegations from the West. It is important, we repeat, that room reservations be made in advance, if possible.

At the Brooklyn Convention of the E. C. Positions T. L., considerable was said both for and against the practice of guaranteeing positions, President Miller making probably the most intense attack on the custom, and Mr. Archibald Cobb, Principal of Banks’ Business College, Philadelphia, the most able and vigorous defense of it. There are among our friends not a few who are guaranteeing positions under more or less careful restrictions, and, since there are plainly two sides to the controversy over this subject, we have asked Mr. Cobb to prepare for this number of The Educator a statement of his position on the question. In view of what has appeared in these columns in the past, it is hardly necessary to say that we are not only for the article of the debate. His contribution is not in any sense to be taken as an indication that The Educator has “turned American.” It is to signify that we want to be just to all classes of our readers. We commend to our readers, the article on another page, by Mr. Cobb, as a favorable presentation of the subject by one of its most successful advocates in this country, and therefore in the world.

A Commandable Plan

For the purpose of investigating the methods employed in the various manufacturing establishments of this city, groups of students are taken on Saturdays to see the operations of the factories and learn how their particular product is made. The students make inquiries into the methods of securing raw material, cost, how it is converted into the finished product, and how and where disposed of and in what quantities, etc. At the Friday Morning Assembly reports are made by the visiting students to the whole school assembled for the purpose of hearing the reports.

These visits are of very great value to the students, as they not only see for themselves how the articles are made, but they learn to make observations and later tell them before the school.—Brown’s College Journal, Peoria, Ill.
Guaranteeing Positions

ARCHIBALD COBB, PRINCIPAL OF BANKS BUSINESS COLLEGE, PHILADELPHIA.

A business cannot live within itself. There must be a law of demand to regulate the production of any marketable article. Obviously, the only reason for the existence of a business is the support or the satisfaction of a demand. In the way of demand for the product. In the degree that the business man fails to recognize this self-evident fact, in that proportion he is either deceiving himself or preying upon a lenient public which shall, in the course of time, arise and smite him with all its might.

It is often amusing to me to listen to the professions of men interested in the business of educating men and women. There is too frequently an assumption of righteousness and the wearing of a cap of dignity, which, in the case of those business men in other lines, is very much like the cone-shaped headwear our fancy places upon the cranium of the dullest in school.

WHAT IS A BUSINESS COLLEGE?

Come, let us reason together. I am adding to the army of competent, learned, experienced men and women, proprietors or teachers in business colleges throughout the United States. In order that we may get at the root of the matter we shall define a business college as an institution which educates and trains men and women along practical lines, thus giving them a comparatively short space of time to go out into the world and demonstrate their value in the transaction of business. We do not invade the field covered by universities and schools of technology. We do not compete with the courses given in these institutions, requiring from four to eight years of study and entailing the expenditure of some thousands of dollars. We are first and all the time striving to impart a practical bread-and-butter education, and, in order to practice what we preach, it is necessary that we so conduct our affairs as to appeal to our patrons in a practical way.

WHAT IS A BUSINESS COLLEGE FOR?

There is no insinuation more keenly and indignantly repelled by business colleges than that they are theoretical and impractical. You yourselves, upon being thoroughly in touch with the demands of the business world; if we do not say so, we imply at least that we are in business simply to improve the conditions of those demands. Gentlemen, to what end, or for what purpose are you educating your boys and girls? There is but one answer: that they may obtain positions. If you and I were honest and we could advise, we should tell everybody to go to college and spend the first twenty-five years of life in the pursuit of a broad and general education, to learn a profession, and then take a business course. The youth and inexperience of our students is the greatest bar to a realization of that dignity we should like to assume; and if our students were college-bred men and women instead of the ignorant, they would be removed. But, from the very nature of our work, this demoralization, devoutly to be wished, can never occur. The results we accomplish, in our dealing with humble subjects and immature minds, that we have dignity and that our calling is a worthy one. Is there a man or woman engaged in a business college work in any part of the world who does not recognize the fact that the sole purpose for which money is spent, labor performed, and time consigned to a bush is the ultimate securing of a position? Students enroll with you and place themselves under your care, not because they love the work, nor for their own good, but because need and want positions, and they believe that a mastery of commercial branches is the surest and quickest way to gain financial and lucrative employment. I do believe there is a business college in the world which does not treat in some manner the subject of positions, because it is the cardinal point of the school's existence. The attempts to make it dignified, plausible, and conservative are ludicrous in the extreme. As it is the real aim, the goal, the ambition which we propose to our students, it is the expenditure of money, why should we not treat it in a frank and honest manner? Gentlemen, if you have an inclination to do otherwise, you are definitely doing an injustice to yourself, and are endeavoring to stifle the criticisms of your own conscience.

HOW DO YOU TREAT THE POSITION QUESTION?

What do you say when your prospective student asks you about a position? Do you evade it or avoid it? Do you tell him there will be none for him? Do you allow him to depart from your school with the idea that he may and may not obtain a position? Assuredly not. I have in my mind's eye a picture of suavity, a patronizing air, a bland countenance, and an ecclesiastical rub of the hands, with the convincing assurance, "There has never been any time in the history of our college when we did not have more positions than the demand. If you don't sign a contract we will fill it with commercial men and women." And the prospective student, uninitiated and unsophisticated, will wonder at the mighty power behind the scenes to get business men and women to confide in the institution, and to take from its sheltering portals future Morgans, Schwabs and Cassats. Do you say those things, sirs, with frankness, with belief in your ability and an actual knowledge of the conditions which have prevailed since you first opened your benevolent institution?

YOUR HONESTY IS NOT QUESTIONED

I have no doubt, mark you, that everyone of you has faithfully lived up to the trust reposed in him by these young people. I have no doubt that every word which you have uttered in your schools. You can point to them with pride, and rely upon them to assist you in securing other students, that they, too, may go out into the world and add another equal measure of success. Do you mean to say, in view of these assurances, that there could ever come a time when the trust and implicit confidence reposed in you may not be realized by every graduate of your institution? Is your word as good as your bond, and if it is, and they are synonymous words, is it not as much bound by your word as by the giving of a positive assurance in a legal form? Can you, after such assurances and promises, accept with a clear conscience the returned dollars of your patrons, and in the end, when your institution has done as much as it can for them, refuse to recognize their right to claim something more, beyond the education, which many, with proper study and industry, could have obtained at home?

CORRESPONDENCE AND COMMERCIAL SCHOOLS COMPARED

If there is one feature of the correspondence school which appeals to me more than any other, it is in occupying the extensive field left open by the average business college. It educates at long distance. It stimulates the young man without means to turn his hand and devote a few of his precious moments each day to the acquirement of some special knowledge which he believes will be of benefit. A business college does not treat with its students at arm's length. It invites them into its class-rooms, encourages them to become acquainted with its teachers, to learn the policy of its management, to occupy comfortable seats, and to avail themselves of the complete equipment and the supervising eye of the faculty. And if we make them so dependent upon us in the earlier stages of their education, is it honest to entirely disclaim responsibility in connection with the student as soon as the pocketbook is depleted or the prescribed course finished?

GUARANTY MISUNDERSTOOD

The guaranty of positions is a much-abused subject. Up to the present time conservative and honest college proprietors have frowned mightily upon the school advertising inducements to enroll, with the assurance of receiving a position when the course is completed. I have faith to believe that the reason for this is simply because they have not properly understood what a good guaranty should be. We declare against it. We characterize and stigmatize it in the bitterest terms, be-
cause we know that it has been used by unscrupulous promoters in a dishonest way. We can unhesitatingly admit that dishonesty or unprincipledly admitted to the business world that there is a possibility of our being dishonest and incompetent. We have, by our own actions, laid ourselves in the same class with those who (as rascals is always cunning) have adopted a scheme plausible and enticing and not without merit, to bait the fish at the largest fly in the stream.

To my mind there is no better evidence of the solidity of guaranteeing positions than the fact that dishonest men have used it to fill their schools with victims. If an inducement like this is powerful to draw students to an unworthy school, what an omnipotent factor it might become if properly used by trustworthy and reliable men.

Are we to leave young people in the ruthless grasp of these wily tricksters, for which they possess the armor of truth and honesty, buckle on our swords, and fight them in a legitimate way with their own weapons?

QUALIFICATIONS OF GUARANTEE

In descanting against these monstrosities of a powerful educational system, opponents will smoothly glide from the real point at issue and add another proviso to their condemnation. It may be said that guaranteeing positions will also hold out inducements as to time, and there you evade the question. You know, as well as I, that a school holding out encouragement or threats concerning the length of time necessary to complete a course, is inherently rotten.

Business school educates individually, and it is as impossible to forecast the quantity and quality of brains, the degree of application, and the aptitude of prospective students, as it is to inform us how many moments they have in their pockets or how fast they can run.

AVOID THE TIME ELEMENT

The element of time must not be permitted to enter into your discussions against guaranteeing positions. Keep it out, not only from your argument, but from every transaction in your school. Allow your students to judge your merit by their daily actions. If your school has already, if they are not satisfied, to return their money with as much grace as you took it.

In my opinion an honest school should hinge its inducements upon its catalogue, and then be careful about the preparation of its chief medium. Let your requirements for graduation be clearly set out, and then be understood by all interested in a business education. Make your students to know that these are your requirements, and that you expect them to be met.

When you have done that, be not afraid that you will be called to judgment, because if your representations have been honest, you can live up to them without fear of condemnation.

A JUST GUARANTEE

A guaranty, to be just, should specify the length of time required to complete the contract after graduation, and the locality in which the situation is to be obtained. Give it freely, because you are bound morally and legally, by everything you say in your catalogue and interviews, and not daring to substantiate them by every means in your power.

There is no danger of misunderstanding if you adhere to your catalogue and refrain from adding, verbally, things which you dare not incorporate in your publication. Let your written guarantee be your Bible to which you pin your faith, to serve as a restriction on smooth words and inducements not backed up by printer's ink.

GUARANTEES STIMULATE TO BETTER WORK

Do you ever have difficulty in keeping your pupils interested? Has any student completed your course? Does anyone ever drop from your school when half way through because there is no particular reason for continuing? Has the student gone up in the world with a little learning a dangerous thing, and the vast army of incompetents from our schools, wasting the energies and patience of business men, and the fat position at any salary, is made up of those who have not completed their course, but who have felt, through stress of circumstances or immature beliefs that they are competent to hold down good positions.

If some obligation were imposed upon the school there would be an incentive for every student to remain until this obligation became valid. I believe that a school guaranteeing positions is able to turn out a greater percentage of students well qualified and in positions, which makes a practice of getting money and dodging promises.

If we are looking for the advancement of our profession and the raising of the standard of our graduates, there is no surer way of doing it than to make it worth while for students to complete the prescribed course of study in your school and your students don't stay until the course is completed, how much worse off are you than if the same condition of affairs should arise when you do not guarantee positions?

HAVE THE COURAGE OF YOUR CONVICTIONS

The school which properly educates its students commands the respect and confidence of the business world, and its recommendation or diploma will always be the open sesame of entrance into business houses. If an individual is incompetent and the course formulated unworthy of confidence, the school is untrustworthy, no matter what inducements are offered.

The statement has often been made that a guaranty of position induces cheating by students, because they do not care to work. How many of their homes and embark in the troubled sea of commerce. If the education you give is good for city boys, is it bad for their country and the necessity of making your own way through business, and the nobility of your calling? Have you confidence in your powers? Are you providing something beneficial for young men and women? If so, work hard to establish to dispense your own goodness to all who may desire it? Is it a sin to create in the minds of young people a longing for the greater opportunities, which shall arise that they may take? I think not, so close your schools and allow some more worthy man to fill the vacancies you are creating. Have you a standing in your community? Has your work hitherto been honest and successful? Have you succeeded in gaining the confidence of your neighbors, and would an honest conviction tell you you have been always done place you under the ban of their displeasure? Or would they rather admire you for having the courage of your convictions and patriotism, and you have courage to accentuate the soundness of your profession?

GUARANTEE INSURES IMPROVED SCHOOL MATERIAL

Another inevitable blessing in disguise will be the higher standard of entrance requirements necessitated by the guaranteeing of positions. I have been in business colleges and noted with much concern the youth of their students, As far as I know there are few business colleges in the United States refusing to accept children from twelve to fifteen years. Do you find them positions or allow them to realize their mistake in the years elapsing before they reach young manhood or womanhood? Would there not be a business man and do you attempt to supply him with such immature bookkeepers and stenographers? If you knew you were forced to supply men of every student in your school would you not hesitate to accept those who, when the course was completed, would be ineligible because of their youth and inexperience? Would the glitter of the dollar or the prospect of a full school be as seductive then as now?

We may pray of our superior educational institution, which makes the difference between a practical and an impractical education, we may wisely decide, in the presence of the parent, that the applicant for admission has not the necessary ability to successfully pursue our course, but would the tune of our lay be changed if we shared the responsibility of the student's future with such a care of the child? The alternative of the contract invites respect. "Your money back if we fail to live up to our representations," the phrase that has not allowed our zeal to secure business, to cause us to paint in too glowing colors the possibilities of a business career. It establishes a difference between frankness and
chicanery and justifies the expenditure of money, often at a sacrifice, to provide for the offspring greater advantages than have ever been possessed by the father.

GUARANTY A PROTECTION AGAINST IMPOSTERS

Would you buy anything but an education if you could not use it? And therefore the use of our specialty is impossible. The average student is absolutely unable to assist himself in the obtaining of employment. Picture his impatience and public concern while waiting for something to turn up unless his fears are quieted by the knowledge that he has an assurance, more binding than words, which will afford him the opportunity to become independent. Your liability will never be questioned until you have proved that you are irresponsible, and woe betide the man who uses his guaranty dishonestly. His sins will find him out. A contract of guaranty will do more to remove from our profession the incompetent and illusory school proprietor than centuries of personal attack and pointed advertisements, while the reliable and worthy school will increase in size and reputation because its history is an epitome of good and useful deeds. "By their works shall ye know them."

Mr. Cobb has Orthodox Company

"Our opportunities for aiding our graduates and competent students in securing positions are far greater than those of a school standing alone. We command the positions of thirteen commercial cities, and beyond that our company has connections in Chicago and St. Louis which alone would employ all the high-grade office help we can turn out. Every competent student is in immediate demand and is never found ready to contract to place every graduate of our Full Commercial Course in a business position or refund to him in cash every cent paid for tuition while taking the course. This is no irresponsible "guarantee" to do an impossible thing. It is a simple business proposition to do one of two things, possible to be done, and which this company stands ready and able to do." —Brown's College Journal, Peoria, Ill.

Method in Spelling and Word Study

BY WILLIAM J. AMOS, PEIRCE SCHOOL, PHILADELPHIA

Good spellers are born and made. So are poor ones. Every school has its good spellers, pupils who seem to grasp a word the instant they see it, and to retain it. Every school has a great number of poor spellers who, for one cause or another, fail to see words, and, failing to see, have nothing to remember.

SKIP THE GOOD SPELLER

The born speller needs very little of our attention and, as he is generally weak on some other lines, we shall turn him over to the tender mercies of his instructor and leave him. The pupil who concerns us is the one "born short" on spelling. Our work is to make a good speller out of a poor one. To do this requires patience and care on the teacher’s part and application and system on the part of the pupil.

SPELLING IS OF THE EYE, NOT THE EAR

Spelling of English words is a matter of eye instead of ear. Pupils learn to recognize words at sight. Spelling can never be taught by any system of phonics, and wherever such system is used, we always find poor spellers. We have all experienced the feeling that a word we have written does not look right; proving that the word must be learned by sight. It is obvious that the only occasion the ordinary individual has for spelling a word is when he wants to print it with a typewriter or write it by hand; and, since this is true, it must be plain that the best way to learn a word is to learn it in the form you use the most.

HOW TO STUDY

Thus, if a would-be stenographer wishes to learn words, he must study them from printed forms. He should study direct from a text-book, lingering over each word until a lasting mental picture is made. The pupil in the business course will have to do much handwriting. He should study from written forms, especially in his own handwriting.

CLASS WORK

The following is my plan for spelling in a business course: The ordinary spelling lesson consists of fifty or one hundred words. I require each pupil to take a sheet of a plain tablet, 7 x 3 inches, and rule it as follows: I. 11 inches from the top we draw a double line, 5/8 of the left margin to 1-4 of the right margin. Connect the ends of the double lines with the bottom of the sheet. Then draw a line from the center of the double lines to the bottom, producing two columns. The words are now copied from the text in the pupil’s best writing, and all studied from this sheet. At the recitation, each pupil hands his sheet to the teacher as written evidence that the pupil has at least looked at each word long enough to write it.

DICTATION AND CORRECTION

The teacher now dictates forty or fifty of the more difficult words. The pupils write these in special blanks used for this purpose only. Each word is pronounced but once. After dictation the pupils exchange books. The teacher spells each word. The pupils place a red check against each error on his neighbor’s book. At the close, the percentage, date and name of examiner are written on the page.

SUMMING UP

Every fourth week each pupil prepares a neat sheet or series of sheets, giving an exhibit of his missed words for the month. The teacher collects these sheets and books, the errors in books balancing the words on exhibit. These exhibit sheets are written on paper specially prepared for filing, and look like the following:

<table>
<thead>
<tr>
<th>No.</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NAME OF PUPIL</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
</tr>
</tbody>
</table>

These filing sheets now contain all the words missed by the class. These sheets are now bound in the cardboard file. When the class has completed the book, the teacher has every word missed. We now stop home preparation and begin on our filing list. The recording proceeds as before. This is kept up until each pupil’s list is reduced to zero. The final filing list is practically a clean record.

This plan is being carried out successfully in the largest business school on earth and it brings results.

In case we find a particularly poor speller, we have him send in sheets showing the lesson written out three or four times. This is done to carry out the theory that the more times a pupil writes a word, the oftener he sees it, and the more familiar he becomes with it.

LEARNING DEFINITIONS

Personally, I believe no word should ever be learned unless it can be made a part of the pupil’s vocabulary. The theory being that the pupil will never have occasion to spell a word until

Office Economy in Commercial Education, Particularly Filing Methods and Labor-Saving Devices.

By GEORGE HARVEY SEWARD, PH. B., BROOKLYN, N. Y.

[An address delivered before the Eastern Commercial Teachers' Convention, at Brooklyn, April 10, 1905. As it was the first appearance of the author before the Association, we prefix his paper by a short biographical sketch. — Ednor.]

Mr. Seward, a New Englander by birth and spent his early life in New Haven, Conn., where he was educated in the public schools, later in Hopkins Grammar School, and finally in the Sheffield Scientific School of Yale University, where, in 1885, he received the Degree of Bachelor of Philosophy. His commercial experience has been broad, usually tending toward the technical, from an investigating spirit into his work and delights in condensing and arranging facts. Among his recent literary work may be cited his serial article on "The Card Index and Mechanical Aids in Accounting," now running in the "Business World" (New York). He finds time to edit a department on Office Appliances in "The Typewriter and Phonographic World," and has delivered lectures before societies and at the School of Commerce, New York University.

The present paper is a copyrighted manuscript, which we use by permission of the author.

Mr. Seward said:

"Your President, just after I had finished the installation of an equipment of filing devices for instruction purposes in his model office, a short time ago, inquired if I would prepare a paper on the subject for this meeting. Since it is a short time since shortly after the above named file was set in operation, and before to your Program Committee to prepare such a paper. These circumstances are not an appearance in your program. At the outset I wish to say that I am not here in the interest of any manufacturer, nor do I receive compensation for the mention or illustration of any article.

During the past decade commercial education has received a great deal of emphasis and is today one of the most popular units of our educational system. Its present popularity is due to the work of the faithful commercial teachers represented here. In the recent stimulus given the subject in America should be mentioned the work of President James of the American Bankers' Association, 1 also Dr. Herrick's monograph 2 on the subject, which work answers the demand for business education.

Time permitting, I would call your attention to some similarities between the training that commercial education affords to that to be had in pursuit of a lucrative business. That strong intellects are lifted against equally strong ones in an endeavor to manufacture, buy, and sell in the most economical manner, and that consequently a knowledge of labor-saving appliances and methods is a requisite to their success.

By "office economy," I mean not alone the saving of time, material, and labor, but also such an arrangement of the office as will provide good light, proper ventilation, regulated temperature, and enough elbow-room for employees to do their work easily and at the pressure under which they are required to work now-a-days; in fact, modern business is conducted under such stress that office managers find it necessary to give their attention to these latter economies. Let us, therefore, divide office economy into (1) the equipment of labor saving appliances; means of intercommunication will only be touched lightly, while the hygienic side of office economy will necessarily be entirely omitted.

The appliances and methods that contribute to office economy will be considered with the following actual conditions in offices today so that you can measure to what degree you are preparing your students to meet them.

Methods of Making Records.

As filing methods form an important part of our subject, I shall ask you to follow me through a discussion of that which precedes filing.

The fact that a paper is to be filed indicates that a certain value is attached to it, in other words, that a record has been made on it. If we inquire, therefore, into the economy of records, themselves.

Records have been called the nerve centers of our industries, the physiological nervous system, transmitting sensations to and from the brain, so records are the stimulating impulses that keep the gigantic organ of commerce advised as to the situation.

A study of office records subdivides into:

1. Materials and tools employed.
2. Processes of making records.
3. Methods of duplication and multiplication of records.
4. Means of preservation, or filing of records.

In discussing "Materials and Tools," Mr. Seward classified papers for writing and those used for special purposes in the office, and passed rapidly in review over inks and such as pencils, pens, and inkwells. Concluding this portion of his paper, he referred his hearers to the text-book on "Printing and Writing," by Mr. Herrick, of Drexel Institute, Philadelphia. It was easy to discern that there had been considerable research work done when the next step was taken up.

Processes of Making Records.

Starting with the efforts of primitive man to record by piling up stones, the speaker illustrated the historical story with Cosmos pictures of Arabians promulgating knowledge of word of mouth; Egyptians carving history into stone; American Indians drawing the tribe's favorite story upon deer skins, and the solemn monk laboriously illuminating by hand the great pages of mediaeval records.

Then came the story of the invention and development of our modern writing machines, with illustrations of the first and second classes, followed by historical mention of the introduction of stenography.

In describing the means for making office records vocally, the speaker said:

"A quarter of a century ago it was accidentally, discovered by Edison that the vibration of a telephone transmitter was capable of making a record that could be recorded. He devised a machine which had a stylus to indent tin-foil on the circumference of a cylinder. From that time we must consider the telephone as a means of making office records. In

No. 2 — An Electric Time Stamp and Clock.

No. 3 — A Pricing Machine.

No. 4 — A Routing System Cabinet.

No. 5 — The "Calculagraph."

No. 6 — An Asbestos Copying Bath.

No. 7 — An Asbestos Copying Bath.
The Business Educator

830 the phonograph was offered solely as an office device to take the place of stenographers, but its use as an entertaining has exceeded its commercial application, which has been retarded by the inability of the manufacturers to give the necessary time to the perfection of the mechanical details.

At the present time, however, a new commercial phonograph is being designed with all the necessary mechanical attachments for efficient use in offices.

A commercial voice-producing machine, known as the graphophone, has been on the market since 1888, and has demonstrated the invention to be one of the greatest labor-savers that has been introduced into offices.

[Lantern slides of the phonograph and its accessories were introduced at this point.]

METHODS OF DUPLICATION AND MULTIPLICATION OF RECORDS.

The third division of the study of office records outlined, was exhaustively treated. The speaker's ability to classify and arrange the matter presented was appreciated as he took it step by step, carbon and carbonized papers, presses, copiers gelatinous and clay duplicators and, the modern stencil devices. Referring to carbon paper he said:

"The use of carbon paper has become so general that we are apt to lose sight of the important part it plays in a labor-saving capacity. Carbon paper takes on three forms: that adapted for typewriter, pencil, and pen, each of these uses calling for a different degree of moisture of the carbon.

The processor of our present, well-developed product is what was called at country fairs "transfer" paper. Packets of this paper containing three pieces, six times, twelve times, were sold back in 1885 for 25 cents by the country-fair takers, who demonstrated their use by taking impressions from leaves. At that time they were used as back-up paper in the market and now demand for carbon paper for duplicating typewritten work.

About 1873 the first typewriter was introduced in western New York state and came into the office where Mr. A. P. Little of Rochester was engaged. Mr. Little became dissatisfied with the carbon paper that came on the market, and in 1885 patented it, and in 1888 introduced his product, which was a carbon paper which would not dry out under ordinary circumstances.

The letter press, roller-copier, and a type of the gelatinous duplicator were illustrated and described with equal clearness. When finally the last division of the study of office records, the "Maintenance of Records," was completed, it was evident that Mr. Seward was on a topic upon which he had spent considerable study.

FILING SYSTEMS.

Prefacing the recital of the history of the introduction of modern filing devices by quoting what purported to be definitions of files, by representative dictionaries, he enumerated the methods in vogue a half-century ago, and then proceeded:

"The commercial world is indebted to a business school student for the invention of the first filing cabinet. In 1891 a patent was granted to W. A. Amberg of Chicago, for his "Self-Indexing File and Binder," Mr. Amberg attended the Bryant & Stratton College in Chicago. He had been trained through and through a joy to classify invoices which passed through his hands as book-keeper for a firm in that city. Providing himself with a paste-board box, he filed these invoices in it, and this file was then placed in a stand and was thereby enabled to check up the monthly statements quickly. When the bills were all paid he placed them in the drawer. The invoices were not mixed and were not run together. These packages in turn were piled one above another with press-board tops and bottoms. Holes were punched through the invoices, and the labels were placed in the hole. It was called, with an awl, copper wire run through, and a label pasted on the back. From this it will be noted that invoice-filing preceded letter-filing and the first indication of the latter was extended to the letter. To facilitate reference to the plain sheets used in those days before the general use of letter-heads, loose invoice-sheets were employed. Thus, the first type of filing was in manner carefully traced from the inception, and a large number of lantern slide views illustrated modern forms.

One of the first of this type in which brought Mr. Seward's paper nearly to the noon hour, he was compelled to conclude with only a brief recital of a page in these school instruction of the filing and card index methods. He said in part:

"The methods of business-practice associations are generally inducted and are productive of good results. Equal benefits to the student, teacher, and school could be derived by the adoption of similar practice in the schools, and the adoption of appliances in connection therewith. All it needs is a little attention, such as your practice work has had. If you would place office economy in one of the school, on a broad plan, it could be arranged so that the pupil would get a working knowledge of present methods and appliances in connection with the purchase of raw materials, finished goods, or services; and, on the other, their sale, or use, the selection of records of a manufacturing concern (A. B. Co., who buys raw material, converts it into a finished product for the market, and sells it) may be taken as representative.

Utilize a concern already organized in your school and divide it into departments.

SCHOOL COURSE IN ILLUSTRATING USE OF OFFICE APPLIANCES.

To cover the business methods that are peculiar to other than manufacturing concerns, separate offices could be opened and operated by independent students. The following lines: (1) Legal, (2) Banking, (3) Insurance, (4) Real Estate, (5) Publishing and Printing, (6) Commission and Jobbing, (7) Transportation, (8) Department Stores, (9) Public Service.

There could be communication and transactions between the manufactures concerns—A. B., Correspondence, and the other concerns in purchasing a factory, erection of plant, contract for light, heat, and power, purchase of machinery and tools; and inspection of the A. B. Co., and in addition, due to the upcoming freight handled by the transportation companies could be conducted much in the same manner as now carried on.

The firm of A. B. Company would have these departments: (1) Purchasing, (2) Shipping and Receiving, (3) Manufacturing or Production, (4) Sales and Advertising, (5) Correspondence, (6) Sales, (7) Mail Order, (8) Order, (9) Accounting.

Office Fixtures Required. Besides the regular school furniture, which will be furnished, in addition to the usual model office arrangement, the following will be required: Letter Press and Stand, Rapid Roller Copier, Letter Press Books, Copying Board, Card File, Chair, etc.

Mr. Seward's suggestions for the organization of these departmental offices were comprehensive in their scope and may be typified by those referred to as the so-called \"correspondence department\" of A. B. Company. He said:

"Here filing is studied in all its branches. Papers are filed according to various systems; a B. Correspondence office with large customers develops indexing methods of chronological and geographical order. For the numerical system of vertical filing, a card index by name and by subject matter would be used to locate the correspondence and the contents of his letters. The latter is instructive, as it develops to the pupil to the so-called \"correspondence department\" of A. B. Company. He said:

On the subject of the use of alphabetical card and index methods, Mr. Seward's paper also included:

lantern slides, showing: Loose Sheet Appliances; Book Indexes; Time Appliances; Mathematical Devices; Routing Systems; Protective Appliances; Numbering and Dating Machines.

Reference to the problem of intercommunication and the hygienic side of office economy concluded the paper. In closing, the speaker used the term "a very practical paper." In fact, the matter presented was so well received that Mr. Seward was encouraged to arrange it into talks or lectures suitable for students in public high schools and business schools. One school proprietor remarked that he would have to hunt around a good deal to gather the information that had been presented. General teachers were inspired to take a greater interest in their office practice work, and in the heart of one young man teacher was kindled the desire to enter actively into commercial life, when the time should be in touch with conditions that had created the demand for such appliances as had been described. These evidences of interest lead us to predict that Mr. Seward will meet with pronounced success before commercial student audiences with his interesting and instructive lectures.

4. The author will consult gladly with those who are planning courses of instruction in the use of modern office appliances, or who wish to improve their present ones.

(From page 18.)

he knows its use. This, however, in the case of a stenographer may not always be true, since a dictator may be a person with an extensive vocabulary and the stenographer may take dictation of which he is practically ignorant.

In our short course schools, it is simply impossible to stop and look up the meaning of every word we wish to spell, so we can only do the next best thing:

Choose ten prominent words from each spelling lesson and have your pupils give a perfect definition and a complete sentence in which the word may be used. This will add four hundred or five hundred useful words to a pupil's vocabulary during a course of study and he will not miss the time.

ANOTHER PLAN

Another plan I have found to work well is to take a clipping from the morning paper and dictate it, omitting ten or fifteen good words and have the pupils supply these words by a study of context. Still another plan to bring out spelling and word

study is to give a list of words as follows: Acquittal, acquisition, acquisition, propose, purpose, population, product, produce, species, and have the pupils write one hundred and fifty words on some interesting subject and use each of these words in his composition. The interest is always great in a contest of this nature, and pupils who have acquired diligent and careless will bestir themselves on occasions of this kind.

TEACH SPELLING IN ALL SUBJECTS

In addition to all this regular class work, pupils should know that errors in spelling will not be tolerated on work. They must know that poor spelling, at any time, is inexcusable, and furthermore, that to carry the habit out of school means no position. In short, that a poor speller has a most excellent chance to make a failure of life.

James B. Dill On University Education

At the last meeting of the Michigan Political Science Association, to which we referred at the time in these columns, the Hon. W. C. Van Buren, lawyer, Mr. James B. Dill, made a very thoughtful address. He called to his address some time before the meeting, but we had not room for it in recent numbers and so we quote from it briefly here.

Mr. Dill took a position diametrically opposite to that occupied by Andrew Carnegie. He believes in the university training, though he admits that it is expensive, saying, "Some who dissent from the view that a university education handicaps and delays a youth intending to become a business man do not hesitate to say, however, that they have observed that great corporations which prefer to employ college men seek university men who have been at least two years out of college, out of whose eyes, they say, has faded the dazzling halo of the Senior year, out of whose ears has gone the echo of the baccalaureate sermon and the music of the valedictory address."

His second point was as to the changed attitude of universities toward what has been called "vocationals." "Of the value of a university-training as preparatory to a business career. He said that to-day less is thought of the individual dollar and more of the individual man than ever before in the history of the world. "Today, education as compared to riches is stronger and vastly more potential to the man who desires to succeed." It is becom..."
Commercial Geography

A paper read at the Milwaukee convention of the Michigan Teachers Association.

Warned by the criticism offered by a teacher the Quiet Observer, and reported by him in the December issue of the practical age, to the effect that he received no benefit from listening to long and laborious papers on what the reader did not do in his school, I am constrained to confine this paper to a simple statement of the method adopted by the writer in conducting his first class in Commercial Geography in the Ann Arbor High School. This will leave for those who take part in the discussion, the more ample field of telling how it should have been done, or, if they choose to make the hour the more helpful, they will confine themselves to the relation of similar experiences in their own class rooms. This decision will somewhat shorten the length of the paper for it does not take any of us as long to tell what we have done as to relate what we should have done or what we have done.

From a teaching experience of eight years in business colleges, I see no reason why the same method might not be adopted in any such school with equal success.

TIME ALLOTTED

The amount of time at the disposal of the teacher is a large factor in determining the method to be pursued. We have a daily recitation period of fifty-five minutes for nineteen weeks, which is given to the study of the subject under discussion. Fifteen weeks is allowed for advanced work and four for review and examination. We have chosen to make four recitation periods per week based upon the subject, the fifth day being devoted to what is designated as report work.

TEXT BOOKS AND HELPS

At the present time there are two texts on the market, either one of which is well adapted for classes of students of high school age and they are "Adams' Commercial Geography," published by D. Appleton & Co., and Macfarlane's "Commercial and Industrial Geography," published by J. Sadler-Rowe Co. Whichever is chosen as a text, the writer suggests that a supply of the other be secured to be used by the class for work. The reason for the choice of a text, comes the selection of such helps as may be valuable in presenting any subject. The number and kinds will largely be determined by the material at the disposal of the teacher. We have had but one class in this subject so we have made only a beginning in the collection of outside matter, but this will grow to each year until the desired amount has been obtained. Our first purchase was a set of the latest wall maps, mounted on rollers and properly encased so as to keep them free from dirt. There were seven of these, one for each continent, one for the world, and one for the United States. To these was added the latest wall map of Michigan, secured from the Commissioner of Railroads without cost. To this we added the following books for and the following reference books bought: Chisholm's Hand Book of Commercial Geography, Clove's Introduction to the Study of Commercial Geography, and the Commercial Geography. Application was made through our Congressman for government publications with a good degree of success, for we are now receiving from the Department of State, Consular Reports and the Commercial Relations of the United States, an annual publication in two volumes. From this we have obtained a Treasury Department, we get the Statistical Abstract of the United States, the Monthly Summary of Commerce and Finance, and the Annual Report of Commercial Statistics of the United States. These, together with the latest census reports, especially those pertaining to Agriculture and Manufactures, give us all the material which the student has time. As a result of my trip last spring to attend the Eastern Commercial Teachers' Meeting, much valuable material was secured from the Philadelphia Commercial Museum. Application was made for and received some of our business men for such copies of the trade papers as they did not have. These are among another source of information for research work.

CLASS WORK

The four days devoted to the study of the text presented but little variety as to the method for the student to follow. The students were encouraged to use the information found in the outside reading in connection with the text for the lesson of any particular day. The day each week set apart for report work was in many ways productive of the best results. The first thing on the program was the outlining, by some member of the class, of the information contained in the last week's issue of the Little Chronicle. The maps were freely used during these exercises, some other member than the one reporting being called upon to place the places indicated. Opportunity was offered for questions, following this part of the work, after which reports were made concerning items of interest found in the outside reading, either from trade papers or newspaper articles. What time was left was spent in discussing the papers with each member of the class was obliged to submit. These were two in number, one on some given country, one on some commercial product. In preparing these reports the papers were to be made of the reports and the few reference books we had secured.

RESULTS

By the end of the semester each member of the class had prepared papers and was to present for examination, a statistical table and a commercial map of the United States. The table was a summary of the world's trade with the United States by continents, detailing the trade with the four or five leading nations in each, giving our total imports and exports with the trade from them and working out the percentage. The exports were treated in the same manner. A table of the various commercial products was made showing, where possible, the world's output and the output of the United States, together with the percentage. Lastly, a comparison of the ten largest manufacturing industries in the United States was made, showing the capital invested and the value of the annual output, the same statistics were gathered from the studies and compared to the several states were most widely noted.

This is an outline of the method followed with my first class in Commercial Geography. It was the beginning next February. The World's Work and several books will be added to our reference list. We shall proceed as we are able, but the statistical work required, owing to the fact that all the census returns are now available. It seems to me that the industry condition will be better when three periods per week are spent on the text and sufficient supplementary material shall have been provided, so that two days may be spent in work suitable to the instructional needs of the class.

In time we hope to add to the interest and practical value of the study by securing a small but well selected lot of commercial products arranged as a Commercial Museum.

California

Messrs. Zane & Blose, Columbus, Ohio.

Dear Friends: I am going to ask you to make some announcement of the fact that I have a Commercial Teachers' Association. I have been writing letters to the business college teachers and teachers in commercial schools in California, to the Chamber of Commerce and Finance in the colleges and universities and am receiving the most hearty responses. Without exception their endorsements of the plan are unequivocal and that was the reason we are having a big association and a good one, for we have some of the best material in all the country out here.

I have not heard from all of them as yet, and many wrote that they were not going to sign up, and yet I wish you would give the movement your support and urge the brethren to write me, that is those may not have written. I have written about fifty of them, and I mean to go on a great many. With best wishes, I am

Very respectfully,
L. H. Hausam.
Orange Valley Business College.
Riverside, Cal., May 26, 1903.
THE HANDWRITING EXPERT

Should He be Made Official? And How?

BY WILLIAM J. KINSLY, NEW YORK

So much has been printed lately about handwriting experts and their work, that the average person who wishes to speak or write on the subject, is prone to express a biased and prejudiced opinion. Many persons believe that all experts are fakers and the public believes that a charge to the jury: either side in any controversy where their opinions are sought, and willing to sell their opinions— and incidentally their souls—for a fee.

The confidence of the public is fostered by the actions of some so-called experts, who, with a smattering of training and more or less experience, are to be found usually on the "off" side. This public cannot see the logic of the case— for the opinions expressed. The newspaper reports (because of space limitations also) usually contain the briefest summary of the evidence and that is dismissed with the statement practically reading: "Six of one—and half a dozen of another."

The reporter didn't hear all of the evidence in the first place; he didn't understand all of what he did hear; he didn't make notes of all that he understood; and the copy editor didn't send all the "copy" of the reporter to the press. The reading public can't read all that is printed about court cases—and if they did read all there would be parts that they would fail to understand, connect, or in a few days or hours, remember. So I say that it is not to be wondered at that the general public fails to comprehend the nature and extent of expert testimony. The jury sees—that the reasons given by one set of experts are logical, convincing—really reasons; while the opposite set of experts, numerically as great and, to boot, paid, have no, or next to no reasons to support them—and, under cross examination, are utterly disregarded.

As Justice William J. Gaynor, of the New York Supreme Court, in a recent trial where handwriting was involved, said about witnesses in general—"It will be a sorry day for Justice, when courts and juries cannot penetrate the mask of fraud and deceit in the witness chair." The judge or jury who are to decide between plaintiff and defendant, must weigh the evidence as presented—and must weigh the character, skill and experience of the expert witnesses themselves. To be sure, courts and juries are not allowed the opportunity to do all of this—but the public seldom or never is. To the public it looks like a tie vote when experts differ, and "When the doctors disagree," etc.

The remedy? There is probably no perfect remedy. But a partial remedy—a vast improvement on the present system would be to have official experts, either paid by the state, or the expenses charged to the litigants. The questioned handwriting could then be submitted to these official experts and after the opinions were rendered, if they did not meet with the approval of one or both sides, the experts could be put on the witness stand in open court and examined and cross examined. Thus their reasons, or lack of them, would be shown to the court and jury. This system would remove dishonest and incompetent experts from the field and would remove any cause for complaint on the score of financial bias in the official expert witness—since he could have no interest in the result of his decision.

It has been suggested that handwriting experts have no technical school for training in their calling, no one to pass on their fitness, and no institution to issue certificates. All of this is true. The official experts would remedy the second and third of these objections and the first. The system is a school or college where the scientific examination of handwriting to detect forgeries is taught, and if there was such a school its course of study must necessarily be long, tuition high priced and its pupils few. When it is remembered that the great number of cases in the United States and Canada of questioned handwriting in which large sums are involved and large fees paid to experts for services, are handled by bar or jury, it may give all or a large part of their time to this work, (and who could take more cases did they come to light) it will be seen that the service is not a large one, and an increase in their number at present. A college with such a course of study would find that it could not secure students—and if it should secure the students, the students would find when they graduated that they could not secure clients.

When courts, lawyers and the public are educated up to the point of understanding that there is an honest and skilled expert in handwriting, there will be a far greater demand for such services than there is now present. An attorney whose client was saved from the gallows and who had his fortune saved to him in spite of an attempt to steal it by a forged will, in a letter to the writer, said: "The services of the handwriting experts in this case cannot be spoken of too highly, and the great utility and necessity of such a profession as yours is as yet inadequately understood and appreciated.

This, I believe, is caused by a general lack of knowledge with regard to it, but it will surely advance in the estimation of the general public as it becomes more widely known.

In the State of New York, graduates of law, medicine, dentistry, veterinary and other technical schools, before they can practice their professions must pass a written examination known as "the Regent's examination"—examinations in the academic studies—and must be of good character. New York State also has a school for accountants—"C. P. A."—certified Public Accountants—and a special board of examiners under direction and control of the Regents examine for those technical fitness, applicants for this degree.

Something like this might be done with handwriting experts, and only those passing the academic and technical examinations, and who possess good character should be licensed or selected as official experts. If the Bar Association of the State of New York would take in this matter and secure the appointment of a commission to "find the way out" of this expert witness problem, great good would come. A uniform system would be inaugurated, and in this, as with the accountants and in other progressive measures, other states would soon follow the lead of the Empire State. Some have complained that handwriting experts have no association—no guild. How can they have? The profession of handwriting expert, while practiced for three hundred years or more, is really now in embryo— in its formative period. Like all young sciences and young movements it has attracted

(Continued on Page 19.)
Lessons in Business Writing.

BY

THE SADLER, BRYANT AND STRATTON

BUSINESS COLLEGE,
Baltimore, MD.

It frequently happens that a student practices over a series of copies, and still his writing does not come up to the desired standard. He realizes that he has made some improvement, that he has learned to make exercises he could not make before but that things are still apparently at a standstill. This is often the case when the student has just gone over a course of lessons in writing. By taking a kind of inventory of things as they are at this time, he will probably find that he can glide the hand over the paper freely, has a fair conception of correct form and spacing, and fairly good control. He can make all the purely movement exercises well, but still the writing is ragged-looking—lacks something. A good plan now would be to begin at the first and take up again the same copies just as if it were the first writing lesson. The first time the student goes over a set of copies, every exercise is new to him, and about the time it begins to become easy he passes to another, so that he is almost continually working on some unfamiliar copy. Yet the faithful effort put on this ever-changing course of work, must have served to develop the correct use of the writing muscles, correct position of body, hand, fingers and pen. Now the student should be able to go more into detail in his writing, make a closer study of turns, angles, spacing and style in general, and thereby come nearer reaching his ideal in good writing.

In the school with which the writer is connected, we have a fixed course in business writing, similar to the one which this number completes. We follow it through faithfully and then go back and come over it again in the same manner, each time striving for a higher degree of perfection. Every graduate from the institution goes over the same course from two to three times, and in this way, it is seldom that a graduate leaves without becoming a good business writer.

We would therefore urge everyone who has been following these lessons to go over them carefully a second time, if he can possibly find time to do it. In doing so, give special attention to word and sentence writing. Watch the spacing, size, turn, angles, careful finishing of letters, smoothness of line and everything that is essential to good writing.

Louis Sanning paid his bill in full.

The exercises, 1 and 2, in the first line of Plate 29 serve to develop a popular style of $P$. It, as well as the $B$ and $R$ to follow, is based on the reversed oval form. The first exercise is made by beginning the same as the first part of $H$ or $K$, and then swing round about ten times with a free, but not too rapid motion. The second exercise is particularly good to develop this style of $P$. It serves to put the hand in motion. Begin with a short, full curve. Notice that you should swing around over the top point of the stem of the letter. Lift the pen upward as the letter is finished. Avoid making too broad a turn at the bottom, but be sure to make the turn at the top broad. The tendency is to make the top too narrow. In making the $R$, as illustrated in line four keep the little loop up toward the point of the stem. If it is thrown too low it is almost impossible to finish the $R$ nicely. After making this small loop, make the final stroke curve in toward the stem exactly like the final stroke of $K$. Exercise Number 5 will be found excellent to develop nice control.

The style of $P$, $B$, and $R$ in lines 6 and 8, is based on the straight line. A little practice on the straight line exercise preparatory to making these letters will be found good. Round the top nicely and watch the location of the small loop in the $B$ and $R$.

The initial stroke of $L$ is a compound curve, much like the first stroke of $P$ or $R$. Press the pen to the paper forming a dot as a definite beginning point. Curve the line well, form a flat loop on the blue line, and let the pen glide under the line and to the right. Avoid making this final stroke too long. Exercise Number 3, at the end of the first line of Plate 31, will be found good to develop boldness in making this letter. While some object to the introductory stroke in $L$, as indicated in Number 5, others favor it. It is largely a matter of taste. It serves as a connective stroke when passing from a preceding letter to $L$, as in writing C. P. Ludwig, see copy Number 7.

In making $X$ be careful to join the two parts forming it, at half its height. Study the letter. The $Q$, it will be observed, is begun like the $X$ and is finished like the $L$.

For grace, the $F$ and $T$ based on the compound curve stem, as illustrated in the first half of the first line in the Plate 32 is best. For ease and simplicity the straight line stem, as indicated in the last half of the above line, is unquestionably the most practical.
The student should not fail to practice faithfully on the various words and sentences given in these copies. Plate Number 34 gives a sentence made up of nice words for practice, and we suggest that the student write and rewrite it, special attention to spacing and uniformity of size. Notice the beginning and ending strokes of words. Make them short to avoid giving page writing a straggly appearance.

This brings this brief series of lessons to a close. The writer began this work with an enthusiastic desire to make it useful to those interested in a popular style of business writing. If he has failed to do so, or at least in a measure, it is not because he has not put a great deal of thought on it, with a view to having it embrace as much as possible of that which has proved to be good.

Lessons in Practical Business Writing

BY

Nina Pearl Hudson

NEW BRITAIN, CONNECTICUT.

Students practice extracted in these columns free of charge. Specimens should be sent to Miss Hudson, New Britain, Conn., by the fifth of each month.

Lesson 3.

"Hand meigh," my old auntie used to say to me at home, "aim high," was the English of it. She was of the bold clan of the MacDuffs, and it is my own motto in these anxious days.

"The Torr Lover."—L. O. Jewett.

Plate 8. Combine plates 3, 4, 5, in these words. Do not have angles at the top of m’s and n’s, and at the bottom of i’s, u’s and e’s.

No. 5. Do not lift the pen in making the word. If you feel that you must lift the pen perhaps at the bottom of the second i, hold pen at that point and move the elbow. This will soon become a habit, so that you will not mind writing a long word.

Plate 9. No. 1. Practice on the u exercise. Bring third stroke a little higher than the first two; retrace and end with a short curve, for u. Keep down stroke straight; curve at the top and bottom, same as the last half of the n. No. 3. Make crossing with an up stroke. No. 4. This is an x without the crossing and an ending like the u. Do not curve the last up stroke to the left so that it will resemble a poorly made o. No. 5. An x with a down stroke on the same slant and one-fourth space below the line.

(Continued on Page 31.)
The Business Educator, its progress, announcements of forthcoming features, words of commendation from friends, etc.

This being the last number of our present volume, (our next number, the September one, will appear as usual on August 25th), the many loyal and enthusiastic friends and supporters of The Business Educator will no doubt be interested in something of a personal nature, something regarding the journal's progress and plans for the future. To satisfactorily present such matter, we have added a few extra pages so that none of the regular features would be crowded out.

The Business Educator cannot point to a record extending back a great many years; but it can point to a record of a few short years, however, which is unparalleled in the history of this class of journalism. In fact, in not a great number of months, it has not only accomplished, but in many ways surpassed, that which has taken similar journals decades.

It appeared a few years ago in a very unpretentious way, but having a mission, and possessing something of merit, it has been most cordially received and generously supported.

The Business Educator is today a gratifying success, and if we judge aright, has a most promising future.

Let it not be supposed that this condition has been reached without work; there has been work, incessant, preparatory work. One cannot be required to conduct a journal to a successful issue unless he undertakes it. But it has been done in the spirit of love, with intense interest, and in the belief that some good was being accomplished. It has therefore been most pleasant work.

The journal is the result of a need of and demand for a broad, liberal, progressive, practical exponent and representative of business education. In the Department of Business Education it has been our aim to present from month to month in connected and consecutive form, editorials, articles, contributions, lessons, etc., in the interest of students, teachers, and proprietors of business schools, public as well as private.

The editorial policy has been connected, constructive, progressive, dignified, impartial, and independent.

The substantial success of The Business Educator has been due to its conservative business management; its liberal, open-door, editorial policy; its progressive, timely, able, select contributions; and its artistic, characteristic, costly makeup.

Composing, superficial policies, and rehash have been carefully avoided. The best, not the cheapest, has been the aim.

As a consequence, The Business Educator has set the pace, not alone in matters pertaining to penmanship, but in commercial education as well.

From the beginning it has championed plain, swift, easier, simpler writing for the many, and more beautiful writing for the few.

It has opposed extremism in slant, in style, and in movement, and with such logic that its competitors are reluctantly abandoning their narrow, one-sided, hobbies for something more modern. One-slate-for-all, one-movement-for-all, and one-style-for-all theories are fads and fancies now passing and passed, as concerns practical, up-to-date writing.

The outcome of this straightforward, far-reaching policy is a prestige among educators, advertisers and subscribers, a newspaper that is never to be surmounted.

Subscriptions during the past year have increased fifty percent. Our clubbing list is so extensive that we cannot spare the space of several pages to present it, as we should like to do, and besides, a number of supporters have requested that no mention be made of their names.

Mr. Gaylord, editor of the Department of Business Education, has done noble service, not alone by contributing each month from his trenchant, lucid, aggressive, thought-provoking pen, but by securing men eminent in their lines to contribute.

The Business Educator is in a position to discover and secure new talent in penmanship to an extent unequalled by others. As a result, surprises are frequently in store for our readers. The lessons now running from the brain and pen of Miss Nina P. Hudson have been a source of comment and congratulation.

Mr. J. E. Leamy, the skillful, progressive, hustling, brilliant penman of Troy, N. Y., has prepared a series of ten lessons to begin in our next number, which, for practicality in the way of legibility and speed, are revelations of skill and swiftness. Copies and instructions are alike stimulating and instructive.

Mr. E. C. Mills, of Rochester, N. Y., with whose work our readers are familiar, will contribute about four lessons as in the past, and the coming year as he has during the past. This means a variety and quality of work worth your while to consider.

Mr. C. E. Doner, who has been with the Penman's Art Journal the past year, now supervisor of writing in the public schools in Dedham, Mass., will be a regular contributor to the columns of The Business Educator the coming year and years.

Mr. Charlton V. Howe, the expert penman, is preparing a series of lessons in practical writing, and will contribute several specimens in our columns the coming year. You need to keep an eye on them if you want the latest and best.

Mr. M. A. Albin, whose lessons in "Modernized Reviews" begun in this number will have something surprisingly sensible from month to month, following which he has promised a series of lessons in practical business writing.

G. A. Henry, another young, enthusiastic, skillful, and promising contributor, is at work on a series of lessons for our columns.

Specimens of business, round and ornate, penmanship will continue to adorn our pages.

Mr. H. B. Lehman, the skillful, will continue to delight our readers, as in the past, and at the present.

E. L. Brown, Rockland, Me., the one who "does up Brown" more and better resolutions, diplomas, etc., than any other man in the country, will continue with us indefinitely.

A. H. Hinman, Worcester, Mass., is contributing the most interesting and exhaustive historical, entitled, "A History of Penman, Early Business Education and Educators in America ever attempted."

E. M. Blue, the talented young penman, with whose work our readers are somewhat familiar, has also consented to favor our columns from month to month with specimens of his skill.

Then too, our convention reports, news items, book reviews, etc., are not neglected.

Beginning with our September number we shall devote at least a page to the reproduction of students' specimens. Every earnest teacher is anxious to see the results obtained by other teachers, and this page will give all the opportunity of making valuable comparisons of results.

Remember, you get all of this and more for but $1 a year if you take The Business Educator.

The object is to make the journal so interesting, helpful and valuable that no one at all interested in the subjects it treats can possibly afford to be without it. And we are sure that commercial teachers prefer to place The Business Educator before their pupils with their wealth than to throw them into the line of commercial education, rather than induce them to accept something cheap, merely because it costs a few cents less.

To the many staunch friends of the journal who have helped in no small degree to make it what it is, we hereby extend our sincerest thanks. And we would add that, if in your opinion we merit it, give us the same loyal, vigorous help the coming year that you have in the past, and we in turn will try to give you a still greater journal.
Department of Business Education.

Announcements for the Coming Year.

Mr. S. S. Hookland, who has charge of the Office Department of Banks Business College, Philadelphia, will conduct a department of Office and Business Practice, which will occupy liberal space in each number during the year. Mr. Hookland has a well-equipped and extensive set of offices and a course of work that has elicited many commendations. He is known to be a very successful teacher, and he will make this department practical and interesting. Teachers of Office Practice everywhere are invited to co-operate with Mr. Hookland in this first effort that has ever been made by a commercial teachers' paper to present a systematic, connected plan of Office Work. Mr. Hookland will write on the following topics, among others: Office Practice in Commercial Schools, Limitations of Office Practice, Relation of Offices to One Another, Office Appliances, Checks on Students' Work, Course for Students Who Deal with the Offices, Intercommunication Business Practice, etc. Mr. Hookland will gladly welcome suggestions, questions, sample forms used in other schools, methods of handling the work in various offices, checks on students' work employed by other teachers, arrangements for division of labor in the several offices, extent to which inspection of business papers by the teacher is carried, frequency and extent of paper work, and the numerous and important items connected with the teaching of Business.

Teachers of Office Practice everywhere are invited to co-operate with Mr. Hookland in this first effort that has ever been made by a commercial teachers' paper to present a systematic, connected plan of Office Work. Mr. Hookland will write on the following topics, among others: Office Practice in Commercial Schools, Limitations of Office Practice, Relation of Offices to One Another, Office Appliances, Checks on Students' Work, Course for Students Who Deal with the Offices, Intercommunication Business Practice, etc. Mr. Hookland will gladly welcome suggestions, questions, sample forms used in other schools, methods of handling the work in various offices, checks on students' work employed by other teachers, arrangements for division of labor in the several offices, extent to which inspection of business papers by the teacher is carried, frequency and extent of paper work, and the numerous and important items connected with the teaching of Business.
of auditing the office books, penalties for violation of office regulations, samples of office regulations, etc. Mr. Hookland will be able to use all the space allotted to him, with what he writes, but he will be glad to divide with other teachers if they will enter into the spirit of the effort, prepare something, that will be helpful and practical for teachers of Office Practice everywhere. This department, like the others, is purely for professional purposes; nobody has an axe to grind. Since copy for the September number must reach us the latter part of July, we suggest that teachers take up this matter with Mr. Hookland at once.

Special articles will appear from time to time, supplementing Mr. Hookland’s regular contributions. Among these contributors will be W. H. Whigam, who has charge of the Counting House Department of the famous Metropolitan Business College, Chicago; and J. M. Davis, Superintendent of the Business Practice Department of Heald’s Business College, San Francisco. Mr. Davis has the reputation, among commercial teachers on the Pacific Coast, of being the best teacher of Office and Business Practice west of the Rocky Mountains. Our visit to his school apartment and our inspection of his work confirmed the generous estimate of Mr. Davis’ fellow teachers in other Coast schools. Other high-class specialists will contribute, but they do not wish to be announced in advance.

W. J. Staley, President of the Capital Business College, Salem, Oregon, whose school, though not the largest on the Coast, has the enviable reputation of sending out unexcelled work in Business Practice.

Department of Commercial Law.

The Department of Commercial Law will be under the direction of Mr. J. C. Barber, of the Bryant & Stratton Business College, of Providence, R. I. It is hardly necessary to say that Mr. Barber, like Mr. Hookland, is a special teacher in one of the greatest schools in the country; neither is it pertinent to speak of Mr. Barber’s ability in this direction, in view of the fact that his quality that has been afforded our readers during the present year. Mr. Barber will be glad to have from fellow teachers of commercial law suggestions as to scope, method, outlines, cases, source material, etc.

Department of Business Arithmetic.

We have tried for three years to obtain the services of a successful and competent teacher to contribute articles on this subject of business arithmetic known as Rapid Calculation. We did not succeed until we obtained the articles recently contributed by E. C. Horton. These articles awakened so much interest that we determined to secure a series of articles extending through the entire year, going more into detail, and covering a wider range than anything hitherto attempted. We are highly pleased to announce that Mr. G. E. King, Vice President of the Cedar Rapids Business College, Cedar Rapids, Iowa, a teacher with whose superior work we have long been personally acquainted, will give in detail, in a series of five articles, beginning with the September number, his methods of teaching the various sub-divisions of business arithmetic that he handles in his Rapid Calculation classes. Following Mr. King’s Mr. W. D. White, V., President of the Gem City Business College, Quincy, Ill., one of the largest and best commercial schools in the world, will present his methods of teaching Rapid Calculation. All who have met Mr. White at the commercial teachers’ conventions, and who have heard him on his favorite subject, will be keenly expectant for the practical, useful instruction that he will set forth. These articles are to be not only expositions of methods of teaching, but also lesson-articles that shall contain material for work, and no commercial teacher anywhere can afford not to know what can be gleaned from the writing of these eminently practical and successful teachers.

Supplementing the contributions of Mr. King and Mr. White, will be several articles by Mr. E. E. Kent, who has charge of the instruction in business arithmetic in the Rider-Moore and Stewart Schools of Business, Trenton, N. J., an institution (for the shorthand and commercial schools are under one management) that is in the very front rank of Eastern commercial schools for size, scope of work, and efficiency in teaching. Mr. Kent will branch out somewhat more than his colleagues in this work are privileged to do, and will show how he gets results by profiting by the principles of percentage, although he will doubtless have something to say, also, on the subject of Rapid Calculations. We are going to spread a feast for the really ambitious teacher of arithmetic, no matter in what school he may be employed; and, best of all, the viands will be prepared by chefs who have been compelled by the law of the survival of the fittest to eliminate all superfluities, and get down to the bed-rock of essentials. There will be no humble bending of the knees to the method or the sequence followed by text-book makers. They will illustrate the definition of a straight line.

Department of Commercial Geography

In a recent canvass of the commercial schools of the country, we found an unusual interest in the subject of commercial geography. This subject is too practical in its relation to foundational knowledge that every business student ought to possess, to be overlooked by commercial teachers. We have, in various ways, from the time this department was established, tried to stimulate an interest in commercial geography, and we believe that the interest and the need for definite, authoritative direction now justifies us in our determination to conduct a regular department of commercial geography, in charge of a specialist of admitted superiority. We are about to close negotia-
tions with a university professor whose standing in his profession warrants the prediction that our readers will find this department alone worth the cost of the journal. We regret that we are not quite ready to announce our contributor's name as we go to press.

Department of Commercial English

The editor, with the help of several special teachers of English in some of the foremost commercial schools of the country, will conduct this department, contributing lesson articles that he hopes will prove of interest and practical value to the readers of THE EDUCATOR. It will readily be conceded that this is one of the most important subjects, if not the most important subject, in the entire commercial school curriculum.

Special Contributors.

We are not content to have this department of THE EDUCATOR serve as a mausoleum for defunct convention papers, although we are glad to publish the best of them when our space permits. We believe that our readers like to have that which is prepared especially for them, and there are always publications that are satisfied to fill their space with second-hand material, so that it would at best be merely a duplication if we were to depend on this class of manuscript to fill our space. We are willing to leave that to the "esteemied contemporaries." During the coming year we shall have special articles written expressly for THE EDUCATOR by such men as M. C. Wright, President of the Long Island Business College, Brooklyn, N. Y.; C. C. Gaines, President of Eastman College, Poughkeepsie, N. Y.; J. A. Lunnon, Vice Principal of Peirce School, Philadelphia; W. H. McCauley, Principal of the Capital City Commercial College, Des Moines, Iowa; S. Van Vliet, Principal of the Spengerian Commercial School, Cleveland, Ohio; W. G. Bishop, President of the Lincoln Business College, Lincoln, Neb.; Col. Geo. Soule, President Soule College, New Orleans, La.; Wm. P. Charles, Charles Commercial School, Brooklyn. These articles will appear, with others not yet ready to announce, under the caption, "From the Business Manager's Desk."

Pictorial Pointers

One of the most popular features we have ever introduced was the illustrations of special rooms and equipment of notable schools, given during the year now closed, under the title "Pictorial Pointers." This feature will be continued. We have in hand some very attractive material for it.

We desire to thank the many readers who have shown their appreciation of our service by kind words and helpful criticism, and we want to express our obligation to the busy men who have taken valuable time to contribute to our pages, helping to make THE BUSINESS EDUCATOR a helpful, interesting paper. We intend to be generous and fair, although it is our fixed purpose to expose sham and fraud when we find it; and we shall not hesitate to criticise in the future, as in the past, that which seems open to criticism, but we hope to attack methods rather than men.
Special Contributors, "From the Business Manager's Desk."

Our Advertising Patronage

Our advertising patrons are reporting the most satisfactory results from our columns, many of them voluntarily stating that they have received far better results from The Business Educator than they have ever been able to secure from any similar journal. As a rule, therefore, those who give our pages a trial, remain permanent patrons. Some have been with us from the beginning.

Our advertising constituency is of the very highest character. The commercial text-book publishers represent the most progressive educational publishers in the world. In fact, our advertisers, like our regular contributors, are furnishing the best possible for our columns, and it is well known that he who desires the most advanced ideas, the highest grade of commercial text-books, helps in commercial training, etc., must read The Business Educator.

It should be remembered that we publish no cheap student's edition. It is well known that the student's editions of some journals make up a surprisingly large part of their circulation, and that these student's editions are worth little or nothing to the advertiser of school books, etc. These journals are thrown aside after the student has practiced on the writing lessons. Not so with the attractive and interesting Business Educator. It follows then that the better editions of the journals mentioned are surprisingly small, and that when they are compared in circulation and influence with The Business Educator, they dwindle into insignificance.

The coming year the Business Educator should be worth far more to advertisers than ever before. The announcements herewith give ample reasons for this statement. With our paid staff of first-class contributors, assuring each subject unusual breadth of treatment, the journal will appeal to a wider class of teachers than heretofore, and extend its influence far beyond that of any similar publication.

Then it should be remembered that, while we completely cover the commercial college field, we maintain unusually close relations with the public school side of commercial education—a field of the utmost promise for publishers of text books and schoolroom helps in the way of commercial training.

With a few comparative figures, the growth of our advertising patronage can be seen. We find that in the June number, 1901, seventeen columns were devoted to advertising. In the June number, 1902, twenty-four columns were occupied, and in the June number, 1903, our advertisers demanded 42 columns.

It is difficult to tell who are pleased most, our advertisers or ourselves.

Where The Journal Goes

While fully nineteen-twentieths of our subscribers are in the United States, every state and territory in the union receiving a share of each issue, the journal each month reaches Canada, England, Scotland, Germany, France, Austria, Turkey, Mexico, Central and South America, Samoan Isles, the Philippines, Hawaii and Porto Rico.

Regular Contributors to the Department of Penmanship.

What Subscribers Say of The Business Educator

Thinking it might be well to publish some testimonials that kind friends have voluntarily sent, we began looking over our files and soon secured enough to fill the whole of the magazine. We can therefore publish but comparatively few of the cheering words received from loyal friends, most of which were accompanied with remittances for subscriptions.

The Business Educator is far in advance of any similar journal;” “The Business Educator leads;” “The Business Educator is the best published journal of the kind published.” These are the words that greeted our eyes as we ran through the files, and it seems that enthusiastic friends are intent on making this verdict unanimous.

Others take occasion to speak of the value the journal has been to them, or of its value as a class assistant. All clearly express the highest opinion of the journal, and if any one is in doubt as to what subscribers think of The Business Educator, he will do well to read the following:

Mr. Ball Speaks.
I have just received the March number of THE BUSINESS EDUCATOR, and am so well pleased with it, and the subscribers among our students are so well pleased with it, that I must write you in congratulation of your efforts. It is one of the finest numbers I have ever seen devoted to penmanship and business education. I think I can send you another club of subscribers within a short time, which I shall take pleasure in doing, and wishing you continued success, I am, Very sincerely, C. E. BALL, Mankato Commercial College, Mankato, Minn.

The Business Educator Aroused Interest.
W. H. Kingman, proprietor of the Pawtucket, R. I., Commercial College, writes favored us with a good club, and with it were the following much appreciated words: “Our pupils enjoy the columns of THE BUSINESS EDUCATOR very much, and I consider it one of the best mediums that I have ever used for class work. Some of our students are very enthusiastic in regard to the magazine, and I think before the year is out you will feel the benefit of their enthusiasm.”

Ransom Writes
The last issue of THE BUSINESS EDUCATOR was a beauty. It is an ideal penmanship paper anyhow, and I always look forward with real pleasure to its monthly visits. Admirably yours, C. W. RANSOM, Sedalia, Mo.

Ransom’s papers are written in Mr. Ransom’s usual bold,Duringis and artistic style. Being a capable judge, his words count.

A Hummer.
Your paper is certainly a “hummer,” and every issue seems to surpass the previous one. BERKSHIRE CARD CO., North Adams, Mass.

Best in America.
J. C. Blanton, a skillful penman of West Point, Ga., renews his subscription to THE BUSINESS EDUCATOR. He compliments the journal in the following language: “The Business Educator is the best paper of its kind in America.”

Best of the Kind Published.
Inclosed find remittance for THE BUSINESS EDUCATOR one year. The EDUCATOR is without doubt the best of its kind published. The March number alone is worth the price of one year’s subscription. Clark’s Tangible C. B. SEARS, Business College, Springfield, Mo.

A Fine Compliment.
Inclosed you will find $1 for which please continue my name on your subscription list for another year. I cannot afford to miss the excellent banquet you spread every month. May THE BUSINESS EDUCATOR continue to prosper.

JNO. ALFRED WHITE, Com’l Dept. High School, Noline, III.

Best.
“Inclosed find six subscriptions to THE BUSINESS EDUCATOR with remittance for five years. Penner is the best of its kind. It is a rare treat to all who are interested in good writing. It has been one of my best instructors, and the principal one in my efforts along the line of ornamental writing.”

Compliment From Oklahoma.
“It is my opinion that THE BUSINESS EDUCATOR is far ahead of any periodical edited along similar lines, and you shall always have my hearty cooperation and support as long as your paper is published.” J. W. COKKELL, Eagle City, Okla.

Has No Equal.
Inclosed find list of subscriptions with remittance for same. I am always glad to solicit subscriptions for such a worthy, wide-awake journal as THE BUSINESS EDUCATOR. In the field of penmanship and business education it has no equal.

Appreciated in Louisiana.
THE BUSINESS EDUCATOR gets better every issue. I cannot find words to express my appreciation of it. The February issue is well worth the subscription price of it for twelve months. May it long live and carry on the good work it advocates.

V. K. BOYETT, Montgomery, La.

The Gem.
“Find enclosed $1.00 for THE BUSINESS EDUCATOR another year. Each number grows more interesting, and I consider it the ‘Gem’ of all publications of its class.”

V. E. THOMAS, Wichita Col’l, College, Wichita, Kans.

Leading.
“THE BUSINESS EDUCATOR is the leading journal now. You are making a grand success of it. Will see your club in a short time.”

W. L. THOmas, Wichita Col’l, College, Wichita, Kans.

S. S. Fahnemeyer, Secretary and Treasurer of the McPherson College, McPherson, Kans., has been a subscriber to our journal from the first. Following the example of Mr. Gaines, he takes the journal for five years at a time. He says he wrote: “I know of no paper equal to THE BUSINESS EDUCATOR for the penman and teacher. Enclosed find $8 for which please renew my subscription for five years.”

Buffalo, N. Y.

Renews for Two Years.

"Enclosed find $2, for which please renew my subscription to THE BUSINESS EDUCATOR for two years, and greatly oblige."

Findlay, O.
H. J. Minnich.

Best.

"The Business Educator is without doubt the best magazine of its kind published."

W. L. Brown.
Shaw Bus. College.
Augusta, Me.

"Your report of the Convention is the best I have ever read. It is brimming over with good nature and embodying much of the spirit that should prevail at such meetings."

C. C. Canaan.
Bradford, Pa.
Mr. Wright Believes in "Simplified."

"I appreciate THE BUSINESS EDUCATOR very much, not only on account of the paper and its contents, but on the fact that Zaner publishes the best system of penmanship I have ever seen, and with which I have demonstrated in this school that the best results can be obtained."

R. C. WRIGHT
Long Island Bus. College, Brooklyn, N. Y.

Mr. Wright adopted simplified penmanship some years ago, and as the reader will see, he has proved it in his school that the best results can be obtained.

No Paper Compares with the B. E.

Enclosed list of subscriptions to THE BUSINESS EDUCATOR, which I have sent in. The other subscribers whose names I sent in have received their papers and they think there is no journal which in any way compares with THE BUSINESS EDUCATOR in its kind. I have ever seen.

E. E. TIEBERG

Strong Words.

"Enclosed find $1 for renewal of my subscription to THE BUSINESS EDUCATOR; for I cannot do without it. It meets the needs of the business educator as no other paper can."

Encouragement from Tenn.

Enclosed find list of subscriptions for THE BUSINESS EDUCATOR with remittance for same. The subject matter as well as the artistic makeup of the Educator are highly creditable and should be continued.

E. L. WILIE
Mountain City Bus. College, Chattanooga, Tenn.

Inspiration from Cover to Cover.

"You get up a splendid journal. It is inspiration form cover to cover, and I enjoy it very much." L. M. HARTON
Tampa Bus. College, Tampa, Ga.

Mr. Cobb appreciates it.

The Progress of Penmanship

Is the Title of a Design Comprising

- Drawing, Flourishing, Lettering, and Various Styles of Penmanship

It is symbolical, illustrative, and descriptive of the progress of penmanship from E50 to date. It represents on each side of the design, a beautiful female figure, the one typical of achievement and the past, the other typical of the present and the future. It presents the various styles of penmanship and the years in which they were used. It discloses the philosophy of writing and penmanship and defines each. It tells what art is in general as well as in particular, and explains what penmanship is. It explains the essentials of good penmanship in a way that cannot be misunderstood. It does all this and more, and with a terseness never before accomplished.

The artist-author-teacher has epitomized his twenty years of study, practice and experiment into this one design. He himself says that he accomplished some things in this design which he thought impossible.

To the penman, the design is invaluable as it contains the History, Philosophy, and Art of Penmanship in a veritable nutshell.

The design is invaluable because of the inspiration and information contained, as it omits none of the essentials of good writing, presenting both forms and instructions. To the teacher it is invaluable because it has crystallized in objective form the whole penmanship fabric of the past and present in such a way as to furnish instruction of the clearest, most authentic character. To the school proprietor, principal, or trustee, it is invaluable, as it is both a chart of information and inspiration to control a crumbling fabric. The design is reproduced by the photo-engraving process and is therefore faithfully like the original. It is printed on the finest, patented, Cameo, plate paper, 22 x 25 inches, ready for framing. The original is valued at $600, for less than which it cannot be secured.

You can get a fac-simile for one-hundredth that amount, $1.00. Sent postpaid in tube.

ZANER & BLOSER, Publishers, Columbus, Ohio.
Plate 9.

Plate 10. Notice the turns, angles, retracings and spacing, also double curves between o and i, e and o, w and a.

Plate 11. No. 2. The hand moves like a hinge on the third and fourth fingers. No. 3. Retrace oval five times, stop; glide; stop; retrace again. No. 4. Watch the fingers. The arm rolls for the o and glides for the joining. No beginning stroke on the o.

Plate 12. No. 1. A is formed from the i. Be sure to close at the top and have opening between up and down stroke at the base line. No. 2. Mark the difference between the o and a. No. 3. Instead of ending the down stroke with an upward curve, bring it down one fourth of a space and stop with a pressure of the pen before lifting. No. 4. Have good curve at the bottom of the q. As there is no English word but is followed by u, practice the qu. No. 5. Join a, e and u to g, at the base line.

G. A. W. Good movement but lack of control. You will need to practice large writing, making copies fully as large, if not larger, at first, than the printed forms. Do not slant the O's so much. By extending the ending stroke downward, you would have the capital A. This fault must be guarded against. Do not lift pen at the bottom of the For the top of u.

C. R. G. Movement exercises excellent. Keep the O smaller and on same slant as your tracing ovals. Keep down strokes of i more nearly straight and both downstrokes of u same height and close together.

J. A. B. You must practice one specimen many times before attempting the next. Follow the form closely. In the retracing exercise keep lines upon lines so that the oval will still be retained. Have shorter ending stroke in the o. Curve the up stroke of the i, w, H, G. Your work is excellent. The o is not full enough. Have more curve in the up stroke of the u. Keep the second stroke of the u as high as the first. Do not curve the down stroke as it gives the appearance of a poor a.
You have great talent. Keep the small loop of the O within the oval. Notice particularly the size of the loop and slant of the downstroke. Make more of a stop at the bottom of the downstroke of the L. Have the strokes of the u a quarter of a space in height and parallel.

J. A. B. Keep the loop in small c, small and on the same slant as the i. Have no loop in small c. Do much practicing on tracing the oval. Keep the loop of capital C in the centre and the upstroke curved. Have no angles in the capital E and a small loop in the centre. Not enough retracing at the bottom of m's and n's. Keep down strokes the same slant. Use less finger movement.

Cannon's Business College, Lawrence, Mass.
Lesson-61

Lesson-62.

Lesson-63.

Trenton, N.J. Mar. 10-02.

Mr. A.W. Kingan,

Winona, Ia.

Dear Sir,

I am just in receipt of your valued favor ordering one

H. C. Keeling.

Lesson-64

Mr. A. W. Kingan,

Winona,

546 Archer St., Iowa.
It may be justly claimed that no other enterprise has so largely contributed to the promotion of business education in our country, as the establishment of the Bryant & Stratton chain of Business Colleges.

In 1853, the occurrence of Bacon’s Mercantile College of Cincinnati, opened a branch College at Cleveland and later another at Madison, Wis. This Cleveland school later passed into the hands of E. R. Folsom, Supt. of penmanship in the Cleveland public schools, who was also a graduate of Platt R. Spencer, Messrs. Henry B. Bryant and H. D. Stratton received their commercial training under Mr. Folsom. Mr. Bryant was engaged as Bookkeeper for a Mining Co. on Lake Superior, but resigned to unite with Mr. Stratton and Mr. James Lusk in opening, in 1852, Bryant, Lusk & Stratton’s Business College at Cleveland, Ohio. In 1854, Mr. R. C. Spencer, supervisor of penmanship in the public schools of Buffalo, bought into the firm, and organized the Buffalo and College under the firm name of Bryant, Spencer, Lusk & Stratton. In 1855, Mr. E. R. Felton, a three months’ graduate of the college, but the usual time in all similar schools, was engaged by the college as teacher, Mr. R. C. Spencer having returned to Buffalo to establish the second link of the Bryant & Stratton chain. 

Mr. Lusk, fearful of the expansion idea of opening numerous schools, withdrew as a partner. Mr. Bryant, being a cool, self-owned and conservatory man of business, and of a sedate common sense, was well placed at the head of the firm as a director of the course of study and the keeper of its finances. Mr. Lusk, who had been one of the most favored and successful pupils of P.R. Spencer, was the builder and director of the writing department. At that time, Mr. Lusk stood before the Northerners of Ohio as the only to his gifted tutor, Mr. Spencer, in the excellences and requirements of his chosen art. Mr. Stratton, also a former pupil of P. R. Spencer, as compared with most men, was a tall man in every particular. He was capable and did accomplish stupendous things. Of pleasing address, of good ability and irresistible force and energy, he was the man of many thousands to promote to successful issue the chain of famous schools in the manufacturing and commercial cities of United States and Canada. Mr. Bryant by going to Buffalo and Mr. Stratton to New York City, left the Cleveland College in charge of E. R. Felton and W. H. Hollister. With headquarters in N. Y. for several years, they made the institutions of schools so rapidly that it required the employment of many salaried men and women of little experience in business affairs. Forty-six schools controlled by a varied personnel made the responsibilities and risks so great that Bryant & Stratton found it wise and necessary to make each local principal a partner with a personal standing of partnership before his community. Later other changes occurred which will be hereafter related. In Cleveland, the Mother School of the Bryant & Stratton chain, Mr. Felton, for years a partner of Bryant & Stratton, has since had as associate partners Messrs. Wheeler, Bigelow, Spencer, and Lobmifter the incorporation of the schools some seven years since. Of its writing teachers, there were first the great author, teacher and man, P. R. Spencer, James W. Lusk, W. H. Lusk, H. B. Stratton, H. J. Williard, all of the Spencer Brothers, A. P. Root, A. C. Clark, Chas. Scoveneck, C. E. Doner, H. E. Lehman and others.

Before the opening of the second Bryant & Stratton College in Buffalo, Mr. Victor T. Rice, a pupil of P. R. Spencer, opened a Commercial School in Buffalo in 1848. The election of President Lincoln in 1860 caused a number of public instruction in 1855 resulted in closing his Buffalo School. D. C. Hicks opened in 1854 a Commercial School in Buffalo which he conducted on the lines of first class schools with moderate success. In 1855, Mr. R. C. Spencer disposed of his interest in the Bryant & Stratton Schools to his partners. In 1856 he went to Chicago to take charge of the Commercial School established by Uriah Gregory as a branch of Gregory’s Commercial College in Detroit, founded in 1839. In 1856 the Chicago Bryant & Stratton College was founded in 1856 by Mr. Stratton, personally, assisted by S. S. Packard for a short time, who was soon succeeded by R. C. Spencer. Judge U. V. Bell founded a Commercial School about 1850, which was very ably conducted and wealthy personal management. Judge Bell sold his school to his pupil, about 1856 when he removed to New York City to engage in the banking business, in which, however, he was not successful. About 1850 Judge Bell returned to Chicago with the intention of resuming his work in commercial education, and with the hope that he could do so in his old school. This expectation was disappointed, and he was making arrangements to open another school in which he was strongly endorsed by the Chamber of Commerce and by influential citizens and business men. He was induced to relinquish his school and became interested in the Bryant & Stratton School in which he succeeded R. C. Spencer & returned to Buffalo as teacher in the Bryant & Stratton School. In the fall of 1859 the Bryant & Stratton chain was extended to St. Louis under the name of Dr. S. Packard. At that point H. G. Eastman had established a commercial school, the remains of which were bought by Bryant & Stratton as the nucleus of the St. Louis link in the chain of colleges. In the fall of 1856 Mr. S. S. Packard left the Chicago school to open a school in Albany, N. Y., where he remained several years prior to joining the Bryant & Stratton Chain as principal of the New York link in the Bryant & Stratton chain, which after the death of Mr. Stratton and the dissolution of the firm in 1857 passed into the hands of Mr. Packard and became what is now known as Packard’s College.

About 1858, J. H. Goldsmith, who had been a teacher at Ivy Merchants’ College in Cincinnati, opened a commercial school at Sandusky, Ohio, where he remained several years before entering the Bryant & Stratton chain as principal of the Detroit College, at the head of which he remained many years and was very successful. On his retirement, the school passed into the hands of his brother in law, Mr. G. Jewell, who is associated with Platt R. Spencer, Jr. and has changed the name of the school to Detroit Business University. This school represents in part the Gregory, Gregory Commercial College, Spencerian Business College, a branch of the Cleveland Spencerian Business College, and other similar schools, which it has absorbed. About 1859 the Chicago Commercial College was founded in Milwaukee by a Scotchman of considerable ability. Soon thereafter, Bohn’s Lincoln Commercial College at Lincoln, Commercial College at Milwaukee, and St. Louis founded Leggo’s Commercial College. In 1863, the Bryant & Stratton chain was extended to Milwaukee under the principalship of R. C. Spencer. In 1866, the co-partnership was dissolved and the school has since been known as Spencerian Business College. For the purpose of maintaining the chain, Bryant & Stratton bought the Commercial College and changed its name to Bryant & Stratton. In less than a year, they turned the school over to the Spencerian College, which stands today as the Lareggio College. The early proprietors of the Lincoln College were Lincoln and Bayless. Bayless removed to Dubuque, Iowa, after he founded a commercial school, which is, I believe, continued by his brother, Mr. C. Bayless. The Bryant & Stratton College of New York was opened in 1859 under the principalship of John R. Penn, who had been a teacher in the Buffalo College. He took his business course in Cleveland.
One of P. R. Spencer's sons, Mr. Henry C. Spencer, was, for a time, connected with the Bryant & Stratton school at Poughkeepsie before removing to Washington, where he spent the remaining part of his life in commercial teaching in the Spencerian College, which has, since his death, been conducted by his widow, Mrs. Marion Spencer, under whose son Leonard G. Spencer, has recently become associated. The Baltimore Bryant & Stratton school was established under the principalship of Mr. Wm. G. Reynolds in 1864. The Philadelphia Bryant & Stratton school was established about 1859 under the principalship of Mr. J. Stratton, who was assistant teacher for a time in the Chicago College. Mr. Warren H. Sadler took his business course in the Buffalo College under the instruction of Mr. R. C. Spencer. The Boston Bryant & Stratton school was opened about 1859 under the principalship of Mr. Hyde. The Portland, Me., Bryant & Stratton school was opened under the principalship of A. S. Gray about 1850. The Hartford Conn., Bryant & Stratton school was opened in 1862. The Providence school was opened about 1859 under the principalship of Mr. R. B. Bryant, and the Principalship of Mr. Mason, who had been a teacher in the Eastman school at Poughkeepsie. The Bryant & Stratton school was opened in Montpelier, Vt., in 1865. The Bryant & Stratton school was opened at Rochester, N. Y., about 1863 under the principalship of J. V. R. Chapman, who subsequently went to New York City and improved the school. The Bryant & Stratton school was opened at Davenport, Iowa, about 1864 under the principalship of Mr. Merrill. The Troy, N. Y., Bryant & Stratton school was opened at Springfield, III., about 1866 in connection with Judge D. V. Bell. Cincinnati Bryant & Stratton school was opened in 1864 under the principalship of John J. DeHan. The Louisville Bryant & Stratton school was opened about the same time, as was also the one at Toronto and the one at Ivison, N. Y., which was opened under the principalship of W. H. Clark about 1863. Mr. Clark had previously been principal of the Albany College. The St. Paul, Minnesota, school was opened in 1864 under the principalship of Mr. Perkey. All of these schools were the offspring of the mother school at Cleveland, Ohio. During a period of about fourteen years, the chain had extended to most of the larger cities and commercial centers of the United States and Canada under the general management of Mr. Bryant & Stratton, consisting of Henry B. Bryant and Henry D. Stratton, who held equal or controlling interest in each of the schools. Scholarships issued by one school entitled the holder to all privileges of instruction in each of the other schools of the chain without extra tuition. The course of instruction as arranged at that time, could be completed by the student of average ability, education and assiduity in a period of about four months. The student, on entering any of these schools, by the payment of $40.00, would receive a life scholarship good in each and all of these schools for an unlimited period of time.

The first commercial school in St. Louis, Mo., was established by Jonathan Jones under the name of Jones Commercial College, about 1850. It began its career under the principalship of M. Bartlett, Cincinnati. He was a man of exceptional ability and energy, and of eccentric character.

Honorable Ira Mayhew, at one time a student of the Commercial Institute in Michigan, an educator of national reputation, early became interested in business education, was the author of several valuable works on commercial education and had opened a commercial school at Adrian, Michigan, and subsequently at Detroit, where he died at an advanced age.

About 1855, Bryant & Stratton, Detroit, under Mr. Packard, then publisher and editor of a small paper known as the Pilot, published at Tonowanda, a small place between Buffalo and Niagara Falls, Mr. Packard's Commercial Course. Mr. Packard's Commercial Course.

Bryant & Stratton brought Mr. Packard into their work as an instructor, and after a series of observations, they conceived the idea of publishing a series of works upon bookkeeping, the authorship of which was placed in the hands of Mr. Packard, who undertook the work, and while engaged in taking, producing the Bryant & Stratton Counting-house bookkeeping, Bryant & Stratton, Academic bookkeeping and the Bryant & Stratton Commercial bookkeeping, published by the firm of Ivison, Phinney, & Company, New York.

The counting-house bookkeeping was the text book throughout the Bryant & Stratton schools, and was widely and generally used in the counting-rooms and business houses of the country. Bryant & Stratton secured the services of Emerson E. White, a prominent educator of Ohio, and a man of national reputation, who prepared for them a commercial arithmetic, which was used throughout the schools.

Those who have studied the commercial schools of the chain that had been published, and were important aids in broadening, deepening and elevating commercial education.

About 1849 O. K. Chamberlain, a typical Yankee, established a school in Pittsburg under the title of Chamberlain's Commercial College, which he sold to P. R. Spencer who changed its name to Spencerian Business College in 1852. The serious illness of Mr. Spencer obliged him to sell the school to Mr. R. B. Bryant.

To Be Continued
Gregg Shorthand Association

THIRD ANNUAL CONVENTION HELD AT GRAND RAPIDS BUSINESS UNIVERSITY, GRAND RAPIDS, MICH., JULY 6, 7, 8, 9, 10, 1903.

MONDAY, JULY 6TH.

"Welcome": A. S. Parish, Grand Rapids, Mich.
Response: John M. Hill, Sedalia, Mo.
President’s Address: J. Clifford Kennedy, Salem, Mass.

What was Laid at the Last Convention: I. S. Sunday, Findlay, Ohio.

Comments and Suggestions: John Robert Gregg, Chicago.
One Hour Theory: First Lesson: Walter Kasinskas, St. Paul, Minn.

Third Lesson: H. C. Rowland, Columbus, Ohio.
Fourth Lesson: Miss Harriet A. Rynan, Hamilton, Ont.

Fifth Lesson: J. W. Butler, Oklahoma, City, O. T.
Sixth Lesson: Mrs. Katharine Isbell, Terre Haute, Ind.

Comments and Suggestions: John Robert Gregg, Chicago.

Note: Each teacher participating in this part of the program will be expected to occupy ten minutes only. This will be sufficient to explain briefly the points required for practice in each lesson. As the Question Box period will give ample opportunity for discussion of the suggestions or points that require further explanation, there will not be any general discussion at this stage. Those in attendance are requested to take note for this purpose.

Easy Dictation: By John Robert Gregg, Chicago.

Note: Mr. Gregg will briefly explain his theory of developing speed and then give a practical illustration of the first stage of speed practice, when the student has mastered the theory, by treating the audience as a class.

Model Class in Dictation, conducted by J. Clifford Kennedy, Salem, Mass.

Questions: Conducted by Mrs. Ida McLenan Cutler, Dubuque, Iowa.

Note: In passing, it is interesting to note that the Question Box has been exceedingly popular, entertaining and instructive. Teachers are requested to write all their problems, and hand them to the teacher in charge of the Question Box.

Informal Discussion, 8:00 p.m.: It has been suggested that it would be well to have an informal gathering, on Sunday evening, so that those in attendance may become acquainted with one another early in the convention.

TUESDAY, JULY 7TH.

"The Day’s Work," Miss C. Mande Metter, Marshalltown, Iowa.

Note: This is an explanation of how Miss Metter carries out her work. The subject is a very interesting one, and is expected to develop a great deal of discussion.

Discussion, opened by W. N. Watson, Lincoln, Neb.; Mrs. L. Allen, Denver, Col.; and C. W. K. Kitt, Chicago, Ill.

One Hour of Theory: Seventh Lesson, Long Island, N. Y.

Eighteenth Lesson: Mrs. N. C. Kempton, Woodruff, Wis.

Ninth Lesson, Pearl A. Power, Chicago.

Tenth Lesson: R. H. Boyd, Madison, Wis.

Eleventh Lesson: Misses J. M. Hill, Sedalia, Mo.; Mary Binns, Davenport, Ia.

Twelfth Lesson: Mrs. Ada A. Allison.

Comments and Suggestions: John Robert Gregg, Chicago.

Discussion, opened by Mrs. Richardson, Minneapolis, Minn.; Mrs. W. M. Mott, and C. O. Bentley, Rock Island, Ill.; and Charles B. Hall, Yorkers, N. Y.

Practical Blackboard Drill: Conducted under the chairmanship of Mr. Gregg. This feature is expected to be of unusual interest and value. Points in execution of forms will be explained and illustrated.

Methods of Economizing Time and Effort in Correcting and Grading Students’ Work: Discussing the question with Miss Lee Collins, Zanesville, Ohio.

Discussion, opened by a representative of the Chicago Board of Education.

Third Class in Dictation: Conducted by J. W. T. H. H. Hall, Quincy, Ill.

Fourth Class in Dictation: Conducted by Sidney L. Daily, Aurora, Ill.

THURSDAY, JULY 9TH.

Shorthand in the High School: J. H. Bayes, Chandler, O. T.

Discussion, opened by Miss Jennie M. Patton, Peoria, Ill.

The Relationship Between Shorthand and Longhand: George S. McClellan, Harrisburg, Pa.

Discussion, opened by Cyrus W. Field, Detroit, Mich.

Enthusiasm: A Positive Factor in the Class Room: J. B. Knowles, Peoria, Ill.

Discussion, opened by Miss R. M. Coburn and C. E. Bissou, Muskegon, Mich.

Speech: For the double purpose of instruction and of bringing some first class writers of the subject. Conducted under the direction of the committee to be appointed at the meeting.

Typewriter Contest: The Underwood Typewriter Company offers the latest model Underwood typewriter in a stand and operating permit as a prize to the winner. Conducted under the direction of a committee appointed at the meeting.

Question Box, conducted by R. W. Goeth, Stoughton, Wis.

FRIDAY, JULY 10TH.

The Teaching of the Auxiliary Branches: Spellling, Mrs. G. W. Brown, Sioux City, Iowa.

English, Mrs. F. Ellinge-Raymond, Chicago, Ill.

Discussion, opened by Miss Harriet P. Conwel, Ann Arbor, Mich., and H. Bayes, Chandler, O. T.

Methods of Giving Instruction by Mail: Pearl A. Power, Chicago.

Discussion, opened by Mrs. Morton Mac-Connie, Chicago, Ill.

Model Dictation Class: Conducted by J. B. Knowles, Peoria, Ill.

Reports of Committees.

Election of officers.

Selection of the next place of meeting.

Question Box, conducted by C. A. Passell, Pontiac, Mich.

Adjournment.

Program of the Boston Meeting of the Private Commercial School Managers’ Association

The Association will Remain in Session Four or Five Days.

FIRST SESSION WILL BE HELD SATURDAY, JULY 11, 1903, AT THE HUDSON COLLEGE, 69 WASHINGTON ST., BOSTON.

9 A.M. Enrollment of members.
9:30 A.M. Roll call and report of the Executive Committee.
10 A.M. President’s Address.

11 A.M. Report of the Standing Committees:
(a) World’s Fair Exhibit.
(b) Legislative, including second class postal privileges.
Final Report.

Report of the Secretary and Treasurer.

AFTERNOON SESSION.

2 P.M. Report of the Executive Committee arranging the recommendations of the President and standing committees for discussion.

Round Table Discussion.

The following subjects with others will be discussed and acted upon:

Qualifications for membership.

Advisory council with its various phases.

Tuition Rates.

Office equipment and records for private business schools.

Teachers’ qualifications, salaries, etc.

Qualifications for students’ entrance.

Length of course of training.

Our relation to the Public Schools.

Typewriting machines.

The new department of Commerce and Labor.

School Room Office appliances and equipment.

Such additional subjects will be taken up as the members may from day to day suggest.

This will be a strictly business meeting for the members.

It is of interest to every Private Business School in the United States to be represented.

This will be the most beneficial meeting ever held by the Private Business School in the world.

All persons desiring to attend this meeting can get the benefit of the rates made for the National Teachers’ Association and have the advantage of attending the National Business Educators’ Association from July 7th to the 10th, inclusive.

Maximum of business, pleasure and profit at a minimum expense.
Program for
Department of Business Education.
National Educational Association, Boston.

SESSIONS IN FIRST CHURCH.
J. H. Francis, Los Angeles, Calif. President.
J. H. Minch, Chicago, Ill., Vice President.
C. E. Stevens, Cleveland, O. Secretary.

TUESDAY MORNING, JULY 7TH.
President’s Address. Commercial Education: Cultural or Vocational, Which? J. H. Francis, Principal of the Commercial High School, Templeton P. Twigg, Detroit, Mich., Vice President.

Commercial Education and College Entrance Requirements, W. A. Scott, director of the School of Commerce, University of Wisconsin, Madison, Wisconsin.

Discussion.

The Disciplinary Value of Bookkeeping as a Study, Eno Spencer, President Spencerian Commercial College, Louisville, Ky.

WEDNESDAY MORNING, JULY 8TH.
Commercial Geography, the New Science, Frank O. Carpenter, English High School, Boston, Mass.

Science in Commercial Work, Its Practical Value, Character and Place in the Course, F. M. Gilley, High School, Chelsea, Mass.

Discussion.

The Disciplinary Value of Stenography and Typewriting as Studies, W. H. Wagner, Commercial High School, Los Angeles, Calif.

Discussion.

FRIDAY MORNING, JULY 10TH.
Round Table Conference.

The July Meeting of the N. E. H. S. C. T. A.

19 AVON ST., MELROSE HIGHLANDS,
Beverly, Mass., May 7, 1903.

Mr. E. E. Gaylord,
Mass., May 7, 1903.

MY DEAR MR. GAYLORD:

I am just in receipt of a letter from Mr. Edward K. Warren, Chairman of the Local Executive Committee of the N. E. A., saying that it is not the policy of that Association to print anything in the official program but the regular business of the Association. He therefore declines to notice our N. E. H. S. C. T. A. business meeting, to be held in the same week as the N. E. A., in the official program.

He further states that the official program is now in hand and will be issued very soon, and that he will at once mail me a copy.

I shall write him today asking him to send copy also to each of the officers of our Association. I have asked them today immediately upon receipt of said program to indicate to me the time and place they would prefer for our meeting, their preference being determined by considerations of the convenience and preference of the persons who will attend our meeting. When a time and place of meeting have been agreed upon by the officers, proper notice will be issued to all members of the Association, and to all persons eligible to membership.

Mr. M. D. Fulton, Chairman of the Committee on Constitution, advised me that his Committee is already at work, and would be very glad to receive suggestions in writing from any one interested in the organization of our Association.

I quote the following from a letter recently received from J. S. Love, Clerk of the Harvard Summer School:

“Yours of April 19th has been received, and I have referred the matter to Professor Shaler, who is chairman of the Summer School Committee. He pronounces it impossible to make arrangements this summer for instruction in Commercial History and Commercial Geography; it seems now too late to secure teachers, and properly arrange for the courses. But we will consider it most carefully next autumn, and, if possible, arrange to offer instruction in the summer of 1904.”

It seems to me that this holds out a prospect of an opportunity which should be embraced by every public school commercial teacher and I know no reason why our friends of the business colleges should not feel as does an interested trade union.

There are already courses in Education offered by the Harvard Summer School which should receive the attention of members of our Association, and I hope to have circulars with all particulars mailed to each member.

Very sincerely yours,

H. G. Greene.
President of the N. E. H. S. C. T. A.

Program of
The Zanerian Reunion.

JUNE 22-26, 1903.

M A N D A Y.
9 a.m. How to Teach Drawing in a Normal: S. L. Caldwell, Teacher of Penmanship and Drawing, Nebraska State Normal School, Peru, Nebr.
9:45 a.m. Discussion.
10 a.m. What Form and Movement is Best-suit to the Many: A. A. Kuhl, Principal Georgia Normal College, Abbeville, Ga.

AFTERNOON.
1:30 p.m. Zanerian Reminiscences: H. C. Rowland, Proprietor Ohio Business Institute, Columbus, Ohio.
2:50 p.m. Open Door Remarks.

EVENING.
Oenotangy Park, Zoological Garden and Theatre.

C U S T U D Y.
9 a.m. Presentation of Zanerian Gold Medal to pupil having made most improve-
ment during year, beginning June 1, 1902, and ending June 1, 1903.
9:15 a.m. How Little Tots are Taught to Write: Miss Jeanette A. Krebs, Ashland, Ohio.
10 a.m. Discussion.
10:45 a.m. How to Teach Drawing From the Blackboard: W. C. Fent, Supervisor Writing and Drawing Public Schools, Mt. Vernon, Ohio.

AFTERNOON.

Picnic, fishing, swimming, outing, etc., at Big Darby, on interurban line, twelve miles west of Columbus.

EVENING.
9:30 a.m. How to Teach Writing in the High School: H. G. Bartner, Reno School of Penmanship and Shorthand, Pittsburgh, Pa.
9:45 a.m. Discussion.
10 a.m. Early Zanerian Pupils, Like the Early Bird, Have Grown There: P. W. Frederick, Proprietor Mansfield Business College, Mansfield, O.
10:45 a.m. Free-For All Reminiscent Anecdotes, etc.

AFTERNOON.
1 p.m. Sketching Expedition, Out-Door Talks and Tumbles, or Theatre at Minerva Park.

EVENING.
Banquet at one of leading hotels.

C H R U S D A Y.
9 a.m. Time in Teaching Writing: A. R. Whitmore, Proprietor, Scranton Business College, Scranton, Pa.
9:45 a.m. Discussion.
10:45 a.m. Discussion.

AFTERNOON.
3 p.m. Discussion.
3:30 p.m. Ups and Downs of the Illustrator: R. E. Hummel, Illustrator, Engraver, and all round artist, Chicago, Ill.

EVENING.
Tour of City on “Electra,” and Interurban Ride.

F R I D A Y.

AFTERNOON.
1:30 p.m. Model Lesson in Business Writing: J. E. Leamy, Troy, N. Y.
2:30 p.m. Discussion.
2:30 p.m. Work of Good Writing in a R. R. Office: W. B. Clark, Agent T. & O. C. Ry., Co., Kenton, O.
3 p.m. Discussion.
3:30 p.m. Remarks by Mr. Zaner.
4 p.m. Discussion.

EVENING.
5 p.m. Chalk Talk: J. O. Wise, the Whi and Wonder of the Platform, Chicago, Ill.

Those marked with star subject to change.
Messrs. Isaac Pitman & Sons, 3 Union Square recently received from the Mer- chant Bankers Bank of Madison Ave, New York, an order for 1,000 copies of the Isaac Pitman com- bined form of the "Van Sant System of Touch- writing" for the use of the "Van Sant System of Touch- writing" for the use of the library of the school.

Mr. G. N. Langum, proprietor of the Met- ropolitan Commercial College, Minneapolis, Minn., has closed a contract with Mr. A. A. Albin, of Portland, Oregon, to take charge of the management of the college, and with a court reporter to take charge of his shorthand work.

Mr. Albin is a young man of exceptional ability in the shorthand line, and if we mistake not will come near doing for Minne- apolis what Pabst did for Milwaukee.

Mr. O. T. Johnston, of Fergus Falls, Minn., will handle the penmanship in the Capital City Commercial College, Des Moines, this summer, during the absence of Miss Champion, who is attending the Anzalian.

Geo. A. Golfer has disposed of his interest in the Yorkville Commercial College and Edgewood School, Minn., and purchased a half interest in the Metropolitan Commercial College, Minne- apolis, Minn.

The Nyeversdale Republican, Pa., Thurs- day, April 10th, contained a column and a half concerning the Nyeversdale Business College and its Principal Mr. W. J. McCarty, formerly of Scioto, 0. It speaks in the very highest terms of Mr. McCarty and his work there, and says nothing which his modesty, energy and ability does not fully justify.

Mr. J. D. Brunner, president of the Marion, Ind., Business College, and Chas. C. Brunner, is associated with him, have begun the erection of a new building including a dor- matory. This will be a beautiful building and the enterprise of the day, and we wish the gentlemen success.

The Philadelphia, Pa., Business College, Messrs. Lening, Wuttman and Dunton pro- prietors, recently purchased the College of Commerce of that city and consolidated it with the business college. The Philadelphia Business College and College of Commerce will be conducted by Mr. G. C. Sewell, the business manager of the College of Commerce, and many of the following members of the faculty: H. K. Good, Mary E. Phillips, Victor- ia H. H. S., M. J. S., etc. This new school is "cutting quite a swath" for one of the most successful schools in the amount of their success.

The Ohio Association

The meeting of the Ohio Commercial and Special Teacher's Association, which meets at Put-in-Bay on the last Monday and Tuesday of June, and is held in connection with the State Teachers' Association, proved to be a most interesting and enjoyable one. All who can do so should be on hand. We have no program to present at this time, because none has been published. Such a program, however, will be presented, and will be largely in the form of symposiums of opinions relative to penmanship, shorthand and business education, from men eminent in their lines. As we under- stand it, the intent is to have many speakers express themselves in few words. We hope to see you there. Best wishes. The most delight- ful one for a midsummer gathering, and it ought to be by far the largest we have ever had.

The Best Advertising Medium of Its Class

The Business Educator being the most popular and widely read journal of its kind, it fol- lows that the writing of business education is still its best advertisement. It reaches practically all persons interested in commercial education and in penmanship, in both this country and in Canada. It covers the commercial school field completely as it does to the heads of Commercial Colleges, Comm- ercial High Schools, Commercial Departments in Parochial and Private schools, and, to a large number of office workers, public school teachers, home students, etc. Then it is pre- served and read by many more persons having it bound in book form. Our rates for space advertising are less than for any other high class journal published. Wide- awake educators will find our columns money makers. Write at once for details.

Vacation

The next number of The Business Educator will be published about August 25th, as we issue no July or August numbers. This is vacation time, and we shall utilize it as best we can to prepare for next year's campaign. We hope that you will do the same and be with us from Sep- tember on, as we expect to be with you.

$25,000.00

From "The Sunday Oregonian" Portland, Oregon, April 19, 1916, we learn that the late H. W. Corbett, of that place, left an estate of nearly a quarter of a million dollars, and among the bequests for charity, education, etc., we find the following, which is of interest to teachers of penmanship and book-keeping:

"To the Portland Academy, located at Portland, Oregon, the sum of two thousand dollars ($2,000.00), to be held by

said Portland Academy as an irrevocable endowment fund, the principal to be invested, and any moneys that would remain, or any perpetual endowment to be paid to the Portland Academy, to be used, at the discretion of the board of directors, in the support of a professor of penmanship and book-keeping, to the end that penmanship might not become an extinct art."

Mr. Corbett, banker, millionaire, manufacturer and public spirited benefactor, was the moulding feature in the destiny of the city of Portland. He was the man who understood the business interests of the country, and his conclusions were that there was neglect and indifference on the part of public educators in general, as regards the important subject of penmanship. The result is the endowment of a chair of pen- manship and bookkeeping as above recorded.

This bequest is something out of the ordinary, as commercial teachers and penmen have not been as a rule favored with contributions of this character, since the educational system has grown to the front, and is still forging further, we presume that donations of this character will be more frequent, and eventually they will be the cheapest, because the best is always the cheapest.

Who Wrote the Capitals?

In the May number of The Business Educator we printed a set of capitals written by twenty-six different penmen, offering a copy of "Zanerian Script Alphabet," $2.50, "for the best identification of the letters." It gives us pleasure to announce that Mr. Fred S. Heath, of Concord, N. H., was the lucky winner, as he guessed all correctly but two. Messrs. J. H. Holmes, of Bradford, Pa., and J. B. Crawford, of Des Moines, Ia., were next, each as guessed all but five. Many guesses sent in, some missing the mark so far as to guess but one correctly.

The list was as follows:

The Ohio Association

The meeting of the Ohio Commercial and Special Teacher's Association, which meets at Put-in-Bay on the last Monday and Tuesday of June, and is held in connection with the State Teachers' Association, proved to be a most interesting and enjoyable one. All who can do so should be on hand. We have no program to present at this time, because none has been published. Such a program, however, will be presented, and will be largely in the form of symposiums of opinions relative to penmanship, shorthand and business education, from men eminent in their lines. As we understand it, the intent is to have many speakers express themselves in few words. We hope to see you there. Best wishes. The most delightful one for a midsummer gathering, and it ought to be by far the largest we have ever had.
Commercial departments among the high schools of the country are on the increase, and expect to push it into the front ranks among the educational departments. Mr. A. S. Heaney, assistant principal of the Commercial Schools of W. Va., was recently employed in the field of these schools in that state. Pupils get something tangible in the way of money, and public pay the usual prices, the profits from the public are used to defray the costs of the schools living. This is but another evidence of Mr. Elliott's enterprise and thought in the interest of his pupils.

On June 1st, 1900, the Northwestern Business School was opened in the old school building, which has been under management for the last three years, and the interest of the students in the school is increasing. Mr. E. C. Stinnett, who has been the principal of the school for the last three years, is now the principal of the school, and the school is now in a position to give the best equipped schools of the kind to be found.

One of the latest moves by Mr. W. E. Elliott, president of the Commercial School of W. Va., was to purchase and equip a restaurant in the downtown section of the city. The school, which has been under management for the last two years, is now ready to open for business. Mr. R. C. Williams, the principal of the school, is now in charge of the school, and is preparing to make the school a success.

One of the most interesting and important events of the past few years was the opening of the University of Michigan's Commercial School, which was opened on June 1st, 1900. The school has been in operation for the last two years, and is now ready to give the best equipped schools of the kind to be found.

Mr. S. B. Fahnestock

Whose handsome portrait and penmanship appear herewith, is a native of Ohio, and just turning the half-century mark in fine health, and without the need of glasses even in doing fine pen work. Twenty years ago he was an active force in public school educational work in Ohio. In 1888 he engaged in commercial teaching, at which time he also became a student of Mr. Zaner. As a commercial educator and penman he is one of America's most substantial.

For fourteen years he has been at the head of the commercial department of McPherson, Kansas, College, which has an annual enrollment of 450, and is recognized by the State Board of Education. He is also secretary and treasurer of the college, and vice-president of the Board of Directors.

He has been honored with the presidency of the Kansas State Penmanship Association, and the Kansas State Commercial Teachers' Federation. He is also active in city politics, being a third term councilman, and chairman of the finance committee of the city of McPherson.

As Sunday-School superintendent and worker, his influence is not alone educational, professional and political, but moral and religious as well.

He has been a subscriber of The Business Educator from its first evolution, and recently sent $5.00 for renewal for five years, and said, "I know of no paper equal to The Business Educator for the penman and commercial teacher."

Mr. Fahnestock is a genial, sturdy, gentleman, with a life-companion as faithful, even tempered, pious, and cultured as he.

Mr. Fahnestock happily possesses the combined qualities of conservatism and progress, qualities which cause him first to thoroughly prepare and then to enthusiastically push.

WANTED

A Commercial Teacher to handle Commercial Arithmetic, Rapid Calculation, Penmanship, Commercial Law, Bookkeeping. Would prefer one who has had some experience in soliciting. Address,

WESTERN IOWA COLLEGE, Council Bluffs, Ia.
News Items
(Continued from Page 38.)
and we know that those who heard her enjoyed a treat. Not only has Mr. Kisinger a good school, but he is blessed with an interesting staff. Mr. Joseph Nelson, president of the Salt Lake Business College, discontinues his work with the close of this school year, and will hereafter act as cashier of the Utah National Bank. His many friends will gladly congratulate him. We understand that the Salt Lake Business College will be consolidated with the latter Day Saints Business College, which will make an institution powerful among the commercial schools of the Far West.

C. J. Maclean, of Goldey College, Wilmington, Del., is a business man as well as a business manager. He belongs to the Wilmington Board of Trade, and has recently been made one of the Membership Committee. Those who heard the modést presentation of Goldey College at the Brooklyn convention will understand that there is likely to be something doing in the vicinity of the Wilmington Board of Trade. Mr. Maclean is not one of the sleepy kind of pedagogues.

E. H. Fisher and his brother, M. C. Fisher, who have been teaching in Bardett College, Boston, for several years, will discontinue their work in this institution in June, and will open a school of their own in Boston, in September. These young men are excellent teachers who have the highest esteem of all who know them, and their record in the large and popular school where they have been employed is an enviable one. We wish them the unlimited success that they certainly deserve.

C. E. Doner, the well-known and popular penman, will leave his present position the first of July, and will instruct in penmanship at the Ann Arbor Summer School for teachers. In September he will take up the work of his new position as special teacher of penmanship in the Beverly, Mass., High School and supervisor of penmanship in the Beverly grammar schools. Mr. Doner has obtained a very desirable place, for which he is well qualified, and great things are expected of him.

After the failure of the Grand River College, Gallatin, Mo., last November, Benjamin K. Sperly, who had been in charge of the commercial department of the school, opened the Gallatin Commercial College, which has been doing an excellent business. We wish Mr. Sperly continued success in his independent work.

C. E. Sisson, who has had charge of the commercial department of the Warren, Pa., school during the past year, will take control of a new department for commercial teachers to be opened in September in the California (Pa.) State Normal School.

This is the first instance of which we have heard, where a state normal school has seen fit to recognize the crying need of commercial teachers who have had a sound professional training for teaching. We congratulate the enterprise of President of this aggressive school, not only on his foresight in establishing this department, but also on his wisdom in making so excellent a choice of teachers, for we have had a chance to see Mr. Sisson's superior work with high school pupils.

TO THE STUDENT: The penman needs enthusiasm, and he needs it five days of nearly every week. There is nothing to stimulate this enthusiasm better than a copy of Artistic Alphabettes. It pays the student to model his work after the best forms that can be obtained.

TO THE TEACHER: The penman needs enthusiasm, and he needs it five days of nearly every week. There is nothing to stimulate this enthusiasm better than a copy of Artistic Alphabettes. It pays the student to model his work after the best forms that can be obtained.

WANTED
MANAGERS
Managers of the branch schools usually make from $150.00 to $225.00 per month salary and commission. We pay better salaries after teachers prove ability than any other college pays. We want teachers and managers, who can take enough stock to guarantee personal interest. Have recently organized Stock Company, Capital Stock $10,000, Interest guaranteed by a Bank. Have eight colleges established and expect to open more. A $45.00 box, the title of "A Little Talk about a Big Success," will be sent free to any one who can answer the first three questions. We are in the business of organizing and operating schools. What our prospects have been for the past few years and the number of the young and old that study in the schools of DRAUGHON'S College since the first one was established fifteen years ago is more than you can imagine. The little story of left, honor, and striving. Send for it.

Address
DRAUGHON'S
Practical Business College Co.
NASHVILLE, TENN.
To the student of roundhand we present, for study and consideration this month, the style that is peculiar to the author. It may not be perfection in itself, but it possesses the qualities upon which we can successfully build the finished product.

The work takes place on a modern air by using modern capital letters. And here I wish the student-penman to pause and give a thought—mix ink with brains. If you then will have ever noticed the application of modern capitals to heavy script you have also noticed the apparent weakness of the capital when the work was completed. The capital was large enough, but it looked weak. In the execution of the first arch form the movement produced the delicate hair line that did not harmonize with the heavy line produced in the remainder of the letter by a different movement. Then you will have noticed the tendency to apply the more flourished form instead of the plain style. Will you notice the harmonizing effect of the capital letters used with the roundhand? Notice their proportion and relative size when compared with the small letters. Capitals are but one space higher than the small letters. They are free from flourish and possess strength: What lends the strength? You say. Notice that the capital gets its strong appearance from the second downward stroke. It is shaded, the shade being carried low—a roundhand shade—just as you would make the small letter t. The first part of the letter was made with the regular writing movement in executing off-hand capitals, but the pen was raised at the top of the upward stroke, and the remainder made just as the roundhand t. Had this letter been finished with the hair line stroke it would have appeared weak and out of place, just as this would appear too substantial with a running hand style of writing.

Now notice the capital B. This was made entirely freehand, beginning with the dot on the base line and making the compound upward stroke a light line and putting the shades on the downward stroke just as you would for ornamental writing. But when completed it looked weak. Lacked backbone. So I deliberately put the pen on the paper, and as you make all shaded downward strokes, I made it the substantial letter you see. The letter c needs no modifying. Both downward strokes should be shaded. The other style of the c does not adapt itself to roundhand. Thus all through, you will find some such characteristic that will be easily improved when you realize what the capitals lack. And very soon, if you are thinking, you can indiscriminately pick out the style of letter from modern capitals and adapt it to roundhand purposes. Keep in mind the idea of strength and proportion, instead of delicacy and extravagance of form.

Now notice the small writing. See how round are the turns; how open all letters; how regular the spacing and how uniform the slant. By all means notice the finish of the m or n and similar letters. End your word just as carefully as if the letter t followed. Do not finish the last stroke with a compound curve, nor run it higher than the small letter, nor make it on a greater slant than your regular connective strokes.

Now that you have studied these words and my style, get your pen and ink and go after it. If you have never done any of this kind of writing hunt up some of your back numbers and find some instructions from Klebe or Howe. They can tell you how to execute it better than I can, for I learned much from them. Then when you have learned how to secure results, imitate the style given in this lesson. Try the words. Use prepared India ink. Zanerian or Higgins Waterproof. A good flexible pen. The original was much larger than the engraving. It has been reduced nearly one-half.

The small letters were made between two blue lines on ordinary practice paper, three-eighths of an inch apart. Try it this size. When you get a word that suits you as to roundness and openness, reverse the paper and look at it upside down. See if your turns at the bottom of the m's, etc., look like m's. They should. Try it again. Then try a word or two, using each letter in the alphabet as a capital, finding the style of capital and its modification best suited to roundhand. Do not make lower case letters smaller than three-eighths of an inch. Keep capitals plain and strong, and from one to one and a half times the height of small letters.

I wish to emphasize once again the necessity of keeping all work large, round and open. The heading for this lesson this month was developed from such work. Next month I will tell you how.

If you lack enthusiasm, re-read my introductory article last month. Write me enclosing some of your best work, also stamps for reply, and I will criticise your work and offer suggestions that may help you climb more rapidly.

Now hustle and be ready for next month.

THE BUSINESS EDUCATOR

A CORRECTION

WASHINGTON, D. C., May 10, 1903,

MESSRS. ZANER & BLOSER,

COLUMBUS, OHIO:

GENTLEMEN—The above order delivered before the National Shorthand Teachers Association at Milwaukee, December 30, 1902, by Mr. Fred Ireland, Official Reporter, House of Representatives, Washington, D. C., and published in the March number of THE BUSINESS EDUCATOR has, on page fifteen of that issue, under the caption “One of Mr. Ireland’s own experiences,” several misstatements which I beg the privilege of correcting.

Mr. Ireland, in speaking of the arbitration between the United States and one of the South American Republics, says:

“The writing of the decision and the opinion...”

hours before the time limit expired...”

“The Stenographer who took the dictation...”

and his capable typewriter assistant remaine...”

“The copy of the opinion was turned over...”

and next day...”

“impossible to accomplish this task.”

And now for the facts in the case.

The decision was written in long hand by Sir Henry Strong, Lord Chief Justice of Canada. This does away with the “faithful stenographer and his capable typewriter assistant.”

There were only two engrossed copies of the decision required, the copy for which (in Sir Henry Strong’s hand writing) was given to the engrossing clerk of the Department of State at 10 o’clock p.m., May 7, 1902, (the Protocol under which the arbitration was held expired May 10, 1902) and at 10 o’clock p.m., May 8, 1902, the engrossed copies were handed by him to the American Arbitrator, the Hon. John D. Dickinson, at the Arlington Hotel, where they were signed the next day, May 9, 1902.

The above statement of facts makes it unnecessary to discuss the alleged “grand stand finish” made by the stenographer with the assistance of the Government Printing Office.

Very respectfully yours,

E. R. RUSSELL,

Engrossing Clerk, Department of State.
LAIRD’S SYLLABIC SHORTHAND
A pronouncedly adapted Pitmanic System. Articulative speed, the aim of shorthand, attained by pronunciative methods, words being analyzed, written and read swiftly by syllables as spoken, rather than slowly by letters. A high-grade system in one brief style, on time-tried principles. Extremely brief, legible and flowing. Complete Manual $2.00 postpaid. Booklet free.

LAIRD’S SYLLABIC SHORTHAND INSTITUTE
Cor. 63d and Green Sts., Chicago, Ill.

A NEW BOOK

Artistic Alphabets

The above name has been given to this book because of the many sets of Ornamental Capitals by C. C. Canan.

The Best.
A book of new engravings, containing the very best copies in all the useful studies of penmanship. Simplified Penmanship is illustrated by C. P. Zener; Anna C. Penman; Anna A. H. W. Flickinger, and E. C. Mills; Engraver’s Script by Chas. V. How; F stamped by W. E. Denne; Ornamental Penmanship for the leaders in this line. The author is represented in nearly all branches of penmanship.
Artistic Alphabets is a book of maravilious penmanship, a book that will not be put aside after an examination, but which merits the study and attention of all who are the least interested in writing. Every page represents the greatest possible value to the purchaser. It is a book of 32 pages, 8.5 x 11 inches, plate paper, printed in brown ink, nicely bound, and the price is $1.00. You will make no mistake by taking a penmanship course under the instruction of this book. The copies are the most helpful and inspiring that could be returned.

Over 50 Hours’ Solid Talk Is Given by

Madaras’s
New York

when the teachers’ course in the Madaras Method of writing is being expanded. Every important point in the subject is covered, every difficulty smoothed away. If you can’t acquire a good business style of handwriting, or know how to teach it successfully after taking the Madaras Method, you are in the wrong business. I’ve had no failures. It would take pages to mention names of the successes. Better write to me and learn more about it. Enclose stamp to MADARAS, 1281 Third Ave., N. Y.

GINN & COMPANY, Publishers
Boston New York Chicago London San Francisco Atlanta Dallas Columbus

The Charleroi Mirror, Charleroi, Pa., has
issued an unusually fine industrial edition,
etitled "Charleroi Chamber of Commerce," newspaper size, beautifully illustrated and splendidly printed upon good book paper. In it we find an entire page devoted to the

The Georgia-Alabama Business College Journal, Macon, Ga., issues quite an attrac-
tive sixteen page paper devoted to the in-
terests of that institution. It contains a
number of interesting half-tone pictures of
students, buildings, city, etc., together with
some handsome penmanship by R. H. Bond
for the penman.

The Fourth Annual of the Conserva-
tory of Music of the West Virginia Confer-
ence Seminary, Buckhannon, W. Va., is a
profusely illustrated affair, and indicates a
most varied program for their commence-
ment beginning May 25th, and ending June
6th. On the front page is given a portrait of
Stephen Benton Elkins, with a very read-
able, short biography of his eventful career,
and on the last page is given the Beecher
like likeness of Levi Gilbert, D. D., Mr. Geo.
W. Broyles is principal of the commercial
department.

Some modern, finely printed circulars re-
lative to "Moore & Miner's Accounting and
Business Practice," by Ginn & Co., publish-
ers, are at hand. The circulars are printed
on linen, deckle edge paper, with double
dines printed in orange, the effect being
quite soft and artistic. A review of this
publication was printed in this journal some
time ago.

College advertising literature has been
received from Aurora, Ill., College, Utica,
N. Y., Farmers, Mo.
line, Ill., Ft. Smith, Ark., Commercial Col-
gele, Bethany Business College, Lindsberg,
Kansas, South Bend, Ind., Commercial Col-
gele, Fort Worth, Tex., Business College,
Brown's Business College, Terre Haute, Ind.

Colorado Commercial College, Denver,
is the title of a purple-backed, gold embossed
catalogue, profusely illustrated, advertising
that institution.

Students are met at the depot with m-
biles, and it would appear as though the
college were in the mobile business as
they have three automobiles illustrated,
two of which are large coaches intended to
carry a dozen or more.

The Detroit Business University recently
favored us with a little four page folder
including the program of their Friday May-
Day exercises, which was quite enjoyable.
The folder is a very artistic one with an
elaborate script mono-gram of D. B. U.,
which the folder is one of the richest things we have ever seen in
the way of book-making. How Mr.
Smith can issue a catalogue of such costi-
ness we are at a loss to know. It indicates a
very good school, and a well patronized one. It
is printed in a number of colors, with ini-
tials that are second to none other that we
have ever seen in genuine artistic elegance.
The text and illustrations are very effective
in form, style, and color, and are presented
in a way to appeal to prospective students
as well as to any one capable of appreciat-
ing beauty and up-to-dateness. If Mr.
Smith can find a patronage capable of ap-
preciating this fine art product, we fear the
South is ahead of the North in print culture.
You ought to see the catalogue, no matter
what it costs you.

WANTED: Teacher for Business
Department. Salary $75.
COLORADO COMMERCIAL COLLEGE,
Denver, Colo.
Mr. Harry W. Wadland, whose portrait and work appear herewith, is a native of Ontario, having been born in Woodstock, June 10, 1880. In 1898 he pursued a course of illustrating in the Zanerian, returning later and completing the work. He was then employed by the Bucher Engraving Company of this city. Two years ago he resigned his position, and assumed charge of the art work of the Columbus Press, which position he now holds.

Some time ago the newspaper artists of Columbus and other portions of the country held an exhibition at which their work was offered for sale. No stronger evidence of the popularity of Mr. Wadland's work could perhaps be given than the fact that he sold more pictures, and received a larger amount for the same, than any other artist at that exhibition. This was certainly quite a feather in his cap, and not undeserved.

Mr. Wadland is destined to become one of our leading newspaper artists, and it gives us great pleasure to testify to the same.

The illustration presented herewith is work he did some time since.
Hand Flourished Cards
Better than ever. Any style. Any Color. 20 cents per dozen.
W. E. McLaughlin, 118 N. High St., Columbus, Ohio.

AN OPINION FROM MASSACHUSETTS
L. Madrave. 429 Third Ave., New York.
My experience with the "Madrave Method" has been uniformly satisfactory. Before studying under you, results in my class work were uncertain, due, I now believe, to the improper manner of presenting the work, and the useless repetition of certain exercises not at all helpful to letter or word construction. By eliminating this useless matter and presenting the work in accordance with your instruction, I have obtained uniformly good results. Enthusiasm on the part of the pupils is much greater and the work of commendation both in and out of the school is very gratifying. I attribute this in a large measure to your teaching very sincerely.
Wilfred F. Weaver.
The foregoing has reference to the Teachers' Course in writing, the "Madrave Method," which I will give in the month of July, 1903, at Radley School, 215 Brevon St., Brooklyn, the price of which is $8. Board and lodgings can be had for $3 per week upwards. It is the best teaching I can do, and if you are not satisfied your money will be refunded. If you are interested write for full particulars enclosing 2c. stamp.

SPENCERIAN PEN CO.
349 Broadway, New York.

READY JUNE 1ST

A GEOGRAPHY OF COMMERCE,
By John N. Tilden, A. M., Author of "A COMMERCIAL GEOGRAPHY," AND
Hon. Albert Clarke, late President of the U. S. Industrial Commission.

IT IS with great pleasure that the Publishers announce this new book. For several years Tilden's Commercial Geography was the standard book in the commercial departments of the best schools. The enormous development of our material resources demanded some changes and new work, and, instead of making a revision, it has seemed best to make a new book that should combine the salient features of the old and incorporate new material which has been furnished in abundance. The services of Mr. Clarke have been as valuable to the educational public in his work upon this book as to the country as a member of the Industrial Commission. The Honorable O. P. Austin, Chief of the Bureau of Statistics, United States Treasury, has acted in an advisory capacity, and the financial departments of the Governments of Europe have rendered all desired information. It will be an epoch-making book and should be used in every commercial class.

The Commercial Geography will continue to be published. Correspondence Solicited.

BENJ. H. SANBORN & CO.
BOSTON NEW YORK CHICAGO
The Remington Typewriter Co. recently issued a large map nearly 13 x 6 feet in size, entitled "The Commercial Map of the World," which they are sending free to schools. The map is quite a costly one and we doubt if highly appreciated by their many patrons.

"Clark’s Tangible Shorthand," by Frank Chadwick Clark, author and publisher, Springfield, Mo., is a new claimant for public favor in the shorthand line.

The author sincerely believes that he has merit on his side, and that the system is bound to win and become a popular one. Clark’s System contains some interesting information regarding the vocalization of sounds, the similarity of various languages, and the working of shorthand characters upon the vowel sounds. The author has endeavored to give "form to speech," and speed to written thought.

Those interested in shorthand and who are not to do well to address the author for further information.

"Gregg Shorthand Reading and Writing Exercises," revised edition, by John Robert Gregg, published by the Gregg Publishing Co., Chicago, III., seventy-six pages, note book form, printed from oil-lead shorthand characters which were photo-engraved. The book contains a series of dictations in the form of business correspondence, legal forms and selections, and its extensive use on the part of schools has be-speaks its popularity and practicability.

Lessons in Shorthand Penmanship by John R. Gregg, published by the Gregg Publishing Co., Chicago, Ill., is a very practical, six-page booklet devoted to this new modern and practicable phase of shorthand, in which the Gregg Shorthand seems to have been the pioneer as concerns the name and character of this class of work, with the learning or teaching of Gregg shorthand as well as teachers of any other system will do well to secure a copy of the same.

"The Place of Industries in Elementary Education," by Katherine Elizabeth Dipp, published by the University of Chicago Press, Chicago, Ill., is the title of a beautifully printed, artistically bound book of 208 pages. This is a timely book upon the topic implied in the title, dealing as it does with the history of our industries from the remotest periods down to the present in such a way as to interest and instruct. In the consideration of an industrial epoch a successful effort has been made to develop (1) some of the most important interactions that take place between man and his natural and social environment, (2) how these result in different forms of industry, and (3) how forms of industry influence the social organization of the people and the development of the sciences and arts.

The book clearly indicates that there is a much closer relation than is usually recognized between the progress of the child and social and industrial activities.

Any one all interested in educational matters particularly as applied to childhood and industrial education should read this book, as it contains the latest and most progressive thought upon this important phase of modern education.

Psychologically, Pedagogically, and Industrially, the work is sound and interesting.

The book is printed on the finest enamelled paper with beautiful, large, clear-cut type, and bound in such a way as to open perfectly flat.

In the forepart of the work we find short, terse, helpful hints under the following headings: To the Student; Who Can Learn to Write Well? Modern Business Writing; Good Writing in Demand; The Business Hand; The Teacher’s Hand; Plan of the Lesson; How to Practice; Materials and Movement.

In the production of this publication the author has combined the skill of the expert, the knowledge of the specialist and the experience of the teacher and business men. He has been aided by men who have won world-wide reputation by their skill in and knowledge of penmanship.

On the right-hand pages plates presenting copies for study and practice are presented, and on the left-hand pages are instructions for their making and practicability. The work is on the actual business, or, learned by doing method, in that it prescribes a definite number of pages to be practiced each lesson.

If you are interested in modern penmanship matters you need to secure this work.

"Modern Show Card Lettering Designs," etc., with 300 bright clear-cut Advertising Phrases for Display Signs, Show Cards and Posters," published by the Thompson School of Lettering, Pontiac, Mich., price $1.00, is the price of an even hundred page book devoted to the subjects mentioned in the title.

The book is practical from the word go, no effort having been made to make it an artistic affair. Any one interested in the subjects treated would therefore find more than his dollar’s worth. One cent a page for technical instruction is certainly reasonable, and that is all it costs. We take pleasure in recommending the publication to practical people.

"Factors of Success," compiled by Hugh Thomas Whitford, published by the Gregg Publishing Co., is the title of a thirty-six page booklet, printed in Gregg Shorthand.

The book consists of a series of pithy paragraphs on the subject of success in life, compiled by Mr. H. T. Whitford of Liverpool, England, from the writings of speeches of such famous men as Washington, Gladstone, Rosebery, Chamberlain, Carnegie and Rhodes. It is a splendid book for the shorthand teacher and student.

"Punctuation Simplified," by J. Clifford Kennedy, published by the Gregg Publishing Co., Chicago, Ill., is the title of a thirty-six-page linen backed book devoted to this much needed and sadly neglected part of a practical education. The book is designed for either class or private use. It seems to us that the book is just the right size to do a great deal of good, being simple and brief enough to reach those who would not be willing to tackle a larger and more exhaustive work, and these are the people who if reached constitute the bulk of our population.

A $3.00 Self-Filling Fountain Pen Given Away Free

to every subscriber to the weekly shorthand magazine, THE STENOGRAPHER, which represents all stenographic and typographic interests. Don’t miss an issue—subscribe today. A valuable premium and description of the free self-filling fountain pen is given free to every subscriber.

THE STENOGRAPHER,
ing recognized more and more generally that the combination of knowledge gained and habits of accurate thinking acquired, as a result of a faithfully spent college course, is of the highest value to the young man who intends to enter business life."

In continuing, Mr. Dill showed that "the corporation movement tends to eliminate the rich man's sons and relatives as a controlling factor in great business companies." He continued at length, showing that to-day the lawyer is retained not so much to fight legal battles in court as to prevent litigation; not "so much to save the expiring business man and the dying business as to keep his client and the business in sound legal health."

The speaker disclaimed any intention of "instructing instructors," and said that he would leave it to the faculties to decide what specific courses or subjects would best fit young men for business life. He said, however, that it is the duty of Universities to have practical men in their faculties, men acquainted with the necessities of the careers for which they intend to fit the undergraduate. He held that a university could teach a man that mental bookkeeping is fatal to business success, and that it should teach the lesson sharply. He declared that the world is not looking for men like a dollar watch that stops running as soon as somebody stops winding it.

In conclusion, Mr. Dill said: "The real problem is the influence of the instructor upon the business success of the pupil in after life. Not whether the student has absorbed much Greek, Latin and Mathematics, but what impress the instructor has made upon the character, mental and moral, of the pupil. The need is not more education in extent, but more educators in the true sense of the word, character-makers rather than lecturers of theory. The demand of the present generation is not so much polished scientists or literateurs, as more young men of rugged individuality, mental and moral strength; not mere polish on the blade, but more temper in the steel is the demand of the business world."

---

Mr. F. Markon Brown, of the Montana Wesleyan University, in a recent letter notes that Mr. Wyman, in his recent report of Montana Commercial Schools, overlooked the Capital City Business College, of Helena, and the Commercial Department of the Wesleyan University, both of which are flourishing schools; the former having an enrollment of nearly 100 students, and being under the direction of Miss Marguerite Moore, formerly of Wolfville, N. S., and the latter, having a faculty of a dozen teachers, including those who instruct in regular university subjects. We are glad to grant Mr. Wyman's request that we make this correction.

"Work More; Talk Less"

Is the advice often given in a business office. "Read much; think little," is the implied instruction in some of the well-known text books on Bookkeeping published in recent years. In an attempt to eliminate the teacher as a factor in the problem of instruction, students have been "talked to death" on the printed page; volleys of business papers have been discharged at them in the beginning, with the idea of stimulating interest while fundamental principles were being absorbed. The result, almost invariably, has been confusion. In probably 75% of the schools where such text-books are used the teachers are compelled to take from such a book as our Complete Practical Bookkeeping drill exercises in journalizing, posting, closing accounts, etc., or else to extemporize such work.

Our work on Bookkeeping is published in three sizes: PROGRESSIVE, 12 sets of Double Entry and 3 sets of Single Entry, 96 pp., 3x11, retail price, $1.00. MERCANILE, 17 sets of Double Entry and 3 sets of Single Entry, 168 pp., 8x11, retail price, $1.50. COMPLETE, 21 sets Double Entry, including Banking, and three sets of Single Entry, 90s pp., 8x11, retail price, $2.25.

Our Twentieth Century Business Practice consists of five pads of work, each illustrating a different business, involving the use of different books of account. Each is dependent on the other, and any of these pads can be used with any text-book published, or, by those who have had instruction in journalizing, posting, etc., these pads can be used without any text-book. The full set of five pads, with all necessary stationery and blanks, costs the student $2.85. Of course we offer liberal discounts to schools.

We stand firmly on the declaration that theory ought to precede practice in the teaching of Bookkeeping—that a person should know how to do a thing before trying to do it—and we therefore have our Practice Pads so arranged that they follow certain sets of our text-book in a way to illustrate the principles taught in those sets.

To teachers who, in writing to us, name the school in which they are engaged, we will send any of the foregoing publications at one-fourth the retail price, carriage prepaid, and if the books are adopted later, we will refund even this small amount. We are widely known as the publishers of the most attractive books obtainable on English, Correspondence, and Spelling, and our full line of books is in popular use in all parts of the country. Write to us about your needs for next year.

The Practical Text Book Company,
479 Euclid Avenue, Cleveland, Ohio.
The above half-tone represents a class of typical Zanerian College students, Summer Session, 1902; earnest, intelligent, ambitious skillful, worthy pupils, who possess the elements of success, and who have therefore been attracted by a success-inspiring institution.

**Seventeen States are Represented**

In this group, including Maine, Washington, Wisconsin and Texas. Usually one or more foreign countries also has a representative here.

Zanerian students as a rule, earn their own money with which to attend. And surely this they would not spend attending school so many miles away from home were they not tremendously in earnest. Being spurred by the lure of achievement, they do things, accomplish something, and are successful to such an extent as to attract the attention of the educational and artistic world generally.

Who are the leading teachers and supervisors of penmanship in the public schools? Who are recognized as the most successful teachers in commercial colleges? He who investigates will answer—Zanerian students.

**Thoroughly Prepared**

Being most thoroughly prepared and getting the best places, it follows that they receive the best salaries. It is not an uncommon thing for students to go direct from the college to accept a position at $5 per month to begin with; and during the past three years the demand for good talent has been much greater than we have been able to supply.

To all who have a liking for any of our lines of work, we can conscientiously and unhesitatingly say, follow your bent; you will make no mistake; there is plenty of demand for the services of the qualified.

The Zanerian College is a success, because its students are successful. It is a success, because the instructors are the world’s greatest teachers of penmanship and engraving. Is it a success, because it is conducted on the strictest principles of honor and integrity.

Write for beautifully illustrated catalogue.

**Address, ZANERIAN COLLEGE, Columbus, Ohio**

---

**Important Announcement!**

Beginning with September, 1903, the department of drawing will be discontinued in the Zanerian. This is due to increased attendance interest, and demand in and for penmanship and engraving, without a corresponding increase in the drawing lines. The latter is due to the fact that all cities contain schools of art, many of which are heavily endowed, superbly equipped, and ably manned. Students therefore find such instruction at home without paying expensive railroad fare, board and room. With penmanship, however, this is not the case. There is not one school in this line—the Zanerian. It has practically no competition. To strengthen it; to enlarge it; to make it even better than it has been in the past; to make it the Mecca of methods in teaching, and skill in execution for which it is already famed, is the object sought by discontinuing the drawing.

Drawing is something that can be pursued by itself, and so can penmanship. Few have been able to carry both successfully at one and the same time.

Persons desirous of preparing as supervisors in penmanship and drawing can attend the Zanerian for the former, and their home art school for the latter, or such other that they may choose.

Persons desirous of preparing as artists and designers can attend the Zanerian and learn to letter, and secure positions in engraving establishments at small salaries to begin with, where they can work up in the art world, as many Zanerians have done who have taken only the engraving course, which consists largely of lettering.

The course, therefore, will consist of all styles of penmanship, all kinds of pen lettering, engraving, flourishing, blackboard work, and methods in teaching.

The purpose is to prepare persons as penmen, as engracers, as teachers, as supervisors, in a manner and with a thoroughness no where else possible.

Persons interested in art will do well to secure our publications entitled, Portraiture, Sketching from Nature, Pen Studies, New Zanerian Alphabets and Character, as they are all prepared expressly in the interest of the home student. For such purposes, in their respective lines, there are no other publications that can be compared to them. They contain practical examples, complete instructions, and genuine inspiration.

If you want the best, the latest, the most practical, artistic, or modern along penmanship and engraving lines, including the most progressive methods of teaching the same, attend the Zanerian.

ZANER & BLOSER, Proprietors.
Penmanship Supplies
FINEST OBTAINABLE
PENS AND HOLDERS

All goods listed below go by mail postpaid.

Zanerian Fine Pen—The best and finest fine writing pen made—best for engraving, card writer, and all fine script work. Gross $1.00, ½ Gross 25c, 1 Doz. 15c.

We do Three Things Well

If this Advertisement does not attract your attention

it is because it is not well written and not because the books we advertise are not worthy of attention.

THERE ARE VERY FEW COMMERCIAL TEACHERS, who have not heard of the Sadler-Rowe Company's commercial publications, but there are doubtless many who do not have an intimate acquaintance with their contents, with the educational spirit that runs through all of them, with the fine methods of instruction which are incorporated as a part of the subject matter, with the practical nature of the transactions and problems, supplementary drills, etc.,

which are presented for the student's consideration, with the carefully graded course of study in each subject as it is outlined in the various texts, and with the ease with which teachers can keep in touch with the work, can check student's results and can secure uniformly high-grade results.

These are all important considerations in the make up of text books in any of the branches included in the usual commercial and shorthand courses of study.

Following are the titles of a few of our principle books:

Commercial and Industrial Bookkeeping.  Billings' Synthetic Shorthand.  (Graham-Pitmanic.)
Business Bookkeeping and Practice.  Richardson's Commercial Law.
Lister's Budget of Writing Lessons.  New Method Speller.
Earnest's English-Correspondence.  Banks' Easy Method of Touch Typewriting.

This advertisement is intended to bring inquiries only from teachers, school officers or dealers. Inquiries coming from others will not receive attention.

State your wants explicitly so as to avoid useless correspondence and waste of time.

Sadler-Rowe Company,
Baltimore, Maryland.
